For the time being, no doubt, the Hollywood writers who are grinding out this trash will content themselves with twisting the facts to ennoble the liberals' heroes ("Franklin and Eleanor") and smear the liberals' enemies ("Tail Gunner Joe)—that being the command of what Bill Buckley calls Zeitgeist": the spirit of the times. But let one suppose the infection will stop there—any more than the presidency stopped being imperial when Richard Nixon got his hands on it. If this sort of abuse goes unresisted, we can all expect to see, sooner or later, a depicting "docudrama" Luther King, Jr. as a self-intoxicated opportunist who liked to fool around with white women and cynically allied himself with known Communists. Ah, what a wailing and gnashing of teeth there will be then! The television networks ought to address themselves seriously to this problem right now, before their medium loses forever what reputation it has for fairness and truth.

APPROVED BUT UNFUNDED CANCER RESEARCH PROJECTS

HON. JACK BRINKLEY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1977

Mr. BRINKLEY. Mr. Speaker, in last Thursday's Congressional Record, during debate on the Biomedical Research Extension Act of 1977, there are listed the unfunded approvals from the National Cancer Institute. They are well worth your review. Each line represents a project application. There are 1,543 of them. The total figure needed to fund these amounts to \$126,362,000. This is a recurring pattern as I demonstrated 3 years ago.

Nine hundred people will die from

cancer today.

It is not within their lifetime that a cure for cancer will have been found.

Three years ago there were comparable approved, but unfunded, projects of NCI. The hopes of 900 people who die today may have been shattered upon that nonfunding decision made 3 years ago.

The lives of 900 people who may die on a day three years from now may be sealed in these project applications. The fate of them, and for them, is within our hands.

For the RECORD I attach two news articles which I came across yesterday, related to cancer research:

[From the Columbus (Ga.) Ledger-Enquirer, Apr. 3, 1977]

HEADWAY ON CANCER REPORTED

SARASOTA, FLA.—Although the battle is far from won, a leader in the fight against cancer said Saturday there is cause for "reasonable optimism" that scientists eventually will learn how to control and prevent the disease.

"In short, the problem is now wide open and approachable and it begins to look to the most skeptical and sophisticated of biological scientists like an ultimately solvable problem," said Dr. Lewis Thomas, president of the Memorial Sloan Kettering Cancer center in New York.

"This is in itself a great change from the situation just a few years back."

But Thomas, expanding on an opening address he made to an American Cancer Society seminar, which he heads, said that the field is filled with uncertainties, with much basic research yet to be done.

Thomas said there are half a dozen different fields that offer great promise in the cancer fight. One, he said, is the effort to find biological substances that signal to the doctor if cancer cells exist, and what kind.

A panel of scientists reported on different

aspects of that work Saturday.

Dr. David Baltimore, Nobel laureate from the Massachusetts Institute of Technology, said a certain enzyme called terminal transferase is useful in differentiating between different types of leukemia so doctors can better plan treatment.

[From the Atlanta Journal and Constitution, Apr. 3, 1977]

TESTS ZERO IN ON APPROACH: TAILOR-MADE CANCER THERAPY NEAR?

(By Jane E. Brody)

SARASOTA, FLA.—Researchers reported here Saturday they are beginning to zero in on special characteristics of cancer cells that can be used to test for or predict the most effective approach to treatment.

These characteristics can help to distinguish between patients whose cancers appear identical microscopically but in fact have important biological differences—and different responses to various treatments.

Accordingly, it should be possible to tailormake treatments to improve the survival chances of individual patients, the researchers said. One distinguishing character already has been used to plan the therapy of some patients, with encouraging results so far.

The new studies provide factual support for what many cancer specialists have long believed—that among any group of patients with one type of cancer, say breast cancer, there are likely to be important differences in the cancer cells of the individual patients that, in part, determine their survival chances following a particular type of therapy.

Doctors long have pondered why some patients do extremely well and others with seemingly the same cancer do not, although they are receiving the same therapy. The characteristics described here represent part of the attempt to find out why this happens.

Two scientists, Dr. David Baltimore, a Nobel Prize-winning virologist from Massachusetts Institute of Technology, and Dr. Stuart F. Schlossman, chief of tumor immunology at the Sidney Farber Cancer Institute in Boston, described three so-called biological markers that help to differentiate between leukemia cells that may otherwise appear identical to or show similarities to outwardly different cancers.

One is an enzyme called TDT (for terminal deoxynucleotidyl transferase) and two are cell surface molecules designated as HTL and Ia. Antibodies can be prepared against each of these substances to enable doctors to determine which patients have them and which don't, and use this information to predict the most effective treatments for each.

A third researcher, Dr. Sydney E. Salmon, director of the University of Arizona Cancer Center in Tucson, described a new technique of isolating and growing the relatively few cells within a cancer that are the apparent "true villains"—the ones that can spread and establish colonies in other parts of the body.

Salmon said he can then use these test tube colonies of malignant cells to test various drugs or radiation therapy and select the treatment that is likely to be most effective against the patient's cancer. FEEDING THE CROCODILE

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1977

Mr. DORNAN. Mr. Speaker, I have recently read three disturbing reports, the facts of which should cause alarm in the highest circles of our Government. These articles, by and about Mr. Miles Costick, detail the export of our scientific knowledge and technology to the Communist regimes of Eastern Europe, the Soviet Union, and Red China.

While I believe that few Americans or national leaders would endorse the sale of complex military technology directly to the Soviets or other Communists, many of our leading computer companies—including IBM, Control Data, Sperry-Rand, UNIVAC, Honeywell, and General Electric—have entered into commercial agreements which have the same effect.

One might naturally ask how this has been permitted to happen? The answer is frighteningly simple: The Departments of Commerce and State and the National Security Council have approved the sale by these companies of millions of dollars worth of sophisticated computers, peripheral equipment, and manufacturing expertise to the Communists. During the last 4 years, American companies have sold the Soviet Union alone more than \$300 million worth of advanced computer equipment.

And that is not the end of it. Late last year, permission was granted to Control Data by the National Security Council to sell the Soviet Union the Cyber 73 computer system. Control Data received \$6 million in the deal and the Soviets received a 10- to 15-year boost in their military capability. In this Congressman's mind, that was far from being an even trade.

Red China is to benefit from our knowledge as well. The Chinese Communists are to receive a computer which is used in the United States for antisubmarine warfare, nuclear weapons calculations, and large phase-array radar systems that track ICBM's. On October 12, 1976, the National Security Council approved the sale of two Control Data Cyber 172 computer systems. Again, Control Data made \$6 million on the deal and the Red Chinese advanced their computer technology by leaps and bounds. And again, America got the short end of the deal.

These sales were approved in spite of the objections of the Department of Defense and ERDA that these computer systems were suitable for nuclear weapons calculations.

As Mr. Costick explains, computers are essential to all aspects of modern warfare. They are used for navigation and weapons guidance in modern missiles, aircraft, tanks, high performance satellite-based surveillance systems, ABM defense systems, and submarines. Mr. Costick correctly observes that "without computers, modern weapons systems could not be built, integrated, tested, deployed, kept combat-ready, or operated."

The national policy which allows for

the sale of American technology to our Communist enemies can only be described as suicidal. These companies—using the name of free enterprise—are helping our avowed enemies toward their goal of eliminating free enterprise. Our national leaders—using the name of mutual security—are arming our enemies and helping them toward their goal of world domination.

It is as if these men had never learned that socialist dictatorships are inherently parasitic and can survive only by borrowing or buying from the free world. They rely almost totally on the fruits of the free enterprise system to acquire even the most primitive technology. Socialist dictatorships cannot provide the economic atmosphere required to invent a sewing machine-let alone a sophisticated computer. It is amazing that these otherwise intelligent Americans ignore this fact. Again, Mr. Costick rightly states: "Computer technology in the Soviet Union is almost totally dependent on Western imports." Our computer industry and National Security Council appear to be working hard to end that dependence.

I believe that the time is long past to reverse this national policy. The facts Mr. Costick has mentioned are well known to our leaders. I only reiterate them here so that the American people can see them and be aware of what the triumvirate of big business, the executive branch, and communism has been accomplishing.

Lenin once said, "The imperialists are so hungry for profits that they will sell us the rope with which to hang them." He would be pleasantly surprised to see that not only are we selling the rope but we are doing it at bargain prices.

I, for one, do not believe that the American people will cooperate with Lenin's prophecy, even if big business and the executive branch do.

NATIONAL SECURITY AT STAKE: U.S. COMPANIES WANT TO SELL COMPUTERS TO SOVIETS

(By Miles Costick)

(EDITOR'S NOTE.—A congressional consultant, Miles Costick is the author of the book The Economics of Detente and of the forthcoming study, The U.S.-Soviet Computer Capabilities. The following article was written especially for The Birmingham News.)

Jimmy Carter's national security advisor, Zbigniew Brzezinski, has said that detente must be reciprocal in order to be enduring. But what remains to be seen is whether the Carter administration will also reassess the Kissinger policy of transferring to the Soviets advanced technology of critical military importance.

A test of this would be whether Control Data Corp. is permitted to deliver to the Soviet Union the world's largest strategic computer the Cyber 76. The deal has been closed and the export license application is pending before the Commerce Dept. There are also several additional pending applications for sale of military computers to the Communist governments on behalf of Control Data, IBM, UNIVAC and Honeywell. None of the computers involved, however, can match the strategic potential of CDC's Cyber 76.

Cyber is a sensitive topic. It is a very high speed, large volume, advanced scientific computer which processes a phenomenal 100 million instructions per second, and has a memory storage capacity at least 15 years ahead of anything that a Communist computer maker is able to construct. Only about two dozen of such installations even exist. Typical installations: The Pentagon, U.S. Air Force, the Atomic Energy Commission, NASA, and the top secret National Security Agency.

Last year President Ford vetoed the extension of the Export Administration Act leaving the county without effective controls over export of strategic items to the Communists. This meant that all restrictions on Soviet bloc purchases in the U.S. have lapsed. Mr. Ford, however, had issued an executive order reimposing controls on exports under authority vested in him by the War powers Act. The executive order placed the National Security Council in a position of authority to permit or decline strategic exports to the communists.

The select informed few knew what most had missed: For the executive order to become an effective barrier to export of strategic goods, the President would have to designate the recipient country as an "enemy country." Obviously under Henry Kissinger's detente, the President could hardly, declare the Soviet Union or Red China an enemy.

NUMEROUS APPLICATIONS

In the order tube, ready to pop out when the cap was removed on Oct. 1, 1976 were numerous applications for export of strategic items of critical military significance. The most important were the applications for export of military computer systems.

On Sept. 30, 1976 President Ford and his National Security Council under Kissinger appointed Lt. Gen. Brent Scowcroft, in strict discretion, have approved the sale of the Control Data's Cyber 73 computer system to the USSR. The value of the transaction to CDC was about \$6\$ million and to the Soviets about a 10-year leap in computer technology plus a new acquired strategic capacity.

On October 12, the National Security Council approved the sale of two CDC Cyber 172 computer systems to Red China. The announced value of transaction was \$6 million. Through acquisition of Cyber 172 computers the Chinese communists gained capabilities which they have lacked before, since their computer technology is about 15 to 20 years behind that of the United States.

The stated purpose of computer sales to Red China was oil exploration and earthquake detection.

An inquiry revealed that the stated purpose of computer sales to the Soviet Union was oil exploration.

However, the Pentagon and the Energy Research and Development Administration (ERDA) objected to the sale of computers on the grounds that both systems—the Cyber 73 and Cyber 172—were suitable for nuclear weapons calculations for anti-submarine warfare, for large phased-array radar to track enemy ICBMs and for other military applications.

OBJECTIONS OVERRULED

A number of U.S. officials confirmed that Dr. Kissinger and his assistant at the State Department, Winston Lord, prevailed over the opposition of the Pentagon and ERDA.

One Commerce Dept. official commented, "If there were no potential military applications there would have been no reason to take a full year to review the sale . . of the equipment."

Today, the U.S. Defense Dept. deploys about 9,000 of the so-called general purpose computers for military purposes. The same type of computers could be used in a wide variety of civil applications from research and development in industry to crime control.

Obviously the national security implications of this trade are enormous. Concern in the United States had led the Defense Department's Science Board task force under J. Fred Bucy of Texas Instruments to recommend restrictions on the transfer of strategic technology to the Communist superpowers and their satellites.

Six high-technology trade associations, however, through their spokesmen, have warned Congress against permitting the Defense Department to control transfer of strategic technology. "In a civilian government such as ours, the control and administration must reside apart from the military," demanded Peter F. McCloskey, president of the Computer and Business Equipment Manufacturers' Association.

It seems that McCloskey and his friends from the industry agree with William Norris of Control Data who stated that, "Our biggest problem isn't the Soviets, its the damn Defense Department."

Businessmen should remember Lenin's words that when it was time to hang the the world's capitalists, they would trip over each other in their eagerness to sell the Communists the necessary ropes.

[From Human Events, Feb. 19, 1977]
WILL BRZEZINSKI GIVE SOVIETS ADVANCED
COMPUTER?

Jimmy Carter's national security adviser, Zbigniew Brzezinski, is facing a major test that could affect the future of detente: will he reassess the Kissinger policy of transferring to the Soviet bloc sophisticated technology with critical, strategic implications?

What's particularly worrying military and intelligence officials is whether Control Data Corp. will be permitted to deliver to the Soviet Union the world's largest and most sophisticated computer, the Cyber 76. Control Data has closed a tentative deal with Moscow, and the application for an export license is pending before the Commerce Department. But Commerce won't give the goahead unless at National Security Council—where Brzezinski, as Carter's personal aide, plays a key role—gives a nod of approval.

There are several other applications by Control Data for the sale of advanced computers to Communist nations, but none of the computers involved can match the strategic potential of Cyber 76.

Cyber 76, according to Miles Costick, an expert on U.S. computer policy, is "a very high-speed, large volume, fourth generation scientific computer which processes a phenomenal 100 million instructions per second." He stresses it "is at least 15 years ahead of anything that any Communist country is able to produce." Only two dozen of these computers exist, with the bulk of them installed in such sensitive military and military-related agencies as the Pentagon, the U.S. Air Force, the Atomic Energy Commission, NASA and the National Security Agency.

Last year, Costick informed Human Events, former President Ford vetoed the extension of the Export Administration Act, leaving the country without effective controls over strategic exports to the Communists. This meant that all significant restrictions on Soviet bloc purchases had collapsed. Ford, however, reimposed the controls under authority vested in him by the War Powers Act. The Executive Order gave the National Security Council a predominant role in exercising authority over strategic exports.

But the question is, will Brzezinski continue in the Ford-Kissinger manner? On September 30 of last year, notes Costick, President Ford and his National Security Council, with Lt. Gen. Brent Scowcroft then fulfilling the Brzezinski role, discretely approved the sale of Control Data's Cyber 73 computer system to the USSR. The value of this transaction to Control Data was about \$6 million, but to the Soviets it meant "a 10-year leap in computer technology," says Costick. The stated purpose of the computer sale was the improvement of Soviet oil exploration.

On October 12, the National Security Council also approved the sale of two Control

Data Cyber 172 computer systems to Red China, with a value of \$6 million. Through acquisition of the Cyber 172's, the Chinese Communists, according to Costick, received computers 15 to 20 years ahead of their own. Supposedly, the computer sale to Red China was to help enhance the detection of both oil and earthquakes.

The Energy Research and Development Administration (ERDA) and the Pentagon objected to the sale of both the Cyber 73 and the Cyber 172 on the grounds that they were suitable for nuclear weapons calculations, for anti-submarine warfare, for large phasedarray radar to track enemy ICBMs and for anti-ballistic missile systems.

A number of U.S. government officials, says Costick, "confirmed that Dr. Kissinger and his assistant at the State Department, Winston Lord, prevailed over the opposition at Pentagon and ERDA."

"If there were no potential military application," noted one Commerce Department official, "there would have been no reason to impose safeguards on the use of the equipment."

There is a general consensus among the experts, however, that there are no effective safeguards so far as application of computers is concerned. Today, the U.S. Department of Defense deploys about 9,000 so-called general purpose computers for military purposes. The same type of computers are being used in a wide variety of civil applications from R&D in industry, to crime control and psychiatry.

"Obviously," says Costick, "the national security implications of this trade are enormous." And the big question today is: what will Brzezinski do? If the Soviets get the Cyber 76, there will be no question as to what direction the Carter Administration intends to lead this country.

[From Conservative Digest, March 1977] SELLING ARMS TO THE ENEMY (By Miles Costick)

During the last four years American companies have sold the Soviet Union more than \$300 million worth of advanced computer equipment—material crucial to modernizing the Soviet military machine.

The giants of our computer industry—including Control Data, IBM, Sperry-Rand and General Electric—have sent Russia and East Europe computers, peripheral equipment, software and manufacturing know-how, and have even built computer component plants for Iron Curtain countries.

And a major new deal that will further erode U.S. security is in the works. Late last year Control Data received permission from the National Security Council, after intervention by Henry Kissinger, to sell very so-phisticated computers to America's two biggest enemies.

The Soviet Union will receive the Cyber 7300, a large scientific computer ideal for military applications and about 15 years ahead of current Soviet computer capability.

And Communist China will acquire the Cyber 172, used in the U.S. for antisubmarine warfare, nuclear weapons calculations, and large phase-array radar systems that track ICBMs.

Computers are essential to modern warfare. Computers themselves are used for both navigation and weapons guidance in modern missiles, aircraft, tanks, high-performance satellite-based surveillance systems, ABM defense systems and submarines.

And without computers modern weapons systems could not be built, integrated, tested, deployed, kept combat-ready or operated.

All technologies revolutionizing warfare, such as giros, lasers, avionics, nucleonics, propulsion and computers themselves, are dependent on computers.

For example, the world's most advanced computers (ILLIAC IV, CDC STAR-100,

Texas Instruments' ASC and Goodyear's STARAN IV) were built with the aid of several large computers.

In short, today's emerging technologies are as dependent on computers as the technologies of the first industrial revolution were dependent on energy.

In the present era of technological competition with the Soviet Union, the United States enjoys now and is expected to maintain a 10 to 12 year advantage in computer technology, provided there are no ill-considered exports to the Soviet Union and other communist countries.

HENRY SAID YES

Computer technology in the Soviet Union is almost totally dependent on Western imports, and there are several significant features of Western computer technology that the Soviets have failed thus far to acquire.

The first is mass production of high-quality computer components, subsystems, and systems. The second is reliability engineering and quality control. The third is the creative dynamism characteristic of the Western computer scene.

The fourth is computer software: Soviet software today is no further advanced than Western software was in 1960. However interesting Soviet work on the theory of automatic programming may be, it has not led to software that economizes programming time and makes computers more accessible to users.

The fifth area of weakness in Soviet computers is memory storage, both internal and external. Even the most advantaged computers produced in the Soviet Union and East Germany have acute memory problems.

The Soviets are making every effort to close these gaps by buying them from us. And they have scored notable successes with this strategy. (They also continue to steal or illicitly buy secrets from private citizens.)

Control Data has been one of the Soviets' richest sources. The company recently agreed to develop jointly with Moscow the next generation of large high-speed computers, the Cyber series, and to build a plant that can manufacture them.

The Cybers are high-speed, large-volume scientific computers, suitable for military and intelligence operations. Only 12 such installations exist in the world, and they belong to such organizations as the Atomic Energy Commission, the U.S. Air Force, NASA and the National Security Agency.

This Control Data-Soviet venture would create a serious competitor for U.S. computer sales overseas and would sharply upgrade Soviet military potential. American sources in Moscow put the agreement's ultimate worth at more than \$500 million.

In the last dozen years Control Data has sold communist countries about 40 computer systems, and has established a joint operation with Romania, which it is now expanding to produce peripheral equipment, integrated circuits and software.

The company's strategy is to increase its share of the communist bloc computer market, and, in combination with communist computer producers, in increase penetration of the developing countries' markets.

And Control Data has an agreement pending to manufacture 100-megabit disk memory units in the Soviet Union, which would considerably enhance Soviet computer capabilities.

The granddaddy of computer companies, IBM, has frequently sold advanced computers to the Soviet Union and its satellites. It sold the USSR what is believed to be the largest industrial computer in the world for use at the Kama River truck plant, and in 1974 it sold Hungary the advanced 370–155.

This sale, which required the personal approval of Kissinger, violated U.S. policy in that the computer was more powerful than the buyer required, was unknown in the East, and could be copied or diverted for military purposes.

IBM has several other pending computer orders from the Soviet Union, including a triplex 36065 computer system for Soviet air traffic control, which would have obvious military uses.

Other firms selling computer equipment, know-how or manufacturing capability to the Soviet bloc include Singer, Dataproducts

and Willi Passer.

While America would never consent to give complex military technology directly to the Soviet Union, we have entered into commercial and scientific agreements which have the same effect.

As former Deputy Defense Secretary William Clements has said, "There have been some significant losses of advanced technology to the communist countries, particularly in electronic and very exotic, sophisticated machine tools."

And Britain's NATO envoy, Sir John Killick, recently stated, "Clearly something is amiss when the Soviet Union's all-consuming military machine continues to gather speed and strength, while its economy is increasingly dependent on Western exports."

Yet six high-technology trade associations have warned Congress against permitting the Department of Defense to control transfer of

strategic technologies.

"In a civilian government such as ours, the control and administration must reside apart from the military," recently demanded Peter F. McCloskey, president of the Computer and Business Equipment Manufacturers' Association.

Control Data's William Norris puts it more bluntly, "Our biggest problem isn't the Soviets, it's the damn Defense Department!"

JEWISH COMMUNITY RELATIONS COUNCIL ENDORSES ADMINIS-TRATION STRESS ON HUMAN RIGHTS CONSIDERATIONS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1977

Mr. EILBERG. Mr. Speaker, the board of directors of the Jewish Community Relations Council of Greater Philadelphia has just adopted a resolution endorsing the efforts of President Carter and his administration to stress human rights considerations in the development and implementation of U.S. foreign policy.

This policy statement reflects JCRC's positive response to the unfolding of an American foreign policy with a strong human rights dimension. Jews have learned from bitter experience that silence only encourages repression. Therefore, we support our Government's decision to speak out against threats to fundamental human freedoms.

I am placing the text of this resolution in the Congressional Record, Mr. Speaker, so that other Members of the Congress will be aware of this strong grassroots support for the ongoing efforts to promote international human rights through our foreign policy:

RESOLUTION OF THE JCRC OF GREATER PHILA-DELPHIA ON THE RELATIONSHIP OF HUMAN RIGHTS CONSIDERATION TO AMERICAN FOR-EIGN POLICY

The Jewish Community Relations Council of Greater Philadelphia supports the efforts of the Carter administration to stress the centrality of fundamental human rights to the conduct of the United States' foreign policy. JCRC applauds the decision of the administration to begin the policy of reduc-

ing foreign aid to some countries because of gross human rights violations within them.

By forging links between the level of American assistance and human rights considerations, the United States is beginning to restore the moral authority of our foreign policy. We are declaring that a goal of American efforts abroad is, in the words of Secretary of State Cyrus R. Vance, to promote "social progress and human rights for individuals wherever they might be."

As a community with a long history of bitter and tragic persecution, Jews have been particularly disturbed by the encouragement provided to repressive governments by the silence of the world community. The slaughter of 6,000,000 Jews by the Nazis was preceded by a thorough, calculated, and increasingly, restrictive abridgement of their fundamental human freedoms. Thus, JCRC is mindful of the crucial importance of speaking out whenever and wherever basic human rights are threatened. We agree with the words spoken by President Carter when he was a candidate, "Violations of basic human rights are no longer the internal affair of any one nation."

JCRC favors the continued examination of the link between American foreign aid and the requirement to promote a commitment to human rights by those who are our partners throughout the world. Sensitivity to considerations of human rights and fundamental freedoms does not restrict the scope of American foreign policy; rather, it expands it. The JCRC urges the administration to continue employing foreign aid leverage—in an imaginative, restrained, and responsible fashion—to express both our national commitment to fundamental American values and also our abiding concern for human rights around the globe.

INDIA: A DEMOCRATIC MODEL?

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by my constituent, Gen. Henry Huglin. General Huglin is a retired Air Force brigadier general and syndicated columnist. He comments on India's democratic example as an attractive alternative to Marxism:

INDIA: A DEMOCRATIC MODEL? (By Henry Huglin)

India is again a functioning democracy. The election of March 16-20—which Prime Minister Indira Gandhi and her Congress Party lost decisively—was a major step back from the authoritarian emergency rule which she invoked 21 months ago.

And India's process of rejecting authoritarian rule may provide a good lesson and useful model for other peoples of the world.

When Mrs. Gandhi declared a state of emergency in June 1975, she undertook to guide and goad the 600 million Indians into reversing a trend of growing economic and political chaos. The economy was deteriorating, with inflation at 30%, and opposition politicians—who had never held power since India gained independence 30 years agowere becoming irresponsible.

With emergency powers, which were legally invoked, Mrs. Gandhi suspended civil liberties, jailed tens of thousands, controlled the press, and took many other authoritarian

During the 21-month emergency rule, much more order was enforced, inflation was drastically reduced, the top-heavy and often corrupt bureaucracy was shaken up, and overall economic conditions were considerably improved.

Yet, Mrs. Gandhi's timing in scheduling this election surprised everyone. She evidently thought that the economic stimulation and political stability that had developed, as the result of her actions under the emergency powers, would gain her enough favor to give her a large majority of the vote.

However, neither the election campaign nor the election itself turned out as she expected. There were major defections of prominent members of her Congress Party to the opposition. And there was surprisingly strong support for her opponents.

Her opposition defined the central issue as democracy versus dictatorship. She contended that the basic issue was stability versus chaos.

Mrs. Gandhi obviously underestimated the depth of concern for human rights and overestimated the political value of the benefits of her emergency measures. The values of democracy have evidently sunk deeper into the Indians' psyches than imagined. However, other factors were the still high cost of living and over-zealous enforcement of family planning programs under the aegis of her son, Sanjay.

So, there clearly was quite a backlash against the repression imposed during the emergency—irrespective of the benefits created by it. Hence, civil liberties and democratic forms were major factors in the election.

This election was certainly a major event in India's political evolution and perhaps will be of considerable significance beyond India.

In contrast, to cope with similar problems, the Chinese have been molded—without electoral choice—into a thought-controlled, highly-regimented society, with an all-pervasive communist communal ideology dictated by the late Mao Tse Tung.

If India can now cope effectively with her problems in a democratic, somewhat economic free-enterprise way—with the possibility still that further "emergencies" may be declared if corruption and disruption require—then India will provide a valuable model for many of the other peoples of the world to emulate. They can have another feasible, attractive alternative to Maxxism.

This turn of events in India shows again that non-communist authoritarian and dictatorial regimes can evolve back to democracy, if given a chance. Greece did this several years ago. Portugal has been in the throes of such an evolution for nearly three years, and Spain for a year. Now India, which has had the shortest period of authoritarianism of any, has reverted to democracy in a resounding way.

The ability of non-communist authoritarian nations reverting to or establishing democratic regimes also highlights a most pernicious feature of communist regimes—that the police-state control they impose is so effective as to preclude any change in the regimes by any means.

As with most of the underdeveloped nations, India has massive problems. Some of hers stem from religious conflict, residual effects of the caste system, and unearned privilege. But perhaps, above all, she has been handicapped with having had imposed too much narrow, doctrinaire, bureaucratically-stultifying socialism, which has held back the progress that could have come from a greater measure of incentive-creating free enterprise.

The 600 million Indians have much potential. Their material and human resources are great. What they need most are unity, diligence, and dedication to pull together, within a functioning democracy.

Perhaps the Indians will now find a workable political and economic democratic formula that fits their circumstances and aspirations—and will, in the process, provide a model for other peoples. Let us hope so.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the Congressional Record.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Wednesday, April 6, 1977, may be found in the Daily Digest section of today's Record.

The schedule follows:

MEETINGS SCHEDULED APRIL 6

9:00 a.m.

Energy and Natural Resources Parks and Recreation Subcommittee

To hold hearings on S. 393, the proposed Montana Wilderness Study Act. 1224 Dirksen Building

9:30 a.m.

Agriculture, Nutrition, and Forestry

To hold hearings on the nominations of Rupert Cutler, of Michigan, Dale Ernest Hathaway, of the District of Columbia, Alex P. Mercure, of New Mexico, and Robert Haldeman Meyer, of California, each to be an Assistant Secretary of Agriculture; to be followed by consideration of these nominations and that of Howard W. Hjort, of the District of Columbia, and John C. White, of Texas, all to be Members of the Board of Directors of the Commodity Credit Corporation.

324 Russell Building

Appropriations Interior Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear Congressional witnesses.

S-126, Capitol

Banking, Housing, and Urban Affairs

To hold a hearing on the nomination of Harold Marvin Williams, of California, to be a member of the Securities and Exchange Commission.

5302 Dirksen Building

Commerce, Science, and Transportation Communications Subcommittee

To hold oversight hearings on rural telecommunications policy.

235 Russell Building

Commerce, Science, and Transportation Aviation Subcommittee

To continue hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.

5110 Dirksen Building

HOUSE OF REPRESENTATIVES—Tuesday, April 5, 1977

The House met at 12 o'clock noon. Rev. Floyd H. Gayles, St. James Baptist Church, Washington, D.C., offered the following prayer:

The Lord will give strength unto His people, the Lord will bless His people

with peace .- Psalms 29: 11.

O God our Father, we thank Thee for this another day. We are grateful for Your abiding faith in these troublesome times. We ask of Thee if Thou would abide with us today as we serve our Nation-a calling to fulfill. Give us more love for Thee and our fellow man. Bless the President of this great Nation, the Speaker of the House, and Members of this Congress. As we wait upon Thee, grant unto us light to guide us, strength to sustain us, and wisdom to help us, that we may be true servants of Thine and always devoted to our country. We thank You for the way Thou hast provided for the welfare and care of all of

And now may the blessing of God Almighty, Father, Son, and Holy Spirit be with us through Christ. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced CXXIII-652-Part 9

that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 266. An act to amend Public Law 92-314 to authorize appropriations to the Energy Research and Development Administration for financial assistance to limit radiation exposure from uranium mill tailings used for construction, and for other purposes.

PROBLEMS OF INFLATION INDUCED BY CERTAIN FEDERAL GOVERN-MENT ACTIONS

(Mr. BOLLING asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOLLING. Mr. Speaker, the committee I have the honor of chairing, the Joint Economic Committee, has a responsibility to look ahead and see some of the problems that may confront us, and later this afternoon, at the conclusion of today's legislative business, I hope to address the House for a few minutes on one of those problems, which is actually an accumulation of problems. It is the problem of inflation which may be induced by certain Federal Government actions and a possible way of dealing with that.

JOSEPH CATANIA, COMMISSIONER, BUCKS COUNTY, PA., WELCOMED TO WASHINGTON

(Mr. KOSTMAYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOSTMAYER. Mr. Speaker, no one need impress upon the Members of the House the importance and value of local government officials to our system of government in America.

Many of my colleagues have distinguished themselves in local government positions prior to their serving here.

Today I take pleasure in welcoming to Washington and to the House a dear personal friend of mine who too has distinguished himself while serving as a county commissioner in my home of Bucks County in southeastern Pennsylvania

Official business brings the Honorable Joseph Catania and his wife, Elaine, to Washington this week and I am honored to welcome them to the beginning of our session today and have their presence acknowledged by my distinguished colleagues. I hope their trip is both pleasant and productive and that they enjoy the session.

Thank you, Mr. Speaker.

PERSONAL EXPLANATION

(Mr. EVANS of Delaware asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. EVANS of Delaware. Mr. Speaker, yesterday, as I think most of my colleagues know, I participated fully in the debate on the debt collection practices bill because I felt that it was a good bill. I felt that we needed to protect individuals from unscrupulous and unreasonable practices by some debt collection agencies. Human beings have their human frailties, but electronic systems also have some frailties. It was certainly my intention vesterday to vote for the debt collection practices bill but somehow my vote was not recorded.

Mr. Speaker, I ask unanimous consent that the RECORD show my intention to have voted "ave" on H.R. 5294 and that this statement appears in the permanent

RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Dela-

There was no objection.

IN SUPPORT OF ZAIRE GOVERN-MENT AND WORLD PEACE

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DERWINSKI. Mr. Speaker, proceeding on the solid premise that enlightenment begets enlightenment. I have today reintroduced, with eight cosponsors, a resolution which affords Congress an opportunity to position itself in support of the Zaire Government

and world peace.

As I pointed out when I introduced an identical resolution on March 22. President Carter deserves commendation for his aid to Zaire which is attempting to defend itself from an attack by a Marxist encouraged mercenary force from Angola. The resolution also calls upon the United Nations and its Security Council "to look posthaste into the blatant violation of Zaire's sovereignty by the invading rebel force with the objective of finding a speedy and peaceful solution to this invasion of Zaire."

Realistically, the current crisis in Zaire can be traced to the head-in-thesand attitude of the 94th Congress. It was that Congress which stopped President Ford from aiding elements in Angola which were resisting a Soviet-Cuban-backed minority. That action certainly encouraged the ascendancy of a Marxist regime which now is aiding a rebel force that is invading Zaire from a staging area in Angola.

The invasion of Zaire represents a clear threat to world peace and to Zaire's critically important copper industry in Shaba Province. If Zaire were to lose Shaba Province, the government probably would fall and the security of neighboring Zambia would be jeopardized.

Zaire is one of the few allies the United States has in black Africa. Its demise very possibly would result in the installation of another Marxist-oriented regime in Africa with a concomitant increase in Soviet influence in an area laden with strategically important reserves

On January 27, 1976, 99 Members of this body voted in opposition to a Senate amendment to the fiscal year 1976 defense appropriations bill to cut off funds for covert operations in Angola. Events have since demonstrated the correctness of that opposition vote.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE A CON-FERENCE REPORT

Mr. NATCHER. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a conference report on the bill (H.R. 4877) making supplemental appropriations for the fiscal year 1977, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Ken-

tucky?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, should we reserve points of order on this?

Mr. NATCHER. It is not necessary. Mr. ROUSSELOT. Mr. Speaker, has the minority been informed?

Mr. NATCHER. The minority has been informed.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentleman and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Ken-

There was no objection.

REQUEST FOR COMMITTEE BANKING, FINANCE AND URBAN AFFAIRS, TO SIT DURING 5-MINUTE RULE TODAY

Mr. MINISH. Mr. Speaker, I ask unanimous consent that the Committee on Banking, Finance and Urban Affairs may sit during the 5-minute rule

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

Mr. ROUSSELOT. Mr. Speaker, I object.

Mr. WYLIE. Mr. Speaker, I object. Mr. GRASSLEY. Mr. Speaker, I

Mr. EVANS of Delaware. Mr. Speaker, I object.

Mr. BAUMAN. Mr. Speaker, I object. Mr. GOODLING. Mr. Speaker, I object. Mr. MICHEL, Mr. Speaker, I object.

Mr. LAGOMARSINO. Mr. Speaker, I object.

Mr. SCHULZE. Mr. Speaker, I object. Mr. TREEN. Mr. Speaker, I object. Mr. BROOMFIELD. Mr. Speaker, I

object. The SPEAKER. Objection is heard.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement. Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated, and after those motions, to be determined

by nonrecord votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

TO PROVIDE FOR RELIEF AND RE-HABILITATION ASSISTANCE TO THE VICTIMS OF THE RECENT EARTHQUAKES IN ROMANIA

Mr. ZABLOCKI. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5717) to provide for relief and rehabilitation assistance to the victims of the recent earthquake in Romania, as amended.

The Clerk read as follows: H.R. 5717

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 9 of part I of the Foreign Assistance Act of (as amended) is amended by adding at the end thereof the following new section:

"SEC. 495D. ROMANIAN RELIEF AND REHA-BILITATION.—(a) The Congress, recognizing that prompt United States assistance is necessary to alleviate the human suffering arising from recent earthquakes in Romania. authorizes the President to furnish assistance, on such terms and conditions as he may determine, for the relief and rehabilitation of refugees and other earthquake victims in Romania.

"(b) There are hereby authorized to be appropriated to the President for the fiscal year 1977, notwithstanding any other provisions of this Act, in addition to amounts otherwise available for such purposes, not to exceed \$20,000,000, which amount is authorized to remain available until expended.

'(c) Assistance under this section shall be provided in accordance with the policies and general authority contained in section

"(d) Obligations incurred prior to the date of enactment of this section against other appropriations or accounts for the purpose of providing relief and rehabilitation assistance to the people of Romania may be charged to the appropriations authorized under this section.

"(e) Not later than sixty days after the date of enactment of appropriations to carry out this section, and on a quarterly basis thereafter, the President shall transmit reports to the Committees on Foreign Relations and Appropriations of the Senate and to the Speaker of the House of Representatives regarding the porgraming and obliga-tion of funds under this section.

(f) Nothing in this section shall be interpreted as endorsing any measure under-taken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki) Final Act and the United Nations Declaration on Human Rights, or as constituting a precedent for or commitment to provide United States development assistance to Romania, and the Romanian Government shall be so notified when aid is furnished under this section.".

The SPEAKER. Is a second demanded? Mr. BROOMFIELD. Mr. Speaker. I demand a second.

Mr. ROUSSELOT. Mr. Speaker, I demand a second.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. ROUSSELOT. Mr. Speaker, I am. The SPEAKER. The gentleman qualifies. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER. The gentleman from Wisconsin (Mr. ZABLOCKI) and the gentleman from California (Mr. Rousselot) will each be recognized for 20 minutes.

The Chair recognizes the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the bill H.R. 5717, as amended, authorizes \$20 million to provide for the relief and rehabilitation of refugees and other earthquake victims in Romania. The executive branch has requested congressional consideration of this measure on a very urgent basis, in order to effectively demonstrate this country's readiness to act in accordance with our humanitarian tradition.

It is a clear intention of the Committee on International Relations that the disaster assistance authorized in H.R. 5717 is to serve the humanitarian needs of the victims of the earthquake and not to be confused with or used as development assistance to the Romanian Government. This bill was introduced with this intention in mind, and language in the form of an amendment was added by the committee on page 2, line 2 by substituting the words "earthquake victims" for the words "needy people," to make clear beyond any doubt that the sole purpose to be served by these disaster assistance funds would be strictly humanitarian and related directly to losses incurred by the earthquake.

The committee also further amended the bill by substituting on page 2, line 6, the sum, "\$20,000,000" for the sum "\$25,-000.000." This amendment brought the amount of the authorization into line with the executive branch recommendation and the Senate bill, S. 1124.

A third amendment is a technical correcting amendment and simply inserts after "chapter 9," the words "of part I".

As you are all no doubt aware, the earthquake that struck Romania on March 4 was a major disaster. The most recent reports from the executive branch lists over 1,500 dead, 11,000 injured, and 34,000 families homeless. Losses to the Romanian economy are said to exceed \$1 billion. AID has already provided some \$626,000 in emergency disaster relief.

The Committee on International Relations held 2 days of hearings on this bill, on April 4 and today, April 5. The executive branch witnesses who testified in support of the bill as amended, and answered the questions of the committee were: the Honorable Matthew Nimetz, Counselor-Designate, Department of State; Mr. John A. Armitage, Deputy Assistant Secretary of State for European Affairs; Mr. Kempton B. Jenkins, Deputy Assistant Secretary of State for Congressional Relations; and General Earl E. Anderson, Director of the Office of Foreign Disaster Assistance, Agency for International Development.

The executive branch intends to use the funds authorized by this bill in accordance with the following list of priorities, according to the testimony received by the committee, and an April 4 letter from the Deputy Secretary of State, Mr. Warren Christopher:

First. Hospital, medical, and similar equipment and commodities with a humanitarian purpose:

Second. Equipment, commodities, and technical services required for clearing damaged buildings and the rehabilitation and reconstruction of damaged housing, schools, and hospitals; and

Third, Equipment and commodities reguired for rehabilitation and reconstruction and replacement in other sectors.

I wish to emphasize to my colleagues once again that this bill is strictly for humanitarian assistance to the earthquake victims. Further, it is not to be construed in any way as constituting a precedent for or commitment to provide U.S. development assistance to Romania.

Finally, Mr. Speaker, I would urge all of my colleagues to support this bill and thereby continue the generous tradition of the U.S. response to disasters which befall our less fortunate fellow man. As the most fortunately endowed country in the world, we have always done so in the past. Recent disaster assistance to Yugoslavia, Turkey, Italy, and in Latin America has demonstrated our generosity.

Finally, our relations with Romania have been steadily improving in recent years, and a generous response from the United States now, in their hour of need will no doubt go a long way to encourage this positive trend.

Therefore, for all of these good reasons, I urge adoption of this bill as amended.

Mr. ROUSSELOT. Mr. Speaker, before yielding to my distinguished colleagues on this side of the aisle who are very anxious to talk about this giveaway money, can the distinguished chairman of the committee tell me whether this is a direct grant? As I understand it, there are no loans, but a straight giveaway of money.

Mr. ZABLOCKI. Will the gentleman vield?

Mr. ROUSSELOT. I yield to the gentleman.

Mr. ZABLOCKI. There is no simple transfer of money, nor any loan involved. It is for humanitarian disaster assistance, and we will have full knowledge whether it is used for the purposes intended in this bill.

Mr. ROUSSELOT. If the gentleman can tell us, who in this country, which agency, will control the program? How it will work?

Mr. ZABLOCKI. The Agency for International Development.

Mr. ROUSSELOT. AID. And we can be assured they will not be as permissive as they have been sometimes in the past in giving away money? In other words, can we be assured it will go directly for the disaster victims of the earthquake and will not be in any way used for military purposes or to assist the Government in Romania, which is a Communist dictatorship? None of those purposes?

Mr. ZABLOCKI. I can assure the gentleman categorically it will not be used for those purposes. And I can further assure the gentleman that AID will comply with the intent of Congress, and we will have a report in 90 days, which I am sure will help us insure that their actions are in conformity with the legislative intent of this bill.

Mr. ROUSSELOT. Can the gentleman explain to us why there is no report? What is the big rush?

Mr. ZABLOCKI. The reason is that it is humanitarian legislation and there

is a need to move quickly.

Mr. ROUSSELOT. I understand that. Mr. ZABLOCKI. And it is very urgent that we pass it. The reason we were unable to provide a report—we have a report in readiness-the reason it could not be printed for consideration today is because of the lack of time. If we do not act on it today-and we sincerely hope it will pass-it will then have to wait until after Easter.

Mr. ROUSSELOT. If we brought it up, say, tomorrow, we would have been able to get a report printed, probably. It is not that I think a report of the committee is an absolute necessity, but it does give more of us who want to raise questions a genuine chance to see what the committee did, what their findings were, and if in fact there were any supplementary, additional, or minority views.

It was a voice vote in committee for this, was it not?

Mr. ZABLOCKI. It was a voice vote. Mr. ROUSSELOT. I know we are always in a great hurry. We are always told if we do not do it today, everything will fall apart tomorrow. But I do not understand why we were not able to get a report. I do know it is for a disaster loan, that there are great problems in Romania as aresult of the earthquake, and the gentleman cited the figures of the casualties, et cetera. None of us want to be in a position of being against help-

ing people who genuinely need assistance. Why cannot Moscow provide the wherewithal? I mean, are they in desperate straits, or something?

Mr. ZABLOCKI. Will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman.

Mr. ZABLOCKI. It is my understanding that Moscow has assisted the Romanian people.

Mr. ROUSSELOT. How much?

\$22 million, Mr. ZABLOCKI. equivalent of \$22 million.

Mr. ROUSSELOT. They have sent \$22 million from Moscow?

Mr. ZABLOCKI. Yes.

Mr. ROUSSELOT. The equivalent? Mr. ZABLOCKI. The equivalent of \$22

Mr. ROUSSELOT. That has all been in direct medical aid, and humanitarian services, and there has been no use of that money other than to help the people who have been harmed or damaged by the earthquake; is that right?

Mr. ZABLOCKI. That is my understanding.

Mr. ROUSSELOT. What is the estimate the committee received as to how much total aid was needed? If Moscow gave \$22 million, why did they not, say, appeal to the OPEC nations, who have lots of hard American cash which they have received from selling oil to us? Why did they not appeal to the OPEC nations for help?

Mr. ZABLOCKI. The determination as to the amount of aid was in part the result of AID and other U.S. Government agencies assessing the needs, and the amount was arrived at accordingly. As I stated, the loss to the economy of Rumania was over \$1 billion.

Mr. ROUSSELOT. What is the total amount that Rumania requested from all

sources?

Mr. ZABLOCKI. That figure I am not

in a position to give.

Mr. ROUSSELOT. We do not have that figure. So how do we know that our "participation" should be \$10 million, \$15 million, or \$20 million? If Moscow has already sent \$22 million, how do we know that another \$20 million is needed so urgently, without the Members having been provided with a report, and being badgered, etc.

Mr. ZABLOCKI. If the gentleman will yield, I am sure the gentleman will thoroughly understand the difficulty in assessing the total need. But I must point out that we are not predicating our assistance on what they might like to have

on or what they want.

Mr. ROUSSELOT. Well, I would think

we would want to do that.

Mr. ZABLOCKI. And \$20 million is a very reasonable amount. It is in keeping with our tradition of assisting those who are in need.

Mr. ROUSSELOT. Has Romania re-

quested \$20 million from us?

Mr. ZABLOCKI. Mr. Speaker, I am sure that if Romania had the prerogative of requesting more, they would; \$20 million was the amount agreed upon by the committee.

Mr. ROUSSELOT. But we do not have a definitive request from Romania for

\$20 million?

Mr. ZABLOCKI. We have a request for \$20 million. As a matter of fact the Romanians would like much more.

Mr. ROUSSELOT. We do? Mr. ZABLOCKI. We do.

Mr. ROUSSELOT. Do we have that

in writing?

Mr. ZABLOCKI. Yes, we do. I received a letter from the Under Secretary of State, Mr. Warren Christopher, supporting an authorization of \$20 million.

Mr. ROUSSELOT. The committee or the investigating body that went from AID and investigated and returned to this country said that \$20 million was what they needed; is that right? I

thought it was \$10 million.

Mr. ZABLOCKI. Mr. Speaker, I might explain to the gentleman further that the \$10 million that was in the supplemental appropriation bill in the other body was not the full amount supported by the executive branch. It is my understanding that the other body will attempt to correct this figure and increase it to \$20 million.

Mr. ROUSSELOT. How did they get

so far off?

Mr. ZABLOCKI. I cannot speak for the other body as to why they went that far off.

Mr. ROUSSELOT. Of course, none of

us would try to do that.

Mr. ZABLOCKI. Mr. Speaker, if the gentleman will yield further, I was advised earlier that the figure of \$50 million was going to be proposed. We felt immediately that that would be a figure in excess of what the Congress would re-

spond to favorably and, therefore, when the bill was introduced, the figure of \$25 million was the amount authorized to be appropriated. In the deliberations of our committee we reduced it by \$5 million.

Mr. ROUSSELOT. Mr. Speaker, I appreciate that, and I am sure the American taxpayers do, especially when we really do not know what the definitive amount is that is really needed. The other body said it was \$10 million; the gentleman is now telling us that figure needs to be corrected.

What was the additional finding of the committee or the group—the auditors, I think the gentleman said—that was sent over? When will they report back to us as to their findings, and why can we not wait until that gets back?

Mr. ZABLOCKI. Mr. Speaker, will the

gentleman yield?

Mr. ROUSSELOT. I yield to the gen-

tleman from Wisconsin.

Mr. ZABLOCKI. The first team has already come back and reported to the executive branch, and the executive branch has, on the basis of that report, supported a program of \$20 million.

As I said earlier, the damage is far in excess of that figure; it is perhaps \$1 billion. However, I think our contribution of \$20 million is a gesture in keeping with our humanitarian interests and our desire to assist those who are struck by a very unfortunate incident.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the comments of the distin-

guished committee chairman.

Mr. Speaker, I now yield 3 minutes to my distinguished colleague, the gentleman from Illinois (Mr. Derwinski), who, I understand, favors this outstanding giveaway program.

Mr. DERWINSKI. Mr. Speaker, I am pleased to support H.R. 5717, the legislation which will provide relief and reconstruction assistance to the victims of the Romanian earthquake. In my opinion, the aid would effectively demonstrate our country's readines to assist victims of a disaster in a humanitarian undertaking.

As the Members know, the earthquake that struck Romania on March 4 was a major disaster. The reports available to us show that over 1,500 persons were killed, 11,000 were injured, and 34,000 families were left homeless. More than 32,000 buildings were destroyed or seriously damaged, and losses exceed \$1 billion

The Romanian Government has requested our assistance, and I believe the United States should take the necessary steps to help Romania in their reconstruction efforts from this major disaster.

Funds provided by the United States would be used for humanitarian purposes. They would be used for hospital, medical and similar equipment, as well as technical services, commodities, and equipment for clearing damaged buildings and the rehabilitation and reconstruction of damaged housing, schools, and hospitals. Some of these funds would also provide equipment and commodities required for rehabilitation and reconstruction and replacement in other sector.

Romania has demonstrated specific areas of independence from the U.S.S.R. in its foreign policy. Moreover, in its domestic policy, while maintaining a typical Communist regime, it has cooperated with humanitarian immigration efforts and has progressed beyond the practices followed by some of the other East Eurpean governments.

It must be noted that the Romanians

It must be noted that the Romanians are receiving more assistance from the free world than from Communist governments, a point that will not be lost on the Romanian officials and the Romanian people as they struggle to recover from the disaster. Thus, our aid would be a positive foreign policy step as well as a legitimate humanitarian

action.

I believe action is appropriate to make funds available for these purposes, and urge Members to support the legislation to aid Romania in their reconstruction efforts.

Mr. Speaker, I support this bill in the spirit of statesmanship and diplomatic leadership that the Republican side of

the aisle displays.

I would like to point out to the Members that this bill is consistent with the humanitarian response that the United States provides peoples in other countries when they are the victims of a natural disaster. The good Lord, when he inflicts such punishment, does not ask about the political color of the victims, and the question of the political situation in Romania is really beside the point insofar as the suffering of the victims is concerned.

However, since a number of the Members in committee, as well as on the floor, have raised a question concerning the precedent of providing disaster relief for a country with a Communist government, let me remind the Members that back in 1962, when an earthquake devastated Skopie, Yugoslavia, we did provide emergency relief which was very effective and, I might add, appreciated.

In this particular case I can assure the Members that the assistance we provide the people of Romania will be appreciated by them and will enhance their respect for and their appreciation and understanding of the attitude of the American people and our Government. I think this is a worthwhile measure. I believe it is a practical measure.

Quite frankly, the relief support reaching Romania from the West substantially exceeds the relief Romania is receiving from the governments of Eastern Europe, which to me is dramatic evidence of the effectiveness of our approach rather than that of the Communist regimes.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield briefly?

Mr. DERWINSKI. Of course.

Mr. ROUSSELOT. Mr. Speaker, let me ask the gentleman this:

Was there any attempt by Romania to get any form of relief from the OPEC nations or the Arabic nations, which are very cash-rich after receiving all the money they have taken from us in selling us their oil?

Mr. DERWINSKI. Mr. Speaker, as the

gentleman from California knows, being the great statesman that he is, when disaster strikes a country, its government accepts aid and support from wherever it comes, whether it be from governmental sources or private sources.

Mr. ROUSSELOT. Did we make a determination that a request had been made of the OPEC nations so that maybe so much of a burden would not be placed on us?

Mr. DERWINSKI. I do not believe that, as a matter of practical administrative policy, we could establish such a policy.

Mr. ROUSSELOT. We sent auditors over to look the situation over, did we not?

Mr. DERWINSKI. Yes. But I do not think it is within our jurisdiction to determine what should be expended from other countries. That is an individual determination of a nation.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. ROUSSELOT. I yield 1 additional minute to the gentleman from Illinois.

Mr. DERWINSKI. I would like to point out to the gentleman from California, knowing of his profound appreciation of history and that the gentleman is also one of the great scholars of this body, I am sure he knows that one of the things that has earned for the United States a position of respect throughout the world is the fact that we properly and instinctively come to the support of people affected by natural tragedies. In this case it is a political advantage to the United States to be more effective than the Communist government of the Soviet Union.

I might point out the gentleman from California that Romania, to the extent that they can and are able to do so, have fashioned an independent foreign policy. For example, they do not cooperate with the Warsaw Pact in maneuvers. They did not permit Russian troops to use their soil. They advised the Soviet Union when there were rumors of a Soviet move again Yugoslavia, that they dare not cross their territory.

So, from not only a logical but a humanitarian standpoint I think the gentleman will find this measure to be completely justified.

Mr. ROUSSELOT. Mr. Speaker, I yield 2 minutes to my distinguished colleague, the gentleman from Ohio (Mr. HARSHA).

Mr. HARSHA. Mr. Speaker, I would like to ask the distinguished ranking minority member of this committee, the gentleman from Illinoi (Mr. Derwinski), if the administration approves of this legislation?

Mr. DERWINSKI. The answer is "yes."

Mr. HARSHA. Did they in fact send a request up here?

Mr. DERWINSKI. Yes, the administration, as the chairman, the gentleman from Wisconsin (Mr. Zablocki), has indicated, will use the AID agency as the arm of the administration and this bill is consistent with not only the administration's policy, but I think it is a legitimate request that the American public supports.

Mr. HARSHA. Mr. Speaker, I would like to ask the gentleman from Illinois if he could explain to me the rationale of this humanitarian administration to deny the same kind of relief to the citizens of the State of Ohio after an extremely severe winter where we had damages in excess of \$60 million in losses and damages to our roads and our brdiges, water mains and lines destroyed, and where many farm buildings were destroyed, fences were destroyed, also where the farmers lost a lot of livestock over this extremely difficult winter? Yet this same humanitarian administration refuses to grant aid or relief to those people who are citizens of the United States and most of whom are taxpayers of the United States. Now that administration seeks to take the taxes from those same people and send it for the relief of Communist people across the sea. Would the gentleman please explain the rationale for that kind of policy?

Mr. DERWINSKI. Yes, very easily. First of all, Mr. Speaker, I represent the State of Illinois where many citizens suffered from the same severe winter as they did in Ohio. We did not have quite the problem that they had in Ohio probably because of better planning by our public utilities. But the fact remains that there is a substantial difference between a devastating earthquake and a severe winter. The gentleman from Ohio knows that local and State governments as well as the Federal Government officials have done what they could to alleviate the problems caused from the severe winter and more will be done. But what we are speaking about today is an earthquake in which thousands of people lost their lives, in which the property damage ran into the billions and this is a country without the resources that we

Further, we have consistently gone to the support of people suffering from natural disasters regardless of the political coloration of their country. That is one of the great virtues of our country.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROUSSELOT. I yield 30 seconds to the gentleman from Ohio.

Mr. HARSHA. Mr. Speaker, I thank the gentleman from Illinois for his response, but, Mr. Speaker, I would like to remind the gentleman that a disaster is a disaster no matter where it is. When people have to exist under conditions of 25° below zero over an inordinate length of time then they are suffering a great deal of hardship. The reason we are here seeking Federal assistance is because the local communities are totally unable to cope with the problem. It is of such a magnitude that they do not have the resources or the wherewithal to do it.

So, Mr. Speaker, I question the philosophy of a government that will give taxpayers' money to Communist people and not to U.S. citizens. Charity begins at home. These are Americans and taxpayers and they deserve at least the same humanitarian assistance that this administration offers to communists.

Mr. ZABLOCKI. Mr. Speaker, I yield

1 minute to the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Speaker, let me just say one thing in response to the question about the matter of the Romanians asking for help from the OPEC countries. I, frankly, do not whether they have or not, but would remind the Members that one reason why they might not have asked for help from the OPEC countries is that Romania shipped oil to us all through the Arab oil embargo. Indeed Romania has retained diplomatic relations with Israel and it is the only Warsaw Pact country to do so. So that might explain why they might not have asked for help from the OPEC countries.

Mr. Speaker, in recommending continued most favored nation treatment by the United States toward Romania last year, President Ford said that "continued good United States-Romanian relations, both political and commercial, serve the foreign policy interests of both countries." That, I think, is a good summary of our national posture toward Romania. It is to further cement good relations with the people of Romania that I introduced H.R. 5717, with the cosponsorship of Mr. Vanik, Mrs. Fenwick, Mr. Rostenkowski, and Mr. Whalen.

I do not need to recite the terrible consequence of the recent earthquake in Romania. They have been widely reported in the press, and were discussed in detail when the House, on March 17, passed a resolution—Senate Concurrent Resolution 12—expressing our sympathy to the Romanian people and calling for the United States to do everything possible to assist the victims of this terrible natural disaster. The legislation now before us would fulfill the promise of that resolution in concrete terms by providing \$20,000,000 in relief and rehabilitation assistance to the earthquake victims.

The Romanian people, Mr. Speaker, have in recent years sacrificed a great deal in efforts to develop their country. The Romanian Government has pursued one of the most ambitious economic development programs of any developing country in the world. In its current 5-year plan, for example, Romania seeks overall economic growth of 9 to 10 percent.

While it has not always achieved these goals, and while some of us might question the wisdom of such rapid growth, these development efforts have required the Romanian people to live with virtually no luxuries and with little in reserve to fall back on in the event of disasters such as the recent earthquakes. The plight of the earthquake victims, therefore, is particularly serious and assistance urgent.

The United States has a long tradition of extending a helping hand to people in need of our help in emergencies. It is one of our proudest traditions—a tradition for which we are remembered with affection by millions of people around the world. We should join with other nations in living up to this tradition of care and generosity for Romania in its moment of need as we have for other friendly nations.

The only factor, Mr. Speaker, that

could give anyone the slightest pause concerning this legislation is the fact that Romania is a Communist country. Several things should be kept in mind about that, however.

Most importantly, as has already been mentioned, Romania is among the most independent of the Communist countries in its foreign policy. It trades more with the West than it does with the Communist bloc. It is a member of COMECON—the Soviet dominated common market of Communist countriesbut pursues its own economic planning and development without subordination to COMECON planning. It does not permit Soviet troops to be stationed on its soil, and generally does not participate in Warsaw Pact maneuvers. It has abstained or voted with the West on a number of occasions on issues of importance to the United States in the United Nations and other international bodies. Unlike most other Communist countries, it is a member in good standing of the International Monetary Fund and other international financial institutions.

Mr. Speaker, the friendship of the Romanian Government and people toward the United States is well proved. As I have already noted, Romania supplied us with oil during the critical days of the Arab oil embargo. The number of Romanians emigrating to the United States has increased dramatically in recent years. We have had many cultural and sports exchanges. We have recognized our basic friendship with Romania by granting it most favored nation status.

In the final analysis, however, the assistance called for in this legislation should not be put in a political context. This is a humanitarian bill. The assistance it provides will go directly to the earthquake victims and their rehabilitation. I urge my colleagues to support this legislation to grant \$20 million in emergency disaster assistance in Romania.

Mr. ZABLOCKI. Mr. Speaker, I yield 1 minute to the gentleman from Indiana (Mr. Hamilton).

Mr. HAMILTON. Mr. Speaker, I rise in support of H.R. 5717, a bill to authorize an appropriation of \$20 million for disaster relief aid and reconstruction assistance for Romania.

On March 4, 1977, Romania was hit by a severe earthquake, the epicenter of which was only a little more than 100 miles from Bucharest, the capital. The earthquake did considerable damage to Bucharest and surrounding towns. Over 1,500 people were killed, some 11,000 were injured, and close to 150,000 citizens were left homeless.

Mr. Speaker, this disaster relief and reconstruction effort is designed to help the Romanian people deal with post-earthquake problems. This aid is not designed to merely supplement other Romanian Government programs. Rather, based on extensive discussions with the Romanian Government, this assistance will help Romania with three priority concerns:

First. Hospital, medical, and similar equipment and commodities with a humanitarian purpose;

Second. Equipment, commodities, and

technical services required for clearing damaged buildings and the rehabilitation and reconstruction of damaged housing, schools, and hospitals; and

Third. Equipment and commodities required for rehabilitation and reconstruction and replacement in other sections.

Mr. Speaker, we have important mutual interests with Romania. Romania has been an independent voice in Eastern Europe. The earthquake Romania recently had will likely put enormous pressures on the country's efforts to maintain independent policies.

But we also have a strong interest in demonstrating our concern over the human suffering and misery that has hit Romania in the aftermath of the earthquake.

H.R. 5717 shows our concern for the suffering of the Romanian people. I urge its adoption.

Mr. ROUSSELOT. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr Findley).

Mr. FINDLEY. Mr. Speaker, I rise in support of the bill. Some question was raised as to the extent of earthquake damage. It was an enormous toll. In monetary terms the Romanian Government estimated it at about \$1 billion.

A question was raised as to other countries' helping in this crisis. The United Kingdom, which is a country, of course, with many pressing financial problems, nevertheless offered the equivalent of \$20 million in aid to Romania.

I realize that this matter is being considered under rush conditions. I wish more time had been taken for the deliberations, but I believe that in a situation like this where there are humanitarian considerations as well as political considerations the timeliness of the congressional response is important. Therefore, I do recommend that the House suspend the rules and pass the bill. H.R. 5717.

Mr. Speaker, in the wake of natural disasters striking other nations, the United States has repeatedly reached out to help the victims with food supplies, clothing, medical help, and shelter.

We have responded in the past to earthquakes in Italy, Guatemala, and Turkey with relief and rehabilitation aid. In 1970, we provided Romania which had been hit by a series of spring floods with \$11.5 million. That aid money significantly improved the climate of United States-Romanian relations.

By approving H.R. 5717 to authorize \$20 million in disaster relief aid for Romania we have a good opportunity to demonstrate our interest in continued good relations with Romania and to help the victims of the March 4 earthquake which left 1,500 dead, 11,000 injured, and 34,000 families homeless. To date we have sent shipments of medical supplies and powdered milk to Romania as well as a team of seismic experts to assess the extent of the damage. This initial aid of \$625,000 was funded out of the Foreign Assistance Act and Public Law 480 and would be included in the \$20 million total proposed today.

The economic difficulties engendered by this earthquake which hit the center of Romania's industrial area jeopardize the independent path Romania has been trying to maintain during the past 10 years. Our aid would signal our interest in Romania continuing its efforts to avoid total domination by the Soviet Union.

In recent years, these efforts have meant that Romania has only minimally participated in Warsaw Pact maneuvers and has not permitted their maneuvers on Romanian soil.

United States-Romanian relations have been friendly. We have extended most favored nation status to Romania. We have a cultural and scientific exchange agreement with Romania and have signed with that country a statement of principles on economic cooperation.

The money authorized for Romania will provide hospital and medical equipment supplies and goods. Nine hospitals were damaged in Bucharest alone.

It will also provide services and equipment for clearing rubble and for rehabilitating shelter and hospitals for the earthquake victims. I would like to stress, however, that this money should be used strictly for humanitarian purposes and should not go toward large-scale reconstruction projects.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. FINDLEY. I yield to the gentle-

man from California.

Mr. ROUSSELOT. I thank the gentleman for yielding.

I appreciate my colleague's point, but I do think it is unfortunate that we did not have time for the committee report to be printed and that we did not have time to debate this under an open rule and consider whether in fact "our fair share" would be \$10 million or \$20 million. Unfortunately, this is always the method and technique that we use. I do not believe I day would have made that much difference, although I realize there is a scheduling problem so that we can go on our "working recess."

Mr. FINDLEY. I want to say to the gentleman that I agree with the points that he has made. As one member of the committee I did what I could to secure full consideration, and I hope that the committee in the future will be more deliberate in taking up questions of this sort.

Mr. ROUSSELOT. I appreciate my colleague's comment.

Mr. Speaker, I yield 1 minute to my distinguished colleague, the gentleman from Ohio (Mr. Whalen).

Mr. WHALEN. Mr. Speaker, I thank the gentleman from California for yielding. I simply rise as one of the coauthors of this bill in its support.

Mr. Speaker, today we are considering a measure to provide \$25 million for disaster relief to Romania to aid in that country's recovery from the greatest natural disaster in its history.

On March 4, 1977, a devastating earthquake measuring 7.2 on the Richter scale struck Romania. The heaviest damage occurred in the capital city of Bucharest, where it is estimated that 1,400 persons were killed and 10,500 injured.

According to official information, the heaviest damages were inflicted upon the chemical industry; machine-manufac-turing industries; food, forestry, construction, metallurgy, and transportation industries. Agricultural facilities were destroyed. And 32,897 housing units collapsed or were heavily damaged, while tens of thousands of homes suffered lesser damages. Over 34,500 families were left homeless.

Important losses also occurred in the commercial and services sectors with numerous medical institutions, schools and kindergartens, institutes of higher edupublic cation, historic monuments, buildings, and cultural facilities destroyed. In all, damages are estimated at over \$2 billion. These losses come on top of severe droughts in 1974 and mas-

sive flooding in 1975.

The Romanians have undertaken reconstruction and recovery in an admirable fashion, with assistance from many countries. The United States promptly sent medical provisions and trained seismological personnel to Romania in the days following the earthquake. Additional American expertise and financial support is needed in the fields of housing and engineering. This continued assistance requires authorization by the Congress.

On March 17, the House joined the Senate in expressing the sense of Congress that the United States should do all that is possible to assist Romania in recovering from the earthquake of March 4. The legislation before us today, which is sponsored by Mr. VANIK, Mr. ROSTENkowski, Mrs. Fenwick, and myself, enables us to make that promise a reality. In view of our constantly improving relations with that country and our response to similar, but lesser, disasters in other countries such as Italy and Yugoslavia, let us not hesitate to extend to Romania this concrete proof of our compassion and friendship.

Mr. ZABLOCKI. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. Biaggi)

Mr. BIAGGI. Mr. Speaker, I rise in full support of H.R. 5717, legislation to provide desperately needed relief and reconstruction aid for the nation of Romania which was ravaged by an earthquake on March 4. Passage of this legislation will be consistent with this Nation's leadership on behalf of persons of foreign nations who are victims of natural disasters

The March 4 earthquake was truly a disaster of profound significance. The most recent reports show over 1,500 dead, 11,000 persons injured, and some 35,000 families homeless. The total extent of damage may exceed \$10 billion. The Romanian Government has specifically requested this assistance and the Carter administration has indicated its support of any relief efforts which Congress may provide.

The need for U.S. assistance is both obvious and compelling. Among the priority needs in Romania today is medical equipment and services to aid the injured. An equally important need is for equipment which will help in the removal of damaged buildings which pose a continual threat to many towns in Romania.

I myself was the sponsor of similar legislation to aid the victims of the Italian earthquake of last May. We provided \$25 million in emergency assistance which according to reports I have received has played an invaluable role in the rebuilding of the Fruili region of Italy which was virtually devastated by the earthquake. We have provided similar assistance to a number of other nations including Turkey, the African Sahel, and Ethiopia, Our record on behalf of providing emergency humanitarian aid is sound. Passage of this legislation will be an important extension of this commitment

Of course, in our discussion of this legislation we should not be oblivious to the political situation in Romania, Despite being a captive nation under Soviet control-Romania over the years has demonstrated their independence from certain of the repressive policies of the Soviet Union. A primary example is the area of emigration. Despite the practices of the Soviet Union and other Eastern European nations which refuse emigration privileges to their citizens-Romania has accomplished an outstanding record in this area. They have consistently demonstrated great humanitarian concern in their allowing of Romanian citizens to emigrate to the United States to be reunited with relatives and friends. To aid Romania in her desperate time of need would represent more than mere humanitarianism. It would make important sense from a foreign policy standpoint, as we would clearly be showing our solidarity with the freedom loving people of Romania

Mr. Speaker, I am proud to support this legislation today. The people of Romania need our help today and we should respond generously. The thousands of injured and destitute victims of this horrible calamity are awaiting our actions today. Let us not let their pleas go unanswered.

Mr. ROUSSELOT. Mr. Speaker, I yield

myself 2 minutes.

Mr. Speaker, I think I have made the point, and my colleague, the gentleman from Illinois, has tended to agree with me, although he supports the bill. I think it is unfortunate that in the name of emergency we rush these kinds of bills through. I certainly do not want to be accused of being insensitive to the needs of disaster-stricken people, and obviously in this case it is desperately needed, but I do feel it is unfortunate that under this procedure, where there is no chance for amendment, there is no chance for really closer questioning as to what amount genuinely our country should be asked to contribute. In fact I have been told that the amount might be as much as a billion dollars of damage, but my attitude is that really Russia which controls this country to a substantial degree has the basic responsibility for providing the assistance even though Romania claims to be a relatively independent satellite of Soviet Russia.

I do not recall Russia ever offering to help, nor have we ever requested it to help when we have had a disaster of a substantial nature. I find it very regretful that we have brought this legislation

up under this procedure. I think it was unfortunate that the committee felt it necessary to rush the bill through in this

I know comments will be made that it is only \$20 million, but that is still a great deal of money, and as my colleague. the gentleman from Ohio, said, he has found it difficult to get aid in Ohio for people who have been drastically hurt by the winter situation. I think it is an unfortunate conflict that we are rushing this bill through here today.

Furthermore, I think it can be well substantiated that there are sufficient funds already available under a number of different accounts which would more than satisfy the needs of Romania without Congress having to hurriedly pass this special emergency legislation. There are at least four different places where disaster-relief funds for Romania could

be secured:

First. The Agency for International Development Disaster Relief Account. It is my understanding that this is a \$26 million account with sufficient funds to assist Romania, at least in the short run, until we have a better chance to carefully consider this legislation.

Second. Public Law 480 Agriculture

account.

Third. Export-Import Bank.

Fourth. Contingency funds account of the 1977 foreign aid appropriation. The Appropriations Committee has indicated that there are sufficient balances in this account to more than take care of the immediate needs of Romanian earthquake victims.

It is clear to see, then, that more than adequate resources are already available to grant Romania the relief that it needs-at least until Congress has had a better chance to consider this matter and carefully determine exactly what Romanian needs truly are.

Mr. BROOMFIELD. Mr. Speaker, H.R. 5717 proposes a \$20 million authorization for relief and rehabilitation for Romania to aid that nation to recover from the earthquake it suffered on March 4. This is a timely and generous response appropriate to the United States and is indicative of our continuing desire to help victims of natural disasters. In recent years we have provided Italy, Guatemala, and Turkey with assistance in the aftermath of similar earthquake tragedies.

In the days immediately following the March 4 earthquake, the United States rushed medical supplies and more than 300 tons of powdered milk to Romania. We also sent a team of seismic experts to Bucharest to assess the extent of structural damage. This initial aid package of \$625,000 was funded out of the Foreign Assistance Act of 1961, as amended and from Public Law 480 accounts. This assistance would be subsumed within this authorization rather than be in addition to the \$20 million.

Reports we have received from seismic experts and estimates from our Embassy in Bucharest place the level of damage at over \$1 billion. In Bucharest alone, nine hospitals suffered structural damage. However, the greatest loss was in terms of human lives. As a result of the earthquake, over 1,500 are dead, 11,000 injured while 34,000 more families are homeless.

These reports on aid priorities have stressed the need for medical supplies and equipment, and for assistance to repair hospitals and shelters. Although the administration has also expressed interest in some funding for rehabilitation and reconstruction, I would like to reiterate my concern and the concern of many of my colleagues that this aid be devoted to purely humanitarian ends. I would also like to note with approval the language in this bill which states that this authorization does not constitute a precedent for further aid to Romania.

I, therefore, intend to support H.R. 5717 and urge my fellow Members of the House to vote to authorize humanitarian disaster relief aid for Romania.

Mr. ROSTENKOWSKI. Mr. Speaker, I am pleased to see that H.R. 5717 is receiving such expeditious consideration in the House. The United States has always been quick to respond whenever a natural disaster of this magnitude has struck. The House and Senate have already passed Senate Concurrent Resolution 12, expressing the sympathy of the United States to the victims of this disaster and requesting that our country do all that is possible to assist the victims of the earthquake. As one of the original cosponsors of H.R. 5717, I congratulate Chairman ZABLOCKI and the members of the Committee on International Relations for their prompt consideration of this legislation.

During the consideration of Senate Concurrent Resolution 12, I discussed the damages which the recent earthquake caused in Romania. At that time, however, only preliminary figures were available. We have now learned from the Department of State and from official Romanian communiques that the damages from the earthquake will amount to more than \$1 billion. There are more than 1,500 people dead, almost 1,400 of these in Bucharest alone, and over 20,-000 injured. Thirty-two thousand housing units either collapsed or were heavily damaged, leaving 34,000 families without shelter. Two hundred industrial enterprises have had to close, at least temporarily.

The funds provided by H.R. 5717 would be used for such humanitarian purposes as hospital and medical supplies. These funds also would provide assistance in clearing and reconstructing damaged hospitals, schools, and homes; and would be used for equipment and commodities to rehabilitate and reconstruct damaged areas.

The long-range effects of this disaster will be visible for years to come. There is very little we can now do to remedy this. We can do something, however, to alleviate the high degree of human suffering which presently exists in Romania.

I again congratulate the International Relations Committee for moving so rapidly on this important bill and urge all my colleagues to support it.

GENERAL LEAVE

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to

revise and extend their remarks on the bill (H.R. 5717) pending before us.

The SPEAKER pro tempore (Mr. Foley). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI, Mr. Speaker, I yield myself 1 minute.

Mr. Speaker, I realize that the gentleman from California is concerned and I do appreciate his concern that we are rather hurriedly scheduling this bill, but we must bear in mind that at this time if we do not consider it today, the bill could not be considered tomorrow. If we are going to deal with an emergency, we have to do it as soon as possible.

I detect that there are some, or at least the gentleman from California has given me this impression, who feel that we should stand back and see who else will help and then come with our little share. I think this would not be in keeping with our tradition of assisting those who are in need and, therefore, I urge the adoption of this bill.

Mr. ZABLOCKI. Mr. Speaker, I have

no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wisconsin (Mr. Zablocki) that the House suspend the rules and pass the bill H.R. 5717, as amended.

The question was taken.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently

a quorum is not present.

Pursuant to clause 3 of rule XXVII and the Chair's prior announcement, further proceedings on this motion will be postponed.

Does the gentleman from Maryland withdraw his point of order that a quorum is not present?

Mr. BAUMAN. Mr. Speaker, I withdraw my point of order.

ELEMENTARY AND SECONDARY CAREER EDUCATION ACT OF 1977

Mr. PERKINS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 7) to authorize a career education program for elementary and secondary schools, and for other purposes as amended.

The Clerk read as follows:

H.R. 7

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Elementary and Secondary Career Education Act of 1977".

PURPOSE

Sec. 2. In recognition of the prime importance of work in our society and in recognition of the role that the schools play in the lives of all Americans, it is the purpose of this Act to assist States and local educational agencies in making education as preparation for work, and as a means of relating work values to other life roles and choices (such as family life), a major goal of all who teach and all who learn by increasing the emphasis they place in elementary and secondary schools on career awareness, exploration, decisionmaking, and planning, and

to do so in a manner which will promote equal opportunity in making career choices through the elimination of bias and stereotyping (including bias and stereotyping on account of race, sex, or handicap) in such activities.

AUTHORIZATIONS

SEC. 3. (a) Subject to the provisions of subsection (c), appropriations are authorized to be made (as provided in subsection (b)) to carry out the provisions of this Act for five fiscal years. The first such fiscal year thereinafter in this Act referred to as the first funded fiscal year") may be any fiscal year beginning after the date of enactment of this Act, and the second, third, fourth, and fifth such fiscal years (hereinafter referred to as the "second funded fiscal year", "third funded fiscal year", "fourth funded fiscal year", and "fifth funded fiscal year," respectively) may be any fiscal year thereafter, except that no such appropriation may be made for the second, third, fourth, or fifth such fiscal year unless such an appropriation was made for the first, second, third, or fourth such fiscal year, respectively

(b) Subject to the provisions of subsection (c), there are authorized to be appropriated for the fiscal years specified in sub-

section (a)-

(1) \$25,000,000 for the first funded fiscal year;

(2) \$100,000,000 for the second funded fiscal year;

(3) \$75,000,000 for the third funded fiscal

year;
(4) \$50,000,000 for the fourth funded fiscal
year; and

(5) \$25,000,000 for the fifth funded fiscal

year.

(c) No funds are authorized to be appropriated for any fiscal year under this section unless such funds are appropriated in the fiscal year prior to the fiscal year in which such funds will be obligated, and unless such funds are made available for expenditure to the States prior to the beginning of such fiscal year.

fiscal year.

(d) Notwithstanding any other provisions of law, no funds may be made available under the provisions of section 406(f) of the Education Amendments of 1974 for grants or contracts with local educational agencies for any fiscal year for which funds have been appropriated pursuant to subsection (b).

ALLOCATIONS

Sec. 4. (a) (1) From the sums appropriated pursuant to section 3 for any fiscal year which are not reserved under paragraph (2) of this subsection, the Commissioner shall allot to each State an amount which bears the same ratio to such sums as such State's population, aged five to eighteen, bears to the total population, aged five to eighteen, of all the States, except that no State shall be allotted from such sums less than \$100,000.

(2) The Commissioner shall reserve from the sums appropriated pursuant to section 3 for any fiscal year an amount equal to 1 per centum of the sums so appropriated for that fiscal year for the purpose of making grants to local educational agencies located in Guam, the Virgin Islands, American Samoa, and the Trust Territory of the Pacific Islands in furtherance of the purposes of this Act.

(b) (1) Any funds allotted to a State under subsection (a) (1) for which a State has not applied or for which a State application has not been approved shall be reallotted by ratably increasing the allocations of each of the States which have approved applica-

(2) If the sums appropriated for any fiscal year are not sufficient to make the allotments of the minimum amounts specified in subsection (a)(1), such minimum amounts shall be ratably reduced. If additional sums become available during a fiscal year for which such allotments were reduced, such

allotments shall be increased on the same basis as they were reduced.

APPLICATIONS

SEC. 5. Every State desiring to receive funds appropriated under section 3(b) for the first funded fiscal year shall submit to the Commissioner an application containing assurances that-

(1) the State educational agency will be the agency responsible for planning the use, and administering the expenditure, of funds received under this Act;

(2) the State legislature and the Governor have been notified of the State's application for such funds:

(3) the State will expend, from its own sources, for any fiscal year for which funds are received under this Act, an amount equal to or exceeding the amount which such State expended for career education during the preceding fiscal year;

the State shall make every possible effort to integrate career education into the regular education programs offered in ele-

mentary and secondary schools in the State;
(5) the State educational agency shall provide assurances satisfactory to the Commissioner that programs of career education assisted under this Act will be administered in such a manner as to impact upon all instructional programs in elementary and secondary education, and not be administered solely as a part of the vocational education program, and these programs of career education will be coordinated by a person having prior experience in the field of career education (who shall be designated as a State coordinator of career education);

(6) such agency will employ such staff as are necessary to provide for the administration of this Act and programs of career education funded under this Act, including a person or persons experienced with respect to problems of discrimination in the labor market and stereotyping affecting career education (including bias and stereotyping on account of race, sex, or handicap), and including at least one professional trained in guidance and counseling who shall work jointly in the office of the principal staff person responsible for such administration and coordination and in the office of the State educational agency responsible for guidance and counseling, if any such office

(7) such agency will continuously review the plan submitted under section 6 and will submit such amendments thereto as may be deemed appropriate in response to such agency's experience with the program;

(8) not less than 15 per centum of that portion of a State's grant for any fiscal year which is not reserved pursuant to section 8(b)(1) will be used for programs described in section 7(a)(3)(B); and

(9) the funds received under this Act will be used in accordance with the provisions of section 7.

STATE PLANS

Sec. 6. Every State desiring to receive funds appropriated pursuant to section 3(b) shall submit to the Commissioner by July 1 of the first funded fiscal year a State plan which shall-

(1) set out explicitly the objectives the State will seek to achieve by the end of each of the five funded fiscal years in implementing the goal of providing career education for students in elementary and secondary schools within the State, and set out the methods by which the State will seek each year to achieve these objectives with all resources available;

(2) describe the methods by which the funds received under this Act will be used, in accordance with section 7, to implement the overall objectives in each of the five funded fiscal years;

(3) set forth policies and procedures which the State will follow to assure equal access of all students (including the handicapped and members of both sexes) to career education programs carried out under the State plan;

(4) provide adequate assurance that the requirements of section 5 will be met in each funded fiscal year after the first such year.

USE OF FUNDS

Sec. 7. (a) Subject to the provisions of section 8, funds received under this Act may be used by a State only for the following activities:

(1) employing such additional State educational agency personnel as may be required for the administration and coordination of programs assisted under this Act;

(2) providing State leadership for career education, either directly or through arrangements with private and public agencies and organizations (including institutions of higher education), in-

conducting inservice institutes for education personnel;

(B) training local career education coordinators;

(C) collecting, evaluating, and disseminating career education materials on an intrastate and an interstate basis;

(D) conducting statewide needs assessment and evaluation studies;

(E) conducting statewide leadership conferences;

(F) engaging in collaborative relationships with other agencies of State government and with State organizations representing the business-labor-industry professional community and organizations representing the handicapped, minority groups, and women; and

(G) promoting the adaptation of teachertraining curricula to the concept of career education by institutions of higher education located in the State;

(3) making grants to local educational agencies for comprehensive programs including-

(A) infusing career education concepts

and approaches in classrooms; (B) developing and implementing compre-

hensive career guidance, counseling, placement, and followup services utilizing counselors, teachers, parents, and community resource personnel;

(C) developing and implementing collaborative relationships with organizations representing the handicapped, minority groups, and women and with the business-labor-industry-professional-government community, including the use of personnel from such organizations and that community as resource persons in schools and for student field trips

into that community;
(D) developing and implementing work experiences for students whose primary pur-pose is career exploration, provided that such work experiences are related to existing or potential career opportunities and do not displace other workers who perform such

(E) employing coordinators of career education in local educational agencies or in combinations of such agencies (but not at the individual school building level);

(F) training of local career education coordinators;

(G) inservice education of teachers, counselors, school administrators, and other education personnel aimed at helping them to understand career education, including their roles in career education, and to acquire competencies essential for carrying out their roles;

(H) conducting institutes to acquaint school board members, community leaders, and parents with the nature and goals of career education;

(I) purchasing instructional materials and supplies for career education activities;

(J) establishing and operating community career education councils;

(K) establishing and operating career education resource centers serving both students and the general public;

(L) adopting, reviewing, and revising local plans for coordinating the implementation of the comprehensive program; and

(M) conducting needs assessments and evaluations: and

(4) reviewing and revising the State plan.

(b) Grants to local educational agencies pursuant to subsection (a) (3) from funds received under this Act shall be made on the basis of applications approved by the State educational agency, and shall, to the extent practicable, be made in accordance with equitable distribution criteria established by the State educational agency, having due regard for the special needs of local educational agencies serving sparsely populated areas or serving relatively few students.

(c) (1) To the extent consistent with the number of children enrolled in private nonprofit elementary and secondary schools within the State, as regards services provided under paragraph (2) of subsection (a), and within the school district, as regards a grant made to a local educational agency under paragraph (3) of such subsection, after con-sultation with appropriate private school officials, provision shall be made for the effective participation on an equitable basis of such children and the teachers of such children in these services and in the programs funded with these grants.

(2) (A) The control of funds provided under this Act and title to materials, equipment, and property repaired, remodeled, or constructed therewith shall be in a public agency for the uses and purposes provided in this Act, and a public agency shall administer such funds and property.

(B) The provisions of services pursuant to this paragraph shall be provided by employees of a public agency or through contract by such public agency with a person, an association, agency, or corporation who or which in the provision of such services is independent of such private school and of any religious organization, and such employment or contract shall be under the control and supervision of such public agency, and the funds provided under this Act to accommodate students and teachers in nonprofit private schools shall not be commingled with State or local funds.

PAYMENTS

SEC. 8.(a) (1) The Commissioner, upon receipt of an application of assurance for the first funded fiscal year which the Commissioner finds to be in compliance with section 5, and upon finding the State to be in compliance with sections 6 and 7 for the second and third funded fiscal years, shall pay to the State the amount which it is entitled to receive for each such year under this Act.

(2) The Commissioner, upon finding the State to be in compliance with sections 6 and 7 for the fourth and fifth funded fiscal years, by reviewing the report required to be submitted by the State under section 10 for the second and third funded fiscal years, respectively, shall pay to the State the amount which it is entitled to receive for each such fourth and fifth funded fiscal years under this Act reduced in proportion to the extent to which the Commissioner determines that such State has substantially failed to achieve the objectives for the second and third fiscal years set forth in its State plan

(b) (1) Any State receiving funds appropriated under section 3 may reserve not more than 10 per centum of such funds for services performed for local educational agencies pursuant to section 7(a)(2) and not more than 5 per centum for the purposes of paragraphs (1) and (4) of section 7(a). The remainder of such funds shall be distributed to local educational agencies.

(2) In the first funded fiscal year, funds available under this Act to a State may be used, subject to the provisions of paragraph

(1), to pay the entire cost of employing the State career education coordinator and staff assisting such cordinator. Funds available under this Act to a State may be used to pay, subject to the provisions of paragraph (1), not more than 75 per centum of such costs in the second funded fiscal year and not more than 50 per centum of such costs in the third

through fifth funded fiscal years.

(3) In the first and second funded fiscal years, funds available under this Act may be used, subject to the provisions of paragraph (1), to pay the entire costs of carrying out the State plan adopted pursuant to section 6. Funds available under this Act may be used, subject to the provisions of paragraph (1), to pay (A) not more than 75 per centum of such costs in the third funded fiscal year, (B) not more than 50 per centum of such costs in the fourth funded fiscal year, and (C) not more than 25 per centum of such costs in the fifth funded fiscal year.

(c) (1) If a State is prohibited by law from providing for the participation in programs of children enrolled in private nonprofit elementary and secondary schools, as required by section 7(c), the Commissioner may waive such requirement and shall arrange for the provision of services to such children through arrangements which shall be subject to the

requirements of that section.

(2) If the Commissioner determines that a State or a local educational agency has substantially failed to provide for the participation on an equitable basis of children en-rolled in private nonprofit elementary and secondary schools as required by section 7 (c), the Commissioner may waive such requirement and shall arrange for the provision of services to such children through arrangements which shall be subject to the requirements of that section.

FEDERAL ADMINISTRATION

SEC. 9. (a) (1) The Office of Career Education created pursuant to section 406 of the Education Amendments of 1974 shall be the administering agency within the Office of Education for the review of the State plans, applications, and reports submitted pursuant to this Act. In addition, the Office of Career Education shall perform a national leadership role in furthering the purposes of this

(2) In reviewing the plans, applications, and reports submitted pursuant to this Act, the Office of Career Education shall provide technical assistance to those States having plans, applications, and reports needing improvement. The Office shall also provide technical assistance, as requested by the States, to all participating States, Guam, the Virgin Islands, American Samoa, and the Trust Territory of the Pacific Islands.

(3) The Office of Career Education shall attempt to assert a national leadership role

in career education through:

(A) encouraging and sponsoring a continuing national dialog aimed at further de-velopment of the career education concept;

(B) providing policy statements for the Office of Education that reflect a national consensus regarding career education among practitioners and conceptualizers;

(C) fostering career education as a goal in the operation of other programs of the

Office of Education;

(D) providing professional upgrading op-portunities to State educational agency personnel in career education;

- (E) designating and carrying out a national communications system for assuring that career education methods and materials developed at the Federal, State, and local levels become available to career education personnel throughout the Nation;
- (F) developing criteria to assist States and local educational agencies in measuring the effectiveness of their career education programs; and
 - (G) establishing and maintaining effective

liaison arrangements with national agencies, organizations, and associations, within and outside of government, who are actively concerned about and involved in improving relationships between education and work.

(b) The National Advisory Council on Career Education created pursuant to section 406 of the Education Amendments of 1974 shall perform the same functions with respect to the programs authorized under this Act as it is authorized to perform with repect to the programs authorized under that section.

(c) The National Institute of Education shall continue its complimentary efforts in career education, including product and program development, evaluation, and research, and shall devote special attention to development and validation of instruments required for measuring the effectiveness of career education pursuant to criteria developed by the Office of Career Education under subsection (a) (3) (F) of this section. The Office of Education shall cooperate with the Institute in identifying research and development priorities and, either directly or through arrangements with private and public agencies and organizations (including institutions of higher education), in disseminating the products and findings of research and development undertaken by the Institute.

(d) The Office of Education shall provide the Office of Career Education and the National Advisory Council on Career Education with sufficient staff and resources required for them to carry out their responsibilities under this Act in addition to those already assigned pursuant to section 406 of

the Education Amendments of 1974.

(e) Section 406(g) (1) of the Education Amendments of 1974 is amended by striking out subparagraph (B) and inserting in lieu

thereof the following:

"(B) not less than twelve public members broadly representative of the fields of education, the arts, the humanities, the sciences, community services, business and industry, and the general public, including (i) members of organizations of handicapped persons, minority groups knowledgeable with respect to discrimination in employment and stereotyping affecting career choices, and women who are knowledgeable with respect to sex discrimination and stereotyping, and (ii) not less than two members who shall be representative of labor and of business. respectively.

A majority of the members selected pursuant to subparagraph (B) shall be engaged in education or education-related profes-

REPORTS

SEC. 10. (a) No later than December 31 of each fiscal year each State receiving funds under this Act shall submit to the Commissioner a report evaluating the programs assisted with funds provided under this Act for the preceding fiscal year. Such report shall include-

(1) an analysis of the extent to which the objectives set out in the State plan submitted pursuant to section 6 have been fulfilled during that preceding fiscal year;

- (2) a description of the extent to which the State and local educational agencies within the State are using State and local resources to implement these objectives and a description of the extent to which funds received under this Act have been used to achieve these objectives; and
- (3) a description of the exemplary programs funded within the State, including an analysis of the reasons for their success, and a description of the programs which were not successful within the State, cluding an analysis of the reasons for their failure.

(b) The Commissioner, through the Office of Career Education, shall analyze each one of the State reports submitted pursuant to subsection (a) and shall provide to the State no later than three months after the date of such submission an analysis of the report and recommendations for improvement in the operation and administration of programs being provided by the State with funds made available under this Act.

(c) The National Advisory Council on Career Education shall submit a report to the Congress by April 30 of each year evaluating the effectiveness of the programs operated during the preceding fiscal year with funds provided under this Act.

(d) The Commissioner shall conduct a comprehensive review of a random sample of the State programs funded under this Act and shall submit a report on such review to the Committee on Education and Labor of the House of Representatives and the Committee on Human Resources of the Senate by no later than September 30 of the fourth funded fiscal year.

DEFINITIONS

SEC. 11. For purposes of this Act the term—
(1) (A) "career education", for the purposes of this Act, except for paragraphs (2) and (3) of section 7(a), and sections 7(b), 7(c), and 8, shall mean the totality of experiences, which are designed to be free of bias and stereotyping (including bias or stereotyping on account of race, sex, or handicap), through which one learns about, and prepares to engage in, work as part of his or her way of living, and through which he or she relates work values to other life roles and

choices (such as family life);
(B) "career education," for purposes of paragraphs (2) and (3) of section 7(a), and sections 7(b), 7(c), and 8, shall be limited to those activities carried out by State educations. cational agencies and local educational agencies involving career awareness, exploration, decisionmaking, and planning, which activities are free of or are designed to eliminate bias and stereotyping (including bias or stereotyping on account of race, sex, or handicap), and shall not include any activities carried out by such agencies involving specific job skill training;
(2) "handicap" or "handicapped" means

mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, orthopedically impaired, or other health impaired persons, or persons with specific learning disabilities, who by reason thereof require special education and related services;

(3) "State" shall mean the States, the District of Columbia, and the Common-

wealth of Puerto Rico;

(4) "State board of education" shall mean the governing board or boards designated pursuant to State law for the administra-tion, or for the supervision of administration, of elementary and secondary education in local educational agencies and other agencies in each State;

(5) "local educational agency" has the meaning given it by section 403(6)(B) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 244(6)(B)); and

"work" shall mean conscious effort, other than that involved in activities whose primary purpose is either coping or relaxation, aimed at producing benefits for oneself or for oneself and others.

AMENDMENT TO THE EDUCATION AMENDMENTS OF 1976

SEC. 12. Section 332 of the Education Amendments of 1976 is amended-

Amendments of 1976 is amended—

(1) in subsection (b) (2), by striking out
"3 per centum" and inserting in lieu thereof
"1 per centum," and by striking out "the
Commonwealth of Puerto Rico,"; and
(2) in subsection (b) (3) (B), by striking
out "and the District of Columbia" and
inserting in lieu thereof ", the District of

Columbia, and the Commonwealth of Puerto Rico."

The SPEAKER pro tempore. Is a second demanded?

Mr. BUCHANAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. PERKINS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 7 makes funds available to State and local educational agencies to implement comprehensive programs of career education in elementary and secondary schools. The underlying purpose of this bill is to insure that more emphasis be placed on career awareness, exploration, decisionmaking, and planning in our schools.

Mr. Speaker, too many of our young people are lacking in knowledge of what type of jobs are available in society, what jobs they are most suited for, and how to go about securing a job. Since 1972 the Federal government has provided ap-

proximately \$200 million in Federal funds for demonstration programs and research in career education. We have clear evidence from these demonstration programs that career education is successful in providing students with these sorts of skills. I feel that the time is right to move beyond demonstrating the worth of career education and instead provide funds to actually implement it in a comprehensive fashion and on a broad national scale.

H.R. 7 makes clear that the Federal Government will only provide funds for this purpose for 5 years and that these funds will decline over this 5-year period. Twenty-five million dollars is authorized for the first year, \$100 million for the second year, \$75 million for the third year, \$50 million for the fourth year, and \$25 million for the fifth year. I believe that this declining funding structure is the right approach, since the ultimate goal of the legislation is to integrate career education into the regular instructional program reaching all students and all teachers of all subjects.

Eighty-five percent of the funds each State receives must be passed through to local school districts. States are permitted to keep 5 percent of the funds for administrative purposes and 10 percent of the funds are for State level programs. States must match these funds over the 5-year period by increasing amounts.

At the local level there is a wide range of activities that can be funded, including inservice training for teachers and guidance and counseling. Funds can also be used to provide a variety of State leadership activities.

Mr. Speaker, career education is supported by a wide range of groups representing educators, the general public and business and industry. These groups include the U.S. Chamber of Commerce and the AFL—CIO.

For the information of the Members, I would like to insert at this point in the RECORD an allocation chart for the States for the 5 years proposed in H.R. 7.

The chart follows:

FUNDING LEVELS UNDER H.R. 7

[Minimum allocation—\$100,000; 1 percent set aside for outlying areas; Puerto Rico counted as a State; based on provisional 1976 estimate for ages 5 to 18 (1970 for Puerto Rico). Authorization levels (in millions)—1st yr: \$25; 2d yr: \$100; 3d yr: \$75; 4th yr: \$50; 5th yr: \$25]

State	1st yr	2d yr	3d yr	4th yr	5th yr	State	1st yr	2d yr	3d yr	4th yr	5th yr

Mr. Speaker, I ask the House to support the motion to suspend the rules and to pass H.R. 7.

Mr. BUCHANAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I am delighted to have been a sponsor of H.R. 7, which Chairman Perkins has just described, and rise in strong support of it. The bill was reported unanimously by the Subcommittee on Elementary, Secondary, and Vocational Education, upon which I serve, and by the full committee. The lack of controversy concerning it is, in, part, a tribute to the careful preparation and hearings by Chairman Perkins—a similar bill having been introduced in the 2d session of the 94th Congresspart, due to the importance of the underlying concept that we must forge a strong link between schools and the world of work.

If only more young people could see a firm connection between what is taught in school and what is needed to bulld a

career in work of their choice, there would be far fewer dropouts and far more successes among those who remain in school. But even before this connection is made-before it can be made-young people need to know a great deal more about the kinds of careers open to them, about what people do for a living in this society and the skills they employ, and they need at some point to have actual experience with work. The experience may be no more than spending some time at actual places and observing and talking with people in a variety of work and career situations, but it is an experience most young people today do not

To accomplish these ends—to begin at an early age with career awareness which proceeds in the middle grades of school to career exploration and in high school with career planning and decisionmaking—requires a complete reorientation of our school systems. It is the purpose of the program authorized

by this bill to assist in the implementation of activities designed to achieve this goal.

Fortunately, as Chairman Perkins has stated, we already are far advanced in planning such reorientation. It is planning which has had some assistance and stimulus from the Federal level-from the Office of Career Education which we created by law in the Education Amendments of 1974, and from the National Institute of Education—but mostly has come about through State and local initiative. All States currently are involved in some phase of career education programs; every State now has a State coordinator of career education; 15 have legislation on the subject; and some 9,200 of the approximately 13,000 operating school districts in the Nation have some kind of career education program. So this legislation has a solid basis upon which to build.

I am proud to be able to say that my State of Alabama has been a national leader in designing and implementing a career education program in our schools, and I want to come back to our experience later because I think it is significant in terms of the structure and timeliness of H.R. 7.

For those of you whose committee assignments do not bring you into daily contact with educational issues, I think it is important to discuss the basic premises of this legislation. We are not talking about an extension of vocational education, although a strong vocational component in education is essential in order to be able to implement many career choices. The definition of "career education" in the bill gives a very good idea of the scope intended for the programs:

Career education . . . shall mean the totality of experiences, which are designed to be free of bias and stereotyping (including bias or stereotyping on account of race, sex, or handicap), through which one learns about, and prepares to engage in, work as a part of his or her way of living, and through which he or she relates work values to other life roles and choices (such as family life).

My colleague, Mr. BLOUIN, and I sponsored the amendment adopted in full committee to make specific reference to the problem of bias and stereotyping. Nothing can be more injurious to career development than stereotypes which limit a child's concept of what he or she can accomplish in the world. Whether such bias and stereotyping is based upon race, creed, color, national origin, physical or mental handicap, or sex it has the effect of crippling a child's self-image with results that are always bad and often irreparable. While we have eliminated a good deal of bias in our educational system, it still does exist. We had testimony that sex bias and sex stereo-typing actually is still in evidence in many instructional materials and in some career education materials in use in our schools. In my judgment we can no longer afford to relegate the more than one-half of our population who are women to inferior career roles in our society. Despite the need to utilize all of our human and intellectual resources, it is still true today that the average working woman with a college degree earns less income than the average working man who was a high school dropout. A major purpose of this legislation is to address that sort of imbalance by helping eliminate the kinds of stereotyping which cause people to limit their own view of their role in society.

Mr. Speaker, I am very proud that Alabama is an acknowledged leader among the States in the development of career education. We are ready to use the assistance that this legislation would provide to implement a complete program of career education reaching from kindergarten into the university level. As early as March of 1972, when the concept of career education was just being discussed nationally, the Alabama State Department of Education set up a committee on career education cutting across all divisions of the department. They appointed a State coordinator of career education, Mrs. Anita Barber, and under her dynamic leadership set out to make career education a major thrust of all education, grades K through 14, in Alabama. They worked out a definition and goals for the program which are very similar to those in this bill. It involved promoting career awareness in the early grades, career exploration in the middle grades, and career planning and decisionmaking in senior high school.

But to reach these goals, as this bill recognizes, teachers must first themselves be aware of career opportunities. In Alabama they established a teachers' committee to plan ways to infuse career concepts in the curriculum and in August of 1973 they held a 1-week seminar for 3,000 Alabama teachers and school counselors to help them understand how to implement the program. In cooperation with the National Alliance of Businessmen, and working with organized labor, 60 career education institutes have been held permitting some 340 classroom teachers to take field trips to visit business, industry, and labor at the worksites. The institutes have been held only in the metropolitan areas of Birmingham, Huntsville, and Mobile, but with assistance under this act could be expanded to all areas of the State.

Alabama is one of only 18 States last year to receive an Office of Education grant for the actual implementation of career education programs, it is the only State with funding for a State university proposal, and we have two junior college projects—one in my district at Jefferson State Community College-in career education. Today, 60 percent of all the schools in Alabama have some kind of career education program in place. With funding from the Appalachian Regional Commission we have programs in 35 school districts in northern Alabama which enroll 300,000 children. In Jefferson County four out of the five school districts have career education coordinators already at work, including the Birmingham City School District.

So Alabama is completely prepared to implement this act successfully. On February 17 of this year the Alabama State Board of Education passed resolutions calling upon the State superintendent, Dr. Wayne Teague, to implement a career education program throughout the State. Dr. Teague serves on both the career education and legislative committees of the council of chief State school officers and is giving outstanding leadership to this effort.

With adequate appropriations as authorized by H.R. 7, we could complete the reorientation of education in Alabama to have a serious focus on career development. Every State has made some progress in this direction, and with the help of funds under this bill could move to complete implementation.

Mr. Speaker, it is imperative that education move forward in making a closer connection between school and work and school and the community at work. In my judgment, one of the reasons for our chronically high rate of youth unemployment—rates which reach disastrous levels among disadvantaged and minority populations—is the lack of career awareness and orientation which should be developed early in the education process. This is a further cause of a sense of rootlessness and alienation from

family and community which contributes to youth delinquency and unemployment. Career education is not a panacea. It is not the single answer to these problems; but it does represent a serious and essential effort to solve part of the problem.

H.R. 7 would move this effort a large step forward. I strongly commend Chairman Perkins and others in this House who have taken the lead in bringing the bill this far. I urge its approval today and hope for swift action in the other body.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield to the distinguished chairman of the committee.

Mr. PERKINS. Mr. Speaker, I want to congratulate the distinguished gentleman from Alabama for his great contribution to this particular piece of legislation, and likewise the ranking minority member of the committee, the gentleman from Minnesota (Mr. Quie), and other members on the minority side. We have all worked together. It has been a nonpartisan piece of legislation we have brought to the floor, and to my way of thinking it is long overdue.

When I was a youngster I had access in a settlement school to industrial arts and manual training, all kinds of trades and crafts. We were compelled to take these courses from the third grade to the second year of high school.

I think of that when we talk about career education. If a youngster does not get started out right in the early years, he perhaps in many instances will be a failure later in life. But, when he gets started out correctly in the early years, most likely he will succeed.

I have watched youngsters who have had access to different types of careers, particularly industrial arts and the various trades and crafts, go to the mining communities and become carpenters. Many could read blueprints by the time they got through the eighth grade. It is this type of thing where this legislation will be helpful. It has almost become a lost art to have a comprehensive educational program—and that is all this is—in the early years of a child in school.

We hope that this will plant the seed so that the States will carry on a comprehensive program which will enrich the curriculum at the elementary and secondary levels tremendously in the days ahead. I just want to compliment the gentleman and his fellow minority members for the leadership they have shown on their side of the aisle.

Mr. BUCHANAN. I thank the distinguished chairman, both for his kind words and for his own leadership in this important matter, and I agree entirely with what he has said, as well as with the thrust of this legislation.

Too many young people drop out of school too soon. There is too little connection seen in too many cases between the world of education and the world of work, and if we can somehow so orient our educational system in its entirety so that a young person going through school, in the very early years of education, begins to see some of these connections and is encouraged to stay in

school and move on toward learning the skills of a vocation or profession, I think it will meet a great need in solving some of the great needs of our society, such as youth unemployment problems, which are so severe in our time, and will make better use of our most precious resources, the youth of our country.

Mr. SARASIN. Mr. Speaker, will the

gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from Connecticut (Mr. Sarasin).

Mr. SARASIN. I thank the gentleman

for yielding.

Mr. Speaker, I want to thank the gentleman from Alabama (Mr. Buchanan) and the gentleman from Kentucky (Mr. Perkins) for bringing out this important bill.

Mr. Speaker, I rise in support of the Elementary and Secondary Career Education Act, a measure long overdue if we are to honor our commitment to an integrated, comprehensive form of

education.

Millions of adult Americans are without jobs; young college graduates often find themselves trained for positions in fields that are saturated with applicants; graduates of vocational and technical schools often find the fields for which they trained obsolete; and high school graduates often have no knowledge of the jobs and careers that might be available to them. Many have never even given much thought to the world of work until a few months before graduating.

This adds up to millions of our citizens who are inadequately trained, poorly informed, tremendously dissatisfied with their jobs, or simply unemployed. These are not just the problems of the affected individuals. These problems belong to all of us, because our Nation cannot afford such an enormous waste of human talent and creativity.

Many solutions to unemployment have been proposed. Some focus on public service employment; others on the private sector. None will be successful until we recognize the one seriously underutilized ingredient—the long-range potential contribution of our education

system

We must recognize that thousands of schools throughout the country have a captive audience in the elementary and secondary grades. It is here that the seeds of a successful future must be cultivated and nurtured. It is during the early stages of life that our people must be exposed to the vast array of work challenges, that interest must be sparked and developed.

Career education will certainly help this overall process by providing them with an idea of the types of jobs available in society, with guidance and counseling to determine what jobs they are most suited for, with assistance in securing these jobs, and with specific job

training.

Career education is not a completely new idea. Since 1972, \$190 million of Federal funds have been provided for research and development programs under a variety of Federal laws. Until now, however, no funds have been provided for a broad scale implementation of career education in the schools.

Our Career Education Act is structured to provide funds through State educational agencies which can best give the leadership necessary to make career education an intrinsic part of elementary and secondary education. It is offered on an almost no-strings-attached basis in that the States draw up their own plans. The only responsibility they have to the Federal Government is to work toward the objectives they have set for themselves. This is education at its best since it leaves the educational decisions solely within the jurisdiction of State and local education agencies.

The funding of this program is not without end. Because we believe the concept to be so important that it should be part of the regular curriculum of the schools, the bill provides funding for only 4 years. After the fourth year, funding would become the responsibility of the State governments, since it is assumed that career education would be operational by that time and only maintenance funding would be required. This limitation is also in recognition of the fact that the Federal Government does not have the resources to continue to fund programs endlessly.

Beyond providing for career education at the elementary and secondary level, the bill provides funding for research and demonstration programs in postsecondary education for adults. It offers increased funding for improved guidance and counseling services, something that is sorely lacking in many schools. Finally, it provides advance funding to assist the States in their planning.

Given the high rates of unemployment and the changes in job market requirements, we must give young people and adults throughout the country the opportunity to learn about the jobs available in our society. We must also provide them with professional help in choosing their occupations and in finding the best training available. Otherwise, our greatest national resource—the intelligence and capabilities of our people—will continue to be wasted, and this is an enormous loss of human potential that this country can ill afford.

I urge my colleagues to join in the support of the Elementary and Secondary Career Education Act.

Mr. WHITEHURST. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from Virginia (Mr. WHITEHURST).

Mr. WHITEHURST. Mr. Speaker, I want to associate myself with the remarks of my colleague and I want to express my appreciation to the gentleman from Alabama (Mr. Buchanan) and the gentleman from Kentucky (Mr. Perkins) for bringing this legislation to the floor.

Mr. Speaker, I am delighted to rise in support of H.R. 7, the Elementary and Secondary Career Education Act of 1977.

In large measure, the impetus for career education programs has been the extremely high unemployment rate among young workers. Nineteen percent of our teenage population are now unemployed when more than a million jobs are going unfilled. This is largely because the new members of the labor force have not gained marketable skills in school. About 900,000 students currently leave

school each year before earning a high school diploma, and this chronically high dropout rate continues at a time when the number of unskilled jobs available is constantly diminishing; 40 years ago, on the other hand, 30 percent of the jobs were unskilled or required few qualifications other than a willingness to work.

At the other end of the spectrum, there are college graduates unable to find employment related to their education, while a number of technical positions requiring less than 4 years of college, but offering good pay and a promising future, remain relatively difficult to fill. While jobs bills and tax credits can help stimulate the economy and provide employment for the short run, the longterm solution requires that adequate vocational counseling be provided students. so that they will be prepared to make intelligent choices of their life's work and have the necessary skills and background for meaningful, productive careers.

During my service in Congress, I have been increasingly skeptical about the efficacy of Federal education programs. Too often, those programs have failed to result in meaningful achievement by our children. However, I can think of no more practical or promising use of Federal education funds than to link education directly to employment. By bringing together educators and leaders of business, industry, and the professions, school programs can be focused on preparing students for specific careers. Students will then find their studies more meaningful, because they will better understand the relationship of their school subjects to employment, and this can be a strong motivating factor. In addition, career education resource center facilities will be available to adults, and this is another strong plus for this legislation.

The incredibly high unemployment rate among young people, and the difficulties faced by some older workers in adjusting to the new technology, impose heavy burdens upon our society in terms of rising costs of welfare and unemployment compensation, escalating crime rates, and lowered economic growth and productivity. Because these costs so far outweigh the relatively minimal costs of career education, I am convinced that a Federal program to provide career education and counseling is an extremely valuable long-range investment.

As the sponsor of H.R. 710, a bill identical in purpose and similar in language, I am delighted to urge my colleagues to act favorably on H.R. 7 today. We can have no greater resource than our work force, particularly the potential among our young people. I am grateful to the chairman for making this time available to me to offer my wholehearted support of this bill.

Mr. BUCHANAN. I thank the gentleman for his contribution.

Mr. PERKINS. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from New York (Mr. Blaggi).

Mr. BIAGGI. Mr. Speaker, I wish to take this opportunity to pay tribute to our distinguished chairman, the gentleman from Kentucky (Mr. Perkins) for his leadership on behalf of this legislation.

Mr. Speaker, I rise as an original co-

sponsor to urge support for H.R. 7, the Elementary and Secondary Career Education Act of 1977. Passage of this legislation will represent a major step forward in this Nation's efforts to remove the educational system from the ivory tower and make it more adaptable to meeting the needs of our society.

H.R. 7 provides a 5-year authorization to local and State educational agencies for career education programs in elementary and secondary schools, both public and private. The practical effects of this legislation will be far reaching.

We find a paradox in the American educational system today. Our citizens are better educated than ever before. The number of Americans completing high school has increased from 24 percent in 1940 to 63 percent today. Yet despite the statistical achievement of the higher matriculation rate by American students, there is a growing isolation of students from the society which awaits them at the completion of their schooling.

The concerns about this gap between knowledge and its practical application, have prompted this legislation. H.R. 7 will allow State and local educational agencies to develop comprehensive programs for the integration of career education programs in regular school curriculums. Included in the career education programs will be specialized counseling and guidance services, as well as the development of collaborative arrangements with community groups representing the handicapped, minority groups, and others. The bill also provides for the implementation of work experience for students for career exploration, and the purchase of relevant instructional materials and supplies.

This legislation today is not breaking any new ground. Federal funds, while limited, have been provided for career education programs since 1972. A survey conducted by the Office of Education revealed that 52 percent of the total student population were in school districts where at least one grade participated in career education activities. In the same OE survey, it was noted that 54 percent of the school districts reported that funding is the most critical factor in insuring the future success of their career education programs. H.R. 7 recognizes the need for a greater Federal commitment and provides a total of \$275 million, over a 5-year period to strengthen existing programs while also providing for the means to create new career education programs. It is hoped that a good number of the estimated 15.5 million elementary school children who have not yet been offered career education programs, will receive these

services under this legislation.

Another problem inhibiting the effectiveness of career education programs is a lack of capable personnel to teach such programs. H.R. 7 also addresses this problem and provides for the specialized training of career education personnel.

The Career Education Act enjoys wide support in the educational community. It is felt by many local and State educational administrators that an expanded career education program is essential to the overall educational enhancement of students. They do not see this legislation as any type of Federal encroachment on their rights as the language of the bill specifically calls for the cooperative integration of career education programs into the standard school curriculums. It is not designed to promote confusion in school curricula or usurp traditional state and local autonomy in education matters.

H.R. 7 recognizes the need for education to have greater relevance to our society. It recognizes the need to remove the barriers between education and work by emphasizing preparation for the work experience as a major goal of American education at the early levels. The American educational system can no longer be a sacrosanct entity detached from the real world. Far too many students are graduating from high schools and colleges into a labor market for which they are inadequately trained. Education must be viewed from a practical and not a theoretical vantage point. I have long advocated that the Federal Government consider funding programs which allow persons who have not benefited from a formalized education, to apply their life's work experience toward a degree. I consider this legislation to be consistent with this philosophy in that it provides the opportunity for students to apply their educational experience to their future career goals.

I wish to take this opportunity to pay tribute to my distinguished chairman, Mr. Perkins, for his leadership on behalf of this legislation. Passage of H.R. 7 today will represent a legislative landmark in the history of American education and I am especially proud to be so closely associated with the bill.

The SPEAKER pro tempore (Mr. Roberts). The time of the gentleman from New York (Mr. Biaggi) has expired.

Mr. PERKINS. Mr. Speaker, I yield 30 additional seconds to the gentleman from New York (Mr. BIAGGI), and I ask him to yield to me.

Mr. BIAGGI. I am delighted to yield to the distinguished committee chair-

Mr. PERKINS. Mr. Speaker, I wish to compliment the distinguished gentleman from New York (Mr. Biagg) for the tremendous interest he took in this legislation in committee. He was with us *throughout the hearings and throughout the markup and manifested a great interest in the legislation. I certainly want to compliment the gentleman

Mr. BIAGGI. Mr. Speaker, I thank the gentleman from Kentucky.

Mr. PERKINS. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Iowa (Mr. BLOUIN).

Mr. BLOUIN. Mr. Speaker, first let me say that, as a cosponsor of this legislation who has worked very closely with the chairman of our committee, the gentleman from Kentucky (Mr. Perkins) in the past 2 years on this overall concept and who has worked in the Congress with the gentleman from Alabama (Mr. Buchanan) and others on the minority side, I wish to commend the committee chairman and the entire committee for the

persistence and diligence that the complete membership of that committee has shown in moving this legislation forward.

Mr. Speaker, as I said in my remarks on the floor last week, I believe that even with the progress that we have made over the past decade and a half in education—despite the very real and very substantial success of our vocational education programs at the secondary and post-secondary level, I am convinced that we have a long way to go in providing young people with the type of education and with the educational options which they need in order to function as meaningful and productive members of adult society.

Throughout this country, far too many young people have been abandoned by the education process in recent years. These young people were never given meaningful exposure to the world of work—they were not adequately appraised of the aptitudes, skills, talents, and training which they need to find meaningful, productive jobs. These young people were virtually dumped into the adult world . . . unaware of what they wanted to do . . . unware of what, in fact, they were equipped to do. As a result, they became both frustrated and angry. In far too many cases, they ended up as unemployment statistics-or worst yet, as crime statistics.

I think the director of the career education project at Rhode Island College, Dr. Ronald Esposito, put his finger on at least part of the problem when he testified before our House Subcommittee on Vocational Education earlier this year. He said the young people he talks to:

Rarely can list more than 100 different career titles . . . or have any concrete knowledge of either the cognitive or affective requirements of their tentative job choices. This, to me, is frightening. With over 30,000 job titles to choose from, how can these young people make valid choices if they only have superficial knowledge of 100 of these titles?

This is not intended as a criticism of our present educational institutions. On the contrary, given the limited financial resources currently available—especially their dependence on a regressive property tax system and the fact that the Federal Government assumes less than 9 percent of total educational costs at the elementary and secondary level—I think schools are doing the best job they can. My point is that, given the challenges facing education and society in the future, we need to do an even better job.

I believe the Federal Government has a responsibility to help local schools develop better ways of meeting the needs of noncollege-bound students—especially in a postindustrial society where job opportunities—and demands for occupational skills—are constantly changing. Career education programs can help do this by making students more aware of career opportunities at an earlier age, by helping relate more traditional classroom learning to the "outside" world of work, and by giving students better opportunities to experience that world through on-the-job learning.

But it is important to keep these points in mind:

Career education is not a substitute for traditional classroom academics;

It is not designed to replace existing vocational education programs;

It is not a tracking system which will program students into one curriculum or another:

It is not mandatory; and

It does not represent a permanent Federal intervention in local education.

Career education is designed to become an integral part of the elementarysecondary school curriculum. Unless it is fully integrated into existing programs, it will fail.

Ultimately, it is designed to expand, not restrict, the individual student's

choice of education and jobs.

The program envisioned by the House bill is limited to school districts which choose, voluntarily on their own, to develop career education programs over the 5-year-period when Federal technical and financial assistance will be available for such purposes.

I envision career education as an integrated and comprehensive approach to education at the elementary and secondary levels—an approach which fuses the formal classroom, the shop, and the community at large in a common educational experience which prepares young people for the realities of the work-a-day world in which everyone must live.

It is an approach which must rely heavily on the input of local community leaders, businessmen, labor and parents, as well as educators. It is an approach which depends, in the final analysis, on local initiative and local choice.

It is a good program whose time has come and I urge its approval.

The SPEAKER pro tempore. The time of the gentleman from Iowa (Mr. BLOUIN) has expired.

Mr. PERKINS. Mr. Speaker, I yield 30 additional seconds to the gentleman from Iowa (Mr. BLOUIN), and I ask him to yield to me.

Mr. BLOUIN. I yield to the chairman of the committee.

Mr. PERKINS. Mr. Speaker, I certainly would be derelict in my responsibility if I failed to congratulate the distinguished gentleman from Iowa (Mr. Blouin) for his untiring efforts on behalf of this legislation, not only this year but last year.

From the day the gentleman came to this Chamber he has been an ardent supporter of the concept of career education. He introduced a companion bill to my original bill last year and has been a part of the operation from the very beginning. I think the gentleman is to be complimented for his great efforts.

Mr. BLOUIN. Mr. Speaker, I thank the

gentleman from Kentucky.

Mr. BUCHANAN. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. Pursell).

Mr. PERKINS. Mr. Speaker, I yield 3 minutes to the gentleman from Michigan (Mr. Kildee) who has been very helpful in the passage of this legislation.

Mr. KILDEE. Mr. Speaker, first of all, I should like to commend the distinguished and honorable chairman of the Committee on Education and Labor, Mr. Perkins, for his fine work in presenting the Elementary and Secondary Career Education Act of 1977 to the House of Representatives.

I am sure that the majority of my col-

leagues have become used to—perhaps, even take for granted—the gentleman from Kentucky's unswerving efforts on behalf of education. But as a new Member of Congress and of the Committee on Education and Labor, I have been impressed and elated to view first hand, the dedicated and excellent work of my chairman. I am proud to serve on his committee, and I hope I will be his worthy colleague in improving educational opportuities for all our citizens.

Mr. Speaker, I rise to voice my wholehearted support of H.R. 7, not only because I feel the need for career education is great and will continue to grow, but also because I believe the States and local school districts have recognized this need and stand ready to implement comprehensive programs once Federal legislation is enacted.

As a member of the Michigan State Senate, I chaired hearings on career education and became aware of the positive results career education was effecting at the classroom level. We have evidence, not just in Michigan but in several States, that career education provides young people with a better understanding of the world of work, better knowledge of the variety of careers that exist and the requirements for these careers, and better ability to make important decisions about their futures.

I think it speaks well for career education that every State in the Union has begun career education efforts of some sort. Fifty-five of the 57 States and outlying areas have appointed career education coordinators. Nine thousand of the 16,000 school districts in the country have begun some career education efforts. I think all of these statistics indicate that there is a great deal of enthusiasm for this new approach to education.

Most of these efforts, however, have been operating with a great deal of faith and very limited funds. Only 3 percent of the Nation's school districts have implemented career education in a comprehensive way. For this reason, I believe there is a need for Federal direction in this area. In the absence of Federal funds, most local districts will not have the leeway in their budgets to mount comprehensive career education programs. Without Federal initiative, local districts will become discouraged by their own inadequate efforts; and it is doubtful career education will ever become a broad-scale, national program.

The committee bill provides that this Federal support ought to be limited in duration, and of a nature so as to encourage increased State and local funding over this limited time period. Since the goal of the legislation is the infusion of career education into the regular school instructional program, and since the accomplishment of this goal depends to a large extent on retraining existing personnel and purchasing instructional materials, it will not involve sizable additional costs to the States and local districts to maintain career education once fully implemented.

Mr. Speaker, I urge that the House support the motion and pass H.R. 7.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. KILDEE. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Speaker, I think I should point out to the Members of the House that the gentleman from Michigan (Mr. Kildee) was the chairman of a committee on career education in the Michigan State Senate and has brought that know-how to the House Committee on Education and Labor and has made a tremendous contribution to developing this legislation.

Mr. KILDEE. I thank the gentleman

from Kentucky.

Mr. PERKINS. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Florida (Mr. Lehman).

Mr. LEHMAN. Mr. Speaker, I rise in strong support of this legislation. I know how much dedication and how much work the distinguished Chairman of the Committee on Education and Labor has given to this effort.

Mr. Speaker, I am proud to be one of the cosponsors of the Elementary and Secondary Career Education Act of 1977.

The concept of career education is an important one, particularly in a society which can offer such a diversity of career paths. Little children are often asked what they want to be when they grow up. The answers to such questions are normally what might be considered the traditional occupations such as doctors, nurses, firemen, or teachers. It is not until much later in life that children begin to comprehend the wealth of career choices that face them.

Career education programs aim to familiarize children with various career possibilities beginning at an early age. Hopefully, we will see the fruits of these programs in years to come. Perhaps then our high school and college graduates will not face the world totally confused as to what roles they can play in it.

The legislation now before us will facilitate the implementation of career education programs throughout the United States. Through its provision of declining amounts of assistance over a 5-year period, this bill will help States to establish programs of high quality and then allow them to eventually fund and administer the programs on their own. I might add that the Department of Education in my own State of Florida is quite pleased with this bill and the way in which it will fit into the State's own programs.

I strongly support both the concept of career education and the way in which this legislation will provide Federal sup-

Mr. PERKINS. Mr. Speaker, I yield $2\frac{1}{2}$ minutes to the gentleman from Hawaii (Mr. Akaka).

Mr. AKAKA. Mr. Speaker, I wish to thank my distinguished colleague, the gentleman from Kentucky (Mr. Perkins), who is renowned in the United States for initiating the best education programs for future generations in their time and thank him for allowing me this opportunity to express my support for H.R. 7, the Elementary and Secondary Career Education Act of 1977.

It is my view that this measure will give our educational systems the opportunity to assist our young people through increased career guidance and counseling. All of us are aware of the high unemployment rates throughout the Nation. Increasingly, graduates of secondary and postsecondary institutions are facing the dismal prospects of a tightening job market. Many high school and college level students leave their schools having gained few if any marketable skills and are frustrated when their efforts to achieve in our competitive society are rewarded with unemployment. H.R. 7 is much-needed legislation which will encourage and stimulate preparation for meaningful work. It could also help eliminate sex sterotyping in many occupations by explaining to both young women and men how performance on most jobs is based not on sex but on competence and training. This legislation will also be a means to develop an awareness of the working world through the development of career education programs at all levels of education. I commend my honored colleague from Kentucky, as well as the other members of the Subcommittee on Elementary and Secondary Education for their outstanding work in preparing this important legislation, and I highly recommend its passage.

Mr. PERKINS. Mr. Speaker, I yield 3 minutes to the gentleman from Cali-

fornia (Mr. PANETTA).

Mr. PANETTA. Mr. Speaker, I, too, want to commend the chairman and the committee for their work. Having served in the Department of Health, Education, and Welfare, I can say that there is no man on this floor who has done as much for education as the distinguished chairman of the Committee on Education and Labor. This is an example of the work of that committee. It is a bill which would help advance career education at a time in this country when our basic concern is making education relevant to students, to the children in our schools. There is tremendous concern in this country about whether education is doing the job. It is not just a question of the three R's.

It is also a question of teaching our children and our students what life is all about. That is what this career education bill attempts to do. In my area, in the Monterrey School District, I participated in a career education program where the students were able to get into the professions and into the work life of the community and understand what it is about. I think this bill will help fund that kind of effort. I support it wholeheartedly. I hope Congress will pass this bill forthwith for the benefit of education, our children and our Nation.

Mr. BUCHANAN. Mr. Speaker, I yield 3 minutes to the gentleman from Louisiana (Mr. Treen).

Mr. TREEN. Mr. Speaker, I thank the

gentleman for yielding.

I have asked for this time so I could ask a couple questions of the chairman of the committee. As I understand the program, the Federal share for the first couple of years will be what? It will be 75 percent or 100 percent?

Mr. PERKINS. The first year and the second year, 100 percent; the third year, 75 percent.

Mr. TREEN. And then it will drop to

50 percent and then 25 percent and then it is to phase out?

Mr. PERKINS. That is correct, over a period of 5 years.

Mr. TREEN. Can the chairman assure the House that in the latter years we will not be subject to such lobbying by the education departments of the various States and that we will not increase that percentage once the States get used to the money or that we will not go back to

100-percent Federal funding?

Mr. PERKINS. Let me say to my friend, the gentleman from Louisiana, I know what the history of legislation has been in the past and I know what the history of the Congress has been when we initiate a new program, but in this particular instance we have thought of something here to enrich the curriculum and that is the reason we start the first year with \$25 million, go up to \$100 million, and then go back down to \$25 million. It is my hope that by the end of the 5-year period we will have it pretty much embodied throughout the Nation at the elementary and secondary level in all the curricula of the country and reaching all the programs and all the children, and that there will not be any need for a new authorization after the lapse of 5 years. The States and the local educational agencies should carry on the burden from

Mr. TREEN. As I understand the chairman then, what he is saving is this is an incentive program to get the States to do this and that it is not intended there will be a long-term Federal involvement in this program. I would hope—and I know the distinguished gentleman from Kentucky will probably chair this committee for many yearswhen the pressure does come in later vears to change this law and provide 100percent financing rather than 75, 50, or 25 percent, the chairman will resist that and we will say to the States: "Gentlemen, it is now up to you to finance the program.'

I am not opposed to the goals and purposes of this legislation, but as I see it, it represents another involvement of the Federal Government in something the States and local communities ought to be doing, so I hope it will be a temporary

incentive program.

Mr. PERKINS. Mr. Chairman, if the gentleman will yield further, let me say to my distinguished colleague that the reasons I gave the gentleman are the reasons I feel that the National Federation of Independent Business People and the U.S. Chamber of Commerce are for the legislation. I feel confident that this program will not be reauthorized by the Congress of the United States. But we must remember that this idea is not a new program by any means. We have just gotten away from it in the last quarter of a century. Career education as we have had it in some school systems has existed for 50 or 75 years or maybe longer. We had it in the Hindman Settlement School when I was a youngster.

Mr. TREEN. But this is the first time the Federal Government has financed the program.

Mr. PERKINS. The idea of the bill

is to change the basic curriculum of the schools, and I believe that it will be phased out of the Federal funding at the end of the 5 years.

Mr. TREEN. This is the first time that the Federal Government has got-

ten into it. Is that correct?

Mr. PERKINS. This is the first time for actual implementation money. We have spent demonstration money before.

Mr. TREEN. But other than that, this is the first time Federal Government has gotten into the substantive part of it?

Mr. PERKINS. It is purely a State and local matter. The money is turned over to the States and the local education agencies. There is no Federal control here whatever.

Mr. TREEN. Mr. Speaker, I am very pleased to hear the chairman say there will be no Federal control. I will await the outcome with great interest.

It seems to me, regardless of the merits of the goals, and I subscribe to the objectives of this program fully, that we are again embarking the Federal Government on a mission that falls within the responsibility of the State and local governments.

A new bureaucracy, a vast new spending program, is instituted by this bill. What happened to those voices, including that of now-President Jimmy Carter, in last fall's campaign that we must stop the spiraling Federal bureaucracy, that we must keep Government close to home?

I also think it unconscionable that a bill of this magnitude should be brought to the floor under suspension of the rules; not subject to amendment by me

or any other Member.

Sure, the bill will pass overwhelmingly because it comes under suspension, a procedure which insures that few Members will really know the substance of the bill. We should not be acting on this kind of legislation without observing the full legislative process.

Mr. BUCHANAN. Mr. Speaker, I yield 2 minutes to the gentleman from New

Jersey (Mr. LE FANTE).

Mr. LE FANTE. Mr. Speaker, I rise in support of H.R. 7, the Elementary and Secondary Career Education Act. First of all, I would like to commend Chairman Perkins for introducing this important legislation and for his leadership in guiding it through committee.

The Elementary, Secondary and Vocational Education Subcommittee, of which I am a member, held extensive hearings on the concept of career education and has reported out a bill which would encourage States and local school districts to develop and implement career education programs in their elementary and secondary schools. This legislation builds on existing career education demonstration programs whose purpose has been to provide greater emphasis on career awareness, exploration, and planning in the schools. It expands these valuable demonstration programs to a broader national scale.

Career education should begin in the early elementary grades and continue through a person's adult years. Career education increases students' awareness of the many careers open to them, emphasizes the relationship between education and work, and encourages career

planning.

An important provision of H.R. 7 is the automatic phaseout of Federal funding 5 years after enactment of the legislation. The committee has made it clear that it is not the intent of this legislation to create a permanent, ongoing federally subsidized program. Instead, the Federal role is viewed as a catalyst for changing the attitudes of teachers, school administrators, and officials in their approach to career education. At the end of the fifth year, States and local school districts are expected to take over the full costs of career education as an integral part of their curriculum.

Several improvements were made in the Career Education Act during committee which strengthened the bill and which I wholeheartedly support. A series of amendments was adopted which aims at eliminating bias and stereotyping with regard to sex, race, and physical handicap. The purpose of these amendments is to promote equal opportunity in making career choices through elimination of these biases and stereotyping by altering traditional patterns in selecting careers and educational programs. It makes sense that the early childhood years are the opportune time to accom-

plish these goals.

The bill originally provided for participation of non-public-school children and teachers in State leadership programs and grants to local educational agencies. I was pleased that an amendment that I offered to clarify and strengthen these provisions was accepted by the committee. My amendment provided that appropriate non-publicschool officials are to be consulted prior to providing services to non-public-school children and teachers and that these services be provided on an equitable basis. It recognizes that there are differences in public and non-public-school needs and reiterates the congressional intent of comparability and equity in providing those services.

I believe the Career Education Act will provide the necessary stimulus for States and local school districts to include career education as an integral part of their curriculum. In doing so, they will hopefully provide children with more realistic concepts about careers and the world of work and give them the tools to make more informed choices about

their future.

I urge my colleagues to vote in favor of H.R. 7.

Mr. EVANS of Delaware. Mr. Speaker, I rise in strong support of H.R. 7, the Elementary and Secondary Career Education Act of 1977.

In my judgment, we have not done enough in this country to prepare young people for future employment in the private sector. Rarely has there been the proper linkage between public education and private employment.

In recent years, we have made some progress in accomplishing this linkage. Since 1974, for instance, there has been an Office of Career Education in the U.S. Office of Education to promote the con-

cept of infusing an understanding of career opportunities and the educational requirements for the "world of work" into the school program. There has also been funding authorized for demonstration projects for these purposes of approximately \$10 million a year. In the 1976 education amendments \$10 million was authorized for fiscal year 1978 for planning grants to the States for career education programs.

But we need to do more. Unemployment, especially for teenagers, remains at unacceptably high levels. Because they have no skill, teenagers, particularly minority youths, are unable to become working and productive members of society. Instead, we are creating a whole new generation of welfare recipients, people who have no place in our economic structure. Unskilled and unemployable, they have no alternative but to live on the dole, roaming the streets and getting into trouble.

If we can direct that teenager to a productive skill during his school career, he will become a contributing member of society. As a skilled worker, his economic status, and even more importantly, his own self-esteem will improve immeasurably. He will be on a payroll, instead of

a welfare roll.

In the past, I have criticized Federal programs such as public service jobs because they did nothing to train a person for permanent employment in the private sector. Instead of solving our long-term unemployment problems, these kinds of programs only cover it up. Public policy must be directed at the root causes of unemployment, such as lack of training and proper education, if we are to ever end the discouraging cycle of economic deprivation in this country.

The Career Education Act, however, is directed at these root causes. It makes grants of \$275 million over the next 5 years to States for actual implementation of career education programs in elementary and secondary schools. The program would involve such activities as inservice teacher training, counseling and guidance programs, and collecting, evaluating, and disseminating career education materials.

Mr. Speaker, this is a long-needed and very cost-effective program. I urge my colleagues to join with me in support of this measure, which will significantly help our young people of today become productive citizens of tomorrow.

Mr. SIMON. Mr. Speaker, the bill before us, H.R. 7, will establish career education as a national priority.

In voting for this measure, we will assure that all students will have access to the countless career possibilities open to a working adult in our country today.

Unfortunately, for many years students have often gone through 8 years or 12 years or more of schooling with no concept of the multitude of choices that could be theirs.

As a result, many left school with the feeling that it bore no relation to their lives. Others completed their studies only to choose an unsatisfying occupation, a sad choice that was made because they were unaware of other areas in which to direct their talents.

But with this bill, Mr. Speaker, we are

finally moving in a direction that will help all realize their potential.

I hope this step will lead to a more satisfying, productive, and rewarding life for many.

Mrs. COLLINS of Illinois. Mr. Speaker, I rise today to urge my colleagues to support the Elementary and Secondary Career Education Act of 1977. This is an important measure that affects most of our Nation's youth.

The act calls for \$275 million to be spent over the next 5 years to set up and develop programs geared toward helping the young people of America think seriously about the careers they may wish to pursue. Such programs would emphasize the many career possibilities open today, demonstrate the connection between education and work, and encourage the students to plan ahead.

Currently, more than 3 million Americans between the ages of 16 and 24 are on the unemployment rolls. It is my firm belief that if many of these young people had received better career guidance and counseling while still in school, they would quite likely be among the Nation's work force today.

work force today.

In my own inner-city district in Chicago, unemployment among young persons is overwhelmingly high. Passage of H.R. 7 will mean that their younger brothers and sisters will have an increased chance of succeeding at the job market because these younger siblings will be better able to tailor their own capablities to existing job opportunities through career education programs.

Therefore, I encourage all of my colleagues to vote yes on this very important bill.

Mr. ROYBAL. Mr. Speaker, I rise in support of H.R. 7, which would authorize career education programs in elementary and secondary schools.

A few years ago, people readily moved between different jobs and often changed career choices with little difficulty. However, as our economic problems have grown, job mobility has decreased and consequently, initial career choices have become much more crucial. School administrators have long sensed this change and have responded by designing programs which increase students' awareness of possible careers, emphasize the relationship between education and work, and encourage career planning

H.R. 7 will help local schools to continue the work they have pioneered in career education programs. The bill authorizes grants to States to help local and State educational agencies plan and provide career education programs in elementary and secondary schools. In order to qualify for a grant, a State must meet very detailed requirements which are provided for in the bill. Specifically, a State must submit a plan which insures that 85 percent of the grant will be channeled to local school districts, that 15 percent of the grant is used for guidance and counseling programs, and that not more than 5 percent of the Federal grant is used for administration. The bill also provides that the States must match Federal funding by an increasing percentage over the 5-year authorization period, and that each State must prepare a State evaluation report on its

career education programs.

Mr. Speaker, the bill before us will aid hundreds of thousands of elementary and secondary school children to better plan their future and career choices. It will open new vistas to many and will encourage others to pursue dreams they have nurtured. I commend this bill to all my colleagues and urge their affirmative vote.

Mr. FORD of Michigan, Mr. Speaker, I rise to urge my colleagues to support H.R. 7, the Elementary and Secondary Career Education Act of 1977, and I commend my good friend and colleague, the distinguished chairman of the Education and Labor Committee (Mr. Perkins) for sponsoring this excellent legislation designed to aid our educational system in becoming more relevant to today's needs.

As a cosponsor of H.R. 7, I believe that after funding career education planning with \$200 million since 1972 in the Education Amendments of 1974 and the Education Amendments of 1976, it now is the time with the Elementary and Secondary Career Education Act of 1977 to provide Federal dollars to State and local education agencies for implementation of this worthwhile program.

Career education provides a better framework in the schools in which to prepare our young people for work and to retrain some of our adults who have become unemployed or have found themselves not adequately trained for

today's work situations.

By placing an emphasis on career awareness, exploration, decisionmaking, and planning in the elementary and secondary grades, this legislation will make our educational institutions more relevant to the current job market. Career education provides students with the skills to make them more adaptable to today's society and gives them a better idea beforehand of the available options when they graduate. In addition, career education bridges the gap between what students learn in school and the tasks they will be requested to perform when they enter the work force without concentrating on any particular group of students' needs.

The idea of a homogenized education curriculum blending basic educational skills with vocational, occupational, and career skill training and orientation is not novel. In the 1870's, Calvin M. Woodward, a Harvard-trained mathematician. launched a campaign to persuade the public that the schools were out of tune with the changing times. They were training gentlemen, but not training men

for the world of work.

Mr. Woodward advocated manual training, not aimed at a specific trade necessarily, but to be a part of the regular curriculum for all students. Despite his advocacy, the homogenization did not take place and vocational and technical education developed on a separate track.

More recently, the term career education was introduced in 1971 during the previous administration as one of the top educational priorities by U.S. Commissioner of Education Sicney P. Marland, Jr. Since then, career education has gained widespread acceptance.

In few other instances is there the broad support for an educational program that exists for career education. Perhaps the success career education has already encountered and the good reception it has received in the schools is reflected in the number and diversity of the groups supporting H.R. 7 which include the U.S. Chamber of Commerce. the National Education Association, the National Association of Chief State School Officers, the United Auto Workers, the American Vocational Association, the National Advisory Council on Vocational Education, the Association of Secondary School Principals, the General Motors Corp., the American Association of Junior Colleges, the College Entrance Examination Board, and the National Institute of Education, which has earmarked nearly 20 percent of its own budget in support of career education research and demonstration.

Career education has received these endorsements probably much quicker and with fewer reservations than any other educational program which has surfaced in the last several years. The States themselves have also been quick to respond. As of 1976, two-thirds of the States had adopted formal career education policies, and 14 States had enacted career education legislation. There are career education coordinators in 55 of the 57 States and outlying areas, and 27 of them are supported with State funds.

Career education got underway early in my home State of Michigan when several pilot projects were awarded in 1970 and 1971. Then in 1974, the State legislature by a wide margin passed career education legislation and a broadly based Career Education Advisory Council was subsequently appointed. Further, each local educational agency is required by law to establish career education performance objectives and to evaluate its program.

The 5-year phase-in of funding in H.R. will simply augment what most of the States have already put into funding for career education. It is clear the States have proven their interest. With the addition of Federal support in H.R. 7, the States can place even more emphasis on career education and fully implement the programs the pilot projects have proven to be successful. The States have done what we have asked them to do with the planning money we have supplied and now I believe we should provide further funding to insure the success of career education activities.

Mrs. SPELLMAN. Mr. Speaker, one of the complaints we, as Members of the Congress, hear from concerned parents. is that the public education process does not meet the future needs of the students. They are not prepared for careers, and indeed, they are not even aware of the variety of careers which await them after graduation. Of all the Federal programs to assist general education, only \$200 million of Federal funds has been spent on research and demonstration projects in this field, from sources such as the Vocational Education Act and the

Education Professions Development Act; only \$200 million since 1972.

While many school districts do have professional career guidance staffs, they are often hampered by lack of funding and understaffing, and face their clients with an unorganized myriad of information that may or may not apply to the individual needs. Limited demonstration projects, which I mentioned before, have proved highly successful in bringing some order out of this chaos, and point to the need for a fully developed national program of funding to State and local governments which are, after all, the most closely involved with the education of our youth. The Federal Government funding acts as a catalyst. and under this bill, will be phased out after 5 years.

Of particular interest to me is the section which contains a 15-percent setaside for career guidance activities. Career guidance professionals maintain that the lack of career education assistance on a more national level has led to an "absence of career vision" which, in turn, leads to indecision, loss of time, and loss of money for parents as well as students. H.R. 7 is designed to assist States and local school districts to redirect this trend of student career indecision. As a cosponsor of this bill, I urge my colleagues to join me in support of this legislation.

Thank you.

Mr. HARRIS. Mr. Speaker, I am pleased to support today H.R. 7, the Elementary and Secondary Career Education Act of 1977, which will help local school systems develop career education programs in our elementary and secondary schools.

The career education concept is an important one. Career education seeks to provide elementary and secondary students with an understanding of the world of work, by providing them with a broad orientation to various occupations in their studies. For example, a teacher implementing the career education concept might have a rural elementary child learning to read, read a story about a zookeeper. In learning specific reading skills, the child would also be exposed to a career he or she might not otherwise be familiar with. Or, career education could be incorporated in a high school chemistry class by relating the study of and experimentation with chemicals to jobs ranging from drug manufacturing to energy research. The student would not learn specific job skills; rather, the student would be exposed to various career options.

Providing our children with a wide range of options is critical. Making a career decision, even trying to understand what is available out there in the working world, is one of the most frustrating experiences a youngster has to go through. Most just fall into an area of study because it is convenient or their parents urge it. And many areas of study have not been oriented sufficiently toward work. I do not mean to suggest that academic training should be emphasized less. But I believe that there is room in the school program for both approaches. Sooner or later our schools have got to

stop "turning out" students who feel their studies did not prepare them. Helping them understand the career options available, it seems to me, is putting the horse before the cart. Our students cannot make an informed career or career training choice without understanding what is available.

Another important advantage of the career education concept is that it has been very successful in raising the performance of the low-motivated student. One evaluation of 40 11th graders exposed to career education with severe reading problems showed a dramatic reversal in their attitudes about reading. according to evidence presented to the Education and Labor Committee. This should come as no surprise. We are all familiar with the teenager whose mind is on his or her weekend plans, rather than the textbook. An uninterested teenage boy, who is preoccupied with cars, would read with much more excitement a handbook on auto mechanics than Beowulf. The student who resists writing a book report might be more interested in writing a job résumé, emphasizing his or her talents

Many teachers have long recognized the need for this type of instruction and have developed programs on their own initiative. I am pleased that the Congress has recognized this need and is taking this step toward encouraging a comprehensive career education approach in our total school curriculum. Over 3 million young people between the ages of 16 and 24 are unemployed; this represents over half of the Nation's unemployed. Our unemployment situation has resulted from several factors, but I would venture to guess that the confusion and disillusion with the work place has been a large contributor to youth unemployment. I am pleased to vote aye today and to help end that confusion and disillusion among our young citizens, our most precious national resource.

Mr. CONTE. Mr. Speaker, I rise in support of the Elementary and Secondary Career Education Act of 1977. As a cosponsor of this measure, I want to commend the chairman, Mr. Perkins, and the other members of the committee for reporting this out early in the session.

There is a genuine need for greater effort in career education. Just yesterday, I met with a group of students from my district who were concerned that there was a lack of information available about career options open to them. They asked why there could not be more done in terms of a more cooperative relationship between Government, business, and labor, to make students more knowledgeable about the world of work.

This bill helps meet many of those concerns. This measure authorizes \$275 million over a 5-year period to assist States and local educational agencies in making career education a major goal of our school systems. This amounts to a relatively small expenditure of approximately \$1 per year for each of our Nation's 48 million elementary and secondary students, but will significantly assist in improving and expanding career education programs.

There are a number of indications that

such programs are needed. Over 3 million Americans between the ages of 16 and 24 are unemployed. This represents half the Nation's unemployed, and indicates that students are to a large extent either unaware of or ill prepared for the job opportunities available to them. About three-quarters of all secondary school students are enrolled in college preparatory courses and programs, even though it is projected that only about 20 percent of all jobs between now and 1980 will require a college degree.

The National Assessment of Education Progress carried out a nationwide assessment of the career development of 17-year-olds. They found that over half had trouble writing a job application, and that less than half could name more than one skill needed for the job they had tentatively chosen.

Career education appears to be the obvious solution and means for improving these skills in which students are lacking. A National Institute of Education study found that children develop concepts about careers at an early age, and that unless they are provided with a wide range of information, they tend to develop narrow, stereotypic views of jobs.

There are, of course, a number of reasons for high teenage unemployment which cannot be addressed by this or any other Federal legislation. In simple terms teenagers have less experience than other, older workers. But career education as provided for under this bill can have a definite impact in improving students' awareness of work through a variety of educational and demonstration methods.

Mr. Speaker, I strongly urge the adoption of this bill.

Mr. DE LA GARZA. Mr. Speaker, I support remarks that have already been made on the Elementary and Secondary Career Education Act of 1977. I cosponsored this legislation with the distinguished chairman because of the evergrowing importance of this proposal to my district.

Recognizing and realizing one's fullest potential is an inherent part of the American dream—the dream we have heard so much about during all of our recent Bicentennial celebrations—and passage of this bill will help to bring that dream closer to an attainable goal. As opposed to vocational education, the purpose of the Career Education Act, as stated in the committee report, is to make "education as preparation for work and as a means of relating work values to other life roles and choices a major goal of all who teach and all who learn."

The approach to career education after the passage of this act would be of an eclectic sort, comprehensive in nature, providing "educational experiences at all age levels with implications for teachers of all subjects."

One other very important aspect to be considered at this time is the role of and the cost to the Federal Government. The Federal Government's involvement is purely catalytic. The provisions of this bill provide for the phasing out of the Federal Government from this program after 5 years. The authorization of appropriations would be for \$25 million for the first year. The outlay would peak in

the second year with an authorization of \$100 million, which amount would be decreased by \$25 million each succeeding year until the Federal Government is phased out of the program. This is in keeping with the spirit of reform in the Federal Government. The program, after its inception, would become a State effort. No Federal Government agency or bureaucracy would be created and after the 5-year initial period there would be no further Federal involvement.

Again, Mr. Speaker, for these reasons, I am proud to be able to lend my support to this legislation.

Mr. HAMMERSCHMIDT. Mr. Speaker, I am pleased to have joined with the distinguished chairman of the House Education and Labor Committee in cosponsoring H.R. 7, the Elementary and Secondary Education Act of 1977. And, I strongly urge its passage by the House today.

This is a good piece of legislation that addresses itself in a very positive way to insure that greater emphasis is placed on career awareness, exploration, and planning in the schools. Career education is surely one of the most vital aspects and integral facets of the entire educational system. I have always been a staunch advocate of intensified efforts in this area.

Under the provisions of H.R. 7, Federal funds will be made available to State and local educational agencies to implement comprehensive programs of career education in the elementary and secondary schools. Consider, for example, the favorable impact that its enactment will have at the local level, for there are numerous activities into which funds will be channelled: inservice training of education personnel; development of collaborative arrangements with business, labor, industry, and groups representing women. minorities, and the handicapped; development of work experience for career exploration, purchasing of career education materials and supplies; and educating community people about the goals of career education. These are all extremely practical purposes; they are workable goals that can and will be achieved.

In these times of unemployment, we can appreciate the need to place emphasis on preparing young people for specific careers that will be marketable and useful.

To give us an example of how far reaching are the goals and provisions of H.R. 7, consider the strong statement of support for this legislation by the National Federation of Independent Business, the Nation's largest association representing small business. The NFIB has actively endorsed the Elementary and Secondary Career Education Act because "small business is labor intensive and most hiring is done by small business right out of the schools. For such reason, Career Education would impact greatly on the caliber of students being hired by small business. NFIB is disturbed over the present state of education and feels that this legislation will encourage a return to basics so students would be more practically oriented for the world of work which they will be entering.'

I cannot imagine a more apt description of the aims of H.R. 7 and I believe

the NFIB comments appropriately emphasize the need for enactment of the

"Basics" is what the bill is all aboutadequately helping to prepare our young people for the world they will face when they graduate from school. The legislation before us today will help to arm them with basic, practical skills and abilities and will help to insure that they will be productive members of the American work force and of society.

I urge my colleagues to support H.R. 7 which will truly improve the quality of education in our country.

Mr. BRADEMAS, Mr. Speaker, I rise

in support of H.R. 7.

Mr. Speaker, career education is a comprehensive instructional strategy. It helps equip students with the skills to enable them to adapt successfully to the career opportunities of the present and the future. These skills include basic academic skills, good work habits, a constructive orientation toward work, career decisionmaking skills and job-seeking, job-getting and job-holding skills.

Mr. Speaker, career education is neither a substitute for academic achievement or vocational education. It is rather an educational strategy for infusing new meaning and relevance into the entire curriculum by relating school work to the larger society beyond the

school house doors.

In essence career education aims at informing students of the career choices available to them, providing them the ability to make intelligent choices from among a variety of options and giving them the skills to pursue successfully the career they choose. Career education, at its best, broadens the choices available to a student and helps education to achieve its fundamental goal of liberating the individual.

I am particularly pleased, Mr. Speaker, that the legislation before us today places strong emphasis on State efforts to eliminate bias and stereotyping due to race, sex, and physical handicap. Minorities, women, and the handicapped are among those most in need of sensitive assistance to enhance their career awareness and

skills.

The Elementary and Secondary Career Education Act of 1977 is an excellent example of creative Federal leadership in education. Commissioner Marland perceived the widespread interest in creating a better linkage between education and work.

In 1971, he coined the phrase "career education" and gave support to development work from the limited discretionary funds available to him. The Education Amendments of 1974 authorized research and demonstration in career education.

Mr. Speaker, the response to career education by students, parents, and educators has been very enthusiastic and supportive. The limited evaluations available indicate that career education is succeeding. For example, the Indiana State Department of Education found that a group of 11th graders with severe reading problems, who were in a career education program, showed dramatic improvement in their attitudes about reading.

The Federal Government did not impose the career education concept from Washington. Federal efforts instead served to crystallize and support a new approach to instruction, the need for which was widely perceived.

Mr. Speaker, this legislation will provide Federal support for the implementation of career education programs in elementary and secondary education. But the support will be carefully phased in and phased out. Career education will get the boost it now needs to be integrated into education nationwide but without undertaking a permanent Federal responsibility in this area. Simultaneously the research and demonstration authorized by the 1974 act will shift to focus on postsecondary education where career education is at an earlier stage of development compared to

elementary and secondary education.

Mr. Speaker, I commend the distinguished chairman of the Education and Labor Committee, Mr. PERKINS, for his leadership in formulating the creative and carefully balanced approach to career education contained in this bill. I am proud to be a cosponsor of the bill, and I urge my colleagues to support it.

Mr. MAZZOLI. Mr. Speaker, I rise in support of H.R. 7, the Elementary and Secondary Career Education Act of 1977.

Since World War II, more and more American youngsters have been entering and graduating from high school. Theemphasis in American secondary education is largely on academic training.

As a result, many young Americans find themselves with high school diplomas, but-for those who do not elect to enter college-with no specific career skill or marketable job talent.

H.R. 7 addresses this problem by providing Federal assistance to encourage, at the local system level, the establishment of career education and counseling programs. Federal assistance would be used to support programs devised and operated by local and State boards of education.

By allowing a great degree of local autonomy in the formulation of career education and counseling programs, the bill insures that each program is tailored to the particular and varying vocational needs of a State or a region.

The program calls for the fairly modest expenditure of \$275 million over a 5year period. These funds are not intended to substitute for local funds, but instead to encourage and assist local school districts in establishing career training and counseling programs.

H.R. 7 provides what I would describe as an ideal Federal program-one designed to assist local districts without forcing them-in return for the assistance—to give up their cherished and necessary independence from the Federal Government.

H.R. 7 provides a satisfactory and inexpensive means for filling a major national need. And, I urge my colleagues to support this measure.

Mr. PERKINS. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Kentucky (Mr. PERKINS)

that the House suspend the rules and pass the bill H.R. 7, as amended.

The question was taken.

Mr. BUCHANAN. Mr. Speaker, on that demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

PERMISSION FOR COMMITTEE ON ARMED SERVICES TO HAVE UNTIL APRIL 7 TO FILE A REPORT ON H.R. 5970

Mr. PRICE. Mr. Speaker, I ask unanimous consent that the Committee on Armed Services may have until April 7 to file a report on the bill H.R. 5970.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

PETROLEUM MARKETING PRACTICES ACT

Mr. DINGELL. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 130) to provide for the protection of franchised distributors and retailers of motor fuel; to encourage conservation by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers; and to prevent deterioration of competition in gasoline marketing, as amended.

The Clerk read as follows:

H.R. 130

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Petroleum Marketing Practices Act".

TABLE OF CONTENTS

TITLE I-FRANCHISE PROTECTION

Sec. 205. Effective dates.

TITLE I-FRANCHISE PROTECTION DEFINITIONS

SEC. 101. As used in this title:

- (1) (A) The term "franchise" means any contract
 - (i) between a refiner and a distributor,
- (ii) between a refiner and a retailer, between a distributor and another distributor, or
- (iv) between a distributor and a retailer, under which a refiner or distributor (as the case may be) authorizes or permits a retailer or distributor to use, in connection with the sale, consignment, or distribution of motor fuel, a trademark which is owned or controlled by such refiner or by a refiner which supplies motor fuel to the distributor which authorizes or permits such use.

(B) The term "franchise" includes-

(i) any contract under which a retailer or distribution of motor fuel under a tradeized or permitted to occupy leased marketing premises, which premises are to be employed in connection with the sale, consignment, or distribution of motor fuel under a trademark which is owned or controlled by such refiner or by a refiner which supplies motor fuel to the distributor which authorizes or permits such occupancy;

(ii) any contract pertaining to the supply of motor fuel which is to be sold, consigned, or distributed under a trademark which is owned or controlled by a refiner; and

- (iii) the unexpired portion of any franas defined by the preceding provisions of this paragraph, which is transferred or assigned as authorized by the provisions of such franchise or by any applicable provision of State law which permits such transfer or assignment without regard to any provision of the franchise.
- (2) The term "franchise relationship" means the respective motor fuel marketing or distribution obligations and responsibilities of a franchisor and a franchisee which result from the marketing of motor fuel under a franchise.
- (3) The term "franchisor" means a refiner distributor (as the case may be) who authorizes or permits, under a franchise, a retailer or distributor to use a trademark in connection with the sale, consignment, or distribution of motor fuel.
- (4) The term "franchisee" means a retailer or distributor (as the case may be) who is authorized or permitted, under a franchise, to use a trademark in connection with the sale, consignment, or distribution of motor fuel.
- (5) The term "refiner" means any person engaged in the refining of crude oil to produce motor fuel, and includes any affiliate of such person.

(6) The term "distributor" means any person, including any affiliate of such person, who-

(A) purchases motor fuel for sale, consignment, or distribution to another; or

(B) receives motor fuel on consignment for consignment or distribution to his own motor fuel accounts.

(7) The term "retailer" means any person who purchases motor fuel for sale to the general public for ultimate consumption.

(8) The term "marketing premises" means, in the case of any franchise, premises which, under such franchise, are to be employed by the franchise in connection with the sale, consignment, or distribution of motor fuel.

- (9) The term "leased marketing premises" means marketing premises owned, leased, or in any way controlled by a franchisor and which the franchisee is authorized or permitted, under the franchise, to employ in connection with the sale, consignment, or distribution of motor fuel.
- (10) The term "contract" means any oral
- written agreement or contract.
 (11) The term "trademark" means any trademark, trade name, service mark, or other identifying symbol or name. (12) The term "motor fuel" means gaso-
- line and diesel fuel of a type distributed for use as a fuel in self-propelled vehicles designed primarily for use on public streets,
- roads, and highways.
 (13) The term "failure" does not include-(A) any failure which is only technical or unimportant to the franchise relationship;
- (B) any failure for a cause beyond the rea-
- sonable control of the franchise.
 (14) The terms "fail to renew" and "nonmean, with respect to any franchise relationship, a failure to reinstate, continue, or extend the franchise relationship-
- (A) at the conclusion of the term, or on the expiration date, stated in the relevant franchise:

(B) at any time, in the case of the relevant franchise which does not state a term of duration or an expiration date; or

(C) following a termination (on or after the date of enactment of this Act) of the relevant franchise which was entered into prior to such date of enactment and has not been renewed after such date.

(15) The term "affiliate" means any person who (other than by means of a franchise) controls, is controlled by, or is under common control with, any other person.

(16) The term "relevant geographic area" includes a State or a standard metropolitan statistical area as periodically established by the Office of Management and Budget.

(17) The term "termination" includes cancellation.

(18) The term "commerce" means any ade, traffic, transportation, exchange, or trade. other commerce-

(A) between any State and any place outside of such State; or

(B) which affects any trade, transportation, exchange, or other commerce described

in subparagraph (A).

(19) The term "State" means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, or any other commonwealth, territory, or possession of the United States.

FRANCHISE RELATIONSHIP; TERMINATION AND NONRENEWAL

Sec. 102. (a) Except as provided in sub-section (b) and section 103, no franchisor engaged in the sale, consignment, or distribution of motor fuel in commerce may-

(1) terminate any franchise (entered into or renewed on or after the date of enactment of this Act) prior to the conclusion of the term, or the expiration date, stated in the franchise; or

(2) fail to renew any franchise relation-ship (without regard to the date on which the relevant franchise was entered into or renewed)

(b) (1) Any franchisor may terminate any franchise (entered into or renewed on or after the date of enactment of this Act) or may fail to renew any franchise relationship.

the notification requirements of sec-(A) tion 104 are met; and

(B) such termination is based upon a ground described in paragraph (2) or such nonrenewal is based upon a ground described

in paragraph (2) or (3).
(2) For purposes of this subsection, the following are grounds for termination of a franchise or nonrenewal of a franchise relationship:

- (A) A failure by the franchisee to com-y with any provision of the franchise, which provision is both reasonable and of material significance to the franchise relationship, if the franchisor first acquired actual or constructive knowledge of such
- (i) not more than 120 days prior to the date on which notification of termination or nonrenewal is given, if notification is given pursuant to section 104(a); or
- (ii) not more than 60 days prior to the date on which notification of termination or nonrenewal is given, if less than 90 days notification is given pursuant to section
- (B) A failure by the franchisee to exert good faith efforts to carry out the provisions of the franchise, if-
- (i) the franchisee was apprised by the franchisor in writing of such failure and was afforded a reasonable opportunity to exert good faith efforts to carry out such provisions: and
- (ii) such failure thereafter continued within the period which began not more than 180 days before the date notification of

termination or nonrenewal was given pursuant to section 104.

The occurrence of event which is relevant to the franchise relationship and as a result of which termination of the franchise or nonrenewal of the franchise relationship is reasonable, if such event occurs during the period the franchise is in effect and the franchisor first acquired actual or constructive knowledge of such occurrence-

(i) not more than 120 days prior to the date on which notification of termination or nonrenewal is given, if notification is given pursuant to section 104(a); or

(ii) not more than 60 days prior to the date on which notification of termination or nonrenewal is given, if less than 90 days notification is given pursuant to section

(D) An agreement, in writing, between the franchisor and the franchisee to terminate the franchise or not to renew the franchise relationship, if-

(1) such agreement is entered into not more than 180 days prior to the date of such termination or, in the case of nonrenewal, not more than 180 days prior to the conclusion of the term, or the expiration

date, stated in the franchise; (ii) the franchisee is promptly provided with a copy of such agreement, together with the summary statement described in section 104(d): and

(iii) within 7 days after the date on which the franchisee is provided a copy of such agreement, the franchisee has not posted by certified mail a written notice to the franchisor repudiating such agreement.

- (E) In the case of any franchise entered into prior to the date of the enactment of this Act and in the case of any franchise entered into or renewed on or after such date (the term of which is 3 years or longer or with respect to which the franchisee was offered a term of 3 years or longer), a determination made by the franchisor in good faith and in the normal course of business to withdraw from the marketing of motor fuel through retail outlets in the relevant geographic market area in which the marketing premises are located, if-
 - (i) such determination-

(I) was made after the date such fran-chise was entered into or renewed, and (II) was based upon the occurrence of

changes in relevant facts and circumstances after such date;

- (ii) the termination or nonrenewal is not for the purpose of converting the premises, which are the subject of the franchise, to operation by employees or agents of the franchisor for such franchisor's own account;
- (iii) in the case of leased marketing premises
- the franchisor, during the 180-day period after notification was given pursuant to section 104, either made a bona fide offer to sell, transfer, or assign to the franchisee such franchisor's interests in such premises, or, if applicable, offered the franchisee a right of first refusal of at least 45-days duration of an offer, made by another, to purchase such franchisor's interest in such premises; or
- (II) in the case of the sale, transfer, or assignment to another person of the franchisor's interest in such premises in connection with the sale, transfer, or assignment to such other person of the franchisor's interest in one or more other marketing premises, if such other person offers, in good faith, a franchise to the franchisee on terms and conditions which are not discriminatory to the franchisee as compared to franchises then currently being offered by such other person or franchises then in effect and with respect to which such other person is the franchisor.
 - (3) For purposes of this subsection, the

following are grounds for nonrenewal of a franchise relationship:

(A) The failure of the franchisor and the franchisee to agree to changes or additions to the provision of the franchise, if-

(i) such changes or additions are the result of determinations made by the franchisor in good faith and in the normal course of business; and

(ii) such failure is not the result of the franchisor's insistence upon such changes or additions for the purpose of preventing the renewal of the franchise relationship.

(B) The receipt of numerous bona fide customer complaints by the franchisor concerning the franchisee's operation of the marketing premises, if-

(i) the franchisee was promptly apprised of the existence and nature of such complaints following receipt of such complaints

by the franchisor; and (ii) if such complaints related to the condition of such premises or to the conduct of any employee of such franchisee, the franchisee did not promptly take action to cure

or correct the basis of such complaints.

(C) A failure by the franchisee to operate the marketing premises in a clean, safe, and healthful manner, if the franchisee failed to do so on two or more previous occasions and the franchisor notified the franchisee of such failures.

(D) In the case of any franchise entered into prior to the date of the enactment of this Act (the unexpired term of which, on such date of enactment, is 3 years or longer) and, in the case of any franchise entered into or renewed on or after such date (the term of which was 3 years or longer, or with respect to which the franchisee was offered a term of 3 years or longer), a determination made by the franchisor in good faith and in the normal course of business, if-

(i) such determination is-

(I) to convert the leased marketing premises to a use other than the sale or distribution of motor fuel,

(II) to materially alter, add to, or replace

such premises,

(III) to sell such premises, or

- (IV) that renewal of the franchise relationship is likely to be uneconomical to the franchisor despite any reasonable changes or reasonable additions to the provisions of the franchise which may be acceptable to the franchisee; (ii) with respect to a determination referred to in subclause (II) or (IV), such determination is not made for the purpose of converting the leased marketing premises to operation by employees or agents of the franchisor for such franchisor's own account: and
- (iii) in the case of leased marketing premises, such franchisor, during the 90-day period after notification was given pursuant to section 104, either-

(I) made a bonda fide offer to sell, transfer, or assign to the franchisee such fran-duration of an offer, made by another, to

- (II) if applicable, offered the franchisee right of first refusal of at least 45-days duration of an offer, made by another, to purchase such franchisor's interest in such premises.
- (c) As used in subsection (b) (2) (C), the term "an event which is relevant to the franchise relationship and as a result of which termination of the franchise or nonrenewal of the franchise relationship is reasonable" includes events such as-
- (1) fraud or criminal misconduct by the franchisee relevant to the operation of the marketing premises;
- (2) declaration of bankruptcy or judicial determination of insolvency of the franchisee:
- (3) continuing severe physical or mental disability of the franchisee of at least 3 months duration which renders the franchisee unable to provide for the continued proper operation of the marketing pemises;

- (4) loss of the franchisor's right to grant possession of the leased marketing premises through expiration of an underlying lease, if the franchisee was notified in writing, prior to the commencement of the term of the then existing franchise-
- (A) of the duration of the underlying lease, and
- (B) of the fact that such underlying lease might expire and not be renewed during the term of such franchise (in the case of termination) or at the end of such term (in the case of nonrenewal);

(5) condemnation or other taking, whole or in part, of the marketing premises pursuant to the power of eminent domain;

- (6) loss of the franchisor's right to grant the right to use the trademark which is the subject of the franchise, unless such loss was due to trademark abuse, violation of Federal or State law, or other fault or negli-gence of the franchisor, which such abuse, violation, or other fault or negligence is related to action taken in bad faith by the franchisor;
- (7) destruction (other than by the franchisor) of all or a substantial part of the marketing premises:
- (8) failure by the franchisee to pay to the franchisor in a timely manner when due all sums to which the franchisor is legally entitled:
- (9) failure by the franchisee to operate the marketing premises for-

(A) 7 consecutive days, or

- (B) such lesser period which under the facts and circumstances constitutes an unreasonable period of time;
- (10) willful adulteration, mislabeling, or misbranding of motor fuels or other trademark violations by the franchisee;
- (11) knowing failure of the franchisee to comply with Federal, State, or local laws or regulations relevant to the operation of the marketing premises; and

(12) conviction of the franchisee of any

felony involving moral turpitude.

(d) In the case of any termination of a franchise (entered into or renewed on or after the date of enactment of this Act), or in the case of any nonrenewal of a franchise relationship (without regard to the date on which such franchise relationship was entered into or renewed) -

(1) if such termination or nonrenewal is based upon an event described in subsection (c) (5), the franchisor shall fairly apportion between the franchisor and the franchisee compensation, if any, received by the fran-chisor based upon any loss of business opportunity or good will; and

(2) if such termination or nonrenewal is based upon an event described in subsection (c) (7) and the leased marketing premises are subsequently rebuilt or replaced by the franchisor and operated under a franchise, the franchisor shall, within a reasonable period of the franchise under which such premises

are to be operated.

TRIAL FRANCHISES AND INTERIM FRANCHISES; NONRENEWAL

Sec. 103. (a) The provisions of section 102 shall not apply to the nonrenewal of any franchise relationship-

- (1) under a trial franchise; or
- (2) under an interim franchise. (b) For purposes of this section-
- The term "trial franchise" means any (1) franchise-
- (A) which is entered into on or after the date of enactment of this Act;
- (B) the franchisee of which has not previously been a party to a franchise with the franchisor:
- (C) the initial term of which is for a period of not more than 1 year; and
- (D) which is in writing and states clearly and conspicuously-
 - (i) that the franchise is a trial franchise;

- (ii) the duration of the initial term of the franchise;
- (iii) that the franchisor may fail to renew the franchise relationship at the conclusion of the initial term stated in the franchise by notifying the franchisee, in accordance with the provisions of section 104, of the franchisor's intention not to renew the franchise relationship; and

(iv) that the provisions of section 102, limiting the right of a franchisor to fail to renew a franchise relationship, are not applicable to such trial franchise.

- (2) The term "trial franchise" does not include any unexpired period of any term of any franchise (other than a trial franchise, as defined by paragraph (1)) which was transferred or assigned by a franchisee to the extent authorized by the provisions of the franchise or any applicable provision of State law which permits such transfer or assignment, without regard to any provisions of the franchise.
- (3) The term "interim franchise" means any franchise-

(A) which is entered into on or after the

date of the enactment of this Act:

(B) the term of which, when combined with the terms of all prior interim franchises between the franchisor and the franchisee, does not exceed 3 years;

(C) the effective date of which occurs immediately after the expiration of a prior franchise, applicable to the marketing premises, which was not renewed if such nonrenewal-

(i) was based upon a determination described in section 102(b)(2)(E), and

(ii) the requirements of section 102(b) (2)

(E) were satisfied; and

(D) which is in writing and states clearly and conspicuously-

(i) that the franchise is an interim franchise:

(ii) the duration of the franchise; and

- (iii) that the franchisor may fail to renew the franchise at the conclusion of the term stated in the franchise based upon a determination made by the franchisor in good faith and in the normal course of business to withdraw from the marketing of motor fuel through retail outlets in the relevant geographic market area in which the marketing premises are located if the requirements of section 102(b)(2)(E) (ii) and (iii) are satisfied.
- (c) If the notification requirements of section 104 are met, any franchisor may fail to renew any franchise relationship-
- (1) under any trial franchise, at the conclusion of the initial term of such trial franchise: and
- (2) under any interim franchise, at the conclusion of the term of such interim franchise, if-
- (A) such nonrenewal is based upon a determination described in section 102(b)(2) (E); and
- (B) the requirements of section 102(b)(2) (E) (ii) and (iii) are satisfied.

NOTIFICATION OF TERMINATION OR NON-RENEWAL

Sec. 104. (a) Prior to termination of any franchise or nonrenewal of any franchise relationship, the franchisor shall furnish notification of such termination or such nonrenewal to the franchise who is a party to such franchise or such franchise relation-

- (1) in the manner described in subsection (c); and
- (2) except as provided in subsection (b), not less than 90 days prior to the date on which such termination or nonrenewal takes
- (b) (1) In circumstances in which it would not be reasonable for the franchisor to furnish notification, not less than 90 days prior to the date on which termination or non-

renewal takes effect, as required by subsection (a) (2)-

(A) such franchisor shall furnish notification to the franchisee affected thereby on the earliest date on which furnishing such notification is reasonably practicable;

(B) in the case of leased marketing premises, such franchisor-

(i) may not establish a new franchise relationship with respect to such premises before the expiration of the 30-day period which begins-

(I) on the date notification was posted or

personally delivered, or

(II) if later, on the date on which such termination or nonrenewal takes effect; and (ii) may, if permitted to do so by the franchise agreement, repossess such premises and, in circumstances under which it would be reasonable to do so, operate such premises

through employees or agents.

- (2 In the case of any termination of any franchise or any nonrenewal of any franchise relationship pursuant to the provisions of section 102(b)(2)(E) or section 103 (c) (2) the franchisor shall furnish notification to the franchisee not less than 180 days prior to the date on which such termination or nonrenewal takes effect.
 - (c) Notification under this section-

- (1) shall be in writing; (2) shall be posted by certified mail or personally delivered to the franchisee; and
- (3) shall contain-(A) a statement of intention to terminate the franchise or not to renew the franchise relationship, together with the reasons there-
- (B) the date on which such termination or nonrenewal takes effect; and

(C) the summary statement prepared un-

der subsection (d).

- (d)(1) Not later than 30 days after the date of enactment of this Act, the Administrator of the Federal Energy Administration shall prepare and publish in the Federal Register a simple and concise summary of the provisions of this title, including a statement of the respective responsibilities of, and the remedies and relief available to, any franchisor and franchisee under this title.
- (2) In the case of summaries required to be furnished under the provisions of section 102(b)(2)(D) or subsection (c)(3)(C) of this section before the date of publication of such summary in the Federal Register, such summary may be furnished not later than 5 days after it is so published rather than at the time required under such provisions.

ENFORCEMENT

SEC. 105. (a) If a franchisor fails to comply with the requirements of section 102 or 103, the franchisee may maintain a civil action against such franchisor. Such action may be brought, without regard to the amount in controversy, in the district court of the United States in any judicial district in which the principal place of business such franchisor is located or in which such franchisee is doing business, except that no such action may be maintained unless commenced within 1 year after the later of-

- (1) the date of termination of the franchise or nonrenewal of the franchise relationship; or
- (2) the date of the franchisor fails to comply with the requirements of section 102 or 103.
- (b)(1) In any action under subsection (a), the court shall grant such equitable relief as the court determines is necessary to remedy the effects of any failure to comply with the requirements of section 102 or 103, including declaratory judgment, mandatory or prohibitive injunctive relief, and interim equitable relief.

- (2) Except as provided in paragraph (3), in any action under subsection (a), the court shall grant a preliminary injunction
 - (A) the franchisee shows
- (i) the franchise of which he is a party has been terminated or the franchise re lationship of which he is a party has not been renewed, and

(ii) there exist sufficiently serious quesgoing to the merits to make such questions a fair ground for litigation; and
(B) the court determines that, on bal-

- ance, the hardships imposd upon the franchisor by the issuance of such preliminary injunctive relief will be less than the hardship which would be imposed upon such franchisee if such preliminary injunctive relief were not granted.
- (3) Nothing in this subsection shall be construed as preventing any court from requiring the franchisee in any action under subsection (a) to post a bond, in an amount established by the court, prior to the is-suance or continuation of any equitable
- (4) In any action under subsection (a), the court need not exercise its equity powers to compel continuation or renewal of the franchise relationship if such action was commenced-
- (A) more than 90 days after the date on which notification pursuant to section 104 (a) was posted or personally delivered to the franchisee:
- (B) more than 180 days after the date on which notification pursuant to section 104 (b) (2) was posted or personally delivered to the franchisee; or
- (C) more than 30 days after the date on which the termination of such franchise or the nonrenewal of such franchise relation-ship takes effect if less than 90 days notification was provided pursuant to section 104 (b) (1).
- In any action under subsection (a), the franchisee shall have the burden of prov ing the termination of the franchise or the nonrenewal of the franchise relationship. The franchisor shall bear the burden of going forward with evidence to establish as an affirmative defense that such termination or nonrenewal was permitted under section 102(b) or 103, and, if applicable, that such franchisor complied with the requirements of
- section 102(d).
 (d)(1) If the franchisee prevails in any action under subsection (a), such franchisee shall be entitled-

(A) consistent with the Federal Rules of Civil Procedure, to actual damages;

(B) in the case of any such action which is based upon conduct of the franchisor which was in willful disregard of the requirements of section 102 or 103, or the rights of the franchisee thereunder, to exemplary damages, where appropriate; and

(C) to reasonable attorney and expert witness fees to be paid by the franchisor, unless the court determines that only nominal damages are to be awarded to such franchisee, in which case the court, in its discretion, need not direct that such fees be paid by the

(2) The question of whether to award ex-emplary damages and the amount of any such award shall be determined by the court and not by a jury.

(3) In any action under subsection (a), the court may, in its discretion, direct that reasonable attorney and expert witness fees be paid by the franchisee if the court finds that

such action is frivolous.

(e) (1) In any action under subsection (a) with respect to a failure of a franchisor to renew a franchise relationship in compliance with the requirements of section 102, the court may not compel a continuation or renewal of the franchise relationship if the franchisor demonstrates to the satisfaction of the court that-

- (A) the basis for such nonrenewal is a determination made by the franchisor in good faith and in the normal course of business-
- (i) to convert leased marketing premises to a use other than the sale or distribution of motor fuel,
- (ii) to materially alter, add to, or replace such premises,

(iii) to sell such premises, (iv) to withdraw from the marketing of motor fuel through retail outlets in the relevant geographic market area in which the marketing premises are located,

(v) that renewal of the franchise relationis likely to be uneconomical to the franchisor despite any reasonable changes or reasonable additions to the provisions of the franchise which may be acceptable to the franchisee: and

(B) the requirements of section 104 have

been complied with.

(2) The provisions of paragraph (1) shall not effect any right of any franchisee to recover actual damages and reasonable attorney and expert witness fees under subsection (d) if such nonrenewal is prohibited by section 102.

RELATIONSHIP OF THIS TITLE TO STATE LAW

SEC. 106. (a) To the extent that any provision of this title applies to the termination (or the furnishing of notification with respect thereto) or any franchise, or to the nonrenewal (or the furnishing of notification with respect thereto) of any franchise relationship, no State or any political subdivision thereof may adopt, enforce, or continue in effect any provision of any law or regulation (including any remedy or penalty applicable to any violation thereof) with respect to termination (or the furnishing of notification with respect thereto) of any such franchise or to the nonrenewal (or the furnishing of notification with respect thereto) of any such franchise relationship unless such provision of such law or regulation is the same as the applicable provision of this

(b) This title shall not be construed to authorize any transfer or assignment of any franchise or to prohibit any transfer assignment of any franchise as authorized by the provisions of such franchise or by any applicable provision of State law which permits such transfer or assignment without regard to any provision of the franchise.

TITLE II-OCTANE DISCLOSURE DEFINITIONS

SEC. 201. As used in this title:

- (1) The term "octane rating" means the rating of the antiknock characteristics of a or type of automotive gasoline as determined by dividing by 2 the sum of the research octane number plus the motor octane number, unless another procedure is prescribed under section 203(c)(3), in which case such terms means the rating of such characteristics as determined under the procedure so prescribed.
- (2) The terms "research octane number" and "motor octane number" have the meanings given such terms in the specifications of the American Society for Testing and Materials (ASTM) entitled "Standard Speci-fications for Automotive Gasoline" designated D 439 (as in effect on the date of the enactment of this Act) and, with respect to any grade or type of automotive gasoline, are determined in accordance with test methods set forth in ASTM standard test methods designated D 2699 and D 2700 (as in effect on such date).

The term "knock" means the combustion of a fuel spontaneously in localized areas of a cylinder of a spark-ignition engine, instead of the combustion of such progressively from the spark.

(4) The term "gasoline retailer" means any person who markets automotive gasoline to the general public for ultimate consumption.

- (5) The term "refiner" means any person engaged in—
- (A) the refining of crude oil to produce automotive gasoline; or
- (B) the inportation of automotive gasoline.
- (6) The term "automotive gasoline" means gasoline of a type distributed for use as a fuel in any motor vehicle.
- (7) The term "motor vehicle" means any self-propelled four-wheel vehicle, of less than 6,000 pounds gross vehicle weight, which is designed primarily for use on public streets, roads, and highways.

(8) The term "new motor vehicle" means any motor vehicle the equitable or legal title to which has not previously been transferred

to an ultimate purchaser.

- (9) The term "ultimate purchaser" means, with respect to any item, the first person who purchases such item for purposes other than resale.
- (10) The term "manufacturer" means any person who imports, manufactures, or assembles motor vehicles for sale.
- (11) The term "octane requirement" means, with respect to automotive gasoline for use in a motor vehicle, or a class thereof, imported, manufactured, or assembled by a manufacturer, the minimum octane rating of such automotive gasoline which such manufacturer recommends for the efficient operation of such motor vehicle, or a substantial portion of such class, without knocking.
- (12) The term "model year" means a manufacturer's annual production period (as determined by the Federal Trade Commission) for motor vehicles or a class of motor vehicles. If a manufacturer has no annual production period, the term "model year" means the calendar year.
- (13) The term "commerce" means any trade, traffic, transportation, exchange, or other commerce—
- (A) between any State and any place outside of such State; or
- (B) which affects any trade, transportation, exchange, or other commerce described in subparagraph (A).
 (14) The term "State" means any State of
- (14) The term "State" means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, or any other commonwealth, territory, or possession of the United States.
- of the United States.

 (15) The term "person", for purposes of applying any provision of the Federal Trade Commission Act with respect to any provision of this title, includes a partnership and a corporation.
- (16) The term "distributor" means any person who receives gasoline and distributes such gasoline to another person other than the ultimate purchaser.

OCTANE TESTING AND DISCLOSURE REQUIREMENTS
SEC. 202. (a) Each refiner who distributes

automotive gasoline in commerce shall—
(1) determine the octane rating of any

(1) determine the octane rating of any such gasoline; and

(2) if such refiner distributes such gasoline to any person other than the ultimate purchaser, certify, consistent with the determination made under paragraph (1), the octane rating of such gasoline.

- (b) Each distributor who receives automotive gasoline, the octane rating of which is certified to him under this section, and distributes such gasoline in commerce to another person other than the ultimate purchaser shall certify to such other person the octane rating of such gasoline consistent with—
- (1) the octane rating of such gasoline certified to such distributor; or
- (2) if such distributor elects (at such time and in such manner as the Federal Trade Commission may, by rule, prescribe), the octane rating of such gasoline determined by such distributor.

- (c) Each gasoline retailer shall display in a clear and conspicuous manner, at the point of sale to ultimate purchasers of automotive gasoline, the octane rating of such gasoline, which octane rating shall be consistent with—
- (1) the octane rating of such gasoline certified to such retailer under subsection (a) (2) or (b):
- (2) if such gasoline retailer elects (at such time and in such manner as the Federal Trade Commission may, by rule, prescribe), the octane rating of such gasoline determined by such retailer for such gasoline, or

(3) if such gasoline retailer is a refiner, the octane rating of such gasoline deter-

mined under subsection (a) (1).

(d) The Federal Trade Commission shall, by rule, prescribe requirements, applicable to any manufacturer of new motor vehicles, with respect to the display on each such motor vehicle (or representation in connection with the sale of each such motor vehicle) of the octane requirement of such motor vehicle.

(e) No person who distributes automotive gasoline in commerce may make any representation respecting the anti-knock characteristics of such gasoline unless such representation fairly discloses the octane rating of such gasoline consistent with such gasoline's octane rating as certified to or determined by such person under the foregoing provisions of this section.

(f) For purposes of this section, the octane rating of any automotive gasoline shall be considered to be certified, displayed, or represented by any person consistent with the rating certified to, or determined by,

such person-

(1) in the case of automotive gasoline which consists of a blend of 2 or more quantities of automotive gasoline of differing octane ratings, only if the rating certified, displayed, or represented by such person is the average of the octane ratings of such quantities, weighted by volume; or

(2) in the case of gasoline which does not consist of such a blend, only if the octane rating such person certifies, displays, or represents is the same as the octane rating of such gasoline certified to, or determined by,

such person.

(g) The foregoing provisions of this section shall not be construed to apply—

- (1) to any representation (by display at the point of sale or by other means) of any characteristics of any automotive gasoline other than its octane rating; or
- (2) to the identification of automotive gasoline at the point of sale (or elsewhere) by the trademark, trade name, or other identifying symbol or mark used in connection with the sale of such gasoline.
- (h) Any display or representation, with respect to the octane requirement of any motor vehicle, required to be made under any rule prescribed under subsection (d) shall not create an express or implied warranty under State or Federal law that any automotive gasoline the octane rating of which equals or exceeds such octane requirement—
- (1) may be used as a fuel in all motor vehicles of the same class as that motor vehicle without knocking; or
- (2) may be used as a fuel in such motor vehicle under all operating conditions without knocking.

ADMINISTRATION AND ENFORCEMENT

SEC. 203. (a) The Federal Trade Commission shall have procedural, investigative, and enforcement powers, including the power to issue procedural rules in enforcing compliance with the requirements of this title and rules prescribed pursuant to the requirements of this title, to further define terms used in this title, and to require the filing of reports, the production of documents, and the appearance of witnesses, as though the applicable terms and conditions of the Fed-

eral Trade Commission Act were part of this title.

(b) (1) The Environmental Protection Agency shall, to the extent practicable—

(A) conduct field testing of the octane rating of automotive gasoline in connection with any other testing of such gasoline it conducts under other provisions of law; and

(B) certify the results of such testing to

the Federal Trade Commission.

- (2) The Federal Trade Commission may enter into interagency agreements with the Environmental Protection Agency and such other agencies of the United States as the Commission determines appropriate for the purpose of assuring enforcement of the provisions of this title in a manner which is consistent with—
- (A) minimizing the cost of field inspection and related compliance activities; and
- (B) reducing duplication of similar or related field compliance activities performed by agencies of the United States.
- (c) (1) Not later than 6 months after the date of the enactment of this Act, the Federal Trade Commission shall, by rule, prescribe and make effective—
- (A) a uniform method by which a person may certify to another the octane rating of automotive gasoline; and
- (B) a uniform method of displaying the octane rating of automotive gasoline at the point of sale to ultimate purchasers.

(2) Effective on and after the effective date of the rule prescribed under paragraph (1),

any person-

(A) shall be considered to satisfy the requirements of subsection (a) or (b) of section 202, as the case may be, only if such person complies with the requirements established pursuant to paragraph (1) (A); and

lished pursuant to paragraph (1)(A); and (B) shall be considered to satisfy the requirements of section 202(c) only if such person complies with the requirements established pursuant to paragraph (1)(B).

- (3) The Federal Trade Commission may, by rule, prescribe procedures for determination of the octane rating of automotive gasoline which varies from that prescribed in section 201(1). In prescribing such rule, the Commission—
 - (A) shall consider-
- (i) ease of administration and enforcement, and
- (ii) industry practices in the distribution and marketing of automotive gasoline; and
- (B) may permit adjustments in such octane rating to take into account the effects of altitude, temperature, and humidity.
- (4) The Federal Trade Commission may, by rule, prescribe and make effective a method of determining the octane rating of automotive gasoline which consists of a blend of 2 or more quantities of automotive gasoline of differing octane ratings if the Federal Trade Commission finds that the method prescribed more accurately reflects the octane rating of such blend than the weighted-average method set forth in section 202(f)(1). Effective on and after the effective date of such rule, any person shall be considered to satisfy the requirements of section 202(f)(1) only if such person utilizes the method prescribed in such rule (in lieu of the method set forth in section 202(f)(1)).
- (d) (1) Except as provided in paragraph (2), rules under this title shall be prescribed in accordance with section 553 of title 5. United States Code, except that interested persons shall be afforded an opportunity to present written and oral data, views, and arguments with respect to any proposed rule.

(2) Rules prescribed under subsection (c)
 (3) and section 202(d) shall be prescribed on the record after opportunity for an agen-

cy hearing.

- (3) Section 18 of the Federal Trade Commission Act (15 U.S.C. 57a) shall not apply with respect to any rule prescribed under this title.
 - (e) It shall be an unfair or deceptive act

or practice in or affecting commerce (within the meaning of section 5(a)(1) of the Federal Trade Commission Act) for any person to violate subsection (a), (b), (c), or (e) of section 202, or a rule prescribed under subsection (d) of such section. For purposes of the Federal Trade Commission Act (including any remedy or penalty applicable to any violation thereof), such a violation shall be treated as a violation of a rule under such Act respecting unfair or deceptive acts or practices; except that for purposes of section 5(m) (1) (A) of such Act, the term "or knowledge fairly implied on the basis of objective circumstances" shall not apply to any viola-tion by any gasoline retailer of the requirements of section 202 (c) or (e).

RELATIONSHIP OF THIS TITLE TO STATE LAW Sec. 204. To the extent that any provision of this title applies to any act or omission, no State or any political subdivision thereof may adopt, enforce, or continue in effect any provision of any law or regulation (including any remedy or penalty applicable to any violation thereof) with respect to such or omission, unless such provision of such law or regulation is the same as the applicable provision of this title.

EFFECTIVE DATES

SEC. 205. (a) Sections 202(a) (1) and 203(b) shall take effect on the first day of the first calendar month beginning more than 6 months after the date of the enactment of this Act.

(b) Subsections (a) (2), (b), (c), and (e) of section 202 shall take effect on the first day of the first calendar month beginning more than 9 months after such date of enactment.

(c) Rules under section 202(d) may not take effect earlier than the beginning of the first motor vehicle model year which begins more than 9 months after such date of enact-

The SPEAKER pro tempore. Is a second demanded?

Mr. BROWN of Ohio. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Michigan (Mr. DINGELL) will be recognized for 20 minutes, and the gentleman from Ohio (Mr. Brown) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Michigan.

Mr. DINGELL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 130, the Petroleum Marketing Practices Act, is similar to legislation reported from this committee during the 2d session of the 94th Congress (H.R. 13000). The purposes of H.R. 130 are to establish Federal standards governing the termination and nonrenewal of franchise relationships in the marketing of motor fuels and to establish standards requiring the disclosure of the octane rating of automotive gasoline to consumers. The bill contains two titles: Title I deals with franchise relationships in the marketng of motor fuels; ttle II deals with the disclosure of the octane rating of automotive gasoline to consumers.

Title I of this legislation protects franchisees from arbitrary or discriminatory termination or nonrenewal of their franchises. The provisions strike a balance between the, at times, conflicting interests of the parties to the relationship.

Title II establishes a program for the testing, certification, and display of the octane rating of automotive gasoline in order that meaningful information regarding a key characteristic of gasoline will be disclosed to consumers. Title II should provide a basis for greater competition in automotive gasoline marketing.

Little need exists to again document the need for this legislation. The problems of arbitrary or discriminatory and, at times, unfair or punitive terminations and nonrenewals of franchises have long plagued the marketing of gasoline. A Federal statute is needed to provide meaningful protection in these areas to motor fuel franchisees

I believe that several important matters regarding this legislation should be appreciated. First, the grounds specified as justification for termination or nonrenewal of a franchise are intentionally broad enough to provide to franchisors the flexibility which may be needed to respond to changing market conditions or consumer preferences. However, to assure that franchisees nevertheless receive the meaningful protections which this Federal legislation is intended to provide and to assure that this flexibility does not frustrate the purposes of this legislation, the bill utilizes very special enforcement mechanisms. The burden of proof is placed upon the franchisor to prove compliance with the requirements of the legislation. In addition, because the franchisee's rights must be preserved, pending litigation, if his ultimate victory is to be meaningful, preliminary injunctive relief is made available to the franchisee as a matter of right upon a minimal

The key to this legislation is the balance which is struck by including flexibility in the grounds which justify termination or nonrenewal and simultaneously requiring that the franchisor prove to an impartial arbiter, a Federal court judge, that permissible grounds for termination or nonrenewal do in fact exist. Franchisee rights under this bill are, as a result, more meaningful than limitations on franchisor conduct, provided in some State laws, which are arguably more stringent. The theoretical protections afforded by these State laws are often not enforceable in practice, due to procedural advantages enjoyed by the

In view of this fact, the Federal legislation can solve the problem of uncertainty of franchisor-franchisee rights created by a multiplicity of differing State laws on the subject. Thus, this bill preempts State laws dealing with termination, nonrenewal, and notification of termination or nonrenewal, if the applicable provision of the State law is "not the same as" that of the Federal law. Of course, where the Federal law does not apply, for example, in the area of termination of existing franchises, no State law dealing with that issue is preempted.

Two other issues should also be addressed: First, the franchise protections of this legislation are extended fully to distributors or jobbers. As a matter of equity, the bill imposes upon these marketers an obligation to comply with

the legislation's requirements in their dealings with their own franchisees.

Not included in this legislation are measures designed to address three marketing issues. These issues include. first, the security of the supply relationships of nonbranded independent marketers, that is, marketers which are not franchisees. The second issue is competitive impacts of greater forward integration by refiners into marketing. The third marketing issue, not addressed by this bill, relates to allegations of predatory pricing practices by both refiners and jobbers, whereby an integrated marketer undersells his own retailers through direct sales to consumers at a price near, or in some cases less than. the supplier's price to its retailers. The absence of legislative solutions to these problems does not indicate that very real problems may not exist in these areas. To the contrary, these are matters which must, and will be, examined by the Congress so that a determination may be made as to whether a legislative response to these problems is justified and, if so, what solution should be enacted. The omission of solutions to these issues, however, should not be a basis for refusal to enact, at this time, the solution to the very real problems of franchise relationships which is presently at hand.

I urge my colleagues to vote "aye" on the motion to suspend the rules and pass the bill, H.R. 130, the Petroleum Marketing Practices Act.

Mr. STEIGER. Mr. Speaker, will the gentleman vield?

Mr. DINGELL. I yield to the gentleman from Wisconsin.

Mr. STEIGER. I thank the gentleman for yielding to me. I have been looking for the report on the bill, but I cannot find it.

Mr. DINGELL. The answer is that the report has been filed but has not yet been printed.

Mr. STEIGER. It has not yet been printed, but it has been filed?

Mr. DINGELL. It has been filed, and we are proceeding, as the gentleman knows, under suspension.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Ohio

Mr. BROWN of Ohio. I might say to the gentleman from Wisconsin that the report has been prepared with the cooperation of both the majority and minority, and that the minority is satisfied with the report. I do not think its nonavailability is a matter of design, but rather a matter of printing difficulties.

Mr. DINGELL. It was a matter of printing difficulties, and difficulty in getting the report together in the time we had to bring the matter up under suspension.

Mr. LONG of Louisiana. Mr. Speaker, will the gentleman yield?

Mr. DINGELL. I yield to the gentle-

man from Louisiana.

Mr. LONG of Louisiana. Mr. Speaker, I rise in support of H.R. 130, the Petroleum Marketing Practices Act. This measure is a step forward in protecting our free enterprise system and will benefit the American gasoline consumer.

At the present time, retail dealers have little protection against loss of franchise, a devastating loss of supply which may occur without notice. H.R. 130 provides franchise protection by defining grounds for termination or failure to renew. The bill will prevent arbitrary termination or failure to renew the franchise relationship unless such action is based upon grounds specified in the legislation and complies with specified notice requirements. The legislation is a fair compromise. Heretofore the small businessman owning and operating his own service station for a number of years could lose his franchise arbitrarily.

In this time of changing market conditions, franchise protection for the retail dealer is absolutely necessary. Otherwise, the livelihood of numerous independent service station retailers may be jeopardized. It is in the best interest of the local community to keep the independent owner-operator alive. The independent retailer is a local employer and his profits are rechanneled into the local economy. Our small communities, our rural areas, and even our cities need the economic support of small business, and H.R. 130 is a much needed bill which will provide small business protection to the independent retail gasoline dealer.

Mr. Speaker, this bill also includes a wise consumer protection measure. The legislation requires testing and certification of octane ratings of automotive gasoline and conspicuous posting of these octane ratings at the point of sale. This requirement will give the consumer a uniform national standard of comparison among the choice of gasoline and will encourage competition—hopefully resulting in better consumer bargains in automotive fuel sales.

Mr. Speaker, I encourage my colleagues to vote for the Petroleum Marketing Practices Act, thereby achieving appropriate protection for retail service station owners and giving to consumers information that will help them to get the most for their money in gasoline purchases.

Mr. DINGELL. Mr. Speaker, I reserve the balance of my time.

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I join my colleague from Michigan, Mr. Dingell, in support of H.R. 130, the Petroleum Marketing Practices Act. This legislation has been before our committee for the last three Congresses, and in the waning days of the 94th Congress was scheduled to come before the full House under the suspension calendar. Unfortunately, the bill was never called up due to the press of more urgent matters in the waning days of the Congress.

But this year, the Energy and Power Subcommittee acted quickly on marketing issues in its schedule of legislative action and reported a compromise bill by a voice vote. Although I am not completely satisfied in every respect with H.R. 130, it does represent a delicate and effective compromise among several legitimate, competing interests, and is, I feel, a better bill than H.R. 13000, which was the bill that achieved a unani-

mous position last year in the subcommittee and in the full committee but did not get acted upon by the House before the House adjourned. Therefore, I urge my colleagues to vote for passage of this bill.

The bill has two basic purposes. First, it protects the franchisee who is involved in a franchise relationship, but at the same time, the bill recognizes the legitimate interests of the franchisor and maintains his fundamental property rights with some modification. Second, the bill provides uniformity of rules under which such franchises are to operate and termination or nonrenewal may occur. Some 30 States have conflicting petroleum marketing protection laws which make it difficult for companies to develop unified and efficient national and regional marketing plans.

This is one of the problems this legislation is designed to cure, since it preempts such laws and the various differences in them.

Mr. Speaker, it is essential that members appreciate how gasoline is marketed in this country in order to understand this legislation.

Today, the petroleum industry markets motor fuel through a unique and extremely complex marketing system which often transcends State lines. From the refinery, motor fuel can move into the final market in one of several ways. First, refiners can market through their own distribution and marketing systems which may include company owned, salary operated retail outlets as well as franchised lessee dealers. All majors and most small and independent refiners market the bulk of their motor fuel in this way. Second, the refiners may sell motor fuel at wholesale to branded jobbers or wholesalers who in turn market the product, under the refiner's brand, through salary operated stations or through franchised lessee dealers. This method is particularly well adapted to rural areas. Third, refiners may sell to independent wholesale marketers who then sell to the ultimate consumer through salary operated stations or dealers.

This bill focuses particularly on that portion of gasoline marketing involving franchise relationships—the agreement a jobber has with a refiner and the agreement that a jobber or refiner has with a service station dealer through which the refiner's brand is used in marketing the motor fuel. This bill establishes rules under which such franchise arrangements should operate.

Under the provisions of this bill, a franchisor would be prohibited from terminating or failing to renew a franchise relationship unless written notice is given and: First, the franchisee has failed to comply with a material term of the franchise or to exert good faith efforts to carry out the franchise; second, an event, such as fraud, bankruptcy, condemnation or the like, occurs that is relevant to the operation of the premises; or third, the parties agree in writing to terminate.

In addition, the franchiser may fail to renew if a 3-year lease has been granted and he decides to convert the franchise to other use, to materially alter the premises, to sell the premises, to withdraw from the market or that the franchise is uneconomical. Finally, there are other grounds for nonrenewal, such as customer complaints and failure by the parties to agree to reasonable changes in the franchise argeement, and with respect to a new franchise, the franchisor may grant a trial franchise of 1 year that the franchisor may fail to renew for whatever reason.

Mr. Speaker, two provisions of this legislation trouble me. I would be remiss in not mentioning them. First, the bill shifts the major burden of proof in an action under this act from the plaintiff-franchisee to the defendant-franchisor to show that a termination or nonrenewal made by the franchisor was in compliance with the act.

Second, the grounds for nonrenewal provisions of the bill are made applicable to existing franchises.

However, as I stated earlier, this legislation is a compromise, and it is one to which all parties involved have agreed. It is specifically designed to address the problems of retail gasoline marketing and should not be viewed as adaptable to other franchise arrangements in businesses which have very different marketing practices.

Finally, it should be noted that the subcommittee struck the title addressing pricing practices because the subcommittee believed that this issue should be considered separately and because no one could come up with a workable formula.

The bill also contains a second title relating to octane rating, for which I have no particular pride of authorship, although various members of the subcommittee do, and, therefore, it is part of the bill. I am not sure that it is significant one way or the other.

Mr. Speaker, the bill addresses a significant change in the practice of marketing gasoline and gasoline-related oil products, and that is this: That people, because the price of that product has gone up, are looking for the lowest possible prices, and, therefore, the marketers are looking for the most economical and efficient marketing methods. In that process there have been complaints that some gasoline retailer-franchisees have been mistreated by the franchisors who are attempting to restructure their marketing methods.

This bill attempts to address that problem in order to assure that fairness and equity will be accorded to both the franchisor, who has property rights, and the franchisee, who has legitimate economic interest in trying to maintain a reasonable relationship in an economically changing business that will hopefully continue to be of significance in the distribution of energy in our society for many years to come.

Mr. Speaker, I urge the passage of this legislation and urge on my colleagues support of the bill as it appears under suspension of the rules.

The SPEAKER pro tempore. The gen-

tleman from Ohio (Mr. Brown) has 11 minutes remaining.

Mr. BROWN of Ohio. Mr. Speaker, I yield such time as he may consume to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Speaker, I strongly support this bill. The gentleman from Michigan (Mr. DINGELL) and I have had many months of hearings on this issue when he was chairman of the subcommittee of the Committee on Small Business and was handling this legislation. I cosponsored this bill with him, and I strongly favor the bill.

Mr. Speaker, I rise today in support of the Petroleum Marketing Practices Act, H.R. 130. This proposal goes a long way in alleviating the problems the small retailers face today. I believe that many of my colleagues in this body can recite experiences the service station dealers in their district have gone through in the past few years. Many of the stations located in my district experienced a shortage of supplies which have had a dramatic effect on their current economic standing. I find it distressing that the major oil refiners and distributors use this uneconomical basis as a determination to terminate the lease with the retailer. Certainly, such a weak economic standing was not a result of a deliberate action by the station owner.

Apart from this problem, I have learned of numerous stations which are under continued pressure from their supplier to either buy them out or face stiff increases in their rent once they renew their lease contract. The reason for this pressure is that the major oil refiners and distributors desire to operate these stations as retail outlets and cut out the small independent retailer. I believe that title I of the legislation will limit the franchisor from engaging in these forms of harassment in order to achieve their purpose of retail ownership. Under this proposal, the franchisor may not terminate or fail to renew a franchise unless written notice is furnished 90 days in advance. Additionally, the right to terminate or not renew is contingent upon the fact that: First, the dealer failed to comply with the terms of the lease; second, the dealer did not act in good faith: third, an event such as fraud or abandonment occurs; or fourth, the parties agree to terminate.

The proposal also contains a provision that states that a franchisor may decide not to renew a franchise if both fail to agree to changes or additions to the provisions of the contract, provided that the failure does not result from insistence by the franchisor upon changes for the purpose of preventing renewal of the franchise. Such provisions will protect the retailer from these pressures. Title II of the bill deals with the testing of gasoline to determine its octane rating and to display the rating at the pump. This is needed in order to assure the consumer of an adequate octane content which maintains the peak fuel efficiency of the automobile.

Mr. Speaker, I believe these provisions, contained in H.R. 130, are needed in or-

der to reaffirm our continued interest in the market position of the independent retailer. We have seen too many examples of what will result if the giant oil corporations continue this practice of eliminating the independent retailer. strongly urge my colleagues to closely examine this bill before they decide on their vote. Clearly, the future existence of a segment of the small business community is at stake here. I fully concur with the sponsor of the legislation, Mr. DINGELL, that these independent dealers need the protection and security that this proposal prescribes. I thank the gentleman for allowing me to express my support.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Michigan,

Mr. DINGELL. Mr. Speaker, I would just like to say that not only has my dear friend, the gentleman from Ohio (Mr. Brown), been helpful in this matter, but the gentleman from Massachusetts (Mr. Conte) has given great assistance. He and I labored together for many hours on this matter in the Committee on Small

Business. The gentleman has given his valuable support to this legislation in those days and continues his support today.

Mr. BROWN of Ohio. Mr. Speaker, if the gentleman will yield, there have been just many Members who have been wonderful about the whole thing.

Mr. DINGELL. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. Seiberling).

Mr. SEIBERLING. Mr. Speaker, I thank the distinguished gentleman for yielding this time to me.

First of all, I would like to say that I think this is an excellent bill. It is going to remedy some of the problems afflicting small businessmen in the retail gasoline business. However, there is one problem the bill does not address, and I would like to ask the chairman of the subcommittee about it.

In the course of looking into the structure of the oil industry—everything from the oil fields through the refineries to the retail establishments, we learned in the Committee on the Judiciary that one of the problems many independent gasoline marketers face is competition from their own supplier-owned outlets which are selling at retail at prices which are often lower than those the independent dealers pay for their gasoline from the suppliers. Obviously that makes it very difficult for them to compete, to say the least.

I take it that this bill does not address itself to that problem?

Mr. DINGELL. Mr. Speaker, if the gentleman will yield, the answer to the question is that it does not.

The introduced bill before the subcommittee involved three titles. One title of the introduced bill related to the issues to which the gentleman has alluded. This title would have mandated a functional pricing system on the oil companies. The title was removed for a number of good reasons. The title is no longer present in the bill; that title is no longer in the bill.

Mr. SEIBERLING. In other words, that is some unfinished business that the Congress still needs to look into, is that correct?

Mr. DINGELL. The answer to that question is yes. The Congress should address itself to these questions separately in the future.

Mr. SEIBERLING. Mr. Speaker, I thank the chairman.

Mr. DINGELL, Mr. Speaker, I yield 2 minutes to my good friend the gentleman from Indiana (Mr. Sharp) who has been invaluable in helping in this legislation.

Mr. SHARP. Mr. Speaker, I thank the chairman, the gentleman from Michigan (Mr. DINGELL) for yielding me this time.

I just want to express my appreciation for the chairman's leadership and hard work in this matter and for the cooperation of the ranking member, the gentleman from Ohio (Mr. Brown). Through them I think we have provided an important protection for our small business men and women who are franchise dealers.

Like the gentleman from Ohio (Mr. Seiberling) I am concerned that we were not able to find an effective solution to the predatory price problem that has faced many of our dealers. There is no question but that this has been a difficult problem for these dealers. I still hope that we can, through our staff and the resources available to us, work toward some resolution of this problem.

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I have taken this time in order to ask the gentleman from Michigan (Mr. DINGELL) a question for the purpose of establishing some legislative history.

One of the events specified as a ground for termination and failure to renew in section 102 of this legislation is that of "willful adulteration, mislabeling or misbranding." Is it the understanding of the gentleman from Michigan that the language in section 102 would cover a situation wherein a brand-name dealer buys gasoline of the brand he sells and then mixes it with some other brand of gasoline purchased from a refiner or a jobber, and then sells the whole lot under the name of the original brand he usually sells, that this would be covered under the language in section 102?

Mr. DINGELL. Mr. Speaker, if the gentleman will yield, the answer to that question is "Yes." That would be misbranding or mislabeling.

Mr. BROWN of Ohio. And would be grounds for termination or nonrenewal action under section 102?

Mr. DINGELL. That is true.

Mr. BROWN of Ohio. Mr. Speaker, I thank the gentleman from Michigan.

Mr. Speaker, I now yield such time as he may consume to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, I would

like to address a question to the gentleman from Michigan (Mr. DINGELL).

As the gentleman from Michigan knows, one of the witnesses who appeared before the gentleman's committee was Mr. Michael Abercrombie, of Salisbury, Md., who is the chairman of the Commission Wholesalers Committee of the National Oil Jobbers Council. Mr. Abercrombie and other oil distributers like him are part of a whole class of people who deal in oil and gasoline products. some of whom are called commission wholesalers or consignees. It is their job to distribute products under a consignment agreement, but they never take legal title to the oil or gas product.

It is my understand that these commission wholesalers perform basically the same marketing functions as other classes of distributors, as this bill defines them. I personally believe that they ought to be afforded the same protection given other distributers. Is my understanding correct that this particular type of consignee is in fact afforded protection in this bill and that that was the intent of

the committee?

Mr. DINGELL. The answer to that

question is a qualified yes.

First of all, the gentleman from Maryland has referred to Mr. Abercrombie. Mr. Abercrombie was consulted by the staff and language is in the report on this particular point. It was our intention to cover a consignee or commission agent where he in fact provides the functions and services of a jobber. It was not intended that a consignee would be covered if, in fact, he is an employee. This is a question of fact resolution of which lies in the hands of the courts whose job it will be to see that fairness is accorded to all parties.

Let me read from the report. The report states:

[I]t is intended that the provisions of the would apply to a consignee who acts generally like a jobber.

What I am saying is that where a person has the characteristics of an employee, although he in fact does handle the product, he is not covered. It is not our intention to expand the rights of employees. Where a consignee functions, however, as a jobber and does everything that a jobber would do, save taking title to the motor fuel-or most of what a jobber does-he would then have the protections afforded by the legislation. We have tried to draw that very narrow distinction. It is not our goal to create problems for either side in this controversy but to leave this as a fact question which will be properly and prudently decided by the court.

Mr. BAUMAN. I thank the gentleman

for his response.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I thank the gentleman for yielding.

I concur with the explanation given by the gentleman from Michigan (Mr. DINGELL) and would say that in the case mentioned by the gentleman from Maryland (Mr. Bauman), it is likely that he would be considered to be in a jobberdealer relationship, but that in many cases the line is so fine that he would probably be deleted.

Mr. Speaker, I have no further requests for time.

Mr. DINGELL. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. Mikva).

Mr. MIKVA. Mr. Speaker, I want to compliment the gentleman from Michigan and the committee for putting out this very important piece of legislation.

Mr. Speaker, the Petroleum Marketing Practices Act introduced by Mr. DINGELL is an important reform in one segment of an industry in which I have long been interested—the franchise industry. Gasoline station operators or franchisees represent one of the oldest franchise relationships in American commerce, and one of the groups most deserving of legal protection. In the past few years, gasoline retailers have been hard hit by the hundreds of terminations ordered by the major refiners.

In the 94th Congress and in the present Congress, I have introduced legislation to provide substantive legal rights to all franchisees, including gasoline retailers. During that time I have met and talked with franchisees all over the country situated in both rural and urban settings and from the sunbelt to the snowbelt States. These operations now run the gamut among all phases of American commercial life from fast food operators to motel managers and from farm implement dealers to beer and wine distributors.

Like the gasoline retailers, these hardworking and independent small businessmen and women are subject to arbitrary and harsh terminations and cancellations. As the franchiser business becomes larger and increasingly dominated by conglomerates and multinationals, the franchisee becomes more vulnerable to corporate decisions not to renew the franchise-even where the individual has put 10 or 15 or 20 years of work into a business that has prospered.

Most franchisors deal fairly and honestly with their distributors and franchisees, but there are some who are more than willing to let the franchisee take the financial risks and invest the time and money in the project, but are not willing to let him share in the success of the venture. Neither the consumer nor the business community is benefited when success in a market becomes a cause for termination.

The bill which my colleague from Michigan has introduced is directed toward an important element in the franchise industry. The bill will not hurt franchising in the gasoline retail business; rather the bill helps to restore to that businesss the essential factor in a fair business relationship-equal bargaining power.

The important principle of equalizing the bargaining power between parties to a franchise is magnified by the extraordinary growth of this method of doing business. Franchising now accounts for over \$200 billion in sales annually, or almost 12 percent of our gross national product. There are over 400,000 franchisees in America—the largest grouping of small businesses in the whole commercial spectrum.

The growth and expansion of the franchise business method is due to the hard work, time and imagination of the men and women who operate the outlets, sell the goods and perform the services-as well as the franchisers. These people deserve the legal protection provided in the Petroleum Marketing Practices Act. But, other franchisees also deserve those legal rights, and I hope that this bill can serve as a model to the effort to pass broad-based franchise reform legislation.

Mr. DINGELL. Mr. Speaker, I yield 1 minute to the gentleman from New York (Mr. Downey).

Mr. DOWNEY. Mr. Speaker, I just want to join the mutual admiration society and say that not only as a cosponsor but as one who has been involved with gasoline retailers, I know that they strongly support the actions of the subcommittee and will welcome it when the bill is finally passed and signed by the

President. Mr. DINGELL. I thank my good friend.

comments

the gentleman from New York, for his Mr. Speaker, I have no further requests for time.

Mr. BROWN of Ohio, Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. Don H.

Mr. DON H. CLAUSEN, Mr. Speaker, I rise in support today of the Petroleum Marketing Practices Act which will go a long way in helping to protect the petroleum franchises throughout the country and to provide uniformity of the rules under which these businesses must operate. While it is certainly not a perfect bill, it is an effective compromise which has taken into consideration several legitimate and competing interests and one to which all parties involved have agreed.

The bill primarily deals with the agreement a jobber has with a refiner and the agreement a jobber or a refiner has with a service station dealer through which the refiner's brand is used in marketing motor fuel. In short, this legislation would establish rules by which such franchise agreements should operate.

Under the provisions of this bill, a franchisor would be prohibited from terminating or failing to renew a franchise relationship unless written notice is given and: First, the franchisee has failed to comply with a material term of the franchise or to exert good faith efforts to carry out the franchise; second, an event, such as fraud, bankruptcy, condemnation or the like, occurs that is relevant to the operation of the premises; or third, the parties agree in writing to ter-

In addition, the franchisor may fail to renew if a 3-year lease has been granted and he decides to convert the franchise to other use, to materially alter the premises, to sell the premises, to withdraw from the market or that the franchise is uneconomical. Finally, there are other grounds for nonrenewal, such as customer complaints and failure by the parties to agree to reasonable changes in the franchise agreement, and with respect to a new franchise, the franchisor may grant a trial franchise of 1 year that the franchisor may fail to renew for whatever reason.

It is unfortunate that this legislation could not have been addressed during the last Congress, but the press of business in the last few days prevented its consideration. A recent withdrawal of a petroleum supplier in my own district points up the need for this legislation, which among other things, would require the rights of first refusal to the franchisee to purchase the service station. This, in fact, was a provision we urged the Federal Energy Administration to require when the major withdrew. However, officials with the Administration felt they did not have the authority and in one lamentable case a man who had been in the business for a number of years was forced to completely close his doors.

This legislation would have allowed him the right to purchase the station and I am hopeful that it will receive speedy enactment so that we can prevent other

similar situations.

Mr. BROWN of Ohio. Mr. Speaker, I have just one final comment to make, if I may. I think a compliment should be given to, in addition to the members the committee, those representatives of both the dealers and the franchisees who have suffered some in the last few years with the change in marketing conditions, and also to the representatives of the franchisors who have in the spirit I think of trying to resolve what is a national problem worked out with us a piece of legislation that, while nobody was 100 percent satisfied, leaves everybody well enough satisfied that I think we have a piece of legislation which should go successfully through the Senate and through the conference without substantial change and be passed. If there is an effort to change it substantially, it is quite likely that this delicate balance will be disrupted, and then we could have some difficulty and a lot more time go by before we can work out something that can get successfully through the Congress, be signed by the President, and become law.

Mr. DINGELL. Mr. Speaker, will the gentleman from Ohio yield?

Mr. BROWN of Ohio. I yield to the gentleman from Michigan.

Mr. DINGELL. I thank the gentleman for yielding.

I concur fully in the remarks just made by my good friend, the gentleman from Ohio. Both the dealers and the franchisors should be commended for their participation and their assistance in this compromise. I concur in the remarks of the gentleman with regard to the fact that this bill is in a delicate state of balance. It should not be changed at any subsequent time without an appreciation that such action will pose

grave risk to the possibility that the legislation will ever reach the President's desk for signature.

Mr. STAGGERS. Mr. Speaker, I rise in support of this bill. We have considered many pieces of energy-related legislation during the last number of years, but few of those bills were as justified as this legislation. Few groups have made as strong a case for legislation protecting their interests as have the gasoline marketers. That is the reason this bill quickly passed our committee and is before the House today.

Franchisors are often the same multinational oil companies which are so powerful that, at times, even the Federal Government cannot control their conduct. Franchisees are commonly the local gasoline retailer who is struggling to provide service to his customers. The corner gas station owner is, in many cases, the last element of independent business competition in this industry, which is dominated by giant corporations. These corporations don't really care about the motorist; they care only about their profits. We need the continued presence of the independent gasoline marketers who care about the motoring needs of their customers and who will continue to provide important consumer services and price competition.

This legislation will do just that. It will place the protection of the Federal Government between the franchisor and the franchisee. The inequality of power which exists between the franchisor and his franchisee is balanced by this bill. That balance is provided by prohibiting termination or nonrenewal of any franchise without good cause. As a result, gasoline retailers will no longer be threatened by arbitrary, unfair, discriminatory, or punitive termination or nonrenewal of their livelihood. The entire motoring public will ultimately benefit from this result.

For that reason, I strongly support this bill. I urge my colleagues to vote yes on the motion to suspend the rules and pass H.R. 130, the Petroleum Marketing Practices Act.

Mr. WHALEN, Mr. Speaker, I rise in support of the Petroleum Marketing Practices Act (H.R. 130) which will establish Federal standards regarding the termination or nonrenewal of franchise relationships in the marketing of motor fuels and will require the disclosure of octane rating of automotive gasoline to consumers.

The franchise relationship in the petroleum industry is unique and complex. The franchisor not only grants a trademark license but often controls and leases to the franchisee the real estate premises and is the primary, if not exclusive, supplier of the principal sale item. Natural tensions have grown out of this relationship. There can be little doubt, however, that in the past threats of termination or nonrenewal have been used to compel franchisees to comply with marketing policies of the franchisor. In practice, actual threats of nonrenewal are not essential to the leverage

the prospect of nonrenewal provides a franchisor over the activities of a franchisee. The prospect is ever present and the franchisee can readily comprehend the implications of departing from the marketing policies of the franchisor, even if in some cases those policies are contrary to the franchisee's economic interests. The increasing friction between the big companies and their franchisees has two adverse effects: First, it threatens the independence of the franchisee as a competitive influence in the marketplace; and second, it threatens to have an adverse impact upon the Nation's marketing and distribution system resulting in poorer service to the consumer.

The legislation before us today provides a single, uniform set of rules regarding the grounds for termination and nonrenewal of motor fuel marketing franchises and the notice which franchisors must provide franchisees prior to termination of nonrenewal of a franchise, It defines the rights and obligations of the parties to the franchise relationship in the crucial area of termination or nonrenewal of the franchise.

This bill, formerly known as "Dealers' Day in Court," prohibits a franchisor from terminating a franchise during the term of the franchise agreement and from failing to renew the relationship at the expiration of the franchise term, unless the termination or nonrenewal is based upon a ground specified or described in the legislation. These provisions strike a balance between the, at times, conflicting interests of the parties to the relationship.

Specifically, H.R. 130 provides a 90-day advance notice period before termination or nonrenewal of a franchise; 180-days' notice is required if the termination or nonrenewal is based upon the withdrawal of the franchisor from marketing of motor fuels in the market area. Under certain circumstances, initial trial franchise periods are instituted. Last, the legislation places upon the franchisor the burden of proving compliance with all statutory requirements and provides for enforcement by private civil action in U.S. district court.

The second aspect of H.R. 130 is establishment of a gasoline octane testing, certification, and posting program. This program is designed to provide automotive gasoline purchasers with meaningful information with respect to the octane quality of gasoline they purchase. It is our aim thus to reduce the costly and wasteful practices of octane overbuying by coordinating the information, which automobile manufacturers provide to the motorist regarding the octane requirements of new cars, with information about the gasoline which they purchase at the pump. Thus, the consumer will be provided with the information needed to avoid octane overbuying. In addition, this provision should lead to healthy competition in gasoline marketing practices.

A lot of expertise has been contributed to the shape of the bill before us today. It has been studied extensively in both this and the 94th Congress. I urge its prompt passage and enactment into law.

Mr. FRENZEL. Mr. Speaker, I rise in support of H.R. 130, the Petroleum Marketing Practices Act. It is not perfect legislation but it does fill a major need in our petroleum marketing system.

As in any profitmaking business the refiner or franchisor must have a right to demand compliance with reasonable rules from his franchisee. However, the present system in many States has left our dealers virtually defenseless in the face of arbitrary or discriminatory actions on the part of their franchisors. This bill will provide some needed protections.

We have been fortunate in my home State of Minnesota in that our legislature passed pioneering legislation on this subject some time ago. It provides that the securities commission regulate franchises and it has, so far, been, working rather smoothly. I am pleased that this new Federal statute will not preempt the heart of our Minnesota law but will add some sensible additional safeguards. It's preemptions will be minimal, and it offers the additional benefits of first right of refusal on a valid offer to the franchisee and shifts the burden of proof for notice of termination or nonrenewal.

The second major function of the bill is to provide reliable octane figures to the consumer. This is a sound step forward and should end much of the present confusion concerning differing State standards.

I support the bill and encourage its

Mr. BROWN of Ohio. Mr. Speaker, I have no further request for time.

Mr. DINGELL. I have no further re-

quest for time The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Michigan (Mr. DINGELL) that the House suspend the rules and

pass the bill H.R. 130, as amended. The question was taken.

Mr. BROWN of Ohio. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to

suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion, on which further proceedings were postponed, in the order in which that motion was entertained.

Votes will be taken in the following

order:

H.R. 5717, de novo; H.R. 7; and H.R. 130

Pursuant to the provisions of clause 3(b)(3) of rule XXVII, the Chair announces that he will reduce to a minimum of 5 minutes the period of time within which a vote by electronic device may be taken on all the additional motions to suspend the rules on which the Chair has postponed further proceedings, after the first vote in the series.

TO PROVIDE FOR RELIEF AND RE-HABILITATION ASSISTANCE TO VICTIMS OF RECENT EARTH-QUAKES IN ROMANIA

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 5717, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wisconsin (Mr. Zablocki) that the House suspend the rules and pass the bill H.R. 5717, as amended.

The question was taken.

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

The title was amended so as to read:
"A bill to provide for the protection of franchised distributors and retailers of motor fuel and to encourage conservation of automotive gasoline and competition in the marketing of such gasoline by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. DINGELL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill (H.R. 130) just passed.

The SPEAKER pro tempore (Mr. SMITH of Iowa). Is there objection to the request of the request of the gentleman from Michigan?

There was no objection.

PERMISSION FOR COMMITTEE ON THE BUDGET TO FILE A REPORT

Mr. GIAIMO. Mr. Speaker, I ask unanimous consent that the Committee on the Budget may have until midnight, April 6, 1977, to file its report on the first budget resolution for fiscal year 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

CONFERENCE REPORT ON H.R. 3365, FLEXIBLE REGULATION OF IN-TEREST RATES ON DEPOSITS

Mr. ST GERMAIN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the bill (H.R. 3365) to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institutions, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr.
SMITH of Iowa). Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

Mr. ST GERMAIN. Mr. Speaker, I ask unanimous consent that the statement of the managers be read in lieu of the report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of April 4, 1977.)

Mr. ST GERMAIN (during the reading). Mr. Speaker, I ask unanimous consent that the further reading of the statement of the managers be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

The SPEAKER pro tempore. The gentleman from Rhode Island (Mr. ST Germain) is recognized for 30 minutes.

Mr. ST GERMAIN. Mr. Speaker, the conferees met. As we will recall, the legislation passed the House by a vote of 401 to 4. It was a four-title bill. The first title has been changed by changing the date from March 1, 1978 to December 15, 1977. The Senate bill had extended it to October 1, 1977.

Title II, relating to the third party transfer instruments for Federal Savings and Loan Associations in New York State has been deleted.

Titles III and IV remain as passed by the House.

Mr. Speaker, I yield to the gentleman from Ohio (Mr. Stanton).

Mr. STANTON. Mr. Speaker, I want to take this time to compliment the gentleman, the chairman of the subcommittee and the ranking minority Member, the gentleman from California (Mr. Rousselor) for sticking to the House position. The vote was unanimous in signing the report and I urge its adoption.

Mr. ST GERMAIN. I thank the gentleman.

Mr. ROUSSELOT. Mr. Speaker, I, too, wish to compliment my colleagues on the conference committee for their consistent support of the House position, which resulted in a very successful conference from the House's point of view. I join my distinguished ranking member (Mr. Stanton) in observing that the legislation process does not work very well when it is focused to operate in a "crisis" situation, particularly when the crisis is artifically created, as it would be if the

extension of regulation Q were unreasonably short.

At this time I would like to ask the distinguished chairman of the subcommittee (Mr. St Germain) for his assurance that when we legislate on this subject again, between now and December 15, that he will do everything he can to produce a compact product which will advance the cause of financial reform, and not a "Christmas tree" bill which will be loaded up with extraneous Senate provisions.

Mr. ST GERMAIN. Will the gentleman vield?

Mr. ROUSSELOT. I yield to my distinguished subcommittee chairman.

Mr. ST GERMAIN. I thank the gentleman for yielding and I want to give my assurance to the gentleman that I will see that we will not be accepting the "Christmas tree" treatment by the other body.

Mr. ROUSSELOT. Is the gentleman willing to include assurances at this time that such a bill will not require the House to accept nongermane Senate provisions which have not been properly considered by the House?

Mr. ST GERMAIN. Will the gentleman yield further?

Mr. ROUSSELOT. I will be glad to yield.

Mr. ST GERMAIN. You have my assurance on that point.

Mr. ROUSSELOT. I thank the gentleman and I yield back the balance of my time.

Mr. ST GERMAIN. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

MOTION OFFERED BY MR. ST GERMAIN Mr. ST GERMAIN, Mr. Speaker, I offer a motion,

The Clerk read as follows:

Mr. ST GERMAIN moves that the House recede and concur in the amendment of the Senate to the title of the bill.

The motion was agreed to.

A motion to reconsider was laid on the table

REPORT TO ACCOMPANY HOUSE RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 5262

Mr. SISK, from the Committee on Rules, submitted a privileged report (Rep. No. 95–162) to accompany House Resolution 473, providing for consideration of the House bill H.R. 5262, to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Fund, and for other purposes, which was referred to the House Calendar and ordered printed.

PROVIDING FOR CONSIDERATION OF H.R. 3199, THE FEDERAL WA-TER POLLUTION CONTROL ACT AMENDMENTS OF 1977

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up

CXXIII—654—Part 9

House Resolution 468 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 468

Resolved, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works and Transportation, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Public Works and Transportation now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, and all points of order against said amendment for failure to comply with clause 5 of Rule XXI are hereby waived. At the conclusion of such consideration the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After the passage of H.R. 3199, it shall be in order in the House to take from the Speaker's table the bill H.R. 11 with the Senate amendment thereto and to move to concur in the Senate amendment with an amendment in the nature of a substitute consisting of the text of the bills H.R. 11 and H.R. 3199 as passed by the House; if said motion is agreed to, it shall then be in order to move to insist on said House amendment and to request a conference with the Senate.

The SPEAKER pro tempore. (Mr. Smith of Iowa). The gentleman from California (Mr. Sisk) is recognized for 1 hour.

Mr. SISK. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. Del Clawson) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 468 provides for the consideration of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977. The rule is somewhat unusual, and, consequently, I will make a more detailed effort to explain the exact procedure provided by the language of the resolution.

The resolution provides for a 1 hour open rule with general debate time equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works and Transportation.

The committee reported an amendment in the nature of a substitute, and it is made in order by the rule as an original bill for the purposes of amendment. The rule waives points of order under clause 5 of rule XXI which prohibits appropriations in a legislative bill. This is necessary because the committee substi-

tute provides for the reallocation of funds for which appropriations have already been made. For example, on page 29, lines 3 through 6 of the bill as reported, sums which were made available for January through March of 1975 are to remain available through September 30, 1978. While the provision is relatively innocuous in nature, it is a technical violation of clause 5 of rule XXI, and therefore the waiver of the rule becomes necessary.

Another waiver provided by House Resolution 468 concerns the Budget Act. H.R. 3199 authorizes \$5 billion in fiscal year 1977 for EPA construction grants for municipal sewage treatment plants. Since this is new budget authority for fiscal year 1977, it violates section 402(a) of the Congressional Budget and Impoundment Act. Section 402(a) of that act provides that it shall not be in order to consider a bill authorizing the enactment of new budget authority for a fiscal year unless the bill has been reported by May 15 preceding the beginning of such fiscal year. Thus, section 402(a) would require H.R. 3199 to have been reported from committee by May 15, 1976. Since the bill obviously was reported subsequent to that date, the budget waiver is necessary. The Committee on Budget has also indicated their support for this

The rule also, as is necessary when a committee amendment in the nature of a substitute is made in order as an original bill for purposes of amendment, provides for a motion to recommit with or without instructions.

The rule further states that after passage of H.R. 3199, it shall be in order in the House to take from the Speaker's table the bill H.R. 11 with the Senate amendment and to move to concur in the Senate amendment with an amendment in the nature of a substitute consisting of the text of the bills H.R. 11 and H.R. 3199 as passed by the House. If the House agrees to this motion, it then would be in order to move that the House insist on its amendment and to request a conference with the Senate.

Mr. Speaker, this procedure is necessary to insure that the House-passed version of the Federal Water Pollution Control Act Amendments is adequately considered in conference with the Senate. The House passed the so-called economic stimulus public works bill, H.R. 11, on February 24, 1977. The Senate on March 10, 1977, passed its version of the bill which included a 2-year authorization of \$9 billion in grants to help municipalities construct sewage treatment plants to help clean up the Nation's waters. Meanwhile our own Public Works Committee was completing work on H.R. 3199, a more comprehensive program for providing sewage treatment plant construction grants. Naturally, the House committee prefers to sit down in conference with their counterparts from the other body with the complete package of House proposals rather than to consider only the Senate amendment to H.R. 11.

Consequently, Mr. Speaker, the chairman of the Public Works Committee has requested a rule which will allow his committee to adequately represent the

position of the House in conference. The Committee on Rules has granted that request, Mr. Speaker, and I would urge my colleagues to adopt House Resolution 468 so that we may proceed to consideration of H.R. 3199 and that we may be assured if this bill is passed the position of the House will be adequately represented in conference.

Mr. MOSS. Mr. Speaker, will the gen-

tleman yield?

Mr. SISK. I yield to my colleague, the gentleman from California.

(By unanimous consent, Mr. Moss was allowed to speak out of order.)

PERSONAL ANNOUNCEMENT

Mr. MOSS. Mr. Speaker, I was present on the floor and voted on the previous two resolutions and thought I had voted on H.R. 130 on rollcall No. 127. Apparently, my card failed to record my vote. It was my intention, Mr. Speaker, to be recorded in the affirmative.

Mr. SISK. Mr. Speaker, as I indicated earlier, if there any questions in connection with the rule, we will be happy to discuss these matters with the Members or attempt to answer any of their questions. Otherwise, Mr. Speaker, I reserve the balance of my time.

Mr. DEL CLAWSON. Mr. Speaker, I vield myself such time as I may consume.

Mr. Speaker, House Resolution 468 provides an open rule with 1 hour of general debate for the consideration of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977, which provides additional authorizations for construction and maintenance of sewage collection systems. The rule waives points of order lying against the bill for failure to comply with section 402(a) of the Budget Act of 1974 because the bill contains fiscal year 1977 authorizations and did not meet the May 15 reporting deadline. The rule also waives points of order lying against the bill for failure to comply with clause 5 of rule XXI because the bill reallocates funds that were previously appropriated. In addition, the rule makes the committee substitute in order as the original bill for purposes of amendment, and allows for one motion to recommit with or without instructions.

After the adoption of the bill, the rule provides that the House may take H.R. 11, the local public works capital development bill, from the Speaker's table with the Senate amendments thereto and substitute the language of H.R. 11 and H.R. 3199. It shall then be in order to move to request a conference with the Senate on the measure.

The Senate's recently passed public works bill (S. 427) contains a 2-year authorization of \$9 billion for water pollution projects and construction grants. The House jobs bill (H.R. 11) contained no EPA water program funding. The House Public Works Committee seeks substantive changes in water pollution legislation, as set forth in H.R. 3199, and House leaders believe that simply continuing project authorizations would jeopardize action on the proposed changes. Therefore, appointment of Members to a conference on the jobs bills has been delayed pending action on

H.R. 3199. If H.R. 3199 passes, the motion will be made to join it to H.R. 11 for conference consideration.

Mr. Speaker, I am not aware of any organized opposition to this unusual rule and therefore suggest its adoption so the House can work its will.

Mr. SISK. Mr. Speaker, I yield 5 minutes to the gentleman from New York

(Mr. OTTINGER).

Mr. OTTINGER. Mr. Speaker, I think that this rule is not just a little peculiar, I think it is an awful lot peculiar. I understand the reasons for it. The gentleman from Maine, Senator Muskie, added some \$9 billion for water pollution grants in the emergency jobs bill, and the Committee on Public Works, as I understand it, wants to hold the jobs bill hostage so as to work its will with regard to the Water Pollution Control Act amendments it desires.

However, Mr. Speaker, it is my understanding that the administration made a commitment that it would come in with proposals for changes to the Water Pollution Control Act promptly. Also the money added by the other body for the sewage treatment grants is very badly needed. Therefore, despite the fact that I can understand the committee's resentment against the action of Senator Muskie, I believe their actions today ill advised.

The rule is most unusual in having the House act on the Water Pollution Control Act amendments and then attaching that, as is permitted under this rule, to the jobs bill. The effect of it is to hold the entire jobs bill, which is so badly needed, hostage to the changes the Committee on Public Works desires to make to the Water Pollution Control Act. This could delay both the jobs bill and the sewage treatment grant money for months.

Second, Mr. Speaker, I am very greatly concerned about a number of other changes which the Committee on Public Works has included in this legislation, particularly its narrow definition of waters to be protected by the section 404 program. I think this change will be terribly damaging to the protection of the wetlands in the United States and go far beyond anything that is needed to assure that the definition of navigable waters does not go beyond what is sensible with regard to farmlands, which seems to be the principal concern.

Another problem involves the newly devised formula for granting moneys to the States. I will offer an amendment to change it. A provision is added to include a 25 percent population factor into the formula, whereas previously the entire formula was based on the actual need for sewage treatment facilities. This will result in a distribution of the funds to States where the need for sewage treatment plants are not the greatest and will provide inadquate funds for the areas of greatest need for the sewage treatment money.

An additional difficulty I have is that what is supposed to be a law to provide for Federal water standards, so as to provide equal treatment among the States, is now being made into an options-tothe-States program. This will inevitably lead to a weakening in all water standards as States with lower standards compete successfully for industries now located in States with more stringent standards and requirements. Only if there is a Federal requirement can the States be expected to measure up to a meaningful water quality program. Without such Federal controls, States presently with strong programs will have to weaken them in order to prevent massive departures by their industries. We have a number of instances in New York, where our standards are quite strong, of industries saying, "we will leave if the New York standards are enforced against

I expect to join the gentleman from Pennsylvania (Mr. EDGAR), the gentleman from New Hampshire (Mr. CLEVE-LAND), the gentleman from Ohio (Mr. HARSHA), and others with amendments to try to improve what I feel is a very undesirable bill. Particularly I am interested in trying to assure the best possible protection of the Nation's wetlands by retaining the strongest language for section 404, amended so badly by section 16 of H.R. 3199.

Mr. SISK. Mr. Speaker, I yield 5 minutes to the gentleman from Pennsyl-

vania (Mr. EDGAR).

Mr. EDGAR. Mr. Speaker, we are here today discussing a very controversial bill. the Water Pollution Control Act Amendments of 1977. I was a member of the Water Resources Subcommittee in the 94th Congress which spent a great deal of time looking at all of the major questions of water pollution. We dealt with questions like State certification and ad valorem taxes. We dealt with issues relating to section 404. However, when that bill came to the House floor and was passed it went to conference with the Senate. I remind the Congress that this very bill was deadlocked for many weeks. and at the conclusion of the 94th Congress on October 1, the Water Pollution Control Act Amendments of 1976 simply did not succeed and were not passed.

We have before us today a revisited version of the Water Pollution Control Act Amendments now entitled 1977. Essentially the bill is the same bill, with some minor changes, and we are asking for a rule today to consider tieing this very controversial bill to H.R. 11. the Public Works Employment Act of 1977 providing for the authorization of an additional \$4 billion of public works

funding.

I am opposed to this rule. Specifically, I should like to suggest that, this particular rule permitting that, after this bill is enacted by the House, it will become title II of H.R. 11, and in fact we might see the same fate occur: That the water pollution bill will deadlock in conference and the very needed public works will not pass.

I have specific concerns. First, my concern that this bill handled in this way, will in fact create additional red tape.

Second, my concern is that it will force the Senate to deal with legislation in conference which they have not had the opportunity to have full public hearings

Third, I think it is dangerous for us to link a water pollution bill with a public works jobs bill. If we look at the

unemployment rate at 7.3 percent nationally and in communities like I serve such as Chester, Pa., we have an unemployment rate of about 13 percent, we need that public works authorization passed. We need the jobs bill passed before the public works appropriation bill gets passed because if the public works appropriation bill, the funding bill, is signed into law, all of the refinements, all of the changes that were very carefully drawn in January and February early this year as part of the President's major economic package will simply not be part of that \$4 billion of expenditure.

Fourth, I think that if this conference were deadlocked on the Water Pollution Act, we are going to find ourselves in the winter months of next year with a public works bill but in fact no opportunity to put people to work in needed construction because in fact the weather

will have changed.

I would urge my colleagues to vote no on the rule. I wonder what will happen when we begin to deal with the clean air act amendments. I would suggest to the Members that the refinements that will have to be made will need certainly more than 1 hour of general debate and then general amendments. I would also suggest that tacking it onto pulbic works employment legislation at this time is playing politics with a lot of jobs that I would like to see being placed in operation by early June or July of this year.

Finally, I think there is probably a more important reason. One of the most controversial sections of this bill is section 16 which changes the intention of Congress in 1972 when the initial water pollution bill was passed. It changes the intention of the section 404 program, which is a program to protect our very necessary wetlands of the United States.

Mr. Speaker, I ask my colleagues to

vote no on this legislation.

Mr. SISK. Mr. Speaker, I appreciate the comments of my two colleagues. However, this rule provides for full discussion and it is an open rule. Therefore I move the previous question on the resolution and urge the adoption of the resolution.

Mr. JOHNSON of California. Mr. Speaker, I urge the entire membership of the House to support the rule for consideration of H.R. 3199.

It is an unusual rule, and as chairman of the Committee on Public Works and Transportation, I urge its adoption.

As you all know, one of the pieces of the President's economic recovery package was a public works jobs program.

Our committee cooperated with the President and introduced a bill at the

first opportunity, H.R. 11.

The leadership of both sides cooperated and we moved it quickly through the House and sent it to the

The other body took the bill up quickly and began to move it, but in committee a second title was added.

This title authorized 2 years of funding for the water pollution program.

The provision remained in H.R. 11 as

it passed the Senate.

In the last Congress, the House passed a water pollution bill by a vote of 339 to 5.

We were unable to work out any conference agreement with the other body because we wanted minor modifications in the 1972 Water Pollution Act, and they only wanted authorizations.

This year, by linking these two matters together, they have attempted to prevent consideration of any House water pollution amendments at this time or in the near future.

The proposed rule before the House will allow us to go to conference and to negotiate

I only want to emphasize that this situation has come about because the other body has put these two bills together, not the House.

Our effort was to cooperate with the administration and have a public works jobs bill on the President's desk as soon as possible.

It is unfortunate that the other body

has put us in this position today.

Mr. ROBERTS. Mr. Speaker, I rise in support of the rule for the consideration of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977.

I congratulate the gentleman from California (Mr. Johnson) chairman of the Committee on Public Works and Transportation, on the strength and leadership he has shown in leading the committee's consideration of H.R. 11, the amendments to the Local Public Works Capital Development and Investment Act of 1976 and of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977.

Moreover, I congratulate him on his determination to see that the House's will in each of these matters be given full recognition and consideration in a conference in the Senate. I give him my complete support in this effort.

This year, in keeping with the President's request, the committee moved swiftly to respond to a problem of sweeping magnitude which affects us all-the need for a job-creating economic stimulus program. In this effort under the brilliant gudiance of our chairman, Bizz Johnson of California, and my friend and colleague, Bob Roe of New Jersey, the Committee on Public Works and Transportation developed and brought to the floor of the House H.R. 11, amendments to the Local Public Works Capital Development and Investment of 1976.

On February 24, 1977, the House worked its will on H.R. 11, passing it by a vote of 295 to 85 and sent it to the Senate. It was our hope that the Senate would also act promptly on this necessary legislation so that we might move quickly to conference and bring this legislation to law.

While H.R. 11 was receiving consideration, the Subcommittee on Water Resources, which I chair, moved to consider necessary amendments to the Federal Water Pollution Control Act (P.L. 92-500)

On February 7 of this year the members of the Subcommittee on Water Resources, the chairman of the full committee, Mr. Johnson and I, as chairman the Subcommittee on Water Resources, introduced H.R. 3199, the bill, as introduced, was the same as H.R. 9560, as passed by the House with the exception of a few technical changes which were needed to update the bill.

You may recall that H.R. 9560 was overwhelmingly supported by the House last year by a vote of 339 to 5, and that the House and Senate were in conference on this important legislation at the close of the session.

On March 1, 2, 3, and 4, the Subcommittee on Water Resources held hearings on H.R. 3199. We received testimony from more than 50 witnesses representing Federal, State, local, industrial, and environmental groups. By far, the full weight of the testimony gave complete support for the approach contained in H.R. 3199—that is, the approach of making both authorizations and necessary changes in the Water Pollution Control Act now. The treatment works construction grant program provided by the act is one of the largest public works programs in the Nation and has been in glaring need of legislative reform of bureaucratic entanglements. The provisions in H.R. 3199 are needed now if we are to have a Federal law that is both workable and enforceable.

While the committee was considering H.R. 3199, and with full awareness of our intent to move the bill as quickly as possible, the Senate moved to combine water pollution control authorizations with the vital job-creating provisions of H.R. 11. Unless we are able to amend H.R. 11 to incorporate the substance of H.R. 3199, we will not be able to deal with these matters in conference and be foreclosed from obtaining urgently needed modifications of the Water Pollution Control Act.

I remind you that in the last session. the Senate balked at considering the necessary substantive amendments that had been developed and supported overwhelmingly by the House in favor of passing little more than authorizations and of letting this major public works program flounder in a sea of redtape and administrative snafus.

We find, this session, that their concern for implementing this program in a responsible and efficient manner has again failed to manifest itself.

Again, they passed authorizations only. They ignored real and pressing problems-problems such as the need for the use of ad valorem taxes to meet the user charge requirements of the act. Pending resolution of this matter many grants are now being held at 80 percent of the 75-percent grant share. We know that without this reform hundreds of municipalities will be forced, at great cost, to completely revamp their administrative procedures. Why? To fulfill a statutory requirement that was directed toward providing an ongoing source of funds for operation and maintenance, a requirement that was never intended to be a tool to dictate to localities the exact manner in which they could finance and administer their local affairs. Without full consideration of H.R. 3199 as part of H.R. 11, I fear that this matter will not be resolved in time to avoid unnecessary and costly expenditures.

H.R. 3199 provides for a case-by-case extension of the July 1, 1977, requirements for municipalities up to July 1, 1982, or where special technology is being used, to July 1, 1983. Also, it provides for a case-by-case extension of the July 1, 1977, requirements for industries up to July 1, 1979.

Some refuse to say it, but I know that it is no secret that more than 50 percent of the municipalities will be unable to meet the law's July 1, 1977 requirements. It is no secret that even though about 85 percent of all industries will meet their 1977 requirements, a good portion of the remaining 15 percent will not meet their requirements for good cause.

It simply does not make sense to put thousands of local elected officials and industrial officers in jeopardy when we know that the law's 1977 requirements cannot and will not be met. It is not fair to rely on an administrative compliance procedure which, if used, is without any basis in the law and subject to extensive and costly litigation. I fear, though, that if the House does not permit H.R. 3199 to be considered as part of H.R. 11, this matter will never have a chance of being resolved before July 1, 1977.

In subcommittee hearings more than 100 witnesses have testified to the need for streamlining the construction grant application process—of the thousands of man-hours of effort that are wasted in pro forma paperwork and redtape—of a process that resembles a beserk bureaucratic's brainchild gone wild. H.R. 3199, would permit a combined grant approval process and a State certification program that would bring this paper monstrosity under control.

But if H.R. 3199 and H.R. 11 are not considered in conference as part of the same package, I fear that the House's solution to real problems will never see the light of day. This means that authorized construction grant money will continue to be tied up—never reaching the localities where it is transformed into the needed jobs that are part and parcel of our water cleanup program.

A district court decision has resulted in an amplification of the Corps of Engineers' power to regulate the activities of individuals under the dredge and fill permit program. Not only does this mean creation of another bureaucratic paperwork empire, but it means duplicating the State programs and substituting Federal land-use decisions for those that rightfully belong to the State and localities.

Section 16 of H.R. 3199 would remedy this matter. This section, which was originally developed by our distinguished Majority Leader Jim Wright in concert with the gentleman from Louisiana (Mr. Breaux), not only provides the basis for the first wetlands protection act in the history of this Nation, but also clarifies the Federal role and eliminates the unnecessary and unjust substitution of Federal judgment for that of the State.

If H.R. 3199 is not considered as part of H.R. 11, I fear, gentlemen, that the destructive course set forth by the court's decision will continue unhindered.

It was never the intent of the committee that water pollution control and economic stimulus legislation be considered together. Quite the opposite.

But our colleagues in the Senate have

seen fit to move to manipulate the rules of the House against us—to avoid consideration of the House's position on water pollution control.

It is now urgent that H.R. 3199 and H.R. 11 be combined into a single package for consideration in conference. In this way, and only in this way, can we guarantee that we will meet the Senate on equal terms—that the conference will be considering not only the Senate's position on jobs legislation and water pollution control, but also the House's position on each of these matters.

To do otherwise is to throw away more than 4 years of hearings, investigation, and monitoring of water pollution control by the House in favor of the Senate's superficial package of authorizations

Without the reforms in the House bill, the Senate's package is meaningless in many cases the money will never be spent, in others, it will be wasted.

To prevent the House from meeting the Senate on equal terms is to say that the will of the House in supporting H.R. 9560 by a vote of 339 to 5 is insignificant—to be cast aside at the whim of a parliamentary maneuver by the other body.

I urge you to support the rule on H.R. 3199 which will permit the House to again consider needed water pollution control authorizations and reform. Then, after the House has worked its will on H.R. 3199, we would take H.R. 11, as passed by the Senate from the Speaker's table, and amend title II of that bill to contain the full text of H.R. 3199, as passed by the House.

To do otherwise is to bend to the will of the other body who apparently choose to completely disregard the efforts and will of this House.

I urge the adoption of the rule.

Mr. LEHMAN. Mr. Speaker, I rise in opposition to the rule which would allow the attaching H.R. 3199 to H.R. 11. A likely consequence of such a course of action would be to hold up funds for the construction of sewage treatment plants. These funds are urgently needed by the State of Florida and 35 other States. Other provisions of H.R. 3199 are not so urgent as to require immediate action by Congress. To embroil ourselves at this time in a protracted struggle with the Senate over these nonurgent issues may well imperil the efforts to clean up our waters.

The Federal Water Pollution Control Act (P.L. 92-500) set our Nation on an ambitious timetable to clean up our Nation's waters. This long overdue effort included a goal that by 1983 all our waterways be clean enough for swimming and for the propagation of fish. To meet that goal a timetable was established. The first deadline is of July 1 this year.

Although 85 percent of the industries in the country will meet their deadlines, only 50 percent of the municipalities will do so. The requirement for municipalities is that they employ secondary sewage treatment. The low rate of compliance is largely due to initial tieups in distributing construction grant funds.

In the past 2 years these problems

have been cleared up and projects have proceeded smoothly. However, we still find ourselves far behind schedule in our effort to clean up the water.

Under Public Law 92-500, the Federal Government funds 75 percent of the cost of building sewage treatment plants. Obviously, these funds are necessary if our financially distressed municipalities are to construct the plants. However, authorization for funding the construction grant program expires September 30 of this year. Thirty-six States will exhaust their funds prior to that date, nine of them this very month, according to the Association of State and Interstate Water Pollution Control Administrators. These States have \$3.1 billion in projects ready to be funded according to ASIW-PCA and Environmental Protection Agency estimates. Many States that will not run out are slowing the pace of their programs, trying to stretch their money as long as possible. Thus, there is clearly a need to authorize funds for the construction grant program as soon as possible.

The Senate version of the public works bill provides \$4.5 billion for construction grants for fiscal year 1977 and fiscal year 1978. This is the amount which the EPA says is necessary for continuation of the cleanup effort. The House public works bill contains no such provision.

H.R. 3199 would include funding of the construction grants program as part of a comprehensive revision of Public Law 92–500. I agree that such a review of the law is desirable.

However, controversies over such complex issues as State certification and priority determination, user charges, extensions of deadlines, and Army Corps of Engineers' authority to monitor dredge and fill operations in wetlands are certain to cause delays in getting the funds out to the States on time. It appears unlikely that the Senate will accept H.R. 3199's provisions on these issues, certainly not before having had an opportunity to hold hearings and thoroughly review them. Former acting EPA Administrator John Quarles estimates a 12- to 18-month delay in final passage of a bill due to such controversies. We clearly cannot afford such a delay. On the other hand, to pass H.R. 3199 in time to get funding out to the States would mean rushing it through Congress. Such an approach would deprive us of the opportunity for a thorough, comprehensive review of the strengths and weaknesses of the law.

I urge the House to provide for necessary authorizations for water pollution programs as soon as possible. When fiscal problems are less pressing, we can undertake a more prolonged fact finding and debating process which is necessary when large changes are being considered for a program of this magnitude.

I am aware that one further approach is simultaneously underway to provide construction grant funds. H.R. 4877 included \$500 million for fiscal year 1977. This quantity is far below the amount needed by the EPA.

My home State of Florida needs a new authorization to be passed quickly. The State currently has more projects than it has funding for. Thus, the State will run out of funds before the end of the current fiscal year. A \$500 million authorization would be far insufficient for its needs. Under the current formula, Florida would receive \$162,450,000 of a \$4.5 billion authorization. Officials of the Florida Department of Environmental Regulation have informed me they have enough projects to warrant the need for that sum.

Dade County has proposed projects which will require \$80 million in Federal funds: \$52,675,000 of that sum is earmarked to tie in the numerous small treatment plants to the three large advanced sewage treatment plants now under construction by the Miami-Dade Water and Sewer Authority; \$13,134,-594 is requested for the rehabilitation of Dade County collecting sewers with excessive infiltration/inflow. Expansion of the Miami-Dade Water and Sewer Authority's North District Wastewater Treatment Plant from 60 Mgal/d. to 80 Mgal/d. will require an additional \$15,-000,000. These projects should provide an approximated 3,200 jobs in Dade County. The portion of these funds going to my district alone will require \$35 million and should provide roughly 1,200 jobs. However, under H.R. 4877's \$500 million authorization, Florida would receive only \$18,050,000. The city of Tampa has requested more than that amount just for its own projects!

Clearly, a serious need exists in my district, in the State of Florida and across the United States for the construction grants program to continue. The attitude of President Carter, the EPA, Governor Askew and Florida's State officials, and local water authority officials is that authorization of funds is needed as quickly as possible. The authorization must be of sufficient quantity to enable our municipalities to proceed with the task of cleaning up the water. We must get on with this program so that our goals can become realities. Our citizens have the right to have water clean enough to drink without getting sick, clean enough for bathing and boating, and clean enough so that fish can live and flourish. I therefore urge the House to reject this attempt to attach H.R. 3199 to H.R. 11. The need to quickly extend the water pollution grant program should be enough incentive to provide for the consideration of the less urgent clean water issues on their own merits later during the session.

Mr. CLEVELAND. Mr. Speaker, March 18, a telegram went to organizations of States, counties, cities, and metropolitan areas which have had the effrontery to support a position taken by the House of Representatives last year by a vote of 339 to 5. Its message: Back off and take a walk or you will get no funding for construction of wastewater treatment projects for a year or more.

extraordinary document, Speaker, exposing the reasons why the other body attached water pollution au-

thorizations to the local public works jobs bill, and laying out the challenge this House faces in enacting critically needed amendments to the Water Pollution Control Act.

That statement alone more than justifies the rule we have requested for handling this legislation and the strategy of combining it with the jobs bill to get into conference.

Issued over the signature of the chairman of the Senate Subcommittee on Environmental Pollution, the message said: "We either fund now and legislate substantively later, or we do the both to-gether at a later date."

It went to such groups as the National Governors Conference, the League of Cities, Conference of Mayors, and the Association of Metropolitan Sewerage Agencies, which have shared the House view that funding must go hand in hand with substantive amendments.

I found it particularly disturbing to find the amendments contained in H.R. 3199, like their predecessors contained in H.R. 9560, 94th Congress, characterized as narrow "special interest" provisions. Special interests? User charges, municipal time extensions, 404, State certification? Is that what we passed last year by a vote of 339 to 5? Special interest legislation?

How about those special interest lobbies supporting the legislation, the Governors Conference, the League of Cities, the National Association of Counties, AMSA, and the Environmental Protection Agency, for that matter?

The attitude conveyed to them, and implicitly to the House, is that no amendments to the Water Pollution Control Act produced by this body will be considered unless and until it suits the other side

With this in mind, our committee report took note of the fact that the 1972 act was the product of compromise between the absolute and the attainable. And it noted that our conference on H.R. 9560 died last year as a result of refusal of some to recognize the urgency of States exhausting their grant allocations this year, or to recognize that the 1972 act was anything less than unblemished perfection.

I want to make it very clear that we are not trying to force the Senate to take our language, any more than we should have to accept theirs. In fact section 16 of our bill is very objectionable to me. That is not the point. The issue is that the other body does not even want to consider our amendments which were the product of 3 years of work.

Procedurally, they invented the game. They wrote the book. Holding one bill hostage to another, loading up our legislation with nongermane amendments in conference, and now refusing to sit down and negotiate honest differences.

Substantively, they created the confrontation, and the crisis facing States running out of construction grant funds. They created the money pinch and are trying to use it to put the squeeze on us.

The organizations, with a nationwide constituency, of agencies and other entities responsible for carrying out the water pollution control program have been courageous in resisting efforts to block action on our amendments. They recognize the urgency of enacting H.R. 3199

I urge my colleagues to keep faith with those groups. This is deadly serious business we are involved in, and not the latest parlor game by Parker Brothers. Support this committee, support these amendments, and support our efforts to get them into conference. We have done all we can. The rest is up to the House. urge the adoption of the rule.

The SPEAKER pro tempore. The question is on ordering the previous question. The previous question was ordered.

The SPEAKER pro tempore. The guestion is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. EDGAR. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members

The vote was taken by electronic device, and there were-yeas 348, navs 60. not voting 24, as follows:

Mr. Moakley with Mr. Young of Florida.

Mr. Jones of Oklahoma with Mr. Stark. Mr. Flowers with Mr. Clay.

Mr. Pepper with Mr. Diggs.

Mr. Dingell with Mr. Akaka. Mr. Harkins with Mr. Brown of California.

Mr. Staggers with Mr. Nolan.

Mrs. SCHROEDER, Messrs. SOLARZ, MILLER of California, GORE, Mrs. SPELLMAN, and Mr. RHODES changed their vote from "yea" to "nay."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. OTTINGER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the resolution just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman

from New York?

There was no objection.

FEDERAL WATER POLLUTION CON-TROL ACT AMENDMENTS OF 1977

Mr. ROBERTS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. ROBERTS).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3199), with Mr. STRATTON in the chair.

The Clerk read the title of the bill. By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas (Mr. ROBERTS) will be recognized for 30 minutes, and the gentleman from California (Mr. Don H. will be recognized for 30 CLAUSEN) minutes.

The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Chairman, I yield such time as he may consume to the distinguished chairman of the full committee, the gentleman from California (Mr. JOHNSON)

Mr. JOHNSON of California. Mr Chairman, I rise in support of H.R. 3199. the Federal Water Pollution Control Act Amendments of 1977. As everyone knows, the 1972 Water Pollution Control Act was a massive undertaking to clean up our Nation's waters. In any legislation as complex as the 1972 act oftentimes fine tuning is necessary to smooth out program performance. The Public Works and Transportation Committee was fortunate in having JIM WRIGHT'S Investigations Subcommittee keeping a close

eye on the Agency's performance in carrying out the massive congressional mandate. For 2 years, I was honored to have been a member of the National Commission on Water Quality led by Vice President Nelson Rockefeller and our former Chairman Bob Jones. This study concentrated on the impact of the 1972 act on society. Later this year the Public Works Committee will be holding extensive hearings on our national water pollution program with the Commission report as its basis.

The bill before us today, for the most part, does not change the thrust of the 1972 act. H.R. 3199 extends the 1972 act through fiscal years 1978 and 1979 and

also calls for:

Greater State authority over administration of the program, subject to continuing Federal oversight:

A new formula for allocating Federal construction funds among the States which, for the first time since 1972, takes into consideration the relative populations of the various States;

A \$5 billion authorization for fiscal year 1977 and \$6 billion for each of fiscal year 1978 and 1979 for construction

grants.

A moratorium of up to 6 years for municipalities which cannot meet the present July 1, 1977, deadline for secondary treatment of their wastes.

Several provisions to eliminate cumbersome redtape.

Case-by-case extensions of the 1977

requirement for the private sector. In addition, under H.R. 3199, municipalities would be permitted to collect the cost of operation and maintenance of their treatment plants through ad valorem taxes. Existing law requires that such costs be recovered by user charges. Many of our large cities such as Los Angeles and Chicago are affected by this.

All of these provisions are important to maintaining the momentum that is building behind our water pollution cleanup efforts while cutting away some of the unnecessary redtape that has kept the program from moving as fast as we would like.

One section of H.R. 3199 which has received a considerable amount of attention is the amendment to section 404. If section 404 continues in the law without amendment, the committee is concerned that the program will prove impossible to administer and that more will be lost than gained in the protection of the Nation's waters. Rather than managing a more limited program well, the corps will be in the position of managing a too-large program poorly, because the required additional personnel cannot be realistically expected to be approved by either the administration or by the Congress.

This legislation will remedy many of the minor problems that have afflicted implementation of the act. I have been concerned about the overlapping and duplicative review of construction grant applications by undermanned and underfunded agencies at both the State and Federal level which continues to delay cleanup efforts. These delays result in increasing costs, forfeiture of employment, and the resultant economic benefits, while depriving the Nation of our ultimate goal, water pollution abatement.

For this reason, Mr. Chairman, we have included new section 214 which gives some States the authority to carry out certain requirements for facility grants. I want to emphasize that only States which qualify may participate. States only qualify when their pollu-tion control agencies have the authority, responsibility, and capability to effect all actions, determinations or approvals for which certification is submitted. While this section is limited only to those States which qualify, it is a necessary step to effect the Federal-State participation we envisioned when Public Law 92-500 was passed.

One of the areas of controversy surrounding the act is the requirement of secondary treatment of municipal effluent being discharged into the ocean. My own State of California will have to invest as much as a billion dollars to meet this requirement. There is a contradictory scientific evidence on this point. While one side says that secondary treatment is a waste of fiscal resources for unrealized environmental gains, the other side argues that the oceans do not assimilate effluent in the manner that many people have thought. Our committee needs time to evaluate this, Mr. Chairman. The National Commission on Water Quality has amassed a great deal of data on this subject and our committee will review it carefully. For the meantime, however, H.R. 3199 allows the Administrator to grant caseby-case extensions of the 1977 requirement for installation of secondary treatment by municipalities. It is expected that he will take particular note of extension requests for ocean discharges while the Congress conducts its evaluation

Rather than go over each section, I would like to include at this point in my remarks a section-by-section summary of H.R. 3199:

SUMMARY OF H.R. 3199, THE FEDERAL WATER POLLUTION CONTROL ACT AMENDMENTS OF 1977 AS AMENDED AND REPORTED BY THE COMMITTEE ON PUBLIC WORKS AND TRANS-PORTATION, MARCH 24, 1977

Section 1 provides that the act would be cited as the Federal Water Pollution Control Act Amendments of 1977.

Section 2 provides a general authorization for funds appropriated for fiscal year 1976, and the transition quarter; in other words, section 2 would recognize previous appro-priations that were made without the benefit of authorizations.

Section 3 provides authorizations for programs for fiscal year 1977 and 1978, the authorizations are as follows: Manpower training grants, \$2 million for 1977, \$3 million for 1978; manpower forecasting, \$1 million for 1977, \$1.5 million for 1978; grants for State and interstate water pollution control agencies, \$100 million for each of fiscal years 1977 and 1978; \$6 million in 1977 and \$7 million in 1978, for grants for training and scholarships; \$150 million would be authorized for each of fiscal years 1977 and 1978 for grants for 208 area wide planning process; \$50 million in fiscal year 1977 and \$60 million in fiscal year 1978 would be authorized for the clean lake program; and the EPA's program authorization \$100 million would be authorized for fiscal year 1977 and \$150 million for fiscal year 1978.

Section 4 would permit a grantee to apply excess construction grant funds toward collection system which is already under construction.

Section 5 would permit the combination of two administrative steps for a treatment works construction grant where the total grant would not exceed \$1 million.

Section 6 would amend the user charge provision of the act to premit the use of ad valorem taxes as a method of collecting operation and maintenance costs. Under section 6 there would be no less than two classes of users, one of which would be industrial users.

Section 6 would provide for proportionality among classes of users and within the class of industrial users. So, where necessary, a surcharge would be established for industrial users, so that each industrial user would be paying a fee directly related to the strength, volume, and other characteristics of its discharge into the treatment works.

Section 7 provides a new allotment procedure for funds authorized for fiscal year 1977 and beyond. Included in the new procedure is the provision that the construction grant contract authority would be subject to whatever limitations might be set in appropriation acts. This provision brings the contract authority into compliance with the Budget and Impoundment Control Act of 1974.

Also, a new allotment formula is provided for fiscal year 1977 and 1978 for construction grant funds. The formula would be ¼ population, ½ partial needs, ¼ total needs. In addition, section 7 would provide an

additional period of 1 year for the obligation of currently authorized construction grant funds. These funds are now subject to reallotment on September 30, 1977.

Section 8 would amend the reimbursement provision of the act to extend from July 1, 1972, to July 1, 1973, the date for qualifying for reimbursement grants. In addition, the authorization for reimbursement grants would be increased from \$2.6 billion to \$2.950

Section 9 provides a total authorization of \$17 billion for construction grants: \$5 billion in fiscal year 1977, and \$6 billion in each of fiscal years 1978 and 1979.

Section 10 extends 100 percent Federal grants for new 208 areawide planning agencles if the first grant is approved by October 1, 1977. Thereafter subsequent grants of up to 75 percent are provided.

Section 11 brings the contract authority provision for areawide planning within com-pliance with the Budget and Impoundment Control Act of 1974, and provides that this contract authority would be subject to whatever limitations might be set in appropriation acts.

Section 12 creates three new sections in the act. One of these, a new section 214, is the State certification program. This provides a program whereby States could certify to EPA that certain Federal requirements for a construction grant have been complied with. States could receive certifying authority only after EPA has made the determination that they have appropriate authority, responsibility, and capability to handle the program. EPA's determination would be subject to public hearing and to judicial review.

Among the Federal requirements for which the states could receive certifying authority are: that the treatment works is not subject to excessive infiltration-inflow; that the proposed works is consistent with any applicable area wide or State plans; and that the work contain sufficient reserve capacity.

The State certification provision does provide that the responsibilities of the admin-istrator of EPA under any other Federal law, including the National Environmental Policy Act of 1969, are not affected by this section. The administrator's responsibility to award Federal grants is not changed, nor existing EPA procedures and environmental assessment to be affected. Participating States would be permitted to use up to 2 percent of their construction grant allotment to defray the costs of the State certification program.

The new section 215 provides for State determination of priority among categories

of treatment works.

The new section 216 provides that materials used in constructing the treatment works are to be American-made. However, EPA may grant exemptions to this requirement where the administrator determines that it is not in the public interest or that costs would be unreasonable.

Section 13 provides for a case-by-case ex-

tension of the 1977 requirement for munici-

palities and for industries.

Municipalities may receive an extension up to July 1, 1982, or, if innovative technology is being used, to July 1, 1983, where EPA determines the construction of the treatment plant cannot be completed by July 1, 1977. An industry proposing to tie in with a municipal works may qualify for an extension of its 1977 industrial requirement if, within 60 days after the municipality receives its extension, the industry enters into an enforceable contract to discharge its waste into the completed municipal treat-

Industries may receive an extension of their 1977 requirement up to July 1, 1979. where the administrator determines that best practicable control technology cannot be completed or applied by July 1, 1977. Also, an industry which received a research grant to develop innovative technology but was unsuccessful in accomplishing its research goal may receive an extension of its 1977 requirement up to July 1, 1978, or the date of the completion of the necessary construc-

Section 14 would permit biennial submission of the State water quality inventory report

Section 15 authorizes hearings on proposed toxic standards within six months of publication and permits EPA to give up to three-year extension for compliance with final toxic standards where compliance within one year would be technologically infeasible.

Section 16 of the bill amends section 404 of the act. Section 404 requires a permit from the Department of the Army for the discharge of dredged or fill material into any water or wetland of the United States. Section 16 would amend 404 by limiting the permit requirement to navigable water and adjacent wetlands. Navigable water are defined as those waters which are presently used, or are susceptible to use in their present condition, or with reasonable improvement, to transport interstate or foreign commerce.

Section 16 also contains the following provisions: The discharge of dredged or fill materials into non-navigable waters and wetlands adjacent to them is regulated if the Secretary of the Army and the Governor of the State in which they are located agree that such regulation is needed because of the ecological and environmental importance of these waters and wetlands.

The Secretary of the Army would be authorized to issue general permits for normal farming, ranching, silvicultural activities; the maintenance of structures such as dykes, dams and levees, and the construction and maintenance of farm or, stock ponds, or irrigation ditches are exempted from the requirement for a permit.

There is a similar exemption for federally or federally-assisted projects where an en-vironmental impact statement for the project has been submitted to Congress in connection with the authorization or funding of

The Secretary of the Army's permit authority over wetlands adjacent to navigable waters and over any fresh water lake located entirely within the boundaries of a State may be delegated to a State if the State has the authority, responsibility and capability to exercise the authority, and the delegation is found to be in the public interest. Section 16 also makes it clear that toxic

Section 16 also makes it clear that toxic substances cannot be discharged into non-navigable waters and wetlands adjacent to them under the guise that it is a discharge of dredged or fill material. This provision is consistent with existing language regulating toxic substances as contained in section 307 (a) (5) of the act.

Section 17 provides a \$5 million contingency fund for use by EPA in emergency situations that would present substantial and imminent danger to public health or welfare.

Section 18 provides for court of appeals review of EPA's approval of a State certification program, and of EPA's publication of effluent guidelines or limitations.

Section 19 provides for congressional disapproval of administrative rules and regulations by resolution of either House of Concress

Section 20 provides for the filing of public written statements by EPA employees that have a financial interest in programs that are regulated or funded by the Federal Water Pollution Control Act.

Section 21 provides for a study of the impacts of the industrial cost recovery provision of the act, to be completed within 12 months of the enactment of this section.

For an 18 month-period, beginning with the date of enactment of this section, industrial cost recovery payments may be deferred.

Section 22 provides for reimbursement to the city of Boston for certain costs of constructing a correctional facility where the city conveys land for a treatment works to the State, and the State conveys certain land to the city.

As everyone is aware the House is faced with an unusual parliamentary situation. The Rules Committee and its distinguished Chairman, JIM DELANEY, have graciously reported to the House a rule which will allow H.R. 3199 to be incorporated into title II of Senate passed H.R. 11. The committee requested this rule, because we felt it was important to allow the House to work its will, as it did last year by a vote of 339 to 5, on some amendments to the 1972 Water Pollution Control Act. The ranking minority member of the committee, BILL HARSHA, and I agree that the House of Representatives deserves just as much consideration as the other body on this matter. We have presented our position to you in a Dear Colleague letter which I would like to include at this point in my remarks:

APRIL 1, 1977.

DEAR COLLEAGUE: On Tuesday, April 5, we are scheduled to bring urgently needed amendments to the Water Pollution Control Act, contained in H.R. 3199, to the floor under a procedure offering the best prospects for gaining consideration of the House position by the Senate in Conference.

We earnestly solicit your support for (1) the rule, (2) this bill, and (3) our Committee's efforts to counter Senate moves to bypass any water pollution control amendments passed by the House this year.

To assert the will of the House, this approach is a fully justified response to the Senate's action in adding water pollution construction grant authorizations to the local Public Works Jobs bill.

Briefly stated, our approach is to have

H.R. 3199 considered in normal fashion under an open rule with one hour of debate—ample time in view of last year's debate and decisive vote on H.R. 9560, 94th Congress—and upon conclusion of action on the bill have it combined with H.R. 11, the Housepassed jobs bill in a single package for Conference.

Most Members will recall that the similar bill passed by the House 339-5 last year, many of whose principal provisions were supported by the Environmental Protection Agency and the National Commission on Water Quality, was taken to Conference with the Senate.

With the Conference in disagreement as adjournment neared, House conferees were prepared to continue negotiations to a conclusion.

The Senate was not. This created the situation wherein a majority of states will exhaust their construction grants this year.

Also left unresolved are the problems of user-charge requirements burdening our major cities, the July 1, 1977 deadline for municipal secondary treatment of sewage which half of our communities can't possibly meet, the section 404 controversy over wetlands vs. the threat of needless over-regulation, and bureaucratic mismanagement of the construction grants program which is strangling our cleanup efforts in red tape.

H.R. 3199, containing amendments to address these and other problems, such as the need of some industries for case-by-case extension of their July 1, 1977 deadline, urgently warrants prompt consideration by the House—and Senate—on its merits.

Yet the Senate, in full knowledge that H.R. 3199 was being expedited this year, divorced water pollution funding from substantive program amendments.

This approach exploits the strong support for the latter measure as well as the plight of communities exhausting their construction grant funds. But if this package is enacted, the Senate can avoid any consideration of House amendments by the simple procedure of failing to act or meet the

House in Conference.

We seek not to force our will upon the Senate, but rather to prevent the reverse from occurring.

Urgency of our amendments momentarily aside, this controversy raises the basic issue of the ability of the House to deal with the Senate, whether House committees can exercise negotiating parity in the face of Senate manipulation of unrelated bills or titles.

Our colleagues on the Committee on Rules fully recognized this problem in their overwhelming vote in support of our position as reflected in the rule. We urge the entire House membership to concur in the interests of the widely recognized need for H.R. 3199. Sincerely.

HAROLD T. (BIZZ) JOHNSON, Chairman.

WILLIAM H. HARSHA,
Ranking Minority Member.

We are not in any way attempting to impede enactment of a jobs bill. Indeed what we in the House passed was just that, a jobs bill. What we got back was something more. The other body has chosen to make amendments to the Federal Water Pollution Control Act part of the conference, but on their terms. Failure to pass H.R. 3199 and make it part of the conference in the jobs bill means that the House of Representatives has been effectively precluded from addressing important amendments to Public Law 92–500.

Mr. Chairman, as I stated before the Rules Committee, I am optimistic that a compromise can be worked out with the other body in conference. We just want

the opportunity to go to conference and negotiate on the basis of a House position.

I urge all my colleagues to vote to pass H.R. 3199, and to amend H.R. 11 so that when the House and Senate meet in conference all the isues will be on the table.

Mr. ROBERTS. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, my colleagues may recall that it was less than 1 year ago that we moved to pass H.R. 9560, the Federal Water Pollution Control Amendments of 1976, by the outstanding vote of 339 to 5. H.R. 9560 represented the output of continuous investigation and monitoring of the implementation of the Federal Water Pollution Control Act.

Major and unprecedented amendments to the act had been enacted in 1972 in the form of Public Law 92-500. These amendments included strict treatment requirements for municipalities and industries that were to be met by July 1, 1977, and a major Federal public works program in the form of \$18 billion for 75 percent grants for the construction of municipal treatment works. Public Law 92-500 was the product of more than 2 years of analysis and study by the Committee on Public Works and Transportation and is now recognized as a landmark piece of environmental legislation.

I remind you that this committee which produced Public Law 92-500, and which today brings you H.R. 3199, The Federal Water Pollution Control Act Amendments of 1977, is the same committee which in 1948 produced the first Water Pollution Control Act, Public Law 845 of the 80th Congress.

We have demonstrated commitment to cleaning up our Nation's waters over almost 30 years—significantly predating the recent emergency of the so-called

environmental fad.

Some have seen fit to accuse the committe of moving to weaken the Clean Water Act-I can only question their understanding and the depth of their newfound commitment to the complexity of this effort. The water pollution control program cuts across all sectors of our life-the massive construction grant program, the treatment requirements for industries and municipalities, the restoration and preservation of our waters for current and future generations-all of these affect us as a nation in terms of technology, economic, institutional arrangements, and environmental impacts.

It is for this reason that Congress calls for a thorough study and assessment of the impacts of the goals and requirements of the 1972 act. We recognized that as we proceeded toward meeting the 1977 and 1983 requirements of the act it might be necessary to make adjustments in the law—to assure that our pace of environmental cleanup was sure and steady—and did not result in unforeseen and disruptive economic dislocations and impossible technological demands for which there was no solution.

It was for this reason that the House called for the establishment of a study conducted by nationally recognized experts to assess the 1983 requirements of the Act. In fact, the House felt so strongly of the need for the study that

it provided for a "trigger mechanism" whereby the 1983 requirements could not go into effect until the Congress received the results of the study and acted affirmatively on the 1983 requirements. Unfortunately, in conference the Senate position prevailed and the House provision for a study was retained, but the "trigger mechanism" was abandoned, leaving the act with two sets of requirementsone for July 1, 1977, and another, more

stringent set, for July 1, 1983. Well, the National Commission on Water Quality, which was established in Public Law 92-500, has completed its study and last year reported its results to the Congress. The Commission was chaired by Vice President Nelson Rockefeller and five members of the House Public Works and Transportation Committee, five members of the Senate Public Works Committee, and five members of the public sat as Commissioners.

The House Commission included Robert E. Jones, former chairman of the committee who served as Vice Chairman of the Commission, the distinguished Chairman of the full committee, Bizz Johnson, the majority leader of the House, JIM WRIGHT, and BILL HARSHA who is ranking minority member of the committee.

Certainly there can be no doubt of this committee's interest and determination to see our waters restored.

Unfortunately, the Commission's recommendations were not before the Committee when we developed H.R. 9560. However, several of the provisions in H.R. 9560 were subsequently supported by recommendations in the Commission's report. This report will serve as the focal point for a major reassessment of the goals and requirements of the act later this Congress.

In the meantime, though, it is mandatory that we move ahead with needed reforms in the water pollution control program-reforms that have come to the committee's attention through extensive oversight and legislative hearings of two separate subcommittees of the Committee on Public Works and Transportation. Oversight hearings were held by the Subcommittee on Investigations and Review under the excellent leadership of the gentleman from Texas, Congressman JIM WRIGHT, who is now our majority leader, and legislative hearings were conducted by the Subcommittee on Water Resources, which I have the privilege of chairing, in 1975 and 1977.

These hearings are only a small part of the extensive monitoring of the act that has taken place since 1972. The committee has regularly conducted field inspections and discussions with representatives of professional organizations, industries, environmental organizations, and representatives of the Environmental Protection Agency, which has the primary responsibility of implementing

As I mentioned earlier, H.R. 3199 is essentially the same as H.R. 9560, with the exception of some technical changes. H.R. 3199 is a well thought-out effort to streamline the redtape that has hampered the water pollution control pro-

gram-to recognize the reality of impossible requirements that are pitting industry and Government together instead of aligning them side-by-side as partners. In H.R. 3199 we have tried to give the concept of a partnership among the Federal Government, the States, local governments, and industry a basis in reality, not just on paper.

H.R. 3199 includes provisions that were recommended and endorsed by the Environmental Protection Agency, several provisions which were included in the recommendations of the National Commission on Water Quality, and others which were developed as solutions to the problems that were thoroughly explored

in subcommittee hearings.

H.R. 3199 provides \$18,250,500,000 in authorizations. In addition to authorizing \$17 billion for three years for the construction grant program, authorizations are provided for fiscal years 1977 and 1978 for important components of the water pollution control effort, such Treatment works operator training and forecasting, program grants to State and interstate water pollution control agencies, training grants and scholarships for undergraduate education, grants for areawide waste treatment management planning processes, the clean lakes program, and funds for EPA to carry out its responsibilities under the act. These authorizations are contained in section 3 of H.R. 3199, and are realistic estimates of the minimum levels of funding that should be provided for the programs, taking into account current, actual program levels. In many cases the authorizations are more than a two-thirds reduction from levels previously authorized. This was done, not because the committee considers these programs to be of a lesser priority, but in recognition of the fact that the programs have been seriously underfunded since the enactment of major water pollution control legislation in 1972 and that program increases will realistically have to occur in increments over time. However, two water pollution control programs for which authorizations were not reduced are program grants to State and interstate water pollution control agencies and grants for areawide waste treatment management planning. The State grant program is the only source of assistance to States to carry out their responsibilities under the Federal Water Pollution Control Act (Public Law 92-500) -responsibilities which were significantly expanded by Federal law in 1972 to include intensive water pollution control planning, the issuance monitoring of control permits, and the processing of construction grant applications for municipal treatment works.

To date the States have been maintained at a starvation level which has drastically handicapped the entire water pollution control effort.

Another key effort is the areawide waste treatment management and planning program which is directed toward the establishment of an ongoing, professional planning capability at the local level. Current law provides 100 percent initial grants with subsequent grants up

to 75 percent. The intent is to progressively decrease Federal assistance over time.

The Office of Management and Budget, however, from the beginning has maintained a posture of one-shot funding. If there is only one-shot funding we have effectively bought a piece of paper onlya plan-not a continuing local, professional planning capability. If we permit one-shot funding, we abandon our own program. The President's budget request provides only \$5 million for this program in 1978. H.R. 3199 would authorize \$150 million for this program. There are more than 150 planning organizations underway, others are awaiting designation. The authorization in H.R. 3199 is the minimum amount necessary to maintain the program.

The authorizations are only some of the important provisions in the bill. Other provisions which will cut down the red tape in the program and make it run

more effectively include:

A case-by-case extension of the July 1, 1977, requirements for municipalities up to July 1, 1982, or where special technology is being used, to July 1, 1983; a case-by-case extension of the July 1, 1977, requirements for industries up to July 1, 1979:

A procedure that permits the combination of two administrative steps for a small treatment works project;

Permitting the use of ad valorem taxes to meet the user charge requirements:

The State certification program for

construction grants:

Clarifying the definition of the term "navigable waters" as it applies to the Corps of Engineers dredge and fill permit program. This language is essentially the same as the Wright-Breaux amendment which was contained last year in H.R. 9560 and was overwhelmingly supported by the House.

I wish to point out, Mr. Chairman, that the committee is not insensitive to the preservation of our Nation's wetland areas. Section 16 does provide a mechanism for the protection of wetlands other than those adjacent to navigable waters where protection is found to be needed, while also recognizing the proper role and responsibility of the States in determining the need for protection. Moreover, in section 150 of the Water Resources Development Act of 1976 we took a significant step forward in restoring and increasing our Nation's wetlands. That section authorizes the Corps of Engineers to create new wetland areas in connection with the dredging of water resources projects. Research undertaken by the corps has shown that wetland areas can be successfully established and section 150 will allow the results of that research to be implemented to help solve the problems of disposal of dredged materials while at the same time creating new wetland areas which are so important for flood control, water quality, and the entire food chain.

I take a moment now to congratulate some of my friends whose contributions were vital to the development of this legislation—to the chairman of the full

CXXIII-655-Part 9

committee, Congressman Bizz Johnson, whose strong leadership has never wavered; to my fellow Texan, Jim WRIGHT, whose creativity and leadership during the last session of Congress as chairman of the Subcommittee on Investigations and Review and now as majority leader of the House, laid necessary groundwork and set a clear direction for this legislation. Also, I want to express my appreciation to the ranking minority member of the committee, Mr. HARSHA, and the ranking minority members of the subcommittees involved in this legislation, Mr. CLAUSEN and Mr. CLEVELAND, for their splendid cooperation and diligent efforts to ferret out the problems and to develop reasoned solutions.

Mr. Chairman, in my opinion the amendments in H.R. 3199 are necessary if we are to cut the redtape in the Federal water pollution control program. We have got to bring this effort back where it belongs—on a partnership level among the Federal Government, the States, cities, and industry. No one group can afford to go it alone.

H.R. 3199 is an excellent piece of legislation and it addresses problems which need resolution now.

Mr. Chairman, at this point, I would like to insert for the RECORD a sectionby-section summary of H.R. 3199:

THE FEDERAL WATER POLLUTION CONTROL ACT AMENDMENTS OF 1977

(Section-by-Section Summary of H.R. 3199 as amended and reported by the Committee on Public Works and Transportation, March 24, 1977)

\$18,250,500,000 Total Cost: (includes \$17,000,000,000 for the construction grant program, \$5,000,000,000 for fiscal year. 1977, \$6,000,000,000 for each of fiscal years 1978 and 1979.)

Section 1: The Act is to be cited as the Federal Water Pollution Control Act Amend-

ments of 1977. Section 2: Provides a general authorization for funds appropriated for FY 1976 and

the transition quarter.

Section 3: Provides authorizations for the following programs for fiscal years 1977 and 1978: Manpower Training Grants—\$2 million and \$3 million, Manpower Forceasting-\$1 million and \$1 million, State and Interstate Agency Grants-\$100 million and \$100 million, Scholarships-\$6 million and \$7 million, Grants to Areawide Planning Agencies-\$150 million and \$150 million, Clean Lakes—\$50 million and \$60 million, and EPA's Administration—\$100 million and \$150 million.

Section 4: Permits a grantee to apply excess construction grant funds toward collection systems already under construction.

Section 5: Permits the combination of two administrative steps for a treatment works construction grant where the total combined grant would not exceed \$1,000,000.

Section 6: Permits the use of ad valorem taxes as a method of collecting operation and maintenance costs.

Section 7: Provides an allotment formula for FY 1977 and 1978 construction grant funds; ¼ population, ½ partial needs, total needs; provides an allotment procedure for funds authorized for fiscal year 1977 and beyond; and extends for one year the period time available to obligate currently authorized construction grant funds.

Section 8: Extends from July 1, 1972, to 1, 1973, the date for qualifying for a reimbursement grant; and increases the authorization for reimbursement grants from \$2,600,000,000 to \$2,950,000,000.

Section 9: Authorizes \$5 billion for FY 1977, \$6 billion for FY 1978, and \$6 billion for FY 1979 for construction grants.

Section 10: Extends 100 percent Federal grants for new areawide planning agencies until October 1, 1977, and permits subsequent grants of up to 75%.

Section 11: Makes the contract authority grants to areawide planning agencies subject to limitations set in appropriations

Section 12: Creates 2 new sections:

New Section 214: State Certification-Provides for State delegation of review of certain Federal requirements for a construction grant award.

New Section 215: Provides for State determination of priority among categories of treatment works.

New Section 216: Provides that materials and supplies used in construction Federallyfunded municipal treatment works must be American-made. The Administrator may grant exemptions to this provision where he determines that it is not in the public interest or where costs would be unreasonably high.

Section 13: Authorizes a case-by-case extension of the 1977 requirements for municipalities to July 1, 1982, or, if innovative technology is being used, to July 1, 1983, where EPA determines that construction cannot be completed by July 1, 1977. Industry proposing to tie-in with a municipal works may qualify for an extension of the 1977 industrial requirement if, within 60 days after the municipality receives an extension, it enters into an enforceable contract to discharge into the completed municipal works.

Authorizes a case-by-case extension of the 1977 requirement for industry, up to July 1, 1979, where EPA determines that the application of best practicable control technology cannot be completed or applied by July 1, 1977.

Also, authorizes an extension of the 1977 industrial requirement up to July 1, 1978, or the date construction can be completed, for an industry that received a research and development grant for new technology but was unsuccessful in achieving their research

Section 14: Permits biennial submission of the State water quality inventory report.

Section 15: Authorizes hearings on proposed toxic standards within six months of publication and permits EPA to give up to a three year extension for compliance with final toxic standards where compliance within one year would be technologically

Section 16: Amends section 404 concerning the Corps of Engineers' permit program for dredged or fill material. Retains the traditional definition of navigable waters, minus the historical test, but adds Corps' regulatory authority over the discharge of dredged or fill material into wetlands adjacent to navigable waters and coastal wetlands:

Provides for the regulation of such discharges into other non-navigable waters and wetland areas by the Corps if the Corps and the Governor of the State in which the areas are located agree to such regulation because of their environmental importance

Exempts from regulation normal farming and silvicultural activities and Federal projects where an environmental impact statement or environmental assessment has been submitted to Congress in connection with project authorization or funding;

Provides for delegation to a State of the regulation of adjacent wetlands where the State meets certain requirements, and clarifies the authority of the Corps to issue general permits.

It also provides for delegation to a State under the same conditions of the Secretary of the Army's permit authority relating to fresh water lakes located entirely within the bounds of a State under sections 9, 10, and of the Act of March 3, 1899, and under section 404.

Clarifies that toxic substances cannot be discharged into non-navigable waters and wetlands adjacent to them under the guise that it is a discharge of dredged or fill

Section 17: Provides a \$5 million contingency fund for use by EPA in handling emergency situations presenting substantial danger to public health or welfare.
Section 18: Provides for Court of Appeals

review of EPA's approval of a State certification program and of EPA's effluent guidelines

Section 19: Provides for Congressional disapproval of administrative rules and regulations by resolution of either House of Con-

Section 20: Provides for the filing of public written statements of EPA employees with a financial interest in programs regulated or funded by the Federal Water Pollution Control Act

Section 21: Provides for an EPA study of the efficiency and need for industrial cost recovery within 12 months after enactment of this section; provides for deferral of industrial cost recovery payments for a period of 18 months after enactment.

Section 22: Provides for reimbursement of facility construction costs to Boston where the city and the State have exchanged land for construction sites.

Mr. Chairman, I would like to add just one thing, that only 10 percent of the funds have been expended that this committee brought to the Members in the original act. We want to clean up the waters, and we want to cut the redtape.

Mr. DON H. CLAUSEN. Mr. Chairman. I yield 10 minutes to the gentleman from Ohio (Mr. HARSHA).

Mr. BURGENER. Mr. Chairman, will the gentleman yield?

Mr. HARSHA. I yield to the gentleman from California.

Mr. BURGENER. I thank the gentleman for yielding.

Mr. Chairman, I rise in vigorous support of the amendments, and particularly proposed subsection g, which would grant the EPA authority to extend, case by case, the June 30, 1977, deadline for installation of "best practicable technology."

As we are aware, Public Law 92-500 provided for the creation of the National Commission on Water Quality, estab-lished to report to the Congress on the effects of achieving the standards and goals called for in the act. The Commission spent 3 years and \$17 million evaluating the program and the act's implementation, and the No. 1 recommendation of the Commission, Mr. Chairman, was that we authorize EPA to grant extensions of time for compliance on a case-by-case basis.

In my own district, local wastewater treatment plants which discharge into deep water outfalls some 3 miles from shore are forced to spend countless millions of dollars. Scientific measurements and monitoring done of the past 15 years by several eminent organizations and individuals have illustrated that there has been no adverse environmental effect. The Southern California Coastal Research Project, whose consulting board is headed by Dr. Robert Issacs of the Scripps Oceanographic Institute, has contended that there have been no adverse environmental impacts.

The city of San Diego alone is faced with a cost of \$200 to \$400 million to upgrade the secondary treatment, compared to an expenditure of \$30 million for expanded primary treatment.

We have for too long, Mr. Chairman, insisted on arbitrary standards in many realms before we knew what the economic impacts of such actions would be. I think it is time we allow some discretion—and I have no fear that it will be very limited discretion when exercised by EPA officials—in this matter, both municipally and industrially.

I urge my colleagues to support this legislation, as it returns some sensibility to the review of standards, in which we have never permitted any waiver or leeway.

Mr. HARSHA. Mr. Chairman, in view of the colloquy and debate that took place on the floor of this House during the consideration of the rule, I think at this time I should reemphasize what the distinguished gentleman from Texas has said relative to H.R. 11. As this House knows, this House passed H.R. 11 without any encumbrances whatsoever. It dealt strictly and solely with the jobs creation and public works construction program, the administration's economic stimulus package. We passed that earlier this year at the request of the administration and sent it over to the other body. The other body then took it upon themselves to tack onto that bill extraneous matters that did not deal with that specific subject matter, and they are the ones that have in fact created this situation which now confronts us, not the Committee on Public Works and Transportation.

But be that as it may, it requires some rather unique parliamentary procedure, and that is why we have the kind of rule we have, because if the conferees on the House side were to go to conference with the other body with only that section pertaining to water pollution control that dealt with construction grants, then according to the rules of the House we could not consider changes in the substantive law which the House considers necessary and which the array of witnesses who appeared before the Public Works and Transportation Committee alluded to day after day.

In an effort to make the water pollution control program work, in an effort to eliminate as much redtape and bureaucracy as possible, and in an effort to get the funds out to the States so that they can more expeditiously start construction of the waste water treatment facilities, this committee has brought before the House H.R. 3199. This bill is designed to do just that. It is designed to restrict redtape and bureaucracy.

For example, we provide in here for a construction grant program where the grant does not exceed \$1 million, that a combination of the design and construction grants may be authorized by the Environmental Protection Agency, therefore doing away with unnecessary redtape.

As Members know the Environmental

Protection Agency requires three steps to a construction grant. They require a feasibility study first to get estimates of the cost of such a project. Then after that appplication is approved and the grant is approved, the community must come back with a second application, setting forth the design and a detailed plan of that project. First the State has to approve it, and then the region has to approve it, and then the Federal Government in the Washington office has to approve it, and then the second step grant awarded. Then after that is done, the community has to come back with a third step application which is the step for the actual construction of the project, which has to go through the same series of reviews and approvals and comes back to Washington, and then if that is approved the third step grant is awarded.

Many of the grant applications in this country are of \$1 million or less, so in order to help the communities overcome the burden of this tremendous workload and the tremendous amount of redtape, we have consolidated these steps, so that after the feasibility study or step 1 grant, the EPA may award a grant for steps 2 and 3 at the same time on just one application.

Second, there are many communities of the Members who represent large communities, and they use an ad valorem tax in order to assess the cost of operation and maintenance of the waste treatment plant. EPA first permitted this procedure. Then the General Accounting Office said: "No, you cannot do that." As a result the EPA is holding up a considerable amount of money that should be passed over to these communities to complete their projects and to get on with the job of cleaning up the streams of the country, but because they do not actually charge a specific user charge for each and every household for each and every plant that discharges into that facility, the EPA is holding up the

Many communities, particularly the large ones, came into the Public Works and Transportation Committee and testified to the inordinate cost and the inordinate billing process and the inordinate burdensome work that would be entailed if they had to install meters for each and every user. The communities of Los Angeles testified they would have to install over 1.2 million specific individual meters to have a user tax for the maintenance and operation of their waste water treatment facilities and that particular fact in itself would create an additional cost to that community of some \$2 billion.

This defeats the purpose of the waste water treatment program. Therefore, we have made it possible under H.R. 3199 to use an ad valorem tax but at the same time requiring that those municipalities that use ad valorem must insure that each user pays their proportionate share and which may include a surcharge depending upon the volume and amount and characteristics of the discharge they put into the waste water treatment plant, so that everybody that is using the facilities of the publicly owned waste

water treatment facilities will in turn pay their proportionate and fair share of the cost of operating those facilities.

Mr. Chairman, there are many other provisions in the bill that merit the support of the Members of the House.

I must say in all candor there is one provision that I do not agree with. That is section 404. I think it is far too broad. I think it permits the pollution of our wetlands. I think it is a step backwards in this effort to clean up the waterways of the country; however, I happen to be in the minority in that particular case. The full committee did not see it as I see but under the provisions of section 404 that is written in the bill, I am advised by the Environmental Protection Agency, substantiated by the Corps of Engineers, that almost 98 percent of the streamways of this country would not be covered by the permit section as it is written in section 16 of this bill and almost 80 percent of the wetlands and swamps would likewise not be covered.

Mr. Chairman, we have spent too many years degrading and destroying the wetlands of this country to ever be able to return them to the condition in which they were. We have destroyed already about 40 percent of the wetlands of this Nation in the last 15 or 20 years. We have destroyed an additional 16,000 to 18,000 acres of wetlands by dredging and filling processes. If we are ever going to get about the task of protecting these wetlands and waterways of the country, we have to have a more stringent permit section than allowed in section 16.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. HARSHA. I yield to the gentleman from Pennsylvania.

Mr. EDGAR. Mr. Chairman, I would like to compliment the gentleman on his comments on section 16. I join with my colleague in his strong concern over what section 16 will, in fact, do to the section 404 program.

Mr. Chairman, I would hope we as a House would delete that section 16 or modify it to the language of the gentleman from Ohio and the gentleman from New Hampshire (Mr. Cleveland) and myself, so that when we go to conference with the Senate we can have those noncontroversial provisions and we can act quickly to get this legislation out with the necessary money, at the same time protecting the very valuable wetlands.

Mr. HARSHA. Mr. Chairman, I thank the gentleman from Pennsylvania for this contribution. I know the gentleman's sincere interest in this and the gentleman's efforts to amend the bill in the committee. Unfortunately, neither one of us were successful.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. DON H. CLAUSEN. Mr. Chairman, I yield 2 additional minutes to the gentleman from Ohio (Mr. Harsha).

Mr. HARSHA. Mr. Chairman, while this is a most important section of the bill, section 16, and while it does not meet the criteria that I would like to see in the legislation, there are many other redeeming factors in this bill that I think are very worthwhile if we are to get

about the problem of cleaning up our waterways, particularly the one of State certification. Here again, there are a number of processes in the program of cleaning up the water and defining water quality standards that require permit applications and grant applications that have to be processed, not only by the local level, but at the State level and at the regional level and at the Federal level. In an effort to eliminate as much duplication as we can, we have put in a State certification program which will, in my judgment, go a long way toward expediting the ultimate objective that we are all concerned with, that is the cleaning up of the waterways; but not only does that State certification eliminate many of the duplications and bureaucracy that we are constantly confronted with, but in my judgment it provides a number of safeguards to see that the plan goes forward as the authors and as the Congress would envision and want it.

We have, first, put in here the requirement that public hearings be conducted by the Environmental Protection Administrator when he determines that a State is able to do these things without the overview of all the Federal bureaucracy. The EPA must first determine that the State has the capability, the responsi-bility and the authority to take the actions that are set forth in this particular

provision.

In addition to the public hearing rerequirement we have provided for judicial review of certification, so that I think there are ample protections in here for the public and for those who are concerned about water pollution abatement

Mr. Chairman, I urge adoption of this bill.

Mr. DON H. CLAUSEN. Mr. Chairman. I yield myself 10 minutes.

Mr. HARSHA. Mr. Chairman, will the gentleman yield?

Mr. DON H. CLAUSEN. I yield to the

gentleman from Ohio.

Mr. HARSHA. Mr. Chairman, I certainly would be remiss in my remarks if I did not refer to the extremely effective leadership, that has been afforded the Public Works and Transportation Committee by the distinguished chairman of that committee, the gentleman from California, (Mr. Johnson), and by the distinguished chairman of the Subcommittee on Water Resources, the gentleman from Texas (Mr. ROBERTS). They both have not only been extremely cooperative and fair to the minority, but they have maintained the best interests of the committee, they have been firm in protecting the perogatives of the House and I think have done a tremendous job toward getting on with the task of cleaning up the resources of this

Likewise Mr. Chairman, the ranking minority of the subcommittee Mr. CLAU-SEN, has likewise made a major contribution toward this issue of clean waters and has provided exceptional leadership to the minority.

Mr. DON H. CLAUSEN. Mr. Chairman, I rise in support of H.R. 3199. This bill contains urgently needed revisions to the Federal Water Pollution Control Act. It meets the immediate needs of

our water pollution control effort. It is intended to do those things which must be done now!

My good friend and colleague from California, Bizz Johnson, the distinguished chairman of the Committee on Public Works and Transportation, as well as my hard working colleague from Texas, RAY ROBERTS, the chairman of the subcommittee, are to be commended for their leadership in bringing this bill to the floor.

I do appreciate also the leadership provided by my most articulate friend and colleague BILL HARSHA of Ohio. He has been a source of major assistance.

Even though I support H.R. 3199 because it meets our immediate needs, two sections give me concern.

I have particular reservations on the amendment to section 404 of the Federal Water Pollution Control Act as set forth in section 16 of H.R. 3199. I shall have

more to say on this later.

Second, the provision on determination of priority in section 12 of H.R. 3199 requires clarification. This provision not preclude EPA from setting guidelines for the proper expenditure of Federal funds. It simply prohibits the Administrator from promulgating regulations which have the effect of precluding the inclusion of certain categories of construction. While cost effectiveness and value engineering criteria must still be followed, EPA cannot preclude the inclusion of collector sewers or correction of combined sewer overflow, for example.

As ranking minority member of the Subcommittee on Water Resources, I can testify that with the exceptions I noted, this is an urgently needed piece of legislation and one which merits immediate action by this body. This need has been repeatedly exhibited by Federal, State, and local officials as well as those regulated by the act. Our water pollution

control effort needs H.R. 3199.

The Federal Water Pollution Control Act was intended to serve as an incentive for industrial dischargers to participate in municipal systems. We sought to minimize the number of discharges, to benefit from the better management and control available at regional facilities and to benefit from the economics of scale. We provided this incentive in a number of ways including reduced requirements and long-term interest-free loans. Unfortunately, the implementation of the pretreatment requirements of section 307(b) of the Federal Water Pollution Control Act by the Environmental Protection Agency has been grossly deficient. As we point out on page 18 of our report, the "failure of EPA to promulgate pretreatment standards is disappointing. The content of pretreatment regulations should weigh heavily on the decision of industrial point sources to participate in municipal systems. It is expected, therefore, that the EPA will make every efto promulgate required regulations at the earliest time. Major emphasis must be and is expected to be given to this

New section 301(g)(4), which is added by section 13 of H.R. 3199, provides a further incentive to participate in regional systems. It recognizes the desirability of having industrial participation

in municipal systems by allowing time modifications of the requirements for industrial discharges if they meet the requirements of the new section.

This provision could result in mischief if not carefully implemented. For an industry to receive a time modification, there must be an enforceable contract. Obviously, a contract is not enforceable if it is illusory and there is not good assurance that the publicly owned treatment works will be constructed.

Before granting time modifications to publicly owned treatment works, I expect that there will in each case be an evaluation of viable alternative wastewater treatment technologies. Specifically included should be an analysis of chemical treatment technology as a costeffective method for the separation of solids and liquids by coagulation, flocculation and sludge conditioning. Presently, available chemical treatment technology will allow publicly owned treatment works in many areas to meet secondary treatment at current funding levels.

Ocean discharges of primary treatment effluents from publicly owned treatment works is addressed carefully on pages 16 and 17 of our committee report. One comment should be made to clarify any misunderstandings. Treatment of industrial effluents in accordance with pretreatment standards will remove many of the materials which may be toxic to ocean life. Thus, a decision to utilize ocean outfalls consistent with section 13 as explained in the committee report is not intended to be a basis for reducing the level of pretreatment. We believe our position is consistent with the needs of the ocean environment; thus pretreatment standards apply for discharges into all publicly owned treatment works.

Section 9 of H.R. 3199 provides an authorization of \$5 billion for fiscal year 1977, \$6 billion for fiscal year 1978 and \$6 billion for fiscal year 1979 for grants for the construction of publicly owned treatment works. All should recognize that these new authorizations are in furtherance of the intent of Congress to fund fully the grant program for the construction of municipal treatment works. This is a most important part of the water pollution control program and it is recognized that it will require continued assurance of congressional intent to bring all municipalities up to the necessary levels. State and local officials should recognize this added \$17 billion as assurance of a continued Federal grant program until the time all treatment works meet the requirements.

Section 5 of H.R. 3199 provides that the Administrator may, after approval of a step 1 facility plan which contains estimates of the cost to complete the project, award a single grant for step 2, design, and step 3, construction, combined in a single application, where the total cost of steps 2 and 3 for this grant would not exceed \$1 million. Roughly a f urth to a third of all projects nationwide would fall within the \$1 million combined ceiling, and would include complete systems for small communities newly instituting treatment or replacing old facilites, as well as extension of existing systems in larger communities. This

procedure will speed up the construction program and will reduce costly delays and redtane.

The Environmental Protection Agency should recognize that projects can be segmented to allow orderly construction with allotments for each fiscal year. The provision of section 203(d) of the act, as amended, make this clear. However, it is clearly not intended that section 5 of H.R. 3199 serve as an incentive to segment projects solely for the purpose of being able to combine steps 2 and 3. The qualitative evaluation and consideration obtained by going through steps 2 and 3 may be necessary for thorough review of larger projects.

Section 404-I hesitate to leap into this but I am concerned by the amendment to section 404 of Public Law 92-500. the Federal Water Pollution Control Act Amendments of 1972, which is incorporated as Section 16 of H.R. 3199.

The Corps of Engineers expanded regulatory authority results from a March 27, 1975 decision by the U.S. District Court of the District of Columbia. which directed the corps to expand the 404 program to all waters of the United States. Previously the corps was applying section 404 to waters which were used in the past, are presently used, or could be used with reasonable improvement, to transport interstate commerce.

This court decision forced the Corps of Engineers to administratively define 'waters of the United States" as well as what activities would be regulated. On May 6, 1975, draft regulations were published and on July 26, 1975, "interimfinal" regulations were promulgated. These regulations extend in three phases the Army Engineers' authority to control dredge and fill operations. Phase I, effective July 25, 1975, covers traditional navigable waters of the United States and continguous or adjacent wetlands. Phase II, effective July 1, 1976, expanded the corps' permit program into primary tributaries of navigable waters of the United States, lakes, and the contiguous or adjacent wetlands. After July 1, 1977. the corps will exercise its section 404 authority over all waters of the United States, administratively defined as a stream with 5 cubic feet per second flow.

It is important that we affirm the administrative exemptions in order that the program be rationalizedthis I think everyone agrees. The extent of jurisdiction is another matter. While I support a moratorium on the implementation of phase III of the Corps of Engineers regulations, I will support the Wright amendment as a vehicle to get to conference. I believe we should leave for the conference with the other body the ultimate determination over the corps' jurisdiction.

Section 6 which amends the "user charge" provisions of the act recognizes the onerous and unfair burden which would be imposed if water or sewage meters had to be installed for every residence. Thus, section 6 is intended to rectify this for residences in eligible municipalities.

Industrial and other classes of significant waste users must pay their proportionate share. If ad valorem taxes are utilized to collect user charges, a system of surcharges will be required to insure that residential customers do not subsidize industrial or other classes and that each industry source pays its fair share based upon volume, strength, and other relevant factors.

There should be a reasonable relationship between the level of user charge income and the cost of collecting user charges. Further, the system to correct inaccuracies in charges based upon ad valorem taxes, high or low, should result in a clear recognition by the users of water of the cost of treating their waste in order that they will factor this into their overall business decisionmaking. The system of surcharges will impose upon industry the full cost of the treatment of their waste and should operate in an incentive to reduce treatment requirements.

Mr. Chairman, I want to call particular attention to State certification, which I have long supported as one of the early cosponsors and which I consider to be one of the principal merits of H.R. 3199.

This is a badly needed reform and one which stands the best chance of any single provision considered since enactment of Public Law 92-500 of enabling that act to deliver-to make performance live up to its promise.

I am pleased to be able to say that it is strongly supported by the water pollution control agency in my own State of California as well as the Federal Environmental Protection Agency. As a matter of fact, Russell Train, the previous Administrator of EPA, has cited the performance and capabilities of my own State's agency as an argument in support of State certification.

This is a limited and carefully drafted provision, an optional alternative to the current procedure followed by EPA and the States, and is focused directly on problems that have swamped the construction grants program since its inception.

It will mean more State responsibility. more State authority, stronger State agencies, and better State performance in assuring that the construction grants program is subject to strengthened management by increasing numbers of qualified personnel.

This provision had its inception in oversight hearings of the Subcommittee on Investigations and Review more than 2 years ago, when the main concern was failure to get the funds out to the States and into construction. Those concerns are equally valid today in terms of getting projects underway and accelerating achievement of the clean water goals of the 1972 act.

We should not lose sight of other benefits, however, represented by its impact on jobs. Getting this construction program on track will mean jobs in the construction of facilities. But more than that, it will mean jobs in other types of construction in countless communities where housing and business and industrial development have been impeded by the lack of adequate facilities. Beyond this it will mean permanent jobs in areas where unemployment is high.

For all that, we are not telling EPA to close its eyes and shovel out the money. On the contrary, State certification will meet the increasingly recognized need to strengthen management over the program, whose \$6 billion annual authorization level exceeds interstate highway construction. It will provide greatly strengthened staffs at the State level, familiar with applicant communities and their problems and needs, familiar with the public officials involved and with the consultants and contractors involved in the process.

Under State certification, 2 percent of State's construction grant allotment would be reserved, and upon approval of the Administrator would be obligated and available until expended. In specific terms, this would mean that a State like California could make an application identifying the staffing levels and activities to be performed on a group of projects initiated during a given year, some of which would take years to complete. This would be analogous to plans, specification and estimated in construction terms. Approval plus a statement of intent by the States would constitute an obligation of funds, assuring their availability to support the needed manpower perform all activities necessary meet certification responsibilities throughout the life of the projects involved.

For these reasons, State certification has been endorsed by a number of environmental groups in California, State water pollution control administrators in at least 48 of the 50 States, the National Governors Conference, the Conference of State Legislatures, the Water Pollution Control Federation and other organizations, the National Commission on Water Quality, and nearly 140 House

This is an outstanding measure reflecting credit on its author, the gentleman from New Hampshire, the principal cosponsor, the gentleman from Texas. the majority leader, and the strong bipartisan majority on the Subcommittee on Water Resources and the full committee responsible for bringing it to the

Mr. Chairman, I urge this body to support H.R. 3199. It is necessary for us to go to conference with the other

Mr. Chairman, I have one further item to address during our recent hearings on amending the Federal Water Pollution Control Act, I asked a number of questions of various witnesses regarding: First, the use of innovative technology in our municipal waste-water treatment program; and second, the necessity of providing incentives to municipalities to utilize new innovative technologies and

Land treatment is not new. Land treatment, perhaps, is not even innovative anymore. Land treatment, in fact, is utilized in dozens and dozens of facilities around the country. However, land treatment in my opinion is not utilized at the level it should and could.

At one time there were significant financial incentives to utilize new and special technology. When Congress special technology. When Congress amended the act of 1972, the net result was to increase the grant level to 75 percent for all new treatment works construction from the then existing 30- to

55-percent level, thereby removing the 20- to 45-percent financial incentive to utilize new technology. The financial incentive is no longer there. Municipalities and their consultants are reluc-

tant to take engineering risks.

I intend to introduce a bill which would change this by amending the Federal Water Pollution Control Act to add an additional 12½-percent incentive to treatment works owners and operators to utilize new technology and land treatment. In addition, study of innovative techniques would be a required part of engineering review. I considered including my amendment in H.R. 3199, but I did not because I believe more study was needed on my part.

I will introduce my bill as soon as we have resolved H.R. 3199 and I can devote increased energies to my bill. I expect it to be a part of the legislation during the "mid-course correction" next year. At this time I ask for and would appreciate any comments or suggestions from any of my colleagues in this body. I believe my bill is important and I know with your help it can be improved. I insert in the RECORD at this point a draft of my bill so that you may have it available for review and comment:

H.R. -

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) Subsection (g) (2) of section 201 of the Federal Water Pollution Control Act (33 U.S.C. 1281) is amened by striking out "and" at the end of subparagraph (A); by striking the period at the end of subparagraph (B) and inserting "; and" in lieu thereof; and by adding a new subparagraph "(C)" as follows at the end thereof:

"(C) demonstrated new and innovative wastewater treatment processes, techniques and equipment, including but not limited to treatment and new or improved methods of joint treatment systems for municipal and industrial waste, have been fully studied and evaluated by the applicant taking into account and allowing to the extent practicable the more efficient use of energy and resources.

(b) Subsection (a) of Section 202 of such Act (33 U.S.C. 1282) is amended by inserting "(1)" immediately after "(a)" and by inserting a new paragraph "(2)" at the end of

subsection 202(a) as follows:

"(2) The amount of any grant made after the date of enactment of this subparagraph for that part of a treatment works utilizing methods, processes, techniques and equipment meeting the requirements of subparagraph 201(g)(2)(C) shall be 871/2 percentum of the cost of construction thereof (as approved by the Administrator)."

(c) Subsection (d) of section 304 of such Act (33 U.S.C. 1314) is amended by adding the following new subparagraph "(3)" at the

"(3) The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, shall publish within 180 days after enactment of this subsection guidelines for identifying and evaluating demonstrated new and innovative wastewater treatment processes, techniques and equipment under section 201(g) (2) (C)."

(d) Section 205 of such Act (33 U.S.C. 1285) is amendeed by adding a new sub-

section "(c)" at the end thereof:

"(c) Not to exceed 2 percentum of the alloted to a State under subsection (a) of this section shall be used for increasing grants for construction of treatment

works from 75 percentum to 871/2 percentum pursuant to section 202(a)(2).

I do not wish to set up another roadblock in the already difficult path from application to grant to construction. There are too many roadblocks now. I am considering making my bill serve as an encouragement rather than a requirement. This could be done by combining my bill with section 201(f) which requires the administrator to "encourage waste treatment management which combines 'open space' and recreational considerations with such management."

Just as I solicit comments from my colleague I also solicit comments from the engineering and construction professions as well as representatives of local governments and the environmental

organizations.

Proper preparation and review now by all concerned will lead to better use of our construction grant dollars.

Mr. Mckinney. Will the gentleman vield?

Mr. DON H. CLAUSEN. I yield to the

gentleman from Connecticut.

Mr. McKINNEY. Mr. Chairman, I come here today to face a very difficult decision regarding H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977. Over a month ago several of my colleagues and I cosponsored legislation to extend the deadline for the construction grants program. This extension is extremely important to Connecticut—not to mention Delaware, Maryland, Massachusetts, Michigan, New York, Pennsylvania, and the District of Columbia-to prevent the potential loss of up to \$700 million in water pollution control funds. Connecticut alone could lose up to \$140 million unless Congress acts to extend the deadline today. However, I feel like Pandora when she opened the famous box. Our simple 1-year extension has been incorporated into the Federal Water Pollution Control Act amendments, and I am forced to vote for some very good provisions along with a very bad oneto drastically restrict the Army Corps of Engineers' authority to regulate dredging and filling in the Nation's nonnavigable waterways and wetlands.

I do not mean to belittle many of the other important provisions in this bill. I strongly support the State certification program, which would allow the Environmental Protection Agency-EPA-to give State agencies the authority to approve Federal construction grants for municipal sewage treatment facilities. This provision would certainly speed up a too-slow approval process for grant applications and accelerate achievement of our clear water goals. I also support case-by-case extensions for municipalities and industries to comply with the July 1977 deadline for installing water cleanup equipment. In view of the fact that approximately 50 percent of the Nation's municipalities and 15 percent of its industries will not meet this deadline, a time extension appears very reasonable. EPA considers 7.5 percent of all industrial dischargers to have been acting in bad faith. While it seems unfair to penalize those industrial polluters that have worked hard to meet the deadline, it would also

be unfair to penalize those who have worked hard yet failed. Also, many of the municipalities have missed the deadline for perfectly legitimate reasons, not the least of which is the impoundment of construction grant funds during the Nixon administration and excessive bureaucratic redtape.

While offering short-term advantages, I have long-range objections to the provision permitting municipalities to use ad valorem taxes to recoup operating and maintenance costs of federally financed sewage plants. After all, municipalities should be permitted to select the revenue system most appropriate to them. However, this is a step backward. The users fee presently in use requires the allocation of operating and maintenance costs based on the actual use of the sewage treatment system in hopes of encouraging water conservation and waste water reduction. While I support this approach, it would be a costly hardship for many municipalities. Under this new provision, property taxes could be used if the EPA determined that the tax system would result in proportional distribution of costs among user classes according to class use, and a surcharge for industrial users could be employed to insure proportional shares.

These provisions, along with many of the others crowded into this legislation, I support today. However, I am now faced with the eternal problem of weighing the good against the bad. While there is only one provision in this legislation to which I strongly object, its weight is almost equivalent to those remaining. The Corp of Engineers' authority over dredging and filling, established in section 404 of the 1972 law, currently covers the "waters of the United States." Section 16 of H.R. 3199 would restrict this authority to commercially navigable waters, adjacent wetlands, and coastal wetlands. While excessive and burdensome regulation should be prevented. I believe this goes too far. According to the EPA, 98 percent of the Nation's stream miles and 80 percent of its swamps and marshlands would be excluded from regulation under this provision. This artificial distinction between navigable and nonnavigable, as a Federal court has held, does not reflect the environmental truism that water is water, wherever it is.

It is my belief that State regulation is preferable to Federal regulation, and my State has effective statutes which regulate wetlands, both coastal and inland. However, Connecticut is an exception to the rule. The majority of States have weak environmental protection programs, and delegating the corps' program to State agencies would leave too much of the Nation's wetlands subject to uncoordinated, unplanned, and destructive development. While Connecticut can take assurance in the fact that we have a very good program, it should be remembered that the failure of one State to adequately regulate its water resources will adversely affect the resources of other States.

The wetlands are the most vital and productive part of the aquatic ecosystem.

Estuaries and mangrove swamps are the breeding ground for an estimated 70 percent of marine life, and would be exempt from protection under this provision. These fecund waters also support a majority of aquatic life fished and eaten by us, and consumed by other forms of marine life. Each marsh area is fragile in nature, and unique in character because each has its own, peculiar biota. Nature takes as long as 5,000 years to develop the flora and fauna in these small ecosystems, and uncontrolled dumping of waste and chemicals, filling with dirt, commercial developing, or dredging presents an invasion against which wetlands have no evolved defense.

Limiting the definition of wetlands to navigable waterways would have severe implications on efforts to keep our present wetlands intact, as evidenced by the loss of over 50 million acres of wetlands since the Nation's formation, with a 6 million acre loss occurring in the last 20 years. In an attempt to rectify this situation, an amendment has been offered by Congressman William Harsha and Congressman James Cleveland, which attempts to restore much of the

corps' regulatory authority.

I strongly support the Cleveland-Harsha amendment to restore the broader definition of waters and wetlands now in the law. The amendment would exempt virtually all routine agricultural and ranching activities from permit requirements, thus avoiding needless regulation. While the amendment would authorize general permits, this would apply only to practices having minimal environmental impacts, such as construction of logging roads and homebuilding. Also, it calls for a study of State and local programs to determine the extent to which the corps' program could be delegated to the State agencies, which is a positive and safe step toward the State regulation

As if the substantive issues were not difficult enough, I am also faced with a complicated rule that would permit House conferees to consider H.R. 3199 with the public works jobs bill (H.R. 11). I object to this unnecessarily complex political manuever which has as its obvious goal to put the House in an extreme position in hopes of a more reasonable conference version. Failing to debate the merits of the controversial wetlands proposals so that a more reasonable conference compromise might emerge is a gross abdication of our responsibilities. I resent the use of this "wait and see" approach, and I will not support a rule that permits the consideration of a short-term economic stimulus measure with a long-term community planning program. The House decision to consider these proposals separately has sound substantive justification which water pollution politics cannot overcome.

Mr. HAGEDORN. Mr. Chairman, will the gentleman yield?

Mr. DON H. CLAUSEN. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. Mr. Chairman, I rise in behalf of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977. The act addresses a number of serious problems that have arisen with the basic act since its inception in 1972. Most immediately pressing is the fact that nearly one-half of the Nation's municipalities are currently subject to a deadline for the installation of secondary sewage treatment facilities which they cannot meet. In Minnesota, well over half the municipalities find themselves in this position, as, of course, do all the industries which are hooked up to their treatment facilities.

This bill would authorize the Administrator of EPA to extend the current July 1, 1977, deadline, on a case-by-case basis, up to July 1, 1982, in most instances. Rather than totally denying some 11,000 municipal units, the opportunity to avail themselves of wastewater treatment funds, these provisions would recognize the difficulties encountered by thousands of diverse units of Government in complying with inflexible Federal deadlines. I fail to appreciate the arguments of those who argue that such an extension penalizes communities which have completed their facilities on a timely basis. If the benefits of a pure water supply are all that they are claimed to be by supporters of strong Federal pollution control action, then I would think that communities which have completed their work on time would receive benefits from that fact alone. Rather than being exposed for longer lengths of time to impure water supplies, they are already able to enjoy cleaner water.

Two other important provisions of H.R. 3199 represent to me healthy exercises in federalism, restoring greater authority to the States to manage their own affairs. In neither instance, in my opinion, will the overriding objective of the act-clean water-be jeopardized. First, the bill establishes a program for State certification of project applications which give to the States authority to administer requirements for facility grants. Although I might prefer giving the States an even greater role in administering grants made to their own communities, section 12 of this act at least indicates an appreciation for the fact that the States may be able to operate these programs more efficiently, more expeditiously, and with more attention to the important environmental and engineering details which must be considered on each project. Safeguards exist which insure that all State agencies to which certification responsibilities are delegated will be willing and prepared to promote the objectives of this act.

Second, and probably the most controversial part of this bill, is section 16 which amends section 404 of the Federal Water Pollution Control Act. Section 404 is a perfect example of single-minded Federal courts interpreting the provisions of legislation in a manner which completely distorts the intentions of Congress. As curently understood, section 404 requires a permit from the Army Corps of Engineers whenever discharges of dredged or fill material are made into any water or wetland of the United States. While the corps has made several controversial efforts to limit the apparently unlimited scope of this authority, the fact remains that, until now, this has been a decision that has been left in the hands of the corps. Without questioning the judgment of the corps-a position which I daresay many opponents of section 16 would not agree with on anything other than section 16-I do not believe that a matter as important to as many people as section 404 should be left entirely to executive discretion.

Section 16 of this act would limit the corps' permit requirements to navigable waters, excluding those which have been considered such purely through historic use. Many agricultural activities would be totally exempted from the provision regardless of where they occurred, while most project maintenance activities would be entitled to a similar exemption. Where the Governor of a State and the corps are in agreement, the permit program would be authorized to protect even nonnavigable waters of unusual environmental value. What this section wili do simply is to restore the corps program to its proper limits, thereby enabling them to focus limited resources in areas where they can do the most good. In the midst of some tens of thousands of permits annually, and jurisdictional responsibilities which cover virtually every brook and stream in the country, it is very easy to lose sight of the basic objectives with which the corps charged-clean and pure water. At far less cost, with far less manpower, and with far less interference in individual and local activities, I believe that section 16 permits the corps to carry on this basic objective without being weighed down with the trivia with which they have been burdened by the courts.

Mr. Chairman, I believe that there has to be a greater recognition of the role that States and local communities must play in the national effort to secure a cleaner environment. H.R. 3199 is a first step in that direction, and attempts to place important responsibilities on local units of government. While critics of this approach have considered it a copout by Washington and indicative of a declining commitment to a healthy environment, I believe that it represents the opposite. It finally represents an appreciation that our environmental objectives are so great that we cannot fully

entrust them to Washington.

Mr. SHUSTER. Mr. Chairman, will the gentleman yield?

Mr. DON H. CLAUSEN. I yield to the gentleman from Pennsylvania.

Mr. SHUSTER. Mr. Chairman, I rise

in support of H.R. 3199.

As has been evidenced thus far by the remarks of my distinguished colleagues on the Committee on Public Works and Transportation, there is a lot at stake here today-and it bears emphasis.

First of all, major improvements and clarifications in the water pollution control program are at stake, including State certification reforms, municipal time extensions, accelerated processing of small projects, the use of ad valorem tax systems, and, a clarification of section 404.

The local public works jobs bill is at stake, with \$4 billion in additional funds for community projects hanging in the

But in the long run, perhaps the most important thing at stake here today is the very integrity of the House of Representatives and our ability to deal fairly and equitably with the other body.

Mr. Chairman, the approach taken by this legislation was dictated by the as yet unexplainable position of the other body in refusing to even consider the amendments contained in the water pollution control bill. The scenario last year resulting in the House bill, which was adopted by this body by the overwhelming vote of 339 to 5, dying in the waning moments of the session, has been fully and fairly treated in previous statements. it is important to note now that once again, the other body is attempting to hold one bill hostage to another despite the undeniable support for the water pollution control bill in the House as clearly documented in last year's legislative history.

Unless the House asserts itself now, and aggressively defends the right of the House to have its measures considered in the Senate, we shall be relegated to playing second fiddle to the manipulation and determination of the other body.

Mr. Chairman, I think it is significant to emphasize an observation made earlier that the distinguished chairman of both the House and Senate Public Works Committees urged that the jobs bill go to conference alone, unencumbered by the additional water pollution control authorizations tacked on in the Senate, but the chairman of the Senate Subcommittee on Environmental Pollution declined. Why? Because without the security of holding the jobs bill hostage, he could not proceed to ignore the mandate of the House and force several billion dollars in water pollution control money down our throats without ever considering for a moment the critical amendments contained in H.R. 3199.

As a member of the Subcommittee on Economic Development, I am most anxious to have the \$4 billion jobs bill adopted so that the communities of our Nation can begin to reap some of its benefits. There will be those who will argue wrongfully that this approach jeopardizes the jobs bill, but the truth is that unless we are successful in asserting the integrity of the House today, the communities of our Nation may never see one red cent of jobs bill money.

I fully support this legislation; we must stand firm now, or we will forever be subjected to the maneuvering and manipulation of the other body in total disregard of the sense of the House.

For this reason, I urge adoption of this bill.

Mr. TAYLOR. Mr. Chairman, will the gentleman yield?

Mr. DON H. CLAUSEN. I yield to the gentleman from Missouri.

Mr. TAYLOR. Mr. Chairman, I rise in support of section 12 of H.R. 3199, which seeks to extend the protection of the Buy American Act to any municipal procurement contract for the construction of a treatment works where Federal construction grant funds are used.

The language of section 12 follows the language of the buy American provision of the public works jobs bill, H.R. 11, as it was perfected and approved by this body not long ago. The section specifies that no grant is to be made for the construction of treatment works unless

American materials or products made substantially from American articles, materials, and supplies are to be used in the construction of the treatment works

The section recognizes that in some situations exceptions from the general buy American requirement may be necessary. Where the Administrator of EPA determines that enforcement of the buy American provision would not be in the public interest or that costs would be unreasonable, the provision shall not apply.

Mr. Chairman, the purpose of the buy American provision is to insure that the general taxpayer gets the maximum benefit of the \$18.2 billion we plan to spend through the Federal construction grant program over the next 3 fiscal years. At the same time these funds are put to work to clean up our water quality, they can be used to bring relief to the Nation's unemployed.

With more than 7 million people—7.3 percent—out of work and looking for jobs, it is imperative that we do everything within our power to strengthen our domestic economy. Limiting the use of construction grant funds to within the United States will have a major stimulus effect, creating meaningful, long-term jobs that will go a long way toward bringing relief to those who long to rejoin the ranks of the employed.

Mr. Chairman, section 12 is one of the many favorable provisions of H.R. 3199 which makes this legislation deserving of swift approval. I strongly urge the passage of H.R. 3199 without the addition of weakening amendments.

Mr. ROBERTS. Mr. Chairman, I yield 3 minutes to the gentleman from Pennsylvania (Mr. Edgar) for debate only.

Mr. EDGAR. Mr. Chairman, I want first to thank the Members of the House for their patience, and in particular I want to thank the members of the Committee on Public Works and Transportation. I have taken the floor many times on very controversial issues to oppose positions taken by the Committee, and so often we find ourselves locked in battle. I hope we all recognize that the battle is one of issues and not person-

I stood in this well a few moments ago to oppose the rule. I believed that the rule was not a good one, but that rule passed overwhelmingly. I think one of the reasons that occurred is many Members of the House are not aware of the controversial nature of some sections of this important piece of legislation.

I refer the Members of the House to a letter that was sent to the chairman of the Committee on Public Works and Transportation dated March 24 from Mr. Douglas M. Costle, who is the Administrator of EPA. He expresses in the last 2 paragraphs of that letter his strong concern and the concern of the administration that we are bringing this bill forward today with substantive changes to the Water Pollution Control Act. He suggests clearly that what we should have in this legislation is simply the authorizations for funding.

Second, I draw the attention of the House to an editorial that appeared in the Washington Post just last week, on March 31. If I may, I will quote from

just the final paragraph of that editorial, which is entitled: "War Over the Wetlands—Again." The editorial says as follows:

Both sides ought to back off. The public works bill needs to be wrapped up rapidly, because every delay will push more of the actual spending into next year, when such an economic stimulus could be ill-timed. The wetlands, on the other hand, can wait a little while. The need to extend the water pollution grant program should be enough incentive for both houses to consider the clean water issues on their own merits later this spring. Right now, the two committees should agree to a truce.

Mr. Chairman, I hope that in the course of this debate and in the amending process, we will either delete section 16 or amend it substantially. By doing so, we can provide that truce atmosphere so that when we go to conference on H.R. 11, we can stand firm on some very important provisions of H.R. 3199 other than section 16.

I am prepared to offer an amendment later in the day which amends section 404, but which is much more environmentally acceptable than section 16 of H.R. 3199.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROBERTS. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. Anderson).

Mr. ANDERSON of California. Mr. Chairman, I rise in support of H.R. 3199.

I compliment our chairman, BIZZ Johnson, and my fellow members of the committee, RAY ROBERTS, chairman of the Subcommittee on Water Resources, BILL HARSHA, and Don CLAUSEN, ranking minority members of the full committee and the subcommittee, respectively. We have worked long and hard, for several years now, to develop the amendments to the Federal Water Pollution Control Act which are necessary to keep its requirements meaningful and enforceable.

I especially lend my support to that portion of section 13 of the bill which provides for a case-by-case extension of the July 1, 1977, treatment requirements for municipalities.

When the 1977 requirement was established in 1972, with the enactment of Public Law 92-500, Congress provided for 75 percent Federal grants to assist municipalities in the construction of treatment works. We expanded the elements of a treatment works system that are eligible for grant assistance; and we provided a total 3-year authorization of \$18 billion to help municipalities meet this requirement. We expected to see this major public works program going full speed in a matter of months. But, what we actually did see was a Presidential impoundment of \$9 billion of the authorized funds and a bureaucratic maze of paper that would defy the skills of the best laboratory rat looking for cheese. The net result is that 50 percent of publicly owned treatment works will not be in compliance with the 1977 requirements on July 1. We are talking about no less than 11,000 separate facilities not in compliance. This means that less than 40 percent of the population will be served by wastewater treatment facilities which meet the deadline, principally because a number of large cities

will not have sufficient time to complete needed construction.

In addition to the thousands of local elected officials in jeopardy, thousands of industries which would reasonably be discharging their waste into a municipal plant rather than going it alone, will also be in jeopardy. This is especially discouraging because a major objective of the act is to encourage, not discourage, the development of regional treatment works.

In response to this situation, the committee developed section 13 of H.R. 3199 which amends section 301 of Public Law 92–500, to authorize the Administrator to grant extensions of the 1977 requirement up to July 1, 1982, or if innovative technology is being used, up to July 1, 1983.

Section 13 provides that time modifications shall not be granted unless there is an approved compliance schedule. These compliance schedules are to be part of any permit issued under section 402, and violation of any conditions in the schedule would be subject to enforcement under section 309 of the act.

Since 1972, there has been a lot of discussion concerning the need to require secondary treatment at publicly owned treatment works which discharge into the ocean. Many cities have argued that removal of dissolved oxygen and suspended solids—the major pollutants addressed in EPA's secondary treatment regulations—are not an important concern in marine waters and that it is a waste of money to require secondary treatment of ocean discharges.

In making time extensions under this section, it is expected that where appropriate treatment works which discharge into the ocean waters, the territorial seas, or the contiguous zone will be

granted extensions.

It is recognized that some municipalities or regions such as Seattle, Hawaii, Puerto Rico, and southern California regions, such as the city of Los Angeles, have already made extensive studies which may provide most of the information and data necessary to grant extensions. Also parts of certain other open waters such as Puget Sound and Cook Inlet have dispersion characteristics similar to ocean outfalls which permit effective dispersion of waste waters from mu-

nicipal treatment works.

In the case of municipal ocean outfalls, it is expected that the Environmental Protection Agency would make planning grants which would be used to make the environmental assessments necessary to determine the need for secondary treatment. These studies and evaluations should be thorough and should include the determination of treatment alternatives and the environmental effects of these alternatives.

Any time extension granted to municipalities that have ocean outfalls or are planning or considering ocean outfalls should be reflected in a compliance schedule that will include a final date for installation of secondary treatment.

INDUSTRIAL TIE-INS

For municipal ocean discharges, as well as all other municipal dischargers, section 13 of H.R. 3199 only postpones

the secondary treatment requirement; it does not eliminate it. It will be up to Congress to consider whether the requirement should be changed, depending upon what evidence is developed by the environmental studies, operating experience, and research, development and demonstration programs.

In addition to addressing the problem of municipalities that cannot meet the 1977 requirement and the problem of ocean-discharging municipalities that may be able to demonstrate a case for not applying secondary treatment, section 13 addresses the question of point sources which will tie-in with a publicly owned treatment works. Section 13 provides that any point source which has an enforceable contract to participate in a publicly owned treatment works shall not be subject to the 1977 requirements for industry until the date the treatment works itself is required to meet its 1977 requirements.

In order for an industry to be eligible for a time extension under this section, the enforceable contract must be in effect no later than 60 days after the date the treatment works receives its time extension

One of the objectives of Public Law 92–500 is the encouragement of industrial dischargers to participate in publicly owned treatment works. These provisions in section 13 are intended to be administered by the EPA in such a way as to encourage industrial participation in publicly owned treatment works.

Mr. Chairman, section 13 is vital to maintaining Public Law 92-500 as a realistic and enforceable law.

Mr. HAMMERSCHMIDT. Mr. Chairman, I rise in support of section 13 of H.R. 3199 which authorizes extensions of time to those municipalities and industries that will not be able to meet the 1977 requirements of the Federal Water Pollution Control Act. I would like to stress that these are not blanket extensions; rather, they are intended to be granted only in those cases where the discharges have made good faith efforts to meet the 1977 requirements but have not. Included would be those municipalities that have not received the requisite Federal funding necessary to construct the facilities to upgrade the treatment of their waste water to the 1977 standards as well as through industries that have exercised their right to challenge effluent standards promulgated by the EPA in the courts. I believe all will agree that it is only fair not to penalize those that have exercised their constitutional rights.

I have also vigorously supported section 21 of the bill which defers the repayment of the industrial costs associated with the construction of waste treatment facilities. Current information indicates that the law as currently drafted may be discouraging industry participation in public systems. This is not the intent. I think the study authorized by section 21 will bring before the Congress the answers we need to insure that the law is doing what we intended—cleaning up our waters in an equitable manner.

Mr. DON H. CLAUSEN. Mr. Chairman,

I yield such time as he may consume to the gentleman from New Hampshire (Mr. Cleveland).

Mr. CLEVELAND. Mr. Chairman, as ranking minority member of the Public Works Subcommitee on Investigations and Review, I take pride in the fact that at least three key provisions of H.R. 3199 emerged from investigations of that subcommittee into the operations of the clean water program.

In saying that, I also want to express my appreciation to the gentleman from Texas (Mr. Roberts), chairman of the Subcommittee on Water Resources and the gentleman from California (Mr. Don Clausen) for supporting these measures along with other urgently needed amendments in the committee bills in the 94th Congress as well as the 95th.

The particular amendments I refer to are State certification reforms to the construction grants program, accelerated processing of grants for small projects costing a million dollars or less, and use of ad valorem tax systems to levy operating and maintenance costs of sewage treatment works.

Mr. Chairman, these are not the product of any contemplative exercise in abstract reasoning on the part of those who write the laws or the regulations to carry them out.

Resulting from extensive investigative hearings followed by legislative hearings, they represent priority provisions in the minds of those in our States and localities with the duty and responsibility to see the provisions of Public Law 92–500 carried out, translated from concept into construction.

It is significant to point out in that connection that those same agencies and their organizations who contributed so much to shaping H.R. 3199 regard its enactment provisions equally important as funding.

Perhaps the highest priority among them is State certification, which is intended to speed up approval of construction projects, to get the dollars out cleaning up the water and creating jobs, strengthening environmental and fiscal management of the program at all levels of government, saving Federal and local tax dollars.

The first principal product of investigative hearings in early 1974 was introduced by myself with the cosponsorship of Majority Leader Jim Wright, then chairman of the Investigations Subcommittee. Briefly, it is intended to strengthen the authority, responsibility, and funding of State agencies in administering the day-to-day operation of construction grants program.

This provision, contained in section 12 of H.R. 3199, would authorize the Administrator of the Environmental Protection Agency to allow qualifying States to certify compliance with a number of requirements of the act with respect to eligible project applications.

States choosing to participate could use up to 2 percent of their construction grant allocations to strengthen the capabilities of their water pollution control agencies so as to equip themselves to fulfill this function.

This would have the effect of ending the duplicative, overlapping and timeconsuming review of grant applications by both State and Federal personnel. This would strengthen program management capabilities at the State level, while freeing EPA personnel to perform the expanded monitoring, inspecting, and auditing activities more in keeping with ultimate Federal responsibility which, of course, would remain with the agency.

This provision has the support of EPA, the National Commission on Water Quality, the National Governors Conference, the National Conference of State Legislatures, the National Association of Counties, the Water Pollution Control Federation, the Association of State and Interstate Water Pollution Control Administrators, and others with a stake in

the program.

The beauty of State certification is that it is not mandatory, nor must it be undertaken on an all-or-nothing basis. We recognize that some States are stronger than some in certain areas of project development and analysis, weaker

than some in others.

We therefore would provide that certification authority could be assumedsubject to EPA approval-on a blanket basis or a piecemeal basis, phased in as State capabilities improve. Only those States with a demonstrated track record of competence in and commitment to the construction grants program would qualify for certification.

Finally, the Administrator's decision to accept certification from a given State would be subject to judicial review.

Mr. Chairman, this provision thus represents a strong step forward consistent with the mandate of the original act with respect to paperwork and delay. and the role of the States, while subject to adequate safeguards to protect the Federal interest. I am proud to commend it to my colleagues in the hope that it will receive the same overwhelming sup-

port it enlisted last year.

The acceleration of small projects costing a million dollars or less is a modest yet practical, workable improvement largely affecting smaller communities newly instituting treatment systems or replacing old facilities. Section 5 of this bill would achieve this by permitting the combination of two steps of the threestage grant award process into a single application. Resulting time savings would range from 4 months to a full year.

Also of benefit to large communities expanding existing systems, this provision would maintain assurance that the requirements of the act and those of the National Environmental Policy Act would be met. Thus it, too, enjoys the support

Authority for communities to employ their ad valorem tax base as a mechanism to levy user charges for operation and maintenance costs of treatment works would prove of benefit to large cities as well as smaller communities.

Actually, EPA, which supports this provision, had proposed such an approach in regulations issued agency which were ruled illegal by an opinion of the Comptroller General on the basis of existing language in Public Law 92-500. The provision is necessary to avoid imposing on cities and towns the need to set up a costly system of metering and bookkeeping which might prove more costly to install and administer than it would yield in rev-

Equity would be assured by a requirement that there be proportionality between classes of users, and within classes of industrial users. Surcharges would be added to assure that each industrial user pays his fair share of municipal treatment of discharge on the basis of volume, strength, and other factors.

In conclusion, Mr. Chairman, a word about section 16 of the bill which in its present form I object to. In additional views to the report on H.R. 3199, Mr. HRUSKA and I address the issue which I will ask to have included at this point in the RECORD:

Additional Views of Hon. William H. Harsha and Hon. James C. Cleveland

We strongly support H.R. 3199 because most of its principal provisions do those things for the clean water program which must be done now, including several measures we have personally worked to develop and refine over the past two to three years The same unfortunately cannot be said of section 16 of the bill, dealing with the authority of the Corps of Engineers to protect the Nation's streams and wetlands.

Our concern is that section 16 of H.R. 3199 goes too far in curbing the regulatory jurisdiction of the corps by a major redefinition of navigable waters with the result that, according to the Environmental Protection Agency, 98 percent of stream miles and 80 percent of swamps and marshlands would be excluded from Federal protection. We believe the Congress and the country agree that the environmental values which these represent must be preserved against irretrievable loss.

At the same time we are mindful of the justifiable concern of farming, ranching, forestry and other interests that-in an era of one-sided environmental emphasis compounded by bureaucratic heavy-handedness—their lawful and legitimate activities may be subjected to needless intrusion of government

Accordingly, we have taken the lead in offering, on the floor last year and in sub-committee and full committee this year, a compromise which we are convinced meets the dual objectives of wetlands protection

and regulatory restraint.

Rather than curb the corps' regulatory jurisdiction, we would instead apply a twofold approach strongly supported by environmental groups and the previous adminis-tration, and wholy consistent with the concerns of those fearing overregulation. procedure would exempt by statute virtually all agricultural operations by straight exemption of a list of specific activities from any requirement for any permit whatsoever. Other practices having minimal environ-mental impact—such as road culverting in connection with logging operations and some home-building activities—would be covered by general permits issued in blanket terms by the corps with no individual application procedure required.

With permit-issuing workload thus reduced, corps personnel would be freed to concentrate on expediting the processing of individual permits where necessary.

We reject the argument that no amend-ment to section 404 is warranted, an argument based on the dubious assumption that the regulatory program being phased in by the corps is working well. The third and final phase, covering nearly 80 percent of the corps' section 404 jurisdiction, will not take effect until July 1, 1977. This is the point

at which there exists at least a real threat of increasing regulatory intrusion accompanied by diminishing environmental benefits, absent the protection afforded by our amendment.

We are similarly unable to accept at this time the argument that state regulation can be relied upon to protect our most important wetlands in areas beyond Federal authority as curtailed by section 16 of this bill. If the States were doing an adequate job, the version of 404 currently in H.R. would not have the support it has among those interests not wishing to be regulated at all.

Major participation by the States will in fact be desirable based on their emerging capabilities and interest in addressing wetlands protection. But any legislative reliance on their performance should most properly await the mid-course corrections in Public Law 92-500 to be considered shortly. The study of state and local capacities in this respect called for by this year's version of our amendment would assist Congress in making this determination responsibly.

We persist in the view that our compromise ought ultimately to prevail: not because it is a compromise in the traditional split-the-difference sense of the term, but because it does indeed balance the conflicting interests involved. It is right, it is

workable, and it will do the job.

The overriding consideration to be borne in mind, however, is that H.R. 3199 is not a "404 bill," nor should it be judged totally in terms of the language to emerge in that respect. No amendment to section 404 was included originally in its predecessor bill, which ultimately became H.R. 9560, 94th Congress and was overwhelmingly passed by the House. The other provisions of H.R. 3199 have long been considered of such high priority that many Members had hoped to see them enacted in advance of the extensive consideration which section 404 would deserve on its own merits. Time has obliterated that option. And time has also rendered more urgent the enactment of those other provisions. We, therefore, urge Members to support the bipartisan efforts of the Committee on Public Works and Transportation to bring H.R. 3199, with funding and substantive amendments intact, to conference with the other body and prompt enactment

Mr. DON H. CLAUSEN. Mr. Chairman, I yield such time as she may consume to the gentlewoman from Nebraska (Mrs. SMITH).

Mrs. SMITH of Nebraska. Mr. Chairman, first let me say I appreciate having had the opportunity to work with the gentleman from California (Mr. Don H. CLAUSEN) on section 21 of H.R. 3199. It offers much needed relief to our communities and to industrial users of industrial waste treatment works. As the gentleman knows, the industrial cost recovery requirement in the Water Pollution Control Act requires industry to pay back that portion of waste treatment works costs attributable to the treatment of industrial waste. In many cases we have found the cost of collection exceeds the amount of money collected. Certainly this is not consistent with the act. Section 21 of H.R. 3199 defers these payments for 18 months while the Administrator of EPA makes a 1-year study of the efficiency of and the need for payment by industrial users.

A major question still remains. As the gentleman knows, the Environmental Protection Agency, in accordance with their regulations, withholds 20 to 50 percent of construction grant funds pending the implementation of a collection system. Is it the gentleman's intent during the 18-month deferral period that the Administrator of the Environmental Protection Agency, at his discretion, might make grants of the full amount of the 75 percent Federal share where he determines that the community will have a system in operation at the end of the deferral period rather than continuing to withhold grant funds.

Mr. DON H. CLAUSEN. Will the gen-

tlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. I thank the

gentlewoman for yielding.

Let me commend the gentlewoman not only for working with me in development of section 21 of H.R. 3199, but also for bringing this most important question to our attention.

It is our intent, clearly, to allow the Administrator to make grants at the full 75-percent level. It is not our intent to have the Administrator to continue to withhold 20 or 50 percent of the 75percent Federal grant if he determines the owner or operator of the publicly owned treatment works will have an industrial cost recovery system at the end of the 18-month deferral period. This is an important consideration in the implementation of section 21 and I would like to ask my good friend, the distinguished chairman of the Public Works and Transportation Committee, the floor manager of H.R. 3199, if my answer to H.R. 3199 is consistent with his intent.

Mr. ROBERTS. Mr. Chairman, will

the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to

the gentleman from Texas.

Mr. ROBERTS. I thank the gentlewoman for yielding. I also thank Mrs. SMITH and Mr. CLAUSEN for bringing this most important consideration to our attention. I listened carefully to Mrs. SMITH'S question and Mr. CLAUSEN'S answer and can assure you that your answer is completely consistent with our

Mrs. SMITH of Nebraska. Section 21 directs the Administrator of the Environmental Protection Agency to study the effectiveness of and need for the Industrial Cost Recovery-ICR-provisions of the Federal Water Pollution Control Act. While this study is being completed and analyzed, the amendment would impose an 18-month moratorium on enforcement of ICR agreements.

Under section 204(B)(1)(b) of Public Law 92-500, an industrial user is presently required to repay to the Federal Government his share of the treatment plant installation costs. This is a payment in addition to the user fee for operation and maintenance of the plant. Although this might appear fair, it discriminates harshly against small rural businesses.

The waste water treatment plant proposed for Stuart, Nebr., a town of 561, is an excellent example of this inequity. Stuart's sewer plant is designed to handle 67,000 gallons of waste water daily. The Stuart Locker Co., a small meatpacker, will generate about 0.5 percent of that

total-380 gallons-the Jack and Jill Market will generate about 0.2 percent-160 gallons-and a small milk shipper will generate around 1 percent-670 gallons. Despite this limited usage, ICR will require Stuart Locker Co., and Jack and Jill Market to pay nearly \$17,000 of the installation costs, and the milk shipper will be required to pay \$36,000. Although these charges can be spread over several years, they are still a significant burden for a rural business with a tight profit margin. These same three businesses in a larger city would have little or no effect on a sewage treatment plant and, therefore, would have a much smaller ICR payment, or no payment.

There are many uncertainties about the effects of ICR on different sectors of our economy. Businesses may have to lay off workers or increase consumer prices in rural areas to recover the ICR outlay. Ravenna, Nebr., serves as a good example of this problem. The cheese company and a few other small businesses employ a majority of the town's 1,300 inhabitants directly or indirectly. City leaders, as well as the cheese producers, are seeking relief from ICR fearing that businesses will be forced to lay off workers or move elsewhere to escape the payments on the waste water plant to be built there.

Although I would be inclined to repeal some aspects of ICR outright, this simple study will provide an ample record for future legislative corrections. Meantime the moratorium will take some of the pressure off businessmen threatened by ICR.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. DON H. CLAUSEN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I rise in support of section 16 as presently drafted. This provision, which is similar to that adopted by the House last year, would amend section 404 of the Federal Water Pollution Act.

Section 404 currently requires an Army Corps of Engineers permit for the discharge of dredged or fill material into any water or wetland. Section 16 would restrict the scope of the corps permit program. It would limit the requirement to navigable waters and adjacent wetland. Navigable waters would be defined as those waters presently used or susceptible to use in their present condition or with reasonable improvement to transport interstate or foreign commerce.

In addition, normal farming, ranching, and silviculture activities would be exempted by section 16 from the permit requirement. Included under the exemption would be the maintenance of items such as dikes, dams and levees and the construction and maintenance of farm or stock ponds and irrigation ditches.

Section 16 would restore some commonsense to water pollution control activities. Unless we adopt this provision many farming and forest activities—even those which are conservation practices designed to reduce soil erosion and improve water quality-would need permits.

I include here a telegram which was

sent by the Ohio Farm Bureau indicating their support of section 16.

Section 16 is a reasonable provision with broad support. I urge that this section be retained as is.

> COLUMBUS, OHIO, April 5, 1977.

Representative JOHN M. ASHBROOK.

Washington, D.C.

We would ask your support of section 16 of H.R. 3199. Section 16 will restrict the authority of the Army Corps of Engineers "dredged and fill" permit program to the major navigable streams and adjacent wet-

This legislation is necessary to undo the distortion of section 404 of the Federal Water Pollution Control Act created by court and corps actions. The current corps regulation will require an estimated 50,000 permits per year from agriculture.
Your support of section 16 of H.R. 3199 is

a vote against over-regulation.

Sincerely,

DEAN W. SIMERAL. Vice President, Public Affairs, Ohio Farm Bureau Federation.

Mr. ROBERTS. Mr. Chairman, I yield to the distinguished gentleman from Georgia such time as he may consume.

Mr. GINN. Mr. Chairman, I commend the distinguished chairman of the Committee on Public Works and Transportation, Congressman Bizz Johnson of California, and my friends and colleagues. RAY ROBERTS, chairman of the Subcommittee on Water Resources, BILL HAR-SHA, ranking minority member of the committee, and Don Clausen, ranking minority member of the Subcommittee on Water Resources, for the intricate and thoughtful bill which they have brought to the House today.

For the past several years, these able legislators have been studying and reviewing the social, economic, and environmental impact of the act. changes proposed in H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977, will do much to strengthen the national program for the restoration and preservation of our waters.

I am proud to associate myself with the efforts of these gentlemen. Also, I am pleased to note that two of these provisions-section 8, concerning reimbursement, and the new section 214, which is created by section 12, concerning State certification will correct problems that surfaced during oversight hearings which were held by the Subcommittee on Investigations and Review in 1974.

Through a series of penetrating oversight hearings and repeated examination of the efforts, abilities, and problems encountered by localities and States in applying for reimbursement grants and for treatment works construction grants, the Subcommittee on Investigations and Review revealed that deserving communities had been deprived of access to both a 75-percent construction grant or a 50 to 55 percent reimbursement grant because of administrative problems. Testimony showed that the regular grant application process had been transformed from a free-flowing system to a Rube Goldberg monstrosity of repeated requests for minute pieces of information, stacks and stacks of paper, and waste of the taxpayer's money because of repeated reviews of the same piece of information by State and EPA person-

Section 8 amends section 206 of the Pollution Control Act to correct inequities that have occurred in the implementation of the reimbursement grant program. Section 206(2) provides that any treatment works on which construction was initiated after June 30, 1966, but before July 1, 1972, that meets certain requirements of that section, would be eligible for reimbursement of 50 percent or 55 percent of eligible project costs.

The cutoff date for qualifying for a 50to 55-percent reimbursement grant was July 1, 1972. After that a community could not qualify for reimbursement but could receive a 75-percent grant for a new treatment works. The law was not enacted until October 18, 1972. The first proposed regulations implementing section 206(a) were not published until June 23, 1973. Since there was a substantial lapse between the eligibility date in the act, the date of enactment, and the date that EPA's definition was published, it is estimated that 61 projects in 18 States which would have otherwise qualified for reimbursement were declared ineligible.

Section 8 of H.R. 3199 corrects this inequity by extending to July 1, 1973, the date by which treatment works projects must have initiated construction in order to be eligible for reimbursement grants. It is estimated that \$26 million would be required to reimburse these projects. On a national scale this is a small amount of money, but locally, each project's share is significant to each community—especially when one realizes that some of these projects are still undergoing construction.

Unless this section is enacted, these communities will essentially be penalized because of the intricacies of the legislative process and EPA's delays in administering the program.

In addition to correcting this inequity, section 8 also amends section 206(e) of the act to increase the authorization for reimbursement grants from \$2,600,000,000 to \$2,950,000,000.

Two billion dollars were initially authorized for reimbursement payments by Public Law 92-500. This was later increased to \$2.6 billion by Public Law 93-207 which was enacted on December 28, 1973. The authorization provided in section 8 will ensure that adequate funds are available to fully reimburse all eligible projects.

The new section 215 created by section 12 is one of the key provisions in the act. This provision demonstrates the committee's responsiveness to the recommendations of the State and local authorities who are on the firing line in this great national effort. Section 215 provides a program whereby States could certify to EPA that certain Federal requirements for a construction grant have been complied with. States could receive certifying authority only after EPA has made the determination that they have appropriate authority, responsibility, and capability to handle the program. EPA's determination would be subject to public

hearing and to judicial review.

Among the Federal requirements for

which the States could receive certifying authority are: that the treatment works are not subject to excessive infiltrationinflow; that the proposed works are consistent with any applicable areawide or State plans; and that the works contain sufficient reserve capacity.

This State certification authority in no way diminishes Federal responsibility for the administration of the program. The certification authority is safeguarded by strict Federal requirements and can be withdrawn in the case of a single application or in all applications after EPA determines that the job is not being done properly.

There is a provision that the responsibilities of the Administrator under any other Federal law, including the National Environmental Policy Act of 1969, are not affected by this section. This makes it absolutely clear that the Administrator's responsibility to award Federal grants is not changed—under the certification procedure EPA, and only EPA, will have the authority to make a grant award.

Also, existing EPA procedures, including environmental assessments, are not affected by this section. Therefore, for example, where citizens feel that an environmental impact statement should be developed on a proposed project, they would still have recourse to both EPA and the courts.

Participating States would be permitted to use up to 2 percent of their construction grant allotment to defray the costs of the State certification program. This will enable States to develop and maintain a high quality of staff to process construction grant applications. However, these funds are in no way to be used by either EPA or the States as a substitute for the section 106 program grants.

This new provision will go a long way toward speeding up the program by eliminating much of the redtape and paper-shuffling between the States and Washington that have slowed our efforts in the past. Its inclusion in the legislation before the House today is one of the major reasons for my urging prompt and overwhelming approval of H.R. 3199.

Mr. ROBERTS. Mr. Chairman, I yield to the distinguished gentleman from California (Mr. MINETA) such time as he may consume.

Mr. MINETA. Mr. Chairman, I rise in support of the provisions of H.R. 3199, the Federal Vater Pollution Control Act Amc idments of 1977, which correct many of the inequitable situations that have resulted from the administration of the Federal Water Pollution Control Act-Public Law 92-500. Sections 3 and 10 of H.R. 3199, concerning the section 208 areawide planning processes, go a long way toward smoothing out the problems that have resulted from an early refusal by EPA to implement this program. The program of areawide waste treatment management planning processes which is called for by section 208 is of key importance to the entire water pollution control program.

Section 3(c) of H.R. 3199 amends section 208 to provide authorizations of \$150 million for each of fiscal years 1977 and

1978. Section 10 provides for the level of Federal funding and the time period for which such funding shall be available.

Section 208 of the act provides for the development of continuous areawide waste treatment management planning processes in areas within a State having substantial water quality control problems as a result of urban industrial concentrations or other factors. Section 208 (a) (6) provides that the State is to act as a planning agency for those portions of the State which are not designated as areawide management areas. Section 208 (f) of Public Law 92-500 provides 100percent grants to areawide agencies for each of the fiscal years ending on June 30, 1973, 1974, and 1975. Grants of up to 75 percent are provided for subsequent years.

It was intended that many agencies would be designated immediately after the enactment of Public Law 92-500 and that the provision of 100-percent funding would allow them to initiate their planning processes immediately. However, implementing regulations were not published until almost 1 year after Public Law 92-500 was enacted and the EPA did not begin actively implementing section 208 until well after that date. In addition, proposed grant regulations were not published until May 1974 and did not become effective until September 1974—almost 2 years after the enactment of Public Law 92-500.

The publishing of the grant regulations is especially significant because local agencies were provided only a limited time in which to qualify for the 100-percent Federal funding.

Because of EPA's delay in implementing this program, none of the funds authorized for fiscal year 1973 were obligated, and only 11 grants were awarded in fiscal year 1974 for a total of \$13,575,550. Between July 1973, and July 1975, 149 designations were approved with most approvals taking place in May and June 1975.

So many grant applications were submitted in fiscal year 1975 that all of that money was obligated with 17 areas not receiving 100-percent grants because EPA ran out of funds.

On June 30, 1975, the availability of 100-percent Federal funding expired, and only 75-percent grants can now be awarded. To date, 27 additional areas have been designated and funded at the 75-percent level. These areas had initiated the complex and lengthy qualification procedure with the understanding that they would be eligible for 100-percent grants. It is estimated that an additional 50 to 55 areas remain to be designated and funded. If EPA had implemented section 208 as intended by Congress, these areas would be eligible for 100-percent grants.

Section 10 of H.R. 3199 corrects the inequities that have resulted from the way the section 208 program has been administered. Section 10 amends section 208(f) (2) to provide for 100-percent Federal grants to designated areawide waste treatment management planning agencies for the first 2 years of the costs of developing and operating a continuing areawide treatment management planareawide treatment management planareawide.

ning process if the first grants are approved by EPA before October 1, 1977. The 2-year period begins on the date the first grant is made.

I note that with respect to funds appropriated for section 208 in Public Law 94-378 the following condition was added:

No part of any budget authority made available to the Environmental Protection Agency by this Act or for the fiscal year 1976 and the period ending September 30, 1976, shall be used for any grant to cover in excess of 75 per centum of the total cost of the purposes to be carried out by such grant made pursuant to the authority contained in section 208 of the Federal Water Pollution Control Act (P.L. 95-500).

It is not our intent to override this condition with respect to the moneys appropriated by that act, and it is intended that none of the funds appropriated for section 208 grants in that act be used to provide 100-percent grants.

Grants of up to 75 percent of the costs of developing and operating a continuing areawide waste treatment management process in any 1 year, are provided for each succeeding 1-year period to newly designated agencies whose first grants are approved after October 1, 1977. Also subsequent grants of up to 75 percent are to be made for each succeeding 1-year period to agencies which have already utilized their first grant. However, if within the 2-year period, it is determined that the first grant is insufficient to cover the costs of the planning process, it is expected that the first grant will be amended by EPA to provide the necessary additional funds. If such a determination is made after the expiration of the 2-year period, the grantee is eligible for a second grant of up to 75 percent of the costs.

It is expected that any agency which receives a first 208 grant of less than 100 percent of the planning process costs before the enactment of this section will receive an amended grant award raising their grant to the 100-percent level. It is expected that any such amended grant awards will be made from funds appropriated after the enactment of this section.

Mr. ROBERTS. Mr. Chairman, I yield to the distinguished gentleman from Michigan (Mr. Bonion), a new member of our committee, 3 minutes. We are delighted to have the gentleman on our committee.

Mr. BONIOR. Mr. Chairman, in the course of debate this afternoon there will be much discussion over controversial sections of H.R. 3199 and I too share those concerns. But it is important not to lose sight of the scope and purpose of the bill. This bill would authorize \$17 billion in water pollution control funds over the next 3 years. This \$17 billion is one of the largest public works programs ever before Congress, it authorizes more than four times the money in the Public Works Jobs bill. Seventeen billion dollars means much needed money for clean water and jobs for the construction industry which has been so badly hurt by the recession.

H.R. 3199 also includes some other very important and much needed provisions which correct inequities which have resulted. One of the major problems facing

State and local governments has been the lack of money to administrate water pollution control programs. H.R. 3199 authorizes 2 percent of the total funds for administrative purposes which will greatly relieve State and local governments which up until now have had to spend local funds for this purpose. It also includes a much needed case by case extension for those local communities which cannot meet the pollution control deadlines in Public Law 92-500. H.R. 3199 is not a perfect bill, I have some problems with the controversial section regarding protection of the wetlands, one of our greatest natural resources. I voted in committee for amendments which would extend greater protection to the wetlands and if this problem is not worked out in this bill I hope the Conference Committee will address this drastically important issue.

One of the major inequities of Public Law 92-500 is corrected by section 7(e) of the bill

Section 7(e) provides an additional period of 1 year for the obligation of currently authorized construction grant funds. These moneys were authorized for allotment to the States on January 1, 1973, 1974, and 1975. However, because of illegal Presidential impoundment action, a total of \$9 billion was withheld from the States and subsequently released, pursuant to a Supreme Court decision in February 1975.

The net result of this action was that a total of 13 billion, \$4 billion that had been allotted by the President plus 9 billion that was released was suddenly made available to the States. States fund themselves with 13 billion to spend in 1976–77 when they had had only 4 billion the year before and 3 billion the previous year. By administrative regulation any portion of the 9 billion which remains unobligated on September 30, 1977, is subject to reallotment among the States.

At this time EPA estimates six States and the District of Columbia are in danger of losing part of their fiscal year 1976 allotment. Totally these States stand to lose about \$850 million.

New York, 300 million.
Connecticut, 70 million.
Pennsylvania, 100 million.
Maryland, 100 million.
Delaware, 15 million.
Michigan, 200 million.

In my own State of Michigan the 200 million we stand to lose is 30 percent of our total allocation for this fiscal year.

These are all States with tremendously high unemployment which cannot afford to lose this Federal money and the jobs it can bring industrial areas that need money to clear up waste.

Some of the reasons why these States are having major problems in obligating these funds are:

The sudden increase of 9 billion was more than double the previous State allotment, Michigan got 625 million during fiscal year 1976 while it had only 189 million the previous year. Many States had not planned on getting this money and could not afford to hire the needed personnel quickly enough to get the projects completed in time.

A large number of municipalities are prevented from receiving Federal funds because they could not come up with the necessary 25 percent local funds. This is a problem for large cities which are having trouble getting funds because of their insecure financial position. This is the case for the city of Detroit which stands to lose about 40 percent of the total State loss.

The bureaucratic redtape involved in getting each step in the construction process approved by EPA and getting the environmental impact statements approved is one of the major reasons for many of these projects not being approved. The EPA regional office in New York has stated that they could not get all the approvals and impact statements necessary completed before the deadline even with additional personnel.

Mr. Chairman, I think section 7(e) is necessary to prevent these States with such high unemployment from being penalized because of political and administrative problems at the Federal level.

Mr. ROBERTS. Mr. Chairman, I yield to the distinguished gentlewoman from Tennessee (Mrs. Lloyd) such time as she may consume.

Mrs. LLOYD of Tennessee. Mr. Chairman, the Committee on Public Works and Transportation, and its distinguished chairman, Bizz Johnson, should be commended on the thoughtful bill they have brought to the House today to amend the Federal Water Pollution Control Act, Public Law 92-500.

For much of the past year, these able legislators have been studying and reviewing the social, economic, and environmental impact of the act and the changes they propose in H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977, will do much to strengthen the national program for the restoration and preservation of our waters.

One section of the committee amendments in particular demonstrates the committee's responsiveness to the recommendations of State and local authorities who are on the firing line in this great national effort—that is the provision which gives the States authority to certify municipal applications for Federal grants for the construction of waste water treatment plants.

This State certification authority in no way diminishes Federal responsibility for the administration of the program. It allows the Environmental Protection Agency to accept such certifications where the State pollution control agencies have the authority, responsibility, and capability to do the job effectively. The certification authority is safeguarded by strict Federal requirements and can be withdrawn in the case of a single application or in all applications at any time that EPA determines the job is not being done properly.

This new provision will go a long way toward speeding up the program by eliminating much of the redtape and paper-shuffling between the States and Washington that have slowed our efforts in the past. Its inclusion in the legislation before the House today is one of the major reasons for my urging prompt

and overwhelming approval of H.R. 3199.

Mr. ROBERTS. Mr. Chairman, I yield to the gentleman from New York (Mr. Nowak) such time as he may consume.

Mr. NOWAK. Mr. Chairman, I rise in support of H.R. 3199 The Committee on Public Works and Transportation has worked effectively and persistently, to report a bill that expedites our Nation's effort for clean waters. One of the provisions of the bill which will significantly reduce unnecessary redtape, in the construction grant process, is the establishment of an alternative method of collecting operation and maintenance fees.

The provision to which I refer is section 6 of H.R. 3199 which amends section 204(b) of the Federal Water Pollution Control Act, to permit the use of ad valorem taxes as a method of collecting the costs of operating and maintaining a municipal waste treatment works which was constructed with the assistance of a 75 percent Federal grant provided under title II of the act.

Section 204(b) of the act provides that the Administrator shall not approve any grant for any treatment works after March 1, 1973, unless he has determined that the grant applicant will establish a system of charges to assure that each recipient of waste treatment services wil pay its proportionate share of the costs of operating and maintaining the treatment works. This provision was intended to insure that the users of treatment work systems bear their fair share of the costs and that each treatment works have a self-sustaining source of revenue. It was also intended that these charges serve as an incentive to heavy users of the treatment works to reduce their contribution to the waste water load of the plant.

In 1972 the committee recognized that the foremost objective of the user charge requirement was the achievement of a local revenue system that would enable the operation costs of the treatment works to be self-financed. Therefore, the committee recognized that a fair system of user charges should be established and that specially designed systems should be used where differing local conditions called for them.

The Environmental Protection Agency has advised the committee that during its effort to implement section 204(b), it discovered that numerous cities and districts, including many large metropolitan areas, presently finance operation and maintenance costs through ad valorem taxes. On April 15, 1974, EPA issued a Program Guidance Memorandum which would have allowed municipalities to establish ad valorem tax-based user charge systems. Included among the criteria used by EPA in approving such systems was a determination that appropriate user classes would be established and charged on a basis roughly proportionate to their use of the system, and that industrial users would be surcharged based on the strength and volume of their wastes.

However, on July 2, 1974, the Comptroller General of the United States issued an opinion advising EPA that it would be illegal to fund new projects in

cases where communities are utilizing ad valorem tax system to finance the operation and maintenance costs of their treatment works.

Since then, EPA has formally requested the Congress to consider legislative action which would permit the use of ad valorem tax systems as a method of collecting waste treatment works operations and maintenance costs. And, in an April 7, 1976, letter for former Chairman Robert E. Jones the Administrator of EPA indicated the importance of the committee's amendment to section 204 (b) when he stated that unless an amendment to section 204 is enacted. the decision by the Comptroller General will have a severe impact on both the implementation of the construction grant program and on municipal compliance with the requirements of the act.

Since then, in testimony before the Subcommittee on Water Resources on March 3, 1977, EPA advised the committee that:

The present state of ad valorem is . . . presenting problems for both municipalities and EPA by hampering the expeditious development and conduct of construction grant projects.

EPA further stated that they supported the provision in H.R. 3199 which would permit the use of an ad valorem tax system when the system achieves proportionality among classes of users and proportionality is achieved within the class of industrial users by imposing surcharges.

The committee is advised that at the present time no less than 97 projects are being held at 80 percent of their 75 percent grant payment level pending resolution of this matter. We are advised that this number can expand to the point where it presents a major bottleneck in the construction grant program.

Mr. Chairman, the committee has heard repeatedly of the need for and importance of this amendment not only from EPA but from many representatives of State and local government and professional organizations—before the hearing of the Subcommittee on Investigations and Review, before the legislative hearings of the Subcommittee on Water Resources on H.R. 9560 and again, just last month, in hearings on H.R. 3199.

Mr. Chairman, I believe that section 6 is the appropriate answer to this problem and will help expedite the construction of waste treatment facilities.

Section 6 provides that a grant applicant which is using an ad valorem tax system to collect any municipal revenues at the time of application for a Federal construction grant may be eligible to use this system for the purpose of collecting revenues to defray the costs of operating and maintaining the proposed treatment works. The Administrator would be required to determine that the ad valorem tax system would result in a proportional distribution of costs between user classes according to each class' use of the treatment works. The committee expects that there will be no less than two classes of users, one composed of residential users of the treatment works, the other composed of industrial users.

For the purposes of this section "in-

dustrial users" includes those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget-1967, as amended and supplemented, under the category "Division -Manufacturing" and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate. Where appropriate, it is expected that EPA and the locality will develop a separate class of users composed of commercial users which make heavy demands on the treatment works; such as laundromats and car washes. These facilities could also be considered "industrial uses" for the purpose of this section

In addition to requiring proportionality among user classes, section 6 requires proportionality within the class of industrial users. The grant applicant would be required to establish surcharges to insure that each industrial user pays its proportionate share of the costs on the basis of volume, strength, and other relevant factors.

Indirect costs not identifiable with any individual user, such as administrative costs, treatment of storm sewer and combined sewer flows, correction of infiltration/inflow, and services for exempt property shall be equitably prorated among all user classes. It is expected that EPA will accept the designations of properties as tax-exempt as made by the local community in accordance with Federal, State, and local law.

Mr. Chairman, I think that section 6 is a vital and necessary amendment.

Mr. ROBERTS. Mr. Chairman, I yield such time as he may consume to the gentleman from New Jersey (Mr. Roe).

Mr. ROE. Mr. Chairman, I rise in support of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977. As one of these who was privileged to be a conferee on the basic 1972 act, Public Law 92–500, I have been repeatedly disappointed in the past 4½ years as I have watched the intent of Congress be repeatedly subverted.

Sometimes it seems like we are never going to get down to the business of building treatment works and necessary connecting sewers. Over and over I have protested the cumbersome methods by which the act has been administered—the never ending flow of massive and confusing regulations.

The grant approval process has been so fouled up by EPA that States have effectively been deprived of the use of their funds. EPA's decision to give a low priority to collector sewers, which certainly was not the intent of Congress, has been particularly troublesome for my State of New Jersey.

Congress made it abundantly clear in 1972 that collector systems were coequal in authorization and in priority with all other eligible categories of treatment works. Apparently we did not get the message across, though, because EPA has passed a regulation, stating that only treatment works plants could have top priority. EPA has, on its own; made it tough on cities who want to build collector systems. This was not by direction of Congress.

Mr. Chairman, I think we all know

that you cannot get the sewage to the treatment plant without collector sewers. If cities are going to bond and create a viable flow of capital, then they have to be able to bill the customer. In order to vote bonds, it is necessary to show that they can be paid off with income revenue.

There are two provisions in H.R. 3199 which address this problem—the new section 215 created by section 12 regarding State priority lists and section 7 which provides an allotment formula for

the construction grant funds.

There are several categories of projects eligible for Federal funding under the act: secondary treatment plants; treatment more stringent than secondary treatment needed to meet water quality standards; correction of infiltration/inflow; major sewer system rehabilitation; new collector sewers; new interceptor sewers and appurtenances; and correction of combined sewer overflows. Section 215 provides that the States have the right to determine its own needs and to allocate its funds by whatever priority they choose—a right that Congress intended in 1972. States must have the right to apply their allotted grant funds to any portion of the total system, whether it be for sewers or the treatment plant itself.

Congressional intent that all cate-gories of needs of a total treatment works system are eligible for Federal grant assistance is further reaffirmed by the allotment formula for construction grant funds provided by section 7 of the bill. The amounts authorized are \$5 billion for fiscal year 1977, and \$6 billion for each of fiscal years 1978 and 1979.

The formula is based one-fourth on population, one-half on partial needs, and one-fourth on total needs. Partial needs include secondary treatment, treatment more stringent than secondary to meet water quality standards, and interceptor sewers and appurtenances. Total needs include partial needs plus collector sewers, infiltration/inflow, and correction of combined sewers.

The formula developed by the committee is a resonable compromise between those that advocate a population factor and those that want a formula based totally on needs. It is a formula that we

can all live with.

Under the committee's formula onefourth of the money is to be distributed on the basis of total needs which expressly includes collection system.

We have, therefore, reached not only a fair compromise in the method of distributing funds, but we make it clear that we include and mandate that collector sewers which are part of the needs, are

eligible for Federal funding.

Two other provisions in H.R. 3199 are of special importance to me. One is section 13 which provides for a case-bycase extension of the 1977 requirements for both municipalities and industries. Municipalities could get an extension up to July 1, 1982, or if innovative technology is being used up to July 1, 1983. Industries may qualify for an extension up to July 1, 1979.

It has long been clear that all municipalities and all industries were not going to meet the 1977 requirements. The provisions in section 13 recognize the facts while still providing a mechanism for keeping these dischargers on a strict cleanup schedule.

Another important provision is section 21 which provides for a study of the impacts of the industrial cost recovery provision of the act. Section 204(b) provides that industries that participate in a municipal treatment works must pay back to the Federal Government that portion of a Federal grant that can be attributed to the industry's use of the

It is only recently that any industrial cost recovery systems have been developed and implemented. But ever since the provision was first enacted we've heard horror stories of industries being forced out of business because of this provision-stories that have never really been substantiated. We've heard from localities claiming that the cost of collecting the money was much greater than the amount of money recovered. Be-cause there haven't been any systems in operation before, we had no way of ascertaining what the costs of collecting the revenues would be.

Now, under section 21, we will have an opportunity to determine the economic impacts of the industrial cost recovery provision, once and for all. The section provides for a 12-month study of the provision. While the study is being conducted and for the next 6 months,

payments may be deferred.

Mr. Chairman, I think H.R. 3199 goes a long way toward bringing some practical solutions to real problems. I urge my colleague to support its enactment. Mr. O'BRIEN. Mr. Chairman, will the

Chairman yield for a question?

Mr. ROBERTS. I would be pleased to yield to the gentleman for a question.

Mr. O'BRIEN. Mr. Chairman, it was my intention to offer an amendment that would allow the Environmental Protection Agency to address the problem of the hundreds of small communities throughout Illinois and the rest of the country for whom the cost of building conventional treatment plants and installing collection sewers just prohibitive. I am talking about towns under 1,000 population, many of them under 500.

Until now construction grants have gone to the big cities and larger towns, rightly so because they are the major polluters. Residents of the smaller communities rely on septic tanks which work reasonably well but, in many instances, do not provide the degree of pollution control required by Federal and State standards. The amendment I had drafted would have allowed EPA to offer grants to small communities for the purpose of improving septic tank and drainage field systems on a community basis. The Illinois EPA sent me a list of 65 small communities, 9 of them in my district, that have been certified for step 1 grants. According to the State EPA, however, none of these towns could afford to build and maintain sewer and treatment plant systems. The costs per household, even with Federal grants, would be much too high. Our State agency would like to have authority to

assist these communities meet pollution control standards by financing needed improvements in their existing septic tank systems.

I have been persuaded, however, through staff discussions with Federal EPA officials, that my proposed amendment is not necessary; that EPA has authority under existing law to extend this kind of assistance, and is in fact just about ready to announce that such grants will be made, under certain conditions. The principal condition is that a septic tank seepage field or sand filter system would serve a group of homes and would be operated and maintained by the municipality. My question, Mr. Chairman, is: Do you agree with EPA that it has authority under existing law to fund such projects?

Mr. ROBERTS. Mr. Chairman, if the gentleman will allow me to say so, the

situation is covered.

Mr. O'BRIEN. The chairman agrees that the EPA has authority under existing law to fund such projects?

Mr. ROBERTS. I do. Mr. Chairman, I yield 2 minutes to the gentleman from

Minnesota (Mr. OBERSTAR).

Mr. OBERSTAR. Mr. Chairman, wish to address myself to section 13 of the bill, which is a departure from the legislation in the past, last year, just recognizing the reality of the situation in industry and the problems that are posed.

Mr. Chairman, one important difference between H.R. 3199 and the similar bill in the last Congress is in the area of time extensions. In a limited way H.R. 3199 addresses the 1977 deadline for industrial discharges. Section 13 of H.R. 3199 grants the Administrator of EPA the authority to give case-by-case modifications of the time requirements for installation of best practicable control technology by industrial point sources under section 301(b)(1) of the act. Such time modifications affecting industrial point sources may be granted by the Administrator when he determines that the installation of the necessary treatment works cannot be completed by the date specified in section 301(b)(1). However, no time modification shall extend beyond July 1, 1979. In addition, the Administrator may not issue a modification unless he first approves a schedule of compliance with the modified date.

Failure by the industrial discharger to meet the conditions of an approved schedule of compliance shall be subject to enforcement under section 309 of the act, including the civil and criminal

penalties of that section.

Mr. Chairman, the installation of "best practicable control technology" by American industry is an important first step in achieving the ultimate goals of the 1972 act. However, certain things have occurred since 1972 which may prevent a discharger from complying with the law on time through no fault of his own. When a discharger petitions the Administrator of the Environmental Protection Agency for a time modification we expect the Administrator to review his request thoroughly. Some of the situations he should consider is when an industry has no effective permit, either because one has not been issued or where important provisions of that permit have been stayed pending an adjudicatory hearing or litigation. Another situation the Administrator should take particular note of is where the discharger will be unable to comply through no fault of its own. Such things as strikes, equipment shortages, and land acquisition are oftentimes beyond the control of an individual discharger.

Mr. Chairman, this provision of H.R. 3199 is only limited in scope. In testimony on this matter, the former Deputy Administrator of the Environmental Protection Agency estimated that of the 4,500 major dischargers in the country, 15 percent would not meet the 1977 standard on time. Some of that 15 percent will not reach the standard due to circumstances beyond their control. It is this small number of dischargers which have made good faith efforts to comply with law, that should have some temporary relief. This point was also made by the prestigious National Commission on Water Quality which recommended a similar provision be enacted.

In closing, Mr. Chairman, let me reiterate what this new provision does. It grants only temporary extensions to those dischargers which the Administrator determines have made every effort to comply with the law but will not be able to do so, through no fault of their own. It does not open up the statute to all dischargers that will fail to comply with the law. The Administrator is given ample legal tools in the 1972 act for dealing with those dischargers who are either delaying or failing to live up to their obligations under the act.

Mr. YOUNG of Alaska. Mr. Chairman, will the gentleman yield?

Mr. OBERSTAR. I yield to the gentleman from Alaska.

Mr. YOUNG of Alaska. Mr. Chairman, does the gentleman intend that the Administrator of the Environmental Protection Agency look closely at the seafood processing industry for time modifications?

Mr. OBERSTAR. Yes. We have looked at that aspect and that issue.

I would direct the gentleman's attention to the committee report on section 13, which addresses the peculiar situation in the seafood processing industry, particularly with Alaska in mind.

Mr. AuCOIN. Mr. Chairman, will the gentleman yield?

Mr. OBERSTAR. I yield to the gentleman from Oregon.

Mr. AuCOIN. Mr. Chairman, section 13 specifically refers to the situation in Alaska. My question is, do the concerns mentioned apply also to other seafood processors in other States.

Mr. OBERSTAR. It certainly does. We only addressed ourselves to Alaska because that was addressed in the hearings.

Mr. YOUNG of Alaska. Mr. Chairman, will the gentleman yield?

Mr. OBERSTAR. I yield to the gentleman from Alaska.

Mr. YOUNG of Alaska. Mr. Chairman, as the gentleman knows, in 1972, the House bill exempted organic seafood processing wastes from the definition of "pollutant." Can the gentleman state whether it is the committee's intention to review the definition of "pollutant" as part of its midcourse correction activities?

Mr. OBERSTAR. I can assure the gentleman that the committee will seek the expertise of many organizations, including the Environmental Protection Agency, in analyzing the impacts of the definition of "pollutant." I would also mention that the National Commission on Water Quality studied in depth the seafood processing industry and the committee will be reviewing its findings.

Mr. AuCOIN. Mr. Chairman, will the gentleman yield further?

Mr. OBERSTAR. I yield to the gentle-

man from Oregon.

Mr. Aucoin. Mr. Chairman, the Ocean Dumping Act of 1972 provides that "no permit is required * * * for the transportation for dumping or the dumping of fish wastes, except when deposited in harbors or other protected or enclosed coastal waters, or where the Administrator finds that such deposits could endanger health, the environment, or ecological systems in a specific location."

Is there any reason fish wastes should be treated differently under the Federal Water Pollution Control Act?

Mr. OBERSTAR. Mr. Chairman, there is no reason for it to be treated differently.

Mr. DON H. CLAUSEN. Mr. Chairman, I received a letter from our colleague, Mr. Young of Alaska, which advocated amending the Federal Water Pollution Control Act to recognize the severe problems in Alaska where fishing is their second largest industry. I note that in my district, fishing is also very important. We experience the same problems.

There are certain well-flushed bodies of water where waste from canneries has been shown in scientific studies to have no effect on the aquatic ecosystem. The Environmental Protection Agency in issuing effluent guidelines has not recognized the differences in characteristics between various receiving waters. However, I cannot criticize EPA for this because this is consistent with requirements of the act. However, for my friend from Alaska, I note that our committee report has addressed this problem on pages 18 and 19. We urged the Administrator to give special attention to this depressed industry's "total costs" when determining effluent limits. This is consistent with the requirements of the act.

In addition, I say to my friend from Alaska that the provision for time extension in section 13 of H.R. 3199 will allow an additional 2 years for the fish processing industry to meet effluent limitations.

I can also assure the gentleman from Alaska (Mr. Young) this committee will thoroughly review the problems of this industry before bringing before this body our major review of the Federal Water Pollution Control Act next year.

Mr. Chairman, I yield the remaining 3 minutes to the gentleman from Louisiana (Mr. Breaux).

Mr. BONKER. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Washington.

Mr. BONKER. Mr. Chairman, I would like to ask the gentleman from Minnesota a brief question. The provisions of section 304 indicate that Congress has some flexibility in mind in this legislation. Do I understand correctly that the committee plans a detailed review of these provisions of the act and EPA's administrative interpretation of congressional intent?

Mr. OBERSTAR. The committee certainly does intend to undertake that review. The gentleman raises a very important point which concerns me, the people in my district and those in other districts.

Mr. BONKER. I thank the gentleman. Mr. Chairman, six pulp and paper mills in Washington State have vigorously contested the need for installing secondary treatment for their discharge into marine waters. While these mills have not conceded their contention, five have now agreed to install secondary treatment. Despite the agreements to proceed with installation of secondary treatment, these mills now face fines by the Environmental Protection Agency for failing to meet the July 1977 deadline for achieving the required effluent limitations.

The committee has added provisions to section 301 of the Federal Water Pollution Control Act which will give the Administrator the power to modify the July 1977 deadline when he determines that the necessary technology cannot be applied by such deadline.

It was, I believe, the committee's intent that the Administrator in fact grant extensions of time to industrial dischargers who have not completed their facilities due to bona fide challenges to the EPA's effluent limitations. I have in mind these pulp mills which have been delayed by the EPA's delay in finalizing applicable effluent limitations, by delays in judicial appeals of such limitations and also by the EPA's delay in promulgating a meaningful variance procedure. These are mills contending that it is not practicable to be required to install secondary treatment, when to do so will produce no appreciable improvement in the already excellent quality marine receiving waters, yet cost millions of dollars with energy and other environmental disadvantages.

These marine discharge mills have been and are seeking the legal review to which they are entitled by law prior to commencing costly construction of treatment facilities. It would be extremely arbitrary for the EPA to assess penalties against such mills for non-compliance with the July 1977 deadlines, yet it has done so, much to the surprise of the Washington State Department of Ecology, which has been working closely with the industries involved to bring about water quality improvement. It is to be hoped that the Administrator will grant extensions to such mills.

The EPA appears to hold the view that marine dischargers must meet the same limitations as inland dischargers.

The express conclusion of a cost-benefit test in section 304 indicates that Congress had some flexibility in mind. Do I understand correctly that the committee plans a detailed review of these provisions of the act and of the EPA's administrative interpretation of congressional intent?

Mr. BREAUX. Mr. Chairman, I would like to take this time to tell every member of the committee individually how much I enjoyed working with him, but I do not have time to do that, so rest assured that I did enjoy working with every member.

I would like to take this time to try to inform some of the members of the committee, because many of them may be misinformed or even uninformed, about one section of the bill, section 404, and amendments thereto. There has been a great deal of discussion concerning the feeling that section 404 amendments in the bill lay open all of the wetlands of the United States to rape and ruin because they will be unregulated. Let me say that is simply not so.

The bill we have before us today is a compromise. Do not let anyone tell you that they are going to offer a compromise, because we are working from what was a compromise in the last Congress. The basic legislation contained in this bill, in section 404, is the legislation which passed last year, and it passed by a margin of about 2 to 1. The bill passed on final pasage with only five dissenting votes, because we felt that we had a good, workable compromise. This is basically the same legislation and if anything, it has probably been strengthened to protect the wetlands more than it was last time.

What this bill does is redefine what navigable is. It says that it maintains the same definition, except that it takes out historical because we are not concerned with what was navigable back in the 1700's, but what is navigable today or what could be made navigable in the future. We say those still would require permits from the Army Corps of

The CHAIRMAN. The time of the gentleman from Louisiana has expired.
Mr. ROBERTS. Mr. Chairman, I yield 1 additional minute to the gentleman from Louisiana.

Mr. BREAUX. In conclusion, in the last 60 seconds I have, I will say that after we change the definition we say that all adjacent wetlands to all those waters are covered by the permit process, then set out exemptions, exemptions for normal operations such as silviculture—which is forestry—ranching activities, and other exemptions set out on page 41.

I submit to all the members of the committee that the bill the committee has come up with is a good approach to a very complicated problem. It should not be dealt with on a hysterical basis, but on the facts, and I think the facts presented by the committee indicate that we have a good, solid, workable bill that is going to adequately protect all the wetlands of the United States that are adjacent to navigable waters. In addition, it will protect all navigable waters.

This is not a coastal zone management bill or a national environmental protection act. It is simply a bill regulating clean water activities. Coastal zone and land management problems are handled under other pieces of legislation of this Congress, which is where they should be.

Mr. KEMP. Mr. Chairman, H.R. 3199, the water pollution control amendments of fiscal year 1977 will assist New York State in a number of ways. Its main provisions will increase State responsibility over treatment works grants, extend authorizations mandated by the 1972 act through fiscal year 1978, and allow more State jurisdiction in the regulation of our navigable waters and adjacent wetlands.

This last provision will prove beneficial to our State's many small farmers. The 1972 act contained a very controversial section 404, which reemphasized the Corps of Engineers' traditional authority to issue permits for any dredge and fill operations in the country's navigable waters. Since then, however, the corps has defined "navigable waters" to include virtually every body of water in the United States that has ever been traveled on, and ranchers, farmers and foresters have become concerned that this broad definition would necessitate a very complicated permit process for ordinary agricultural and forestry activities. This bill will aid farmers in that it will return the jurisdiction over water use to the States where they belong, while retaining the corps oversight activities on the major waterways to adequately protect our wetlands.

I was also particularly pleased with the committee's decision to include funding for collector sewers, combined sewers, and infiltration/outflow in their construction grants program. I know that EPA originally opposed the inclusion of moneys for collector sewers, a proposal that would have severely hurt the smaller communities in western New York and indeed, throughout the State. For some years, the State of New York did not allow reimbursement for the construction of collector sewers even though they were eligible for reimbursement under Federal construction grant programs. As a result, our State now has an overwhelming backlog of collector sewer construction projects that desperately need this Federal funding. I strongly urge my colleagues to vote for this provision in its entirety, because of the immediate impact this will have both on small communities and on the hard-hit construction industry.

There are two more provisions in this bill that will be particularly beneficial to New York State residents. The first will extend for 1 year the September 30, 1977, deadline for EPA approval of Federal wastewater treatment construction grants, a measure which I cosponsored as H.R. 2937. While I would have preferred a shorter extension of time, so that EPA would be encouraged to finish its review process as close to schedule as possible I feel that this will be necessary to preserve for New York State approximately \$316 million in Federal dollars that would otherwise be reallocated to different States as a result of USEPA's continual delays.

A better solution would be a combined effort by USEPA and the States to speed

up the review process for these types of grants, and I was indeed happy to see that the provisions of my bill, H.R. 3751, have been incorporated into the final version of the Water Pollution Control Act amendments. My bill proposed to authorize EPA to accept, from qualifying States, certifications of their compliance with FWPCA in developing applications for treatment work grants. This would eliminate the useless duplication of effort that is delaying vital projects that have already been thoroughly examined at the State level, and should help to eliminate the kinds of problems that New York is facing this year with the wastewater treatment construction grants.

Mr. Chairman, I believe that the bill we are considering today is a well thought out measure that will insure needed public works development without jeopardizing our valuable environment. I urge that my colleagues give full consideration to these points as we examine and vote on this bill today.

Mr. LEHMAN. Mr. Chairman, I rise in opposition to H.R. 3199. The bill makes full funding of the construction grants program for sewage treatment plants contingent upon making farreaching changes in the water clean-up programs set up by the Federal Water Pollution Control Act (Public Law 92–500). The bill is strongly opposed by environmentalists. Prolonged controversy over some of its provisions could cause 36 States, including Florida, to exhaust their funds for constructing sewage treatment plants.

Section 16 of H.R. 3199 has generated the most controversy. This section would cut back substantially on the comprehensive Federal coverage provided waters and wetlands under section 404 of the Federal Water Pollution Control Act. Section 404 requires the Corps of Engineers to regulate by permit all dredging and filling operations in the Nation's waters and wetlands. This provision is a key to the protection of drinking supplies, finfish and shellfish spawning grounds, wildlife nesting and breeding areas, and countless esthetic and recreation benefits that are enjoyed throughout the Nation. Furthermore, wetlands provide free of charge \$140 billion worth of flood protection and water purification services, according to the clean water action project. Such priceless natural resources should be given Federal protection from development and destruction. However, the amount of wetlands in our Nation has diminished by 50 percent over the past 200 years.

President Carter issued several statements voicing support of wetlands protection during the campaign. In addition, his forthcoming environmental message is expected to include strong support for maintaining corps authority over wetlands development.

Section 16 of H.R. 3199 would provide for a continued reduction of our wetlands. Under this bill, the corps could require permits only for dredging and filling that occurs in commercially navigable waters, adjacent wetlands, and coastal wetlands. Such a provision would cut back Federal water authority to pre-

1899 limits. The EPA and the Corps of Engineers estimate that the effect of section 16 would be to leave 98 percent of stream miles and 80 percent of wetlands unprotected by uniform nationwide controls.

Section 12 of H.R. 3199 would give each State the sole authority to approve Federal sewage plant construction grants and to determine the priority of projects for funding. Such amendments were first proposed 3 years ago as a means of speeding up the obligation process. At that time this new program had trouble getting off the ground. The initial tieups were compounded by the former administration's impoundment of pollution control funds. Since that time, however, the rate of grant obligations has improved dramatically. States are now spending money as fast as the Federal Government authorizes it. Thus, changing the delegation of the program to a different level of government would not improve the program's efficiency.

In fact, such a change could actually slow down the rate of grant obligations. Accompanying such a change would be a period of uncertainty over "new rules of the game." There would probably be a lengthy period during which State staffs would be increased and trained to handle the new workload. Only 6 States are currently deemed capable by EPA of adequately handling such a re-

sponsibility.

Furthermore, provisions already exist for States to assume almost all grant review functions once they have proven to the EPA that they have the competence and resources to handle such functions in a responsible manner. California has done so since 1975.

The Association of Metropolitan Sewerage Agencies, which represents the Miami-Dade Water and Sewer Authority and whose members serve 50-60 million Americans, opposes section 12 as now written.

State certification could prove to be both wasteful and harmful. States usually provide less than 25 percent of the money for construction grants. State agencies are prone to use less scrutiny with the spending of money not raised by themselves. Evidence exists indicating substantial reductions are often desirable in State-approved projects. Internal EPA analyses indicate that the quality of the cleanup efforts provided by the States could be inadequate.

At stake is how effectively billions of tax dollars are to be spent. Thus, the Federal Government should take extra precautions to insure that the funds it distributes are being spent wisely by the

recipients

H.R. 3199 would grant industries 2year extensions on their July 1, 1977, deadlines on a case-by-case basis. The deadline calls for the use of best practicable technology to limit discharge of pollutants; 85 percent of the Nation's industries will meet the deadline. The bulk of those which will not be in compliance have been more active trying to get out of their requirements than trying to meet them. Court cases were pursued, with no action being taken in the interim. A recent Supreme Court deci-

sion quashed any hopes these industries had of getting around the law. To grant these industries extensions would be to reward them for dragging their feet. Indeed, these recalcitrant industries have given themselves unfair competitive advantages over the majority of industries who in good faith made the substantial expenditure necessary to begin their cleanup efforts.

No doubt, some industries did make a sincere effort to meet the deadline but were unable to do so. EPA already has provisions to put such industries on a compliance schedule. To provide for more far-reaching extension for undeserving industries would merely encourage them to stall longer, hoping they could come back in 2 years for another

One amendment added in committee would defer for 18 months the industrial cost recovery fee and have EPA study the issue for 1 year. These fees are charged to industries to cover their share of the sewage treated by municipal sewage plants. The result of allowing industries a way out paying this fee would be to have domestic consumers subsidize treatment of industrial pollution.

Too much latitude is given municipalities in extending their deadline by up to 5 years. Clearly some extensions are needed. However, H.R. 3199 provides no guidelines establishing when extensions would be appropriate. Extensions would be authorized even if municipalities have not made good faith attempts to comply. In addition, H.R. 3199 contains no provision for exploring why certain municipalities failed to meet the deadline. In many cases water quality standards were set under the Water Quality Act of 1965. Lengthy extensions should not be granted to municipalities which have had 12 years to clean up.

A further complication arises with industries who intend to meet their requirement by tying in to municipal treatment plants which are granted time extensions. The result is an unwarranted extension for those industries. Their industrial discharge, sometimes including toxic substances, will continue to go untreated until the municipality completes its project. Some means of interim control, such as pretreatment by the industries, are necessary but not provided for by H.R. 3199.

A final objection to H.R. 3199 involves discontinuing user charges for commercial and residential users of water. User charges based on metered water use, strength of waste, et cetera, are the most logical way to collect money for the operation of a sewage treatment system. The use of meters and user charges for all new developments-industrial, commercial and residential—provides incentive for conservation of water and help cut pollutant load going into the sewage systems. Such a system of user charges makes much more sense than H.R. 3199's plan to use a property tax system in its place for commercial and residential users of water.

H.R. 3199 would significantly weaken the requirements of the Federal Water Pollution Control Act and jeopardize the goal of cleaning up the Nation's waters. We must do all we can to protect our wetlands. We must see that effective Federal control remains over the sewage treatment program. We must insure that recalcitrant industries and municipalities are not rewarded for dragging their feet with their cleanup requirements. Because H.R. 3199 takes an environmentally unsound approach to these important issues, I urge the defeat of this bill.

Mr. BONIOR. Mr. Chairman, H.R. 3199 provides much needed money for water pollution control and corrects some inequities which have resulted from the EPA's administration of the Water Pollution Control Act. One of the most controversial sections of this bill, section 16, would amend section 404 of the act. While I recognize the necessity for exemptions under this section for normal farming and ranching operations I believe section 16's definition of "navigable waters" as: "all waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark, including all waters which are subject to the ebb and flow of the tide shoreward to mean high water mark," is much too narrow and I do not believe is consistent with the intent of the act.

Under this definition of "navigable waters" only wetlands adjacent to navigable waters would be protected by the act. Wetlands are one of this Nation's largest resources because they provide a natural filtration system for our waterways, and the sedimentation process, and provide a spawning ground for a huge variety of fish and waterfowl. Wetlands are a very fragile resource which is constantly in danger of being eliminated by dredge and fill operations and contractor's quests for more land. This valuable, fragile resource must be protected yet under this definition of "navigable waters," 80 percent of this Nation's wetlands would not be protected.

Wetlands are especially necessary for the filtration of waterways near large urban areas where the pollution is the worst. Many of the waterways near urban centers are not navigable and their wetlands would not be protected under this bill. In my own district the St. John's Marsh, which is the largest remaining wetland on the American side of Lake St. Clair, is in danger of being filled. This resource is one my constituents value and want protected. While the St. John's Marsh would be protected by section 16 because Lake St. Clair is used for commerce, I would like the same protection for other wetlands along smaller bodies of water which are presently not used for commerce although they may have been in the past.

I am confident the conference committee will address this issue and will submit language which will more adequately protect the wetlands. I am hopeful that the conference language will contain a broader definition of "navigable waters" than section 16 and would make less drastic changes in section 404 of the act.

Mr. SIKES. Mr. Chairman, I support

H.R. 3199, the Water Pollution Control Amendments of 1977. This measure contains both critically needed funding and substantive amendments. It is essentially the same as H.R. 9560 of the 94th Congress, which was passed last year; however, this occurred late in the session. Congress adjourned before the conference committee could act.

The bill does not completely overhaul the program, but seeks to remove the principal impediments to the program's

success.

This measure would authorize \$17 billion of Federal grants for construction of municipal waste treatment plants over a 3-year period and sets limits on the authority of the U.S. Army Corps of Engineers to require permits for disposal of dredge and fill materials in the Nation's waters—the so-called section 404 wet-

lands protection program.

The bill would authorize extensions, on a case-by-case basis, for municipalities and industries that are unable to meet the 1972 law's deadline. Approximately one-half of the Nation's municipalities confront a deadline of July 1, 1977, for installation of secondary sewage treatment which they cannot conceivably meet. Industries relying on delayed municipal systems for treatment of their discharges face the same deadline. Others facing the prospect of noncompliance may have justifications for extensions. It further delegates greater authority to the various States for administration of the construction grant program. Current requirements for charges to defray plant operating and maintenance costs create the need for costly and cumbersome metering and bookkeeping syetems, with administrative costs exceeding revenues. Unresolved controversy over the scope of Corps of Engineers regulatory authority over activities affecting wetlands and nonnavigable streams poses the threat of needless bureaucratic overregulation of farming, forestry, and other practices. Duplicative and overlapping review of construction grant applications by undermanned and underfunded agencies at both State and Federal levels is delaying construction of treatment works and resulting pollution abatement, increasing costs, forfeiting employment and economic stimulus benefits, and depriving the program of strengthened environmental and fiscal integrity to result from more rational use of resources.

The administrative and regulatory reforms contemplated by H.R. 3199 to resolve these problems directly involve the credibility of the clean water program and the prospects for sustaining public support essential to its success.

In 1972, the Congress mandated a 3year crash program to help the Nation's communities build badly needed waste treatment plants. The program has been delayed by court orders and bureaucratic redtage

This legislation is desirable and I feel it is necessary in order to carry out the intent of Congress under the Federal Water Pollution Control Act Amendments of 1972. The interim improvements within the framework of Public Law 92–500 are necessary, if it is to work as Congress intended. Therefore, the modest adjust-

ments provided in H.R. 3199 are needed and should be enacted now. This measure contains amendments of pressing urgency. The primary provisions of this proposal include streamlining the application process by permitting local applicants for projects costing \$1 million or less to combine two of the three timeconsuming steps in applying for a grant; allow communities to continue to use local ad valorem tax to pay for plant operations and maintenance where they have traditionally done so; provide a fairer allotment formula: State certification of project compliance; allow cities to go ahead with projects using their own money and providing reimbursement when it is determined they have fulfilled Federal requirements, and define navigable waters in the way that term has been traditionally understood.

The Senate has passed a straight 2year, \$10 billion extension bill, without substantive changes in the existing water pollution control law, as an amendment

to its public works job bill.

I urge my colleagues to join in supporting this legislation. This is a major effort to make the clean water program work. It has very general support nationwide. It is a proper approach to the problem. It should be approved by both the House and the Senate without delay.

Mr. BAUMAN. Mr. Chairman, I am pleased to support H.R. 3199, presently being considered which would amend the Water Pollution Control Act. While not perfect, this legislation goes a considerable distance to correct many of the deficiencies in our present Federal clean

water program.

One of the most important ways in which this bill will do this is provided in section 16 which restricts the authority of the Army Corps of Engineers "dredge and fill" permit program as originally outlined in section 404 of the Federal Water Pollution Control Act-Public Law 92-500. As presently interpreted by the courts, section 404 could require over 50,000 permits a year to satisfy corps' regulations in the State of Maryland alone. Farmers and others in agriculture must apply for such permits and this results in a waste of time and money for them, and the process makes little contribution to the improvement of water quality. It is a prime illustration of the kind of Government overregulation and redtape politicians rail against. H.R. 3199 would modify section 404 to give more authority to the States where it ought to reside and to limit the meaning of navigable waters as Congress intended.

Certainly normal farming and forestry activities ought to be exempt from inclusion in the corps' "permit authority" restrictions. I hope that section 16 will remain in tact in the bill we are considering. The costly and time-consuming regulations which have victimized farmers are factors working against increased agricultural production, and the bill's delineation of "navigable waters" gives the corps ample authority to protect wetlands.

Mr. Chairman, I am particularly pleased that H.R. 3199 makes provision for the delegation by the Corps of Engineers for the administration of permit authority to the States in cases where

the States have this capacity. The State of Maryland already has on the books a strict wetlands protection law and it would be unnecessary and burdensome to require permit applicants to go through the same process twice at both the Federal and State level.

This bill embodies the substance of similar legislation I sponsored last year

and I support it.

Mrs. HECKLER. The Water Pollution Control Act Amendments of 1977 contain several key provisions amending the present law and authorizing an additional \$17 billion for fiscal year 1977 through 1979 for municipal sewage treatment plant construction grants. However, section 21 of H.R. 3199 is of particular interest to my district and to other older, urbanized areas.

Section 21 imposes a deferral on the collection of payments from industrial users for the recovery of the Federal share of the cost of constructing waster-treatment facilities. The moratorium will be in effect for a period of 18 months allowing a year long study to be conducted by the Administrator of the Environmental Protection Agency to determine the efficiency and need for the industrial cost recovery provisions of Public Law 92–500. The study will be submitted to the Congress 1 year from the date of enactment allowing the Congress time for review of the results.

One year ago the publication of the "Report to the National Commission on Water Quality," brought to the fore some startling facts. The implications for older industrialized areas are immense.

The report states that the degree of use of publicly owned treatment facilities by various industrial categories varies from negligible to nearly complete dependence. Industrial categories in which 70 percent or more of plants or production capacity ties to publicly owned treatment plants are the following: Textiles, meat and dairy processing, canned and preserved fruits and vegetables, metal finishing, brewing, grain milling and leather tanning

milling, and leather tanning.

In an analysis of the negative social impacts resulting from implementation of water quality treatment requirements, the report states that small, older businesses will be most adversely affected Heaviest job losses are expected in several of the same industrial categories most heavily dependent on publicly owned treatment works: textile manufacturing, electroplating, pulp and paper, and meat and dairy processing. Major job losses are expected in the Northeast and North Central States.

The "Report to the National Commission on Water Quality" predicts severe economic hardships in affected areas:

Employment losses from plant closures, both direct and indirect, could amount to over one-quarter million jobs with full implementation of BPT (Best Practicable Technology) and BAT (Best Available Technology) limitations.

Mr. Chairman, section 21 of this bill acknowledges the fact that industries in older cities are handicapped by an industrial cost recovery charge which may not, in the overall picture, be cost effective. There is a direct relationship between cost increases and plant closings.

The Government must be wary of imposing new industrial costs in cities where industrial survival is already endangered by a myriad of rising operational costs ranging from fuel bills to taxes. This study will provide data essential to our consideration of the overall effect of the industrial cost recovery charge. I feel confident it will prove that industry in older, urbanized, and industrialized areas cannot absorb these construction costs without severe damage to individual companies and the attendant labor market. The unemployment resulting from imposition of industrial cost recovery may well cost far more in unemployment insurance, food stamps, and other Federal income and nutrition programs than the industrial cost recovery itself.

I requested that this provision be added to H.R. 3199. It was passed by a unanimous vote of the Public Works Committee. I hope my colleagues in the full House will give it the same endorsement. The economic and social impact of industrial cost recovery must be thoroughly investigated prior to imposition of charges having long-term economic implications for key industrial areas of the Nation.

Mr. ALEXANDER. Mr. Chairman, I rise in support of H.R. 3199, the Water Pollution Control Act Amendments of 1977, as reported by the committee.

1977, as reported by the committee.

This bill represents the vigorous work of the Public Works and Transportation Committee over the last 3 years to bring some sense to the situation that has developed with regard to the Corps of Engineers' authority to regulate discharges of dredged and fill materials into waterways and wetlands as contained in section 404 of the Federal Water Pollution Control Act of 1972.

Last year the House approved what I believe to be a sound compromise on this issue. I am pleased that the committee saw fit to incorporate that compromise into the bill before us today.

I do not believe the Congress intended for section 404 to cover all of the Nation's waters and wetlands. I believe the intent was to maintain Federal authority over dredging and filling operations in commercially navigable waters.

The broad definition of "navigable waters" as contained in the 1972 act has, however, left us with the potential for the corps' exercising power of approval for any routine activity that a farmer may engage in on his own land. The bureaucracy that comes with this extensive permit process leaves one to wonder whether the bill we passed in 1972 is a water pollution control bill or a Federal inland waterways and wetlands management law. I believe the amendments before us today make clear that the 1972 act is the former.

This bill specifically provides that the discharge of dredged or fill material into nonnavigable waters can be regulated by the corps if requested by the Governor of the State in which they are located. The bill also exempts normal farming and ranching activities from any permit requirements and allows the corps to issue general permits for activities not needing periodic review.

The corps' authority over wetlands,

adjacent to navigable waters, under the terms of H.R. 3199 as well as its authority over freshwater lakes totally within State boundaries, may be delegated to a State if the State meets certain requirements.

In summary, Mr. Chairman, I believe this bill strikes a proper balance between the urgent need to protect the environment and the urgent need to use some commonsense. I urge adoption of H.R. 3199.

Mr. MITCHELL of New York. Mr. Chairman, before us today we have a bill which is of critical importance to the State of New York and several communities throughout our Nation. I support this bill, particularly the provision which allows for a 1-year extension of the September 30, 1977, deadline for the obligation of sewer construction funds. As it now stands, New York will lose a \$316 million reservation of Federal funds if these funds are not released for approved projects by September 30.

The Environmental Protection Agency became aware of the need for this extension when it was apparent they could no longer process the flood of applications they were receiving in a timely fashion. In response they took several steps to rectify this unfortunate situation. By coordinating their efforts with State officials they attempted to process all applications prior to the deadline, however, it proved to be an impossible task and it became more apparent that New York State would lose \$316 million in sewer construction funds unless an extension of the September 30 deadline is granted.

The need for this legislation providing an extension for the obligation of funds is obvious. We all know that a timely allocation would have been a preferable alternative but it is also an alternative that can not be achieved under present circumstances and, therefore, we must support this legislation.

The EPA must realize, and I think they do, that this extension is not a signal to slow the pace of the application review process. On the contrary, we want to see the funds allocated as soon as possible. But with the "use them or lose them" cloud hanging over our heads on these Federal funds so necessary for vital water and sewer projects, we must take action now to protect our interests.

Mr. McKAY. Mr. Chairman, I wholeheartedly support passage of H.R. 3199, the Federal Water Pollution Control Act Amendments of 1977, and would particularly like to address myself to section 16 of this legislation which pertains to section 404 of the original act. As you know, section 16 would, among other things, amend section 404 to clarify the meaning of "navigable waters." This has been a source of controversy for several years, and our effort to correct the problem last year failed when the legislation died in conference with the Senate. I sincerely hope H.R. 3199 will successfully proceed to final enactment. It is a measure we have needed for too long.

I have long been an active supporter of remedial legislation to curb the overlybroad authority assumed by the Corps of Engineers in dredge and fill activities. On July 16, 1975, I testified before the Sub-

committee on Water Resources on the problems of the expanded section 404 permit program. I had serious reservations then, I still have them today, as to the substance and the procedure by which the corps has broadened its authority over our Nation's wetlands.

First, I object to the ever-burgeoning collection of Federal rules and regulations which the American people are forced to live with. It is a scandal when businessmen and farmers must spend substantial portions of their time and money trying to keep up with the paperwork forced upon them by their National Government. Even worse, many of the forms they fill out are duplications of those issued by other Federal agencies.

As it now stands, the corps has effective authority to require a permit application every time a dredge or fill activity is planned for any stream, ditch, or pond in the United States. I do not think Congress intended this, nor should we allow such an interpretation to remain a possibility.

Second, the intention of Congress has been called into question, and I feel it is mandatory that we reaffirm our original intent in connection with section 404. The original legislation, I believe. contemplated a commonsense meaning of "navigable waters"-not one which would inflate the corps' permit authority to unprecedented levels. The House of Representatives reaffirmed this last year when we voted 339 to 5 to pass remedial legislation similar to the bill we are considering today, H.R. 3199. The term "navigable waters" meant what it said: Waters which are used or could be used for navigation-no more, no less. The fact that the corps has voluntarily limited its permit authority should have no bearing on our actions today. The Federal court ruling which interpreted "navigable waters" to mean "waters of the United States" has caused much controversy. I feel a further statement of congressional intent is necessary to lay the matter to rest.

I would like to emphasize that I fully support the goal of protecting our environment, and I recognize the need for effective Federal controls. However, even back in 1975 when I testified before the Water Resourcs Subcommittee, there were 15 Federal laws and programs designed to protect our Nation's wetlands. To give further authority over them to the Corps of Engineers in the form of a burdensome and expensive permit program is simply not necessary or desirable. What we need is efficient government, not one which resembles a patchwork quilt of duplication and waste.

Mr. Chairman, I urge my colleagues to vote in favor of H.R. 3199 for the above reasons, and particularly because I feel its passage will restore some of the confidence in the legislative process which this whole controversy has challenged. It will perhaps reassure the American people that Members of Congress are not insensitive to the burdens which may be created by a false interpretation of the laws we pass.

The CHAIRMAN. All time has expired. Pursuant to the rule, the Clerk will now read the committee amendment in the nature of a substitute, recommended by the Committee on Public Works and Transportation, now printed in the bill as an original bill for the purpose of amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Water Pollution Control Act Amendments of 1977".

AUTHORIZATION APPROVAL

Sec. 2. Funds appropriated before the date of enactment of this Act for expenditure during the fiscal year ending June 30, 1976, and the transition quarter ending September 30, 1976, under authority of the Federal Water Pollution Control Act, are hereby authorized for such purposes.

AUTHORIZATION EXTENSION

SEC. 3. (a) Section 104(u) (2) of the Federal Water Pollution Control Act (33 U.S.C. 1254) is amended by striking out "1975" and inserting in lieu thereof "1975, \$2,000,000 for fiscal year 1977, and \$3,000,000 for fiscal year

(b) Section 104(u)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1254) is amended by striking out "1975" and insert-ing in lieu thereof "1975, \$1,000,000 for fiscal year 1977, and \$1,500,000 for fiscal year 1978,".

(c) Section 106(a) (2) of the Federal Wa-

- ter Pollution Control Act (33 U.S.C. 1256) is amended by striking out "and the fiscal year ending June 30, 1975;" and inserting in lieu thereof "and the fiscal year ending June 30, 1975, and \$100,000,000 per fiscal year for the fiscal year ending September 30, 1977, and the fiscal year ending September 30, 1978;".
- (d) Section 112(c) of the Federal Water Pollution Control Act (33 U.S.C. 1262) is amended by inserting "\$6,000,000 for the fisyear ending September 30, 1977, and \$7,000,000 for the fiscal year ending September 30, 1978," immediately after "June 30, 1975.".
- (e) Section 208(f)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out "and not to exceed \$150,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "and not to exceed \$150,000,000 per fiscal year for the fiscal years ending June 30, 1975, September 30, 1977, and September 30, 1978."
- (f) Section 314(c) (2) of the Federal Water Pollution Control Act (33 U.S.C. 1324) is amended by striking out "and \$150,000,000 for the fiscal year 1975" and inserting in lieu thereof "\$150,000,000 for the fiscal year 1975; \$50,000,000 for fiscal year 1977; and \$60,000,-000 for fiscal year 1978".
- (g) Section 517 of the Federal Water Pollution Control Act (33 U.S.C. 1376) is amended by striking out "and \$350,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "\$350,000,000 for the fiscal year ending June 30, 1975, \$100,000,000 for the fiscal year ending September 30, 1977. and \$150,000,000 for the fiscal year ending September 30, 1978.".

SEWAGE COLLECTION SYSTEM GRANTS

SEC. 4. Section 202 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding any other provision of this title, in any case where the total of all grants made under section 201 for the treatment works exceeds the actual construction costs for such treatment works such excess amount shall be a grant of the Federal share of the cost of construction of

a sewage collection system if—
"(1) such sewage collection system was constructed as part of the same total treat-ment system as the treatment works for which such section 201 grants were approved,

"(2) an application for assistance for the construction of such sewage collection system was filed in accordance with section 702 of the Housing and Urban Development Act of 1965 (42 U.S.C. 3102) before all such section 201 grants were made and such section 702 grant could not be approved due to lack of funding under such section 702.

The total of all grants for sewage collection systems made under this subsection shall not exceed \$2,800,000.".

PLANS, SPECIFICATIONS, ESTIMATES, AND PAYMENTS

SEC. 5. Section 203(a) of the Federal Water Pollution Control Act (33 U.S.C. 1283) is amended by adding at the end thereof the following new sentence: "In the case of a treatment works that has an estimated total cost of \$1,000,000 or less (as approved by the Administrator) upon completion of an approved facility plan, a single grant may be awarded for the combined Federal share of the cost of preparing construction drawings and specifications, and the building and erection of the treatment works.".

USER CHARGES

SEC. 6. Clause (A) of paragraph (1) of subsection (b) of section 204 of the Federal Water Pollution Control Act (33 U.S.C. 1284)

(1) by striking out "proportionate share" and inserting in lieu thereof "proportionate share (except as otherwise provided in this paragraph)"; and

(2) by adding at the end of such paragraph (1) the following: "In any case where an applicant uses an ad valorem tax system and the Administrator determines such system results in the distribution of operation and maintenance costs for treatment works within the applicant's jurisdiction, to each user class, in proportion to the contribution to the total waste water loading of the treatment works by each such user class, and such applicant establishes surcharges which will insure that each industrial user will pay its proportionate share on the basis of volume, strength, and other relevant factors, then such ad valorem tax system and surcharges shall be deemed to be a user charge system meeting the requirements of clause (A) of this paragraph.".

ALLOTMENT

SEC. 7. (a) The first sentence of subsection (a) of section 205 of the Federal Water Pollution Control Act (33 U.S.C. 1285) is amended by striking out "June 30, 1972," and inserting in lieu thereof "June 30, 1972, and before September 30, 1976,".

(b) Such section 205 is further amended

adding at the end thereof the following

new subsections:

"(c) Sums authorized to be appropriated pursuant to section 207 for the fiscal year beginning October 1, 1976, shall be allotted the Administrator not later than the tenth day which begins after the date of enactment of the Federal Water Pollution Control Act Amendments of 1977. Sums authorized to be appropriated pursuant to sec-tion 207 for each fiscal year beginning after September 30, 1977, shall be allotted by the Administrator on October 1 of the fiscal year for which authorized. Sums authorized for the fiscal years ending September 30, 1977, and September 30, 1978, shall be allotted in accordance with table 1 of Committee Print Numbered 94-39 of the Committee on Public Works and Transportation of the House of Representatives.

"(d) If the sums allotted to the States for a fiscal year are made subject to a limitation on obligation by an appropriation Act, such limitation shall apply to each State in pro-portion to its allotment. So much of any allotment not subject to such a limitation on obligation shall remain available for obligation for the fiscal year during which it can first be obligated and for the period of the next succeeding sixteen months, the remain-

ing amount of the allotment shall remain available until expended. The amount of any allotment not subject to such a limitation on obligation which is not obligated by the end of such sixteen-month period shall be immediately reallotted by the Administrator on the basis of the same ratio as is applicable to sums allotted for the then current fiscal year, except that none of the funds reallotted by the Administrator shall be allotted to any State which failed to obligate any of the funds being reallotted. Any sum made available to a State by reallotment under this subsection shall be in addition to any funds otherwise allotted to such State for grants under this title during any fiscal year.

(e) Notwithstanding any other provision of this section, sums made available between January 1, 1975, and March 1, 1975, by the Administrator for obligation shall be available for obligation until September 30, 1978.". REIMBURSEMENT AND ADVANCED CONSTRUCTION

SEC. 8. (a) Subsection (a) of section 206 of the Federal Water Pollution Control Act "July 1, 1972," and inserting in lieu thereof "July 1, 1973,".

(b) Subsection (e) of such section 206 is amended by striking out "\$2,600,000,000" and inserting in lieu thereof "\$2,950,000,000".

(c) Notwithstanding section 206(c) of the Federal Water Pollution Control Act and section 2 of Public Law 93-207, in the case of publicly owned treatment works on which construction was initiated between July 1, 1972, and June 30, 1973 (both dates inclusive), applications for assistance under such section 206 shall be filed not later than the ninetleth day after the date of enactment of the Federal Water Pollution Control Act Amendments of 1977.

CONSTRUCTION GRANT AUTHORIZATIONS

SEC. 9. Section 207 of the Federal Water Pollution Control Act (33 U.S.C. 1287) is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "and for the fiscal year ending September 30, 1977, subject to such amounts as are provided in appropriation Acts, not to exceed \$5,000,000,000 and for the fiscal years ending September 30, 1978, and September 30, 1979, subject to such amounts as are provided in appropriation Acts, not to exceed \$6,000,000,000 per fiscal year.".

FEDERAL SHARE OF MANAGEMENT PLANNING PROCESS COSTS

SEC. 10. Section 208(f)(2) of the Federal Water Pollution Control Act (33 U.S.C. 2188) is amended to read as follows:

"(2) For the two-year period beginning on the date the first grant is made under paragraph (1) of this subsection to an agency, if such first grant is made before October 1. 1977, the amount of each such grant to such agency shall be 100 per centum of the costs developing and operating a continuing areawide waste treatment management planning process under subsection (b) of this section, and thereafter the amount granted to such agency shall not exceed 75 per centum of such costs in each succeeding oneyear period. In the case of any other grant made to an agency under such paragraph (1) of this subsection, the amount of such grant shall not exceed 75 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process in any year.".

CONTRACT AUTHORITY

SEC. 11. The second sentence of section 208(f)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to such amounts as are provided in appropriation Acts.".

NEW PROVISIONS

SEC. 12. Title II of the Federal Water Pollution Control Act (33 U.S.C. 1281 et seq.) is amended by adding at the end thereof the following new sections:

"CERTIFICATION

"Sec. 214. (a) (1) The Administrator may carry out any of his responsibilities for actions, determinations, or approvals under sections 201(g) (2) and (3), 203 (a) and (d), 204 (a), (b) (1), and (b) (3), and 212(2) (B) of this Act with respect to projects or proposed projects for treatment works by accepting a certification by the State water pollution control agency of its performance of such responsibilities.

"(2) Nothing in this section shall affect or discharge any responsibility or obligation of the Administrator under any other Federal law, including the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

"(b) The Administrator shall not accept any certification provided for in subsection (a) of this section unless the Administrator determines after public hearings that the State water pollution control agency has the authority, responsibility, and capability to take all of the actions, determinations, or approvals for which certification is submitted under subsection (a) of this section and the Administrator has determined that the State is following practices that conform to the Federal construction grant regulations under section 201 of this Act, including specifically that any person having a significant financial interest in the construction of treatment works will not be a member of any State board or body which processes an application for a grant under this title.

"(c) If the Administrator determines after public hearings that a State water pollution control agency, with respect to any requirement, condition, or limitation for which he has accepted a certification under subsection (a), fails to meet the requirements of this section, he shall suspend his acceptance of certification as to such requirement, condition, or limitation with respect to any project, or may suspend such acceptance with respect to all projects in such State, as he determines necessary, and during such suspension he shall be responsible for such requirement, condition, or limitation.

"(d) The Administrator shall conduct interim and final inspections and audits, and shall require such information, data, and reports as he determines necessary to carry out this section.

'(e) (1) The Administrator shall reserve an amount not to exceed 2 per centum of the allotment made to each State under section 205 on or after February 1, 1975. Sums so reserved shall be available for making grants to such State under paragraph (2) of this subsection for the same period as sums are available from such allotment under subsection (b) of section 205, and any such grant shall be available for obligation only during such period. Any grant made from sums reserved under this subsection which has not been obligated by the end of the period for which available, and any reserved amount at the request of the State, shall be added to the amounts last allotted to such State under section 205 and shall be immediately available for obligation in the same manner and to the same extent as such last allotment.

"(2) The Administrator is authorized to grant to any State exercising, or proposing to exercise, certification authority under this section, from amounts reserved to such State under this subsection, the reasonable costs, as determined by the Administrator, of carrying out such authority.

"(f) The Administrator shall promulgate

"(t) The Administrator shall promulgate such rules and regulations as may be necessary to carry out this section. The initial rules and regulations necessary to carry out this section shall be promulgated not later than the ninetieth day after date of enactment of this section.

"DETERMINATION OF PRIORITY

"Sec. 215. Notwithstanding any other provision of this Act, the determination of the priority to be given each category of projects for construction of publicly owned treatment works within each State shall be made solely by that State. These categories shall include, but not be limited to (A) secondary treatment, (B) more stringent treatment, (C) infiltration-inflow correction, (D) major sewer system rehabilitation, (E) new collector sewers and appurtenances, (F) new interceptors and appurtenances, and (G) correction of combined sewer overflows.

"REQUIREMENTS FOR AMERICAN MATERIALS

'SEC. 216. Notwithstanding any other provision of law, no grant shall be made under this title for any treatment works unless only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States will be used in such treatment works. This section shall not apply in any case where the Administrator determines it to be inconsistent with the public interest. or the cost to be unreasonable, or if articles, materials, or supplies of the class or kind to be used or the articles, materials, or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in sufficient and reasonably available commercial quantities and of a satisfactory quality.".

TIME REQUIREMENTS

SEC. 13. Section 301 of the Federal Water Pollution Control Act (33 U.S.C. 1311) is amended by adding at the end thereof the following new subsections:

"(g) (1) The Administrator may modify the time for achieving the requirements of subsection (b) (1) of this section for any publicly owned treatment works and any point source (other than a publicly owned treatment works) to extend such time beyond the dates specified in such paragraph, if the Administrator determines that the construction of the treatment works, or the application of best practicable control technology necessary for the achievement of such requirements cannot be completed or applied (as the case may be) by the dates specified in such paragraph.

in such paragraph.

"(2) No time modification granted by the Administrator under this subsection for any point source (other than a publicly owned treatment works) shall extend beyond July 1, 1979. No time modification granted by the Administrator under this subsection for any publicly owned treatment works shall extend beyond July 1, 1982, except in the case of treatment works which the Administrator determines are based on innovative technology relating to the abatement and control of water pollution in which case time modifications may extend up to, but not beyond, July 1, 1983.

"(3) No time modification shall be granted under this subsection unless the applicant shall have first submitted to the Administrator, and the Administrator shall have approved, a schedule of compliance with the modified date. Failure to meet the approved schedule of compliance shall be a violation of this section and shall be subject to enforcement under section 309 in the same manner as any other violation of this section. The Administrator shall promulgate such rules and regulations as may be necessary to carry out this paragraph.

"(4) Any point source (other than a publicly owned treatment works) which has, either on the date a time modification is granted a publicly owned treatment works

under paragraph (1) of this subsection or not later than the sixtieth day after the date such time modification is granted, a contract (enforceable against such point source) to discharge its effluent into such publicly owned treatment works shall not be subject to the requirements of subsections (b)(1)(A) and (C) of this section until the date such treatment works must meet the requirements of subsections (b)(1)(B) and (C) of this section.

"(h) Notwithstanding any other provision of this Act, any owner or operator of a point source which is subject to the requirements of subsection (b) (1) (A) (i) of this section who—

"(1) received a research and development grant pursuant to section 105(c) of this Act to develop new technology for the treatment of industrial waste and was unsuccessful in accomplishing the goal set forth in the grant agreement; and

"(2) did not commence the necessary construction to comply with the requirements of such subsection (b) (1) (A) (i) until it became apparent that the research and development project would be unsuccessful, shall be deemed to be in compliance with the requirements of such subsection until July 1, 1978, or the date of the completion of such construction, whichever date first occurs."

STATE REPORTS

Sec. 14. Subsection (b) of section 305 of the Federal Water Pollution Control Act (33 U.S.C. 1315) is amended—

(1) by striking out "January 1, 1975, and shall bring up to date each year thereafter," in paragraph (1) and inserting in lieu thereof "April 1, 1975, and shall bring up to date by April 1, 1976, and biennially thereafter,"; and

(2) by striking out "annually" in paragraph (2) and inserting in lieu thereof the following: "October 1, 1976, and biennially".

TOXIC AND PRETREATMENT STANDARDS

SEC. 15. (a) The first sentence of paragraph (2) of subsection (a) of section 307 of the Federal Water Pollution Control Act (33 U.S.C. 1317) is amended by striking out "to be held within thirty days".

(b) Paragraph (6) of subsection (a) of section 307 of the Federal Water Pollution Control Act (33 U.S.C. 1317) is amended by adding at the end thereof the following new sentence: "In any case where the Administrator determines that compliance within one year from the date of promulgation is technologically infeasible for a category of sources, the Administrator shall establish the effective date of the effluent standard (or prohibition) for such category of sources at the earliest date which compliance can be feasibly attained by such sources, but in on case shall such date be more than three years after the date of promulgation."

PERMITS FOR DREDGED OR FILL MATERIAL

SEC. 16. (a) Subsection (a) of section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) is amended by adding immediately after "navigable waters" the following: "and adjacent wetlands".

(b) Such section 404 is further amended by adding at the end thereof the following new subsections:

"(d) (1) The term 'navigable waters' as used in this section shall mean all waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark, including all waters which are subject to the ebb and flow of the tide shoreward to their mean high water mark (mean higher high water mark on the west coast).

"(2) The term 'adjacent wetlands' as used in this section shall mean (A) those wetlands, mudflats, swamps, marshes, shallows, and those areas periodically inundated by saline or brackish waters that are normally characterized by the prevalence of salt or brackish water vegetation capable of growth and reproduction, which are contiguous or adjacent to navigable waters, and (B) those freshwater wetlands including marshes, shallows, swamps, and similar areas that are contiguous or adjacent to navigable waters, that support freshwater vegetation and that are periodically inundated and are normally characterized by the prevalence of vegetation that requires saturated soil conditions for growth and reproduction.

e) Except as provided in subsection (f) of this section, the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands is not prohibited by or otherwise subject to regulation under this Act (except for effluent standards or prohibition under section 307), or section 9, section 10, or sec-

tion 13 of the Act of March 3, 1899.
"(f) If the Secretary of the Army, acting through the Chief of Engineers, and the Governor of a State enter into a joint agreement that the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands of such State should be regulated because of the ecological and environmental importance of such waters, the Secretary, acting through the Chief of Engineers, may regulate such discharge pursuant to the provisions of this section. Any joint agree-ment entered into pursuant to this subsection may be revoked, in whole or in part, by the Governor of the State who entered into such joint agreement or by the Secretary of the Army, acting through the Chief of Engineers.

"(g) In carrying out his functions relating to the discharge of dredged or fill material under this section, the Secretary of Army, acting through the Chief of Engiis authorized to issue those general permits which he determines to be in the

public interest.

The discharge of dredged or fill "(h)

material-

"(1) from normal farming, silviculture, and ranching activities, including, but not

limited to, plowing, terracing, cultivating, seeding, and harvesting for the production of food, fiber, and forest products;

"(2) for he purpose of maintenance of currently serviceable structures, including, but not limited to, dikes, dams, levees, groins, riprap, breakwaters, causeways, and abutments and approaches, bridge other transportation structures (including emergency reconstruction); or

"(3) for the purpose of construction or maintenance of farm or stock pounds and

irrigation ditches,

is not prohibited by or otherwise subject to

regulation under this Act.

"(1) The discharge of dredged or fill ma terial as part of the construction, alteration, or repair of a Federal or federally assisted project authorized by Congress is not prohibited by or otherwise subject to regulation under this Act if the effects of such discharge have been included in an environmental impact statement or environmental assessment for such project pursuant to the provisions of the National Environmental Policy Act of 1969 and such environmental impact statment or environmental assessment has been submitted to Congress in connection with the authorization or fund-

ing of such project.

"(j) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section relating to the adjacent wetlands in that State if he determines (A) that such State has the authority, responsibility, and capability to carry out such funtions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause of

such a delegation.

"(k) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him this section and by sections 9, 10, and 13 of the Act of March 3, 1899, relating to any fresh water lake located entirely within the boundaries of such State (other than such a lake constructed, in whole or in part, by either the Secretary of the Army, acting through the Chief of Engineers, or the Secretary of the Interior) if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause for such a delegation.".

EMERGENCY FUND

SEC. 17. Section 504 of the Federal Water Pollution Control Act is amended by designating the initial subsection therein as subsection "(a)" and adding the following new subsections at the end thereof as follows:

'(b) There is hereby established a contingency fund to provide assistance for emergencies, including, but not limited to, those which present an imminent and substantive endangerment to the public health or welfare, those which require protection of perwhere the endangerment is to the livelihood of such persons, and those resulting from natural and other disasters.

(c) There is authorized to be appropriated not to exceed \$5,000,000 to carry out subsection (d) of this section. The amounts appropriated under this subsection shall remain available until expended. There is authorized to be appropriated such sums annually as are necessary to maintain such fund at a \$5,000,000 level.

(d) The Administrator shall submit a report annually to each House of Congress on his activities in carrying out subsections (b)

and (c) of this section.

This section shall not be construed to relieve the Administrator of any requirement imposed on the Administrator by any other Federal laws. Nothing contained in this subsection shall (1) affect any final action taken under such other Federal law, or (2) in any way affect the extent to which human health or the environment is to be protected under such other Federal law.".

JUDICIAL REVIEW

Sec. 18. Subsection (b) (1) of section 509 of the Federal Water Pollution Control Act is amended by striking out "and (F) in issuing or denying any permit under section 402," and inserting in lieu thereof the following: "(F) in issuing or denying any permit under section 402, (G) in promulgating or revising guidelines for effluent limitations under section 304(b), and (H) in making any determination as to a program for State certification under section 214,"

RULE AND REGULATION REVIEW

SEC. 19. Title V of the Federal Water Pollution Control Act is amended by renumbering section 518 as section 519 and by inserting immediately after section 517 the following new section:

"RULE AND REGULATION REVIEW

"SEC. 518. (a) Any rule or regulation issued under authority of this Act after the date of enactment of this section may by resolution of either House of Congress be disapproved, in whole or in part, if such resolution of disapproval is adopted not later

than the end of the first period of sixty calendar days when Congress is in session (whether or not continuous) which period begins on the date such rule or regulation is finally adopted by the department or agency adopting same. The department or agency adopting any such rule or regulation shall transmit such rule or regulation to each House of Congress immediately upon its final adoption. Upon adoption of such a resolution of disapproval by either House of Congress, such rule or regulation, or part thereof, as the case may be, shall cease to be in effect.

"(b) Congressional inaction on or rejection of a resolution of disapproval shall not be deemed an expression of approval of such rule.".

FINANCIAL DISCLOSURE

SEC. 20. Section 501 of the Federal Water Pollution Control Act (33 U.S.C. 1361) is amended by adding at the end thereof the following new subsection:

"(g) (1) Each officer or employee of the Environmental Protection Agency who-

"(A) performs any function or duty under

this Act: and

"(B) has any known financial interest in any person who (i) discharges pollutants any point source, (ii) discharges oil, hazardous substances, or sewage from any vessel, (iii) discharges oil or hazardous substances from any onshore or offshore facility, (iv) is otherwise subject to regulations unthis Act, or (v) is applying for or receiving financial assistance under this Act,

shall, beginning on October 1, 1977, annually file with the Administrator a written statement concerning all such interests held by such officer or employee during the preceding calendar year. Such statement shall be avail-

able to the public.

"(2) The Administrator shall-

"(A) act within ninety days after the date of enactment of this section-

(i) to define the term 'known financial interest' for purposes of paragraph (1) of this

subsection; and

'(ii) to establish the methods by which the requirements to file written statements specified in paragraph (1) will be monitored and enforced, including appropriate provisions for the filing by such officers and employees of such statements and the review by the Administrator of such statements;

"(B) report to the Congress on June 1 of each calendar year with respect to such disclosures and the actions taken in regard thereto during the preceding calendar year.

"(3) In the rules prescribed in paragraph
t) of this subsection, the Administrator may identify specific positions within the Environmental Protection Agency which are of a nonregulatory and nonpolicymaking na-ture and provide that officers or employees occupying such positions shall be exempt from the requirements of this subsection.

"(4) Any officer or employee who is sub-ject to, and knowingly violates, this subsection, shall be fined not more than \$2,500 or imprisoned not more than one year, or

both.".

COST RECOVERY STUDY

SEC. 21. (a) The Administrator of the Environmental Protection Agency (hereafter in this section referred to as the "Administrator") shall study the efficiency of, and the need for, the payment by industrial users of any treatment works of that portion of the cost of construction of such treatment works (as determined by the Administrator) which is allocable to the treatment of such industrial wastes to the extent attributable to the Federal share of the cost of construction. Such study shall include, but not be limited to, an analysis of the impact of such a sys tem of payment upon rural communities. No later than the last day of the twelfth month which begins after the date of enactment of this section, the Administrator shall submit a report to the Congress setting forth the re-

sults of such study.

(b) During the period beginning on the date of enactment of this section and ending on the last day of the eighteenth month which begins after the date of enactment of this section (both dates inclusive), no officer or employee of the Federal Government shall enforce, or require any recipient of a grant under section 201(g) (1) of the Federal Water Pollution Control Act (33 U.S.C. 1284) to enforce, any provision in an application for a grant or in a grant agreement under such section which requires any payments by industrial users pursuant to section 204(b) (1) (B) of such Act.

(c) For purposes of this section, the terms "industrial user" and "treatment works" have the same meaning given such terms in the Federal Water Pollution Control Act.

SECONDARY TREATMENT FACILITY SITE

SEC. 22. The Administrator of the Environmental Protection Agency shall reimburse the city of Boston, Massachusetts, an amount equal to 75 per centum, but not to exceed \$15,000,000, of the cost of constructing a modern correctional detention facility on a site in such city, on condition (A) that such city convey to the Commonwealth of Massachusetts all of its right, title, and interest in and to that real property owned by such city on Deer Island which is the site of the existing correctional detention facility for use by such Commonwealth as the site for a publicly owned treatment works providing secondary treatment and (B) that such Commonwealth convey to such city all of its right, title, and interest to the real property on New Chardon Street in such city owned by such Com-monwealth for use by such city as the site for such correctional detention facility. There is authorized to be appropriated \$15,000,000 to carry out the purposes of this section

Mr. ROBERTS (during the reading). Mr. Chairman, I ask unanimous consent that the committee amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDMENT OFFERED BY MR. OTTINGER

Mr. OTTINGER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OTTINGER: Page 27, line 13, insert "(1)" immediately after

Pages 27, after line 17, insert the following: (2) The fourth sentence of subsection (a) of such section 205 is amended by striking "For the fiscal year ending June 30, 1975," and inserting in lieu thereof, the fiscal years ending June 30, 1975, September 30, 1977, and September 30, 1978,".
Page 28, strike out the sentence beginning

on line 3 and ending on line 7.

Mr. OTTINGER. Mr. Chairman, this amendment has the effect of restoring the formula presently in effect for distribution of sewer treatment grant funds-on the basis of a State's needs, eliminating the provision that was added by the Committee on Public Works inserting 25-percent consideration of population in the distribution formula.

Section 7 of H.R. 3199 sets up this new formula for allocating sewer treatment construction grants among States on the basis of: First, 25 percent of a State's projected 1990 population; second, 50 percent on its partial needs for sewage treatment facilities-including secondary treatment, more stringent treatment to meet water quality standards, interceptor sewers and appurtenances; and third, 25 percent on the basis of total needs which include partial needs plus collector sewers, combined sewers and infiltration inflow devices.

What my amendment would do is to strike the population variable entirely and fashion the formula around total water treatment needs as it was in the

previous and current formula.

It has been demonstrated that population has no bearing on a State's need for financial assistance for the construction of vital sewage treatment facilities. When the population element was first proposed several years ago, both the Committee on Public Works and the Senate committee, in a detailed analysis dated September 13, 1973, rejected the population variable. In the original House report to accompany Public Law 92-500. the 1972 Water Pollution Control Act (House Report 92-911, March 11, 1972. page 93), the committee discussed the relationship between total population and State's need for financial assistance to construct sewage treatment facilities and agreed that: "This needs formula is a sound basis for allocating funds since our experience to date clearly demonstrates that there is no necessary corollation between the financial assistance needed for waste treatment works in a given State and its population."

Instead, degree of industrialization and urbanization-not total population-are major factors which determine a State's need for sewage treatment facilities; and it is those States which are the most urbanized and the most industrialized which suffer under the proposed formula.

New Jersey would lose \$14 million in fiscal year 1977 under the Committee formula; Michigan, \$40.5 million; Ohio, \$26 million; Illinois, \$8.5 million; Massachusetts, \$.5 million; New York, \$71.5 million; New Hampshire, \$4 million; Delaware, \$2.5 million; Maryland, \$16 million; Kentucky, \$3 million; Indiana, \$2 million; Arkansas, \$.5 million; Oklahoma, \$3 million; Kansas, \$9 million; Nebraska, \$3.5 million; Hawaii, \$1.5 million; Samoa, \$.5 million; Trust Territories, \$1.5 million; Alaska, \$3 million; Idaho, \$1 million; and Washington, \$1 million.

Of course, the States that are hit the hardest are those in the Northeast and Midwest, States that are already suffering disadvantages under so many of the Federal formulae for distribution of funds. This would just add to the very serious inequities in funds distribution that already exist.

All of these large industrialized and urbanized States whose present allotments are determined solely on the basis of need are going to lose millions of dollars if we enact a new formula based on population.

The objective of the Water Pollution Control Act is to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." If one State's allotment, based on sewage treatment needs, is to be decreased because of the new population variable-and we would be decreasing the allotment of the States most in need under the proposed formula-then it seems to me that Congress is defeating the purpose of the act and placing us further away from the objective of cleaning up the Nation's

Mr. Chairman, I hope in the interest of fairness the Committee will support this amendment.

Mr. HARSHA. Mr. Chairman, I rise in

opposition to the amendment.

Mr. Chairman, we must first recognize that this program is one of national scope. We are trying to clean up all the waterways of the entire Nation, and in order to do that we have to devise the most equitable and the most effective formulas if we are to try to do that.

Obviously there are going to be some problems in that area because everybody is not going to get the same amount of money. When we first devised the formula back in 1972, we based it totally on need. The net effect of that was that some of the States that had the capability got together very quickly and put in a lot of needs, whether they were justi-fied or not. They in effect loaded the formula down with an inordinate number of needs in some areas, and that penalized those States that were rather deliberate in their gathering of the information to determine their needs. These were States that were more cau-

As a result of that, some States, for example, the State of West Virginia, gathered together their needs very quickly. They acted rightly or wrongly, as the case may be-and I am not attributing any ulterior motives to anyone—and they got together on a rather expedited program and set forth their needs. As a result, they got roughly five times as much money under the grant formula in West Virginia as the State of Arizona; yet the State of Arizona had probably the same amount of population.

The State of Texas, for example, with 13 million people, because it was more deliberate and more circumspect in preparing the needs report, got less than the District of Columbia, which has only 800,000 people.

Mr. Chairman, in an effort to overcome these inequities we devised this new formula. One of the most difficult aspects of any Federal grant program is the determination of the formula for the allot-

ment of grant money. Everybody naturally wants as much of the money as he

In the case of the construction grant programs these allotments are made to the States. In the past the committee has been adamant that actual environmental needs, and only such needs, should be the basis of that allotment. On the other hand, there is a body of opinion that says that other factors such as population should be recognized. After all, it is the population that pollutes. That is a very important factor.

Needless to say, the advocates of either formula, whether they go to one extreme or the other, generally base their decision on what their particular State will actually receive under a particular formula.

In our system of government, compromise is the basis for reaching difficult

program or political decisions, and the key is fairness to all. That is what we have tried to do in resolving this particular issue, to be as fair and as equitable as possible to everybody concerned and get on with the national commitment of cleaning up the waterways of this coun-

This is a difficult formula, I recognize that. Some States do not receive as much as other States, but the needs of the country will be best met by this formula.

When we get into consideration of population as a factor, we come up with what is probably the most equitable on a national level to do the job and get about the task of cleaning up the waterways. Certainly the Representatives of a particular State can sit here and pick a fight with the formula or with these provisions, and it is just like any other issue dealing with percentages or figures; they can justify just about anything they want to justify.

But I implore the Members and plead with them to look upon this as a national commitment to go on and complete a national program to get the waters of this country cleaned up and as quickly as possible and to do it as equally and as equitably to everyone concerned as is

possible.

I urge defeat of the amendment.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. HARSHA. I will be happy to yield to the gentleman from New York.

Mr. OTTINGER. If the gentleman's problem is with correct ascertainment of needs-and obviously we will get the water cleaned up most effectively if we do apply the fund in accordance with need-then what is needed is better oversight of the application of the needs formula, not a change which adds population.

The CHAIRMAN. The time of the gen-

tleman has expired.

(By unanimous consent, Mr. HARSHA was allowed to proceed for 2 additional minutes.)

Mr. OTTINGER. Isn't yours a problem of getting the States to accurately ascertain their needs rather than inserting an irrelevant factor of population into the formula?

Mr. HARSHA. Let me say to my good friend, the gentleman from New York (Mr. OTTINGER) that initially when the needs test was applied, many States who had the capabilities of going ahead with the program, and there were only a few, one of which was the State of New York. went ahead and included in its needs every possible phase of the water pollution abatement problem. Included in this was the storm water issue. This is not now eligible for funding under the grant program due to the fact that it is such a tremendous problem in and of itself, and would alone entail billions of dollars. If we were to address the storm water problem in this bill alone it would take up about all that we have in here. There were other States that did not address the storm water problem and addressed solely the collector systems and the waste water treatment facilities, so their needs do not reflect this significant problem.

I realize that the State of New York does have a tremendous problem with storm waters but I believe we will have to address that specifically after a study and after we get into the issue of revising and going over the water that is involved

Mr. OTTINGER. I do not see how the introduction of population helps address

that kind of a problem.

Mr. HARSHA. It is because population is what is actually causing the problem. If we do not take that into consideration on at least a partial basis then we will never address the problem of pollution.

The CHAIRMAN. The time of the gen-

tleman has expired.

Mr. GINN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the allotment formula contained in the legislation before us. H.R. 3199, represents a compromise between two major factions-one group that wanted the construction grant funds distributed 50 percent on population and 50 percent on partial needs, and another group that wanted the money distributed 50 percent on partial needs and 50 percent on total needs.

Both factions had a good point-there is a relationship between the population in a State and the level of municipal

On the other hand, different States have different needs, and the cost of meeting these needs varies. For example, some States have major needs for treatment works and for collector sewers, while other States may need funding to meet the water quality standards and to correct combined sewers.

The needs are different and the costs are different and a population factor

simply will not reflect this.

Thus, Mr. Chairman, the formula in Section 7 of H.R. 3199 is a compromise between these two extreme positions. H.R. 3199 recognizes the importance of having a population factor while still giving a major emphasis to the real needs.

The formula in H.R. 3199 is exactly between these two extremes. The H.R. 3199 formula is one-quarter population, one-half partial needs and one-quarter total needs.

This formula is equitable and I believe that it fairly reflects the needs of the States.

Mr. Chairman, I rise in strong opposition to the amendment offered by the gentleman from New York (Mr. OTTIN-GER) and hope that it shall be defeated.

Mr. OBERSTAR. Mr. Chairman, will the gentleman yield?

Mr. GINN. I yield to the gentleman from Minnesota.

Mr. OBERSTAR. I thank the gentle-

man for yielding.

I think the key word in the gentleman's statement is "compromise." We spent a great deal of time in hearings last year in the 94th Congress and again this year receiving testimony on many aspects of the bill, including this matter distribution of funds. The committee did arrive at a fair compromise. We do have to recognize the concentrations of population in this country where large industries are located and where they are making the big discharges of waste water, and where these funds are needed for treatment. We also need to recognize the one-quarter total needs aspect of the formula, including collector and interceptor sewers, and that, too; is a problem. It is a matter of putting some of these problems in proper perspective. That is what this committee does-put all the many requirements in proper balance and with a responsive approach. I commend the gentleman and urge defeat of the amendment.

Mr. HARSHA. Mr. Chairman, will the

gentleman yield?

Mr. GINN. I yield to the gentleman from Ohio.

Mr. HARSHA, I thank the gentleman for yielding.

I think that during my colloquy I inadvertently said that one-half of the formula was based on population, and I was incorrect; it is one-quarter.

Mr. GINN. It is one-quarter.

Mr. HARSHA. But I do want to point out to the House that the House has already approved this formula in the supplemental appropriation bill which passed this House. That bill alluded to this very distribution formula, and the House by voting to approve the supplemental voted to approve this formula. Now the gentleman is in here several days later asking that it be changed

Mr. Chairman, I ask for defeat of the amendment

Mr. GINN. The gentleman from Ohio is exactly correct.

Mr. CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. Don H. CLAUsen, and by unanimous consent, Mr. GINN was allowed to proceed for 2 additional minutes.)

Mr. DON H. CLAUSEN, Mr. Chairman, will the gentleman yield?

Mr. GINN. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. I thank the gentleman for yielding.

Mr. Chairman, I rise in opposition to the amendment for most of the reasons stated by the gentleman from Georgia and the gentleman from Ohio. This formula recognizes properly that population should be included as a serious criterion. This formula also recognizes and gives emphasis to those needs which are currently being emphasized in the construction program, which are primary treatment, secondary treatment, interceptor sewers, and the more stringent treatment necessary to meet the water quality standards. This formula also goes one step further and recognizes the need for funds for collector sewers, correction of infiltration and inflow problems, as well as combined sewer problems

Regarding the statement of the gentleman from New York, that the formula will cause States to lose money, we know from the experience of implementing the program that there are many factors other than just an allocation formula that cause States to lose money. The committee amendment is fair, and I join in opposition to the gentleman's amendment.

Mr. GINN. I thank the gentleman.

In closing, Mr. Chairman, I would like to point out that I can certainly understand the gentleman from New York's concern. I should like to remind him that we have attempted to be of assistance to his great State in this legislation by drafting language in section 7(e) that will reinstate approximately \$400 million that would have lapsed in New York State were it not for the action taken by this committee.

Mr. ROBERTS. Mr. Chairman, I move

to strike the last word.

Mr. Chairman, I rise in opposition to this amendment and ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. OTTINGER).

The question was taken: and on a division (demanded by Mr. OTTINGER) there were-ayes 13, noes 32.

Mr. OTTINGER. Mr. Chairman, I demand a recorded vote, and pending that I make the point of order that a quorum

is not present.

The CHAIRMAN. Evidently a quorum is not present. The Chair announces that pursuant to clause 2 of rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears. Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its busi-

Does the gentleman from New York insist on his request for a recorded vote?

Mr. OTTINGER. Mr. Chairman, yielding to the sage advice of my senior colleague from New York (Mr. PIKE), who knows how to count better than I do, I withdraw my request for a recorded vote.

So the amendment was rejected. AMENDMENT OFFERED BY MR. ECKHARDT

Mr. ECKHARDT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ECKHARDT: On age 44, strike line 16 and all that follows through line 13 on page 45.

Redesignate the subsequent sections ac-

cordingly.

Mr. ECKHARDT. Mr. Chairman, I have additional copies of this very simple amendment here on the desk, if any

Member wishes to see it.

Mr. Chairman, this amendment would simply strike what is called the legislative veto device. It is contained on page 44, and it would require that any rule or regulation issued under authority of this act after the date of enactment of this section may, by resolution of either House of Congress, be disapproved in whole or in part if such resolution of disapproval is adopted not later than the end of the first period of 60 calendar days when Congress is in session. That is the guts of the amendment.

Now, Mr. Chairman, that means that

every single regulation of this agency under the act would be subject to legislative veto, and of course that means that every such provision would be delayed in its force for 60 days.

Now, I understand the argument behind the legislative veto, but if the legislative veto is to be applied, it must be applied reasonably and effectively. In the first place, there is no provision in this bill by which expedited procedure of the House or the Senate could be put into effect if the legislative veto is sought

to be applied.

That means, my friends, that in any instance where the legislative veto is sought to be applied, somebody is going to have to get up and move to discharge the committee from consideration of the matter. That means that this committee which has devised this bill is not going to have an opportunity to advise this House as to whether or not the action of the agency was in the committee's view a proper exercise of the authority delegated to this agency. We would then have to decide the matter ad hoc on the

We have had experience with that process under the Oil Allocation Act. We have not had any opportunity for deliberate consideration of whether FEA acted rightly or wrongly on motions brought on the floor without the advice of the committee, in that case the Interstate and Foreign Commerce Committee, that fashioned the legislation under which authority was delegated.

In fact, we have seldom, if ever, exercised our negative because we do not have the time or facilities to intelligently

examine the matter.

Let me show the Members what type of action would be subject to this veto under the present bill as written.

Section 301 of the Water Quality Act gives the administrator authority to make, under certain conditions, and modify effluent limitations. This is a very

technical subject matter.

Section 302 gives the administrator authority to apply additional effluent limitations where a point source would interfere with attainment of that water quality necessary to protect water supplies, fish, and other interests in a portion of the stream.

So we are called upon to decide whether the effluent is going to affect the fish. We in Congress are going to make that determination, are going to be called upon to judge whether the very technical and specialized decision of the agency

was good or bad.

In addition to that, that particular section 302 gives the administrator the right to waive these limitations where somebody comes in and shows that the social benefits are not equal to the cost. That would have to be reviewed. So even where the rule is to be modified in favor of a person under conditions where there is no real reason for or benefit from the rule, that question has to be submitted to us before an exception is made, and 60 days must elapse prior to the decision becoming final. And so on and so forth.

Section 303 gives the agency authority to make water quality standards and implement plans.

The CHAIRMAN. The time of the gentleman from Texas (Mr. ECKHARDT) has expired.

(By unanimous consent, Mr. ECKHARDT was allowed to proceed for 3 additional minutes.)

Mr. ECKHARDT, Mr. Chairman, section 304 provides information and guidelines; and in section (b) it says:

For the purpose of adopting or revising effluent limitations under this act the administrator shall, after consultation with appropriate Federal and State agencies and other interested persons, publish within one year of enactment of this title, regulations providing guidelines for effluent limitations.

That would have to be submitted to us for our consideration.

The next section which deals with this matter is section 306, National Standards of Performance. In section (B) under that section, it provides:

As soon as practicable, but in no case more than one year after a category of sources is included in a list under subparagraph (A) of this paragraph, the administrator shall proand publish regulations establishing Federal standards of performance for new sources within such category.

The categories include regulations for pulp paper mills, for paperboard, for meat, for dairy product processing, for grain mills, for canned and preserved fruits and vegetables, and on down the

So we are dealing with highly technical questions and purporting to decide whether the agency acted rightly in all of these most detailed provisions if we chose to exercise our authority to review.

The toxic and pretreatment effluent standards of section 307 would likewise be subject to such review.

To reach the absolute in ridiculousness, there is a provision in this act by which the toilets on boats can be regulated and Congress would reserve the right to exercise the function of latrine

inspector for marine operations. Mr. Chairman, if we take upon ourselves the duty to review every act of the water pollution control agency, we are not going to have time to do much else. I submit to Members that if review procedure of this type has any merit at all, it should be strictly limited to those types of rules which are statutory in nature, and should not be applied to the technical details of enforcing prohibitions against water pollution. This provision is not in existing law. This is a new and improvident addition in this bill and it should be stricken out.

Mr. Chairman, I hope that the amendment will be adopted.

Mr. LEVITAS. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Texas (Mr. Eck-HARDT), and I will ask the Members to follow me in what I say for just a moment.

This provision that is now in the bill was adopted by the House in the 94th Congress. This provision simply includes in this bill what we included on 10 other occasions during the 94th Congress, and by this provision we say to the administration, regardless of which party is in control, that the laws of this country

are to be made by the Congress of the United States and not by the unelected, anonymous bureaucracy. It is as simple as that.

If my friend, the gentleman from Texas (Mr. Eckhardt), does not believe that the rules and regulations which pour out of these bureaucratic departments downtown are laws, then I suggest he ask his constituents whether they have ever been told they could be punished with a fine or a civil penalty or even put in jail because they have violated a rule or regulation adopted by someone elected by no one.

This provision in the bill as it is now written simply provides that where we have a rule that has been adopted by an administrative agency which has the force and effect of law, someone elected by somebody will have an opportunity to say whether it is or is not consistent with the congressional intent and

whether it makes sense or whether it should be imposed upon the American people. The basic question is simply who makes the laws in this country.

Let me give the Members a classic example. We have been fighting for 2 years about section 404 of this very bill. Why? Not because the law provided that the Corps of Engineers could make the types of rules and regulations that they make, forcing every farmer in America to get a permit to dig a hole on his farm. It was because the Corps of Engineers issued a rule, a regulation, and if this provision had been in effect and the Congress by its exercise of a legislative veto could have acted, we would not now have to deal with this problem.

Mr. Chairman, I could give example after example. Indeed if there is any agency that merits the close scrutiny of Congress and deserves congressional review, it is the Environmental Protection Agency, because we have all had expe-

rience with it.

Mr. LAGOMARSINO. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from California.

Mr. LAGOMARSINO. Mr. Chairman, I would like to commend the gentleman on his statement, and I wish to associate myself with it.

As the gentleman has already pointed out, on some 10 occasions last year we adopted exactly the same provision to numerous authorization bills that were

before this House.

I think if there is any one thing that distresses the American taxpayer and the American voter more than perhaps even the attaching of nongermane riders by the Senate, it is this situation where administrative bureaus and bureaucrats are making the rules and regulations by which people must live and pay their taxes and carry on their daily activities.

Therefore, I rise in very strong opposition to this amendment. I would, if I may, like to add just one other thing,

and that is this:

We have this in the law already, and if the members of the committee will recall, those who were here last year, we used it. It is contained, for example, in the provision requiring the GSA to report back on what disposition should be made of the Nixon tapes and documents.

Mr. LEVITAS. The gentleman is eminently correct. Not only is there legislative veto provided in 129 other statutes, but during the 94th Congress we exercised a legislative veto, as the gentleman has indicated.

Mr. DON H. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Chairman, I want to commend the gentleman from Georgia for his opposition to the amendment and in asking that we retain the provision in the rule. I have worked with the gentleman as we designed a similar proposal for the Committee on the Judiciary last year. As I recall, it went through the Committee on Rules but got bogged down on the floor. It actually carried by a majority but since it was on suspension of the rules it did not carry.

Somehow we will have to bring the agencies to account and one way to do it is to include a statement telling the people downtown that the people up on the Hill are watching them.

Mr. LEVITAS. I thank the gentleman from California for his statement.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. Levitas was allowed to proceed for 2 additional minutes.)

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, if the gentleman from Georgia really wants to provide a means by which Congress may review these actions, why not go through the Committee on Rules and provide for some sort of shortened procedure for the House? Does the gentleman really believe that such a review on the floor of this House is going to be done? Does the gentleman think he will accomplish his purpose by such truncated language?

Mr. LEVITAS. No. 1, Mr. Chairman, I have got to acknowledge the fact that the bill which would provide for a comprehensive congressional veto has been referred jointly to the Committee on Rules and the Committee on the Judiciary. I hope that sometime during the early stages of the 95th Congress we will have an opportunity to deal with the matter. But, in answer to the gentleman's last question, let me say that I do so believe. I do believe this House could have dealt with Section 404 and the problem created by the Corps of Engineers and their regulations through that legislation. The only difference between that legislation and the legislation this House passes is that the bureaucrats are not hampered by any restrictions, they pass one sort and we pass another sort. We have the responsibility, it seems to me, to say to the American people that this is the law, if they violate it then they can be punished, or they can go to jail or they can lose funds. It is not the bureaucrats who have that responsibility.

I would say to my friend the gentleman from Texas (Mr. Eckhardt) for whom I have the greatest respect, that if this House retains the provision and defeats this amendment that we will so sensitize these bureacrats that they will write regulations that make sense and are workable, rather than the type we have seen all too frequently.

Mr. VOLKMER. Mr. Chairman, will

the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Missouri. Mr. VOLKMER, I thank the gentle-

Mr. VOLKMER, I thank the gentleman for yielding.

Mr. Chairman, there is one specific thing that I would like to bring out to the Members of the House.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. Volkmer, and by unanimous consent, Mr. Levitas was allowed to proceed for 2 additional minutes.)

Mr. VOLKMER. If the gentleman will continue to yield, I believe that perhaps with this language in the bill we could have more sane regulations when they know that there is a strong possibility that someone in the Congress will be looking them over.

Second, Mr. Chairman, I also think we have to agree with the gentleman from Texas, perhaps, that there are any number of regulations being issued and that it would be a monumental task to review all of them. But, perhaps is that not our own fault since we are the ones who produce so many agencies that pro-

duce so many regulations?

Mr. LEVITAS. Mr. Chairman, I believe that the point made by the gentleman from Missouri is very well taken and that is that we ourselves have created the problem we now have to deal with. But, let me say that I am sure the gentleman from Texas knows that this House would not have to deal with every single regulation that is issued. There are thousands of bills in the Congress and we do not deal with every one. Only those pieces of legislation which are the most important are dealt with. I believe we would do the same thing with regard to the regulations.

I am not concerned about the great workload. What I am concerned about is the great burden being placed upon the American people.

Mr. VOLKMER. The gentleman from Georgia then is willing to go ahead and review them?

Mr. LEVITAS. Not only that, but I would say with all respect that any Member of the Congress that is unwilling to take the time to deal with matters that so drastically deal with his constituents might well stop and think about whether he is earning his pay.

Mr. VOLKMER. Mr. Chairman, I ask to be associated with the remarks of the gentleman from Georgia.

Mr. FOUNTAIN. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from North Carolina.

Mr. FOUNTAIN. Mr. Chairman, I am happy to associate myself with the views of the gentleman from Georgia. I am not unsympathetic to the position that was raised by the gentleman from Texas but I believe this is something we should have done many, many years ago.

I am happy to be the coauthor of a

bill now pending in the House, and which I hope the Congress will pass that provides that legislation shall be written through the duly elected Representatives of the people. I think the legislation, if we can enact it into law, will have a salutary effect, to which the gentleman has referred, that would prevent these agencies from writing countless thousands of unnecessary regulations.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas (Mr. ECKHARDT).

The amendment was rejected.

AMENDMENT OFFERED BY MR. EDGAR

Mr. EDGAR. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EDGAR: On page 38, strike out everything after line 23 up to and including line 2 on page 43, and insert in lieu thereof the following:

SEC. 16. Section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) is amended by adding at the end thereof the following new subsections:

(d) For purposes of this section, the following shall not be considered discharges of dredged or fill material:

"(1) plowing, cultivating, seeding, and harvesting for the production of food, fiber,

and forest products;
"(2) maintenance, including emergency reconstruction of recently damaged parts, of currently serviceable fills such as dikes, dams, levees, groins, riprap, breakwaters, causeways, bridge abutments or approaches, and other transportation structures;

"(3) maintenance of irrigation and drainage ditches and small dams that create stock

ponds and farm ponds.

"(e) No permit shall be required under this Section or Section 402 of this Act for discharges of dredged or fill material necessary to construct farm ponds, stock ponds, and debris basins.

"(f) consistent with the requirements of through the Chief of Engineers, may issue general permits for discharges of dredged or fill material where such activities are similar in nature and cause only minimal adverse environmental impact. Such permits shall contain such conditions as necessary to achieve the purposes of this Act and shall be for a maximum period of five years. A general permit may be revoked or modified if it is determined that the effects of the permitted activities are such that individual permit treatment is required consistent with the goals of the Act.

"(g) The Secretary shall submit a detailed report to the Congress on or before December 31, 1978, on the implementation to such date by the Department of the Army of the provisions of this Section. This report, which shall be prepared in conjunction with the Administrator, shall detail the progress made in implementing the requirements of this Section and the objectives of this Act, shall, in consultation with the Secretary of Agriculture, assess the impact of this section on the rural, agricultural, ranching, and forestry community, and shall provide recommendations on the manner in which State and local agencies can become more directly responsible for fulfilling the requirements of this Section in a manner consistent with the purposes of the Act."

Mr. EDGAR (during the reading). Mr. Chairman, I ask unanimous consent that the remainder of the amendment be considered as read and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to

the request of the gentleman from Pennsylvania?

There was no objection.

Mr. EDGAR. Mr. Chairman, there has been a great deal of controversy since May 6, 1975, when the Army Corps of Engineers put out a press release which scared everyone-the farmers, the loggers, the ranchers. These particular industries began to be very concerned about this section 404 program. They immediately began to respond and to react to this misleading and poorly worded press release, which has since been repudiated by the corps. Suddenly it has been blown up until 2 years later we find ourselves here on the House floor with section 16 in this bill. I find section 16 to be very inappropriate in light of the fact that section 404 is basically working, that section 404 as it presently is operating with the general permit program of the Army Corps of Engineers is not overly bureaucratic, and that the rules and regulations that have been promulgated clearly exempt normal farming, normal agricultural activities, and normal logging activities.

The amendment which I am offering as a substitute to section 16 clearly spells out in the beginning that those particular practices such as plowing, cultivating, seeding, harvesting, construction of groins, ripraps, and break-waters, farm ponds and stock ponds, and similar structures needed during routine operations will not be regulated by sec-

tion 404.

Therefore, I believe it is sensitive to the anger and frustration of those farmers who were concerned about normal farming, normal agriculture, and normal logging operations, but are not aware that corps' regulations exempt these activities.

The second thing that my amendment does is it puts statutory language in the law to provide for something that the Army Corps of Engineers is already doing-providing for a general permitting program which obviates the need for the large numbers of individual permits that frighten so many farmers and small businessmen.

Finally, my amendment provides that a report be submitted to Congress by December 31, 1978, that would specifically outline how the 404 program is working.

I want to bring to the Members' attention several pages of additional views that have been submitted in the report of this bill by my colleague, the gentleman from Pennsylvania, (Mr. GARY A. Myers) and myself.

If Members will note, in the report on page 52 we underscore how the section 404 program is working. We analyze the court decisions and other legal controversies. We point out that on page 131 of the House Public Works Committee report in 1972, this very committee defined what it meant by navigable waters when it said this:

One term that the committee was reluctant to define was the term "navigable waters." The reluctance was based on the fear that the interpretation would be read narrowly. However, this is not the commit-tee's intent. The committee fully intends that the term "navigable waters" be given

the broadest possible constitutional interpretation unencumbered by agency determinations which have been made or may be made for administrative purposes.

Similar language appears in the conference report accompanying the Federal Water Pollution Control Act. And we point out that the act itself clearly defines "navigable waters" as "waters of the United States including the territorial seas."

We go on to cite what we believe is basically an overreaction to the specific language of section 16, and provide an appendix of valuable legislative history to the section 404 issue. First we share President Carter's wetlands statement. Then we go on to share several statements by the Army Corps of Engineers and EPA outlining the fact that section 404 is in fact working.

I would commend each of you to read the report carefully and read the additional views and find out exactly what this section 404 program does. I believe after Members read that carefully, they will discover we are moving a little too hastily in proposing major catastrophic changes to section 404.

What we should do is move more cautiously and provide exemptions for normal farming, ranching, and silvicultures.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

(By unanimous consent, Mr. EDGAR was allowed to proceed for 3 additional

Mr. EDGAR. Mr. Chairman, I think we should proceed very cautiously and carefully and take a closer look at section 404. It would be very unfortunate if we failed to protect our very valuable wetlands, and if we failed to recognize how important those wetlands are in serving as natural wastewater treatment plants and flood protection. If we do not recognize the fact that these wetlands are at the heart of our food chain and provide this Nation with a tremendous food source, we have made a mistake.

I think it is important for us to provide business and industry the opportunities for them to do their vital work. But we can at the same time provide responsible protections for the very precious wetlands of our United States which are being destroyed at an alarming rate.

I hope that we would accept the language which we carefully drafted and carefully reviewed by the staff in the EPA and the Army Corps of Engineers and in the administration.

I urge my colleagues to accept my compromise substitute to section 16 of H.R. 3199.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

(On request of Mr. OTTINGER, and by unanimous consent, Mr. Edgar was al-lowed to proceed for 2 additional lowed to minutes.)

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. EDGAR. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would just like to congratulate the gentleman on a very sensible amendment and a very eloquent statement in support of it. I think his amendment provides for an adequate protection of the wetlands and at the same time it eliminates the fears that have been sent abroad by the Corps of Engineers very lately. This would, I am afraid, affect the normal farming processes. I hope the amendment will receive widespread

Mr. HAMMERSCHMIDT. Mr. Chairman, I move to strike the requisite number of words and I rise in strong opposition to the amendment offered by the gentleman and in strong support of the amendment to section 404 of the Federal Water Pollution Control Act that is contained in section 16 of H.R. 3199. This provision restates that it is the intent of the Congress that the jurisdiction of the Corps of Engineers to regulate the discharge of goods and fill material be limited to what it always has been; namely, regulation of only "navigable waters." We are not changing the jurisdiction of the Corps of Engineers, we are merely restating the intent of Congress as to what their jurisdiction really is. This is a point that many people seem to have overlooked even though it was clearly reemphasized by my friend and distinguished colleague (Mr. BREAUX), a member of the committee and the author of this amendment contained in section 16.

A second point, Mr. Chairman, that I think needs to be raised is the question of what are the roles of the States on the subject of wetlands preservation.

I would submit, Mr. Chairman, that section 404 is not the appropriate provision for regulating our Nation's wetlands. We already have a statute to address this problem, the Coastal Zone Management Act. Under this act, the States have developed plans to regulate activities impacting on the wetland resources. I would argue, therefore, that to make section 404 a "wetlands protection act" would be duplicative and a usurpation of the States rights that we delegated to the States under the Coastal Zone Management Act.

I, therefore, urge, Mr. Chairman, my colleagues to rise in support of section 16 of H.R. 3199 and reject the contention that we are taking away Federal protection of our wetlands. I urge the defeat of this amendment.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. HAMMERSCHMIDT. I yield to the

gentleman from Pennsylvania.

Mr. EDGAR. Mr. Chairman, I appreciate the gentleman's statement. Let me see if I understand the gentleman correctly. It is accurate to say that the gentleman is stating that the definition as provided on page 39 of the bill does not change; it simply restates the committee's position of 1972.

Mr. HAMMERSCHMIDT. Only as it relates to the Corps of Engineers historical jurisdiction over navigable waters; that is my contention, yes.

Mr. EDGAR. Mr. Chairman, if the gentleman will yield further, it seems to me as I have read that language carefully it restricts even further than the court decision the definition of navigable waters way beyond what was suggested on

page 131 of the committee print and way beyond the section 101 goal that is provided in the original intention of the act.

I was wondering if the gentleman could clarify for me how the gentleman believes that this language, in fact, reinstitutes the initial committee intention?

Mr. HAMMERSCHMIDT. Well, it is my contention and my belief that the Congress intended for the Corps of Engineers to limit their jurisdiction over navigable waters to be what has been traditionally navigable waters. I think that was the intent of Congress. I recall that from my discussions and colloquies within the committee and the debate that has gone on here.

Mr. Chairman, I yield to the gentleman from Louisiana (Mr. Breaux), since this is the gentleman's original amend-

Mr. BREAUX. Mr. Chairman, I think the distinguished gentleman from Arkansas is referring to what the gentleman has had and the majority of the Members of Congress had as the original intent, to require a permit for navigable waters that were involved in interstate and foreign commerce.

I think the gentleman is now talking about language that will put in proper perspective what we intended when we first voted for the 1972 act. It was intended and that is how the original regulations were set out, it was intended to be limited to waters involved in interstate and foreign commerce.

Mr. HAMMERSCHMIDT. Mr. Chairman, I concur in that.

Mr. DON H. CLAUSEN. Mr. Chair-

man, will the gentleman yield?

Mr. HAMMERSCHMIDT. I yield to

the gentleman from California, Mr. DON H. CLAUSEN. Mr. Chairman, under section 16(j) there is a dele-

gation to the States. I would read this:

"(J) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section relating to the adjacent wetlands in that State if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause of such a delegation.

Mrs. SMITH of Nebraska. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to this amendment.

I would like to make just one point in addition to the other points made that is, for one thing, that it will not destroy the wetlands. I have a list of 13 Federal laws which protect the national wetlands. I think that our critics are not right on target in feeling this will destroy the wetlands. We have not only the Wetlands Protection Act, but we have the Coastal Zone Management Act, the Watershed Protection and Flood Prevention Act, and a host of others to protect our wetlands.

Mr. Chairman, last year the House voted 234 to 121 to limit the Army Corps of Engineers' regulatory program for dredge and fill activities in rivers, lakes, streams, and wetlands. In the final days of the 94th Congress, however, the House and Senate conferees deadlocked over the extent of changes needed in the program, leaving us to resolve the issue. I have introduced, with 13 cosponsors, legislation which is identical to section 16 of H.R. 3199. This would confine the corps' permit programs to waters that are now being used or could be used in the future for commercial water transportation. In addition, our language would allow delegation of the permit authority to State agencies that are willing to assume those responsibilities.

The military's jurisdiction over America's waterways is limited by the terms of the original act, Public Law 92-500, section 404, to "navigable waters." Although the term "navigable waters" would appear to restrict the corps to waters deep enough and wide enough to afford passage of ships, the definition of that term has a long and complex history. If any of my colleagues are interested in this sad commentary on the expansion of Federal authority, I would invite them to read my statement on page 6568 of the March 7, 1977 RECORD. I have a few copies of that statement with me now if you are immediately interested.

Over the years, the courts developed a wise definition for "navigable waters" as that term appeared in the laws which first authorized the corps to issue permits for activities involving our Nations' waterways. This workable definition confined the corps to those activities which might actually have an effect on waters which carried interstate commerce. Were it not for a March 25, 1975, District of Columbia District Court decision, the corps would administer section 404 along with its other permit programs within those workable geographic boundaries. But the court's ruling forced the Army to extend its regulatory tentacles into all the "waters of the United States." Pursuant to that decision the Army issued regulations, effective July 1977, which regulate all waters that flow more than 5 cubic feet per second. To be frank, that bloated definition of navigability may make my bathtub tap a "navigable water."

Today we must define clearly the parameters of this 404 permit program by defining, for once and for all, "navigable waters." The Congress must do what only the Congress can do: clarify its intent. Surely the Congress does not intend to make a stream 2 inches deep navigable. Nor do we intend to make every watering pond in the Nation navigable. Nor do we intend to make every source of irrigation water navigable. Nor do we intend to require 20,000 permits or more a year from agriculture. Instead, I submit, we logically intend to support the language of section 16 which clearly establishes the corps' appropriate authority over waterways used or susceptible to use in interstate commerce.

I feel that section 16 is the best resolution of this entire controversy because it insures agriculture an unrestricted use of water resources, perpetuates the State's privilege to dictate water policy, and avoids needless expense.

Since the corps' release of May 6, 1975,

in response to the Callaway decision which stated in part:

Under some of the proposed regulations, Federal permits may be required by the rancher who wants to enlarge his stockpond or the farmer who wants to deepen an irrigation ditch or plow a field, or the mountaineer who wants to protect his land against stream erosion.

There has been great concern over the impact such regulation could have on crop production. Although the corps was quick to retract its May 6 statement and promise moderate and reasonable implementation of its regulations; when even a potential exists to put Federal controls on agricultural water, that potential is a threat to the Nation's food supply and the livelihood of thousands of farmers.

This is particularly distressing because even conservation measures could require a Federal permit under the corps' expansive jurisdiction. Ironically, conservation measures improve water quality by preventing sedimentation. farmer, who has for years voluntarily installed and maintained these important water purification and conservation systems, stands to be penalized for continuing these beneficial practices.

It must be undisputed that a farmer can fill an irrigation ditch or divert a stream on his own land without a Federal permit. H.R. 4231 would insure by law that normal farming operations would be free from corps intervention.

The right of States to govern water policy is traditionally accepted. Protection and allocation of water necessarily demands a careful balancing of many important social and economic interests. It should be the State's role to weigh these concerns at a local level where the questions are best understood and handled. Many States, Nebraska included, have sensed such a prominent responsibility to determine water policy that their constitutions set forth specific guidelines for water resource management. The dominant role of the States becomes even more evident when a lake or stream is entirely within one State. There is great wisdom in leaving this authority with the States, where it belongs.

Finally, this bill would prevent the expenditure of millions of dollars toward misguided pollution control programs. The Army Corps came before the Appropriations' Public Works Subcommittee recently to request an increase of 202 Federal employees and added funds to administer the permit programs. The corps' representative, General Morris, clarified that those 202 are needed to merely keep pace with the present programs; anticipated growth will require still more personnel. These employees, at taxpayer expense, are needed to merely handle the paperwork, not to mention the tremendous expense and delay for private businessmen and farmers. In both human and monetary cost, the current program under swollen Federal jurisdiction does not merit continuance.

To put this all in focus, I recommend that we examine the number of permit applications received by the corps under its permit programs. The year 1974 was the first year applications were received under the 404 program. During that year 2,878 were filed. At that time the corps was not operating under its expanded jurisdiction, therefore these permits were combination section 10 of the 1899 act and section 404 permits. In 1975, 4.353 were requested. In 1976, the corps moved into a larger jurisdiction and 7,734 were filed. In just 3 years the 404 permit program had tripled. All of these permits have been requested for traditionally navigable waters or their tributaries. Imagine what will happen in July 1977 when the corps assumes jurisdiction over all waters which flow at more than 5 cubic feet per second. The American Farm Bureau's estimate of 50,000 annual permits from agriculture may be far too conservative. No wonder General Morris was careful to state that future growth of the corps permit authority will require additional personnel.

Finally, let me stress one thing that this legislation would not do. It would not, as some critics charge, destroy this Nation's valuable wetlands. Removing some wetlands from the corps jurisdiction does not leave them without protection, for there is an ample body of Federal and State law designed to preserve wildlife habitats and wetlands. Although my list may not include them all, allow me to isolate 13 different laws protecting wetlands:

ALTERNATIVE LAWS AND PROGRAMS ALREADY DESIGNED TO PROTECT WETLANDS

1. The Water Bank Act.

2. The Rural Development Act.

3. The Coastal Zone Management Act.

The Marine Protection Research and Sanctuaries Act.

5. The Appalachian Regional Development Act.

6. Watershed Protection and Flood Prevention Act.

7. The Land and Water Conservation Fund

8. The Federal Aid in Fish Restoration Act. 9. The Federal Aid in Wildlife Restoration Act

10. The Migratory Bird Conservation Act. 11. The Fish and Wildlife Coordination Act.

12. Great Plains Conservation Program.

13. The Wetlands Acquisition Act.

The stakes in legislation such as this are especially high because of the pressing need for U.S. farmers to join all farmers in the world in an all-out attempt to double food production in the next 25 years. The population of the Earth is expected to nearly double by the year 2000—jumping from 4 to 6 or 7 billion people. Some 86 percent of this increase will take place in the less developed countries. As it is, nearly 500 million people currently suffer from chronic malnutrition. And 2 billion people, one-half of the world population, exist on a per capita income of less than \$200 a year. The American farmer has accepted the challenge of feeding the world. But today's farmer cannot afford to operate his business under rules and regulations that inhibit his full production. The image of the environmentally destructive farmer is false. In issues such as this, we should honor the rural tradition of voluntary action: Let the farmer continue his conservation practices. Let him maintain his production without unnecessary permits. Let him feed the world.

I wholeheartedly endorse the language

of section 16 of H.R. 3199 and urge its immediate adoption.

AMENDMENT OFFERED BY MR. CLEVELAND AS A SUBSTITUTE FOR THE AMENDMENT OF-FERED BY MR. EDGAR

Mr. CLEVELAND. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows: Amendment offered by Mr. CLEVELAND as a substitute for the amendment offered by Mr. EDGAR: Page 38, strike out line 24 and all that follows down through and including line 2 on page 43 and insert in lieu thereof the following:

SEC. 16. Section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) is amended by adding at the end thereof the

following new subsections:

(d) The discharge of dredged or fill material-

"(1) resulting from normal farming, silviculture, and ranching activities, such as plowing, cultivating, seeding, and harvesting, for the production of food, fiber, and forest products;

"(2) placed for the purpose of maintenance (including emergency reconstruction) of (A) currently serviceable structures such as dikes, dams, levees, groins, riprap, breakwaters, causeways, and bridge abutments or approaches, and (B) transportation structures; or

"(3) placed for the purpose of construction or maintenance of farm and stockponds and irrigation ditches and the maintenance of drainage ditches.

is not prohibited by or otherwise subject to

regulation under this Act.

(e)(1) Consistent with the requirement of subsections (a) through (c) of this section, the Secretary of the Army, acting through the Chief of Engineers, may issue general permits for discharges of dredged or fill material if the activities to be conducted under the permit (A) are similar in nature, (B) would cause only minimal adverse environmental impact is performed separately, and (C) will have only a minimal adverse cumulative effect on the environment. Such permits shall contain such conditions as necessary to achieve the purpose of this Act and shall be for a maximum period of five years. A general permit may be revoked or modified by the Secretary of Army if he determines that the cumulative effects of the permitted activities are such that an individual permit is required for one or more of the activities for which such general permit was issued, except that no general permit shall be revoked or substantially modified without opportunity for public hearings.

(2) The Secretary of the Army, acting through the Chief of Engineers, shall distribute by public notice a list of all categories of activities proposed for processing

by means of general permits. "(f) The Secretary of the Army, acting through the Chief of Engineers, shall submit a detailed report to the Congress on or before December 31, 1977, on the implementation to such date by the Department of the Army of the provisions of this sec-tion. Such report, which shall be prepared with the Administrator, confunction shall (1) detail the progress made in implementing the requirements of this section and the objectives of this Act, (2) assess State programs that are similar to this program, and (3) provide recommendations on the manner in which State and local agencies can become more directly responsible for fulfilling the requirements of this section in a manner consistent with the purposes of the Act.".

Mr. CLEVELAND (during the reading). Mr. Chairman, I ask unanimous consent that this substitute amendment be considered as read and printed in the

The CHAIRMAN. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

Mr. CLEVELAND. Mr. Chairman, the substitute for the Edgar amendment is known as the Cleveland-Harsha amendment. This is an amendment that was prepared last year. Some may ask why it is necessary to have an amendment as similar to the Edgar amendment offered as a substitute. I want the RECORD to show, so that not only the members of this committee, but the Members of the House and those who read the RECORD, will have an opportunity to read the two amendments and the discussion of them.

Last year, the Cleveland-Harsha amendment was prepared in consultation with a number of environmental organizations. After an appropriate approach to the so-called 404 problem was drafted, this amendment was then run through the whole array of downtown bureaucracy—the Corps of Engineers, the Environmental Protection Agency, the Department of Agriculture, the Department of the Interior, et cetera. This amendment has been thoroughly examined and thoroughly scrutinized.

This Cleveland-Harsha amendment, we feel, is the proper approach to the so-called 404 problem. In the discussion on the floor of the House last year when the Cleveland-Harsha amendment was offered, our distinguished colleague from Texas (Mr. Wright) offered a substitute. I must compliment him on the manner in which he argued for his substitute, because the arguments that he used for his substitute, which was adopted by approximately a 2 to 1 vote in the House, were precisely the arguments that had been prepared and were offered in support of the Cleveland-Harsha amendment. There was a great deal of confusion, and in fact surface similarities insofar as both contained statutory exemption from permit requirements for farming, et cetera, and general permits. The arguments for the Cleveland-Harsha amendment were adroitly used in support of the Wright substitute.

One may say, what would be the difference between the Wright substitute and the Cleveland-Harsha amendment if the same arguments could be used? I will tell the Members what the difference is. It is a rather startling difference; it is a very startling difference. First of all, the Cleveland-Harsha amendment takes care of the farmers, takes care of the loggers, takes care of the ranchers, takes care of all the idiocies that came out of the early Corps of Engineers announcements and early press releases. We take care of most conservation and forestry programs. They are all exempt.

This year we have taken from Mr. EDGAR'S amendment the wise suggestion that there be a study of States capabilities to qualify for the State certification principle elsewhere in this bill, and the corps could then be empowered to turn over to most States a vast amount of the task at hand.

But again, we come back to the question what is the difference? Here is the difference, the way I see it-and it is a big difference. Under the Wright substitute, which is now embedded in the legislation that we are considering, 80 percent-80 percent of the wetlands, the marshlands-are placed by the definition used for navigable waters beyond the reach of Federal protection. Even more startling, as far as streams are concerned, 98 percent of them are placed beyond the protection. So there is a difference. There is a big difference: there is a substantial difference.

It is for that reason, I think the REC-ORD should clearly show, that when the Cleveland-Harsha proposal was made last year and was approved, as I say, by many environmental groups and by the entire administration it was approved and it was approved for a good and

sound reason.

This is not to in any way say that the Edgar amendment is unsound, but it has not had the history of the Cleveland-Harsha amendment.

The CHAIRMAN. The time of the gentleman from New Hampshire (Mr.

CLEVELAND) has expired.

(On request of Mr. Cohen and by unanimous consent, Mr. CLEVELAND was allowed to proceed for 2 additional minutes.)

Mr. COHEN. Mr. Chairman, will the gentleman yield?

Mr. CLEVELAND. I yield to the gentleman from Maine (Mr. COHEN). Mr. COHEN. I thank the gentleman

for yielding.

Mr. Chairman, some States, such as Maine, have very progressive environ-mental laws that effectively regulate certain wetlands within their borders. In my judgment, parties operating in these areas should not be required to acquire Federal permits, general or otherwise, if they comply with the Federal law. Would this bill, if the gentleman's amendment is adopted, permit an arrangement between the corps and the State whereby the meeting of stringent State requirements would effectively constitute the meeting of the Federal requirements? In other words, would a party be required to obtain a Federal permit even if by meeting State requirements the party satisfies the intent of the Federal law?

I know we are all interested in reducing bureaucracy and redtape, and it seems to me unnecessary to duplicate the State-required paperwork were such an exemption provided for in the amend-

Mr. CLEVELAND. Under the Cleveland-Harsha permit provision, that might be accomplished. Certainly that is my intent.

Mr. COHEN. But would it be?

Mr. CLEVELAND. For me to tell the gentleman what any agency of Government is going to do would be foolhardy in the extreme. I think that under the Cleveland-Harsha permit provisions, it might be done. As a result of the study provision it is even more certain that eventually it will be done, though additional legislation might be necessary.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman. I would like to take this time to try to clarify and put into proper perspective where we are, so far as the whole question of section 404 is concerned.

What we have now pending is an amendment to the legislation contained in the bill in a substitute amendment to that amendment. I, basically, think, and I think both of the authors will agree, that there is not a lot of difference between the amendment offered by the gentleman from Pennsylvania and the substitute amendment offered by the gentleman from New Hampshire (Mr. CLEVELAND)

I think, basically, they do the same thing. Let me explain, if I may. The Water Pollution Control Act says that anybody who wants to do any dredge and fill activity in any navigable waters of the United States is going to have to get, before he can do that, a permit from the Army Corps of Engineers, the Federal permit.

The district courts here in the District of Columbia took that on a case, and said, "Well, Congress, when you said you need a permit for all activities in navigable waters, you really meant you needed a permit for dredge or fill activities in all waters of the United States."

And right now we are under a threephase program to require a permit for any dredge or fill activities in any waters of the United States. So I offered an amendment which was worked on and improved by the gentleman from Texas WRIGHT), which became the Wright-Breaux amendment, which was adopted by this House last year by a 2to-1 margin, and that is what is contained in the legislation pending before us today, and which the amendment is trying to take out.

Let me tell the Members how we docided to approach the problem, why our method is a lot more preferable.

They are, I think, using a number of exemptions saying that you are not going to need a permit if you are engaging in this kind of activity, that kind of activity, or what have you. This said you would not need a permit if you are engaging in normal activity, silviculture, and that type of activity.

But the amendment is defective because it does not say what areas we are

going to need a permit in.

Here is what the legislation says in the bill before us and why I think it should be kept in there:

First of all, we start out by defining what is "navigable." Before we know what we can exempt from a permit, we have to know what we need a permit for in the first place, so we need a definition of "navigable." It is contained on page 39 of the bill we are working on, and it says you are going to need a permit if it is navigable, and this is what "navigable" means. We take out the historical definition of "navigable," because we do not think it is necessary for anyone to get a permit for a body of water which is not navigable today but which might have been navigable back in 1700 when

the fur trappers were using it. Yet that is what the original definition said.

So we define "navigable," and then we add something. We say that you are also going to need a permit for any dredge and fill activity that is going to be carried on in any adjacent wetlands or areas contiguous to those navigable waters. So

we extended it in that sense.

So they are going to need a permit if it is navigable under that definition, and they need a permit from the Army Corps of Engineers if it is activity in any wetlands adjacent or contiguous to the navigable waters. That is true if it is salt wetlands or if it is fresh water wetlands; they are also going to need a permit

It is not correct to say that a permit is needed in 80 percent or 90 percent of all the wetlands. This is not a correct statement. If we want to stretch it out and measure it in miles, we might be correct, but I say that when we measure a 5-foot stream and simply because it might be 500 miles long and we say we ascertain the 80 percent by that measurement, that is to me not a proper argument. That is not what we should be concentrating on.

So, as I say, we redefine "navigable," and we add "adjacent wetlands" to that and say this is where we need a permit. Then we take the features from the Cleveland amendment and the features from the Edgar amendment and say "All right, these are the exceptions." There is

no real disagreement on that.

So I think that what we have in the committee print is a compromise. It was the Wright-Breaux compromise adopted by the Congress last year, and if any Member says, "Well, we ought to compromise and split the difference," I say it has already been done. I think that what we have to come up with is a more rational approach.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. BREAUX) has

expired.

(On request of Mr. Tucker and by unanimous consent. Mr. BREAUR was allowed to proceed for 3 additional minutes.)

Mr. TUCKER. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Arkansas.

Mr. TUCKER. Mr. Chairman, I appre-

ciate the gentleman's yielding.

Mr. Chairman, I would like to ask what would happen in the event that a large landowner was preparing a road, for example, for a logging operation. If a large landowner had a logging operation already and decided to construct a road across a watershed which blocked off, let us say, 15 or 20 small streams in the watershed which individually have no significant impact whatsoever on the navigable stream, but taken together represent a very substantial amount of flow off the watershed, what provision of law protects the watershed in that event?

Mr. BREAUX. Mr. Chairman, if I interpret the gentleman's proposition correctly, he is talking about an area that is clearly a wetland area which would fall under the bill, and then he wants to know whether, because there is a logging operation involved, it would require a permit?

Mr. TUCKER. No. Let us say we are in watershed area that does not fall within a wetland classification as defined in the bill. Let us say it is beyond that, but the water flows into a navigable stream. What protects the watershed area? What provision of law would protect it if the committee's proposal is adopted?

Mr. BREAUX, Mr. Chairman, I will say to the gentleman that, as he has stated, it is not an adjacent wetland and it is not a navigable body of water, so it would not be covered. However, it would probably be covered if there is a major Federal action involved. It would be covered by the national environmental policy, and they would have to do an environmental impact report on that type of project.

If there is not a major Federal action involved, it would probably not be covered, but if there is a watershed project or it involves a watershed, it would be covered by the national environmental policy, so you would need an environmental impact report before you could carry out that type of operation.

Mr. Chairman, I will recapture some of my time, and I thank the gentleman from Arkansas (Mr. Tucker) for getting

me extra time.

Mr. Chairman, I believe that we have a proper compromise contained in the bill before us today. It protects adjacent wetlands and navigable waters. It protects all navigable waters by requiring a permit for any activity in that area, and it takes into account the exceptions being proposed by the substitute and by the amendment. I think we have a good pact. and let us stick with it.

Mr. Chairman, I ask that both amend-

ments be rejected.

Mr. GARY A. MYERS. Mr. Chairman. I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I rise in support of the Cleveland amendment. I support the Edgar amendment, and in the spirit of compromise I support the Cleveland

amendment.

I think we should be aware of the fact that both the Corps of Engineers and the EPA have expressed a need for this type of legislation so that they can have substantial control over the effects on wetlands, not only coastal wetlands but on internal wetlands as well. If we fail to recognize by not making substantial changes in this provision away from what is presently in the bill, we do, in fact, ignore our responsibility to the tremendous amounts of wetlands, no matter how you measure them, by mileage or some other standard. It is important to realize that we are debating a bill in which we are attempting to upgrade the general quality of our water and we must realize that the retrofitting of good environmental practices is far more expensive than preserving the integrity and the environmental quality of wetlands to begin with.

We should not ignore the fact that the Cleveland and Edgar amendments virtually answer all the concerns of most of our constituents about the activities the corps was going to take. It would seem to me that very few of us would have very many complaints in our districts by accepting either one of the amendments. They both address almost in totality the concerns that all individual farmers are going to have, and for the individual loggers, and so forth. I think both of these amendments are the answers that we were struggling for last year.

I oppose the amendment that is now in the bill and ask for support of the Cleveland-Edgar amendments.

Mr. EDGAR. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Harsha-Cleveland substitute.

Mr. Chairman, there may be only two Members in the room who understand the difference between the Cleveland-Harsha substitute and the Edgar amendment. I would just share, very quickly, what the major difference is and indicate why I also support the Cleveland-Harsha substitute to the Edgar amendment.

It is clear and correct what the gentleman from New Hampshire (Mr. CLEVE-LAND) has said that, in fact, the language of his amendment was carefully drawn by the last administration. It would simply exempt from both section 402 and section 404 the normal operations of farming silviculture, ranching, logging, and other things, with some technical amendment changes. That is the substance of it.

The Edgar amendment simply focuses more on section 404 alone. In section 402 the permitting is done by the Environmental Protection Agency and in section 404 the permitting is done by the Army Corps of Engineers. But I believe with the exception of exemptions under section 402, the Cleveland-Harsha-Edgar-Myers amendments are essentially the same. There have been some technical changes made after informal consultation with staff in the executive branch. But the Edgar-Mineta-Myers and the Cleveland-Harsha amendments have the same very important focus.

I would like to direct the attention of the Members to the text of a letter received by Jennings Randolph in the other body from the Acting Administrator of the Environmental Protection Agency, at the request of Senator Ran-DOLPH which describes the importance of the section 404 program, and there is indicated in the heart of this letter, the

following:

The permit program is our only direct control over discharges of dredged or fill material. Such discharges can irrevocably destroy critical aquatic areas including swamps, marshes, and submersed grass flats that play a valuable role in maintaining the chemical, physical and biological integrity of our water resources. If conserved, these resources can continue to be of value by providing: (1) high-yield production of food for aquatic animals; (2) spawning and nursery areas for commercial and sports fish; (3) removal and recycling of pollutants; (4) recharge of surface and underground water supply; (5) nesting and winter areas for waterfowl; and, (6) natural protection from flood and storms

It goes on to describe the general permit program. It clearly indicates that in November 1976, when this letter was sent, after this House passed H.R. 9560, the last Water Pollution Control Act amendments of the 404 program is working. We approved section 16 of this bill last year without having the benefit of these letters from the corps and EPA.

I would again urge my colleagues to look carefully at the discussion—additional views of Mr. Meyers of Pennsylvania and myself which appear in the report accompanying H.R. 3199. I would ask each Member to weigh carefully the statements of the Army Corps of Engineers and the EPA, and I urge that the Members support the amendment in the form of a substitute offered by my colleague, the gentleman from New Hampshire (Mr. CLEVELAND).

Mr. COHEN. Mr. Chairman, will the

gentleman yield?

Mr. EDGAR. I yield to the gentleman from Maine.

Mr. COHEN. I thank the gentleman for yielding.

Is it the gentleman's understanding that under the Cleveland-Harsha amendment, or under the gentleman's amendment, that the corps could delegate to the States the responsibility for enforcing laws which are currently on State books or might be put on State books without the necessity of getting State permits as well as Federal?

Mr. EDGAR. The language of the Edgar amendment provides for a study to be brought forward to Congress with specific recommendations of how States could become more directly responsible for fulfilling the requirements of section 404. There is similar language in the Cleveland-Harsha amendment.

The CHAIRMAN. The time of the gen-

tleman has expired.

Mr. WRIGHT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think there probably has been sufficient debate. Most Members understand what is involved. Let me give just a brief recapitulation.

In 1972 the Congress enacted a very ambitious water cleanup program. One of the provisions of that bill called for permits to be obtained for any work of a construction type that would be done in the navigable waters of the United States.

The Court interpreted that to mean all the waters of the United States—all the waters. Pursuant to that interpretation, the Corps of Army Engineers wrote a series of regulations. Those regulations are 35,000 words long.

Before Members vote for any amendment to this portion of the committee bill, they ought to know what is in those regulations. Those regulations would require that anybody who intends to perform any work that involves any impoundment of water—on private property—any impoundment of water—would have to get a permit from the Army.

Anybody who would do any construction work on any land that is periodically inundated by water—the regulation does not say what that means; it does not say whether "periodically inundated" means once every 2 weeks, once every 6 months, or once a year—would have to get a permit from the Army.

Anybody who would do any work on

any body of water which is used by any interstate traveler for recreational purposes would have to get a permit. This means that if one is going to visit his Uncle Fred out in North Dakota and fish in a pond on his land, then that property would be subject to a permit.

It would increase the permit-writing authority of the corps to the point that the agency eventually would have to hire more people to monitor permits by private citizens of the United States to do work on their own property than it employs for actually building the civil works projects of the Army Corps of Engineers.

The Secretary of Agriculture, Mr. Bergland, has written a letter in which he endorses the committee language. He says that what happened in phases 1 and 2, let alone phase 3 which will go into effect this July unless we act as is proposed in the committee bill, already is causing delays, duplication, and expense in carrying out soil and water programs which are aimed at efficient production of needed food, fiber, and forest resources.

What I would like to say to the Members is that this bill recognizes the necessity to protect the really significant wetlands. It includes all the navigable waters and all the wetlands that are adjacent or contiguous to them. In addition to that, it allows any State to nominate any other body of water that State authorities think is ecologically valuable, and it can be subject to the permit requirement as well.

But, at the same time, it protects the citizens against the all-inclusive authority of the Army Corps of Engineers that otherwise would be requiring citizens in great numbers to go to the Army to apply for permits and then to wait 6 or 8 or 10 weeks for permission to use their own land in ways that have never before been questioned and which do not affect anything of serious ecological importance.

The citizens of this country are concerned about increasing Government regulation. If Members do not think the citizens are concerned about overregulation and the growing instrusiveness by Government agencies into their private lives, I suggest they go back this week and talk to some of them. I think the Members will find that the citizens in increasing numbers are deeply concerned about this problem.

In the second place, the bill protects the major wetlands, those that are of primary ecological value to the Nation, against any acts by those who would despoil them.

In the third place, the bill protects the Congress of the United States against the intrusion of administrative regulation writers who more and more thirst to make law without the inconvenience of running for Congress. It restores the original intent of Congress. It is a fair provision, carefully thought out and carefully drafted.

The committee view prevailed on the House floor last year by a very substantial margin over the view that is being offered by those who offer these amendments today. It prevailed heavily again this year in the committee. I urge the Members with all the emphasis at my

command that if they would protect the citizens against an intrusive and growing and ever more costly bureaucracy, if they would free the clean water program from the encumbrance of proliferating redtape and let it work as it was intended to work, they will vote down these amendments and they will vote for the committee bill.

Mr. ROBERTS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would oppose the Edgar amendment and the substitute amendment, and I ask the Committee to vote down the substitute and vote down the amendment, and then we will vote for the bill and get it over with.

Mr. TUCKER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I will be very brief. I have listened to this whole debate this afternoon, because I respect very deeply the work of the Committee on Public Works and Transportation and the work of my colleagues from Arkansas and Texas who serve on the committee.

I must admit I come from a State that is predominantly agricultural, where I have had a great, great deal of concern expressed about the activities of the Corps of Engineers. I could not agree more with the gentleman from Texas, the distinguished majority leader, when he says we need to change the provisions that currently exist on this. But by the same token I would urge my colleagues to be aware of the fact, as I understand the debate, and I questioned the gentleman from Louisiana about this earlier, that this legislation is a significant narrowing of the environmental protections which are important to all of our citizens. including farmers and loggers and the forest industry.

The watersheds of our Nation do not respect State boundaries. They extend on both sides of State boundaries. My State is surrounded by other States. We have a border on every side. We do not have a coastline, and the activity which takes place in Arkansas affects Louisiana, and the activity which takes place in Oklahoma affects the northwest portion of my State of Arkansas, which my distinguished colleague, John Paul Hammerschmidt, represents.

I have a substantial amount of concern about the wording of this bill as it is today. It strikes me that we do need to protect the farmers from the outrageous incursion of the Corps of Engineers, and the substitute and the amendment itself I understand do that.

As has been recognized, I think there no protection under the committee language for watershed areas and for water table areas where a marshland owner builds a road across a large number of small streams, each one of which in and of itself, would have no substantial impact on the watershed, but when taken together, 10, 20, 35 separate streams, could have a substantial impact on ground water and water supply in adjacent States. I am not talking about toxic substances. I would appreciate hearing an answer to this, because as I remember when I asked that question, I was told no protection was available.

Mr. ROBERTS. Mr. Chairman, if the gentleman will yield, that would be cov-

CXXIII-657-Part 9

ered in any of the three amendments, the bill or the other three amendments; if they were building a road, they would

have to have a permit.

Mr. TUCKER. Mr. Chairman, if I may engage in further colloquy with the gentleman, would it cover a private watershed area not adjacent to a navigable stream?

Mr. ROBERTS. It would not.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Hampshire (Mr. Cleve-Land) as a substitute for the amendment offered by the gentleman from Pennsylvania (Mr. Edgar).

The amendment offered as a substitute

for the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. Edgar).

The question was taken; and the Chairman announced that the noes

appeared to have it.

Mr. GARY A. MYERS. Mr. Chairman, on that I demand a recorded vote.

A recorded vote was refused. So the amendment was rejected.

Mr. DANIELSON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, and members of the committee, I rise in support of H.R. 3199. My purpose today is to emphasize the importance of section 6 of H.R. 3199, which would permit the use of an advalorem tax as a user-charge for a waste treatment—sewage—system when the Administrator of the Environmental Protection Agency determinates such a system results in a proportionate distribution of operation aid maintenance costs among recipients of sewer services, based on the user's contribution to the total wastewater treated by the system.

share of the costs.

BACKGROUND

Presently section 204 of the Federal Water Pollution Control Act Amendments of 1972, Public Law 92–500 (33 U.S. Code 1284) of October 18, 1972, provides as follows:

and the applicant for a grant establishes

surcharges which will insure that each

industrial user will pay its proportionate

(b) (1) Notwithstanding any other provision of this subchapter, the Administrator shall not approve any grant for any treatment works . . . unless he shall first have determined that the applicant (A) has adopted or will adopt a system of charges to assure that each recipient of waste treatment services within the applicant's jurisdiction, as determined by the Administrator, will pay its proportionate share of the costs of operation and maintenance (including replacement) of any waste treatment services provided by the applicant.

The above provision is essentially the same as section 204 of the Senate bill, S. 2770 (92d Cong., 2d sess.), dated October 28, 1971. The committee report states, in part, as follows, in explanation of section 204(b) (1):

Although the committee is aware of the many different legal and financial circumstances that characterize state and local governments and agencies throughout the country, the bill directs the Administrator to promulgate guidelines for the establishment and imposition of user charge systems as a guide to grant applicants for waste treat-

ment works grants.... As a general rule, the volume and character of each discharge into a publicly owned system should form the basis of determining the rate at which each user should be required to pay.

In my congressional district in Los Angeles County, sewage treatment costs have traditionally been paid through an ad valorem tax on the real property served. Initially, there was some question as to whether the ad valorem tax system met the requirements of the Federal Water Pollution Control Act Amendments of 1972. Then, in response to my objection that the creation and inauguration of a new user-charge system, or the installation of sewage meters, would be prohibitively expensive and an undue burden on the people served by the sanitation districts within my congressional district, and others similarly situated, the Environmental Protection Agency, on April 5, 1974, issued program guidance memorandum No. 28, which authorized the use of the ad valorem tax as a user charge under the act, under certain narrow, well-defined circumstances, as follows:

The use of ad valorem taxes can be permitted as a source of funds for operation and maintenance only in those cases where such a method has been used historically. Where there is a history of the use of ad valorem taxation for collection of operation and maintenance costs, and it is properly demonstrated that it would be administratively difficult, more costly, and disruptive to change that system, and that the goal of proportionality among user classes can be achieved by means of an ad valorem tax system, such a system may be used.

On July 2, 1974, however, the Comptroller General rendered a decision that an ad valorem tax for the payment of sewage charges does not meet the requirements of the Federal Water Pollution Control Act Amendments of 1972. That decision, in effect, reversed the authorization of EPA memorandum No. 28.

After reviewing the legislative history of the amendments, the Comptroller General stated, in part, that:

The basic difficulty with EPA's position is that the ad valorem system is clearly a tax based on the value of the property and, conceptually at least, the Congress did not intend that a tax be used to obtain the user charges. . . . Of major importance also is the fact that the ad valorem tax does not in any way reward conservation of water and this was clearly an important factor in the congressional adoption of the user charge.

Accordingly, while the matter is quite complex and not entirely free from doubt, it is our view that the Section 204(b) (1) requirement that each recipient of the sewer services will pay its proportionate share of the treatment works' operation and maintenance expenses may not be met through an ad valorem tax system.

Those responsible for the providing and operation of sanitation districts in Los Angeles County have advised me that there are really only two alternatives to the ad valorem tax as a method of imposing a user charge. The first of these, which would accomplish a precise measurement of waste water discharge, is the sewage meter. However, in order to comply with the act, sanitation districts within Los Angeles County, but not including the city of Los Angeles,

would have to install some 1,200,000 sewage meters. If we were to add the city of Los Angeles, which operates its own sanitation system, the number of meters would be doubled. Needless to say, it would cost an astronomical sum to purchase and install those meters.

In addition, the meters probably would not work in the case of residential connections because a substantial head of pressure is required to operate the meters and to pass the waste through the meters.

The other alternative which would meet the requirements of the Comptroller General's decision, would be to base sewage charges on the amount of water going into each place of use as determined by water meters, on the supposition that water input will bear a direct relationship to sewage output. That system although less costly, would still result in an estimated \$2,000,000 per year in additional accounting expense to the sanitation districts within Los Angeles County, but not including the city of Los Angeles. That is because, in my area, the water supply systems are not coterminus with, do not have the same boundaries as, the sewage collection systems. In other words, a given residential area may receive its water from one source, but it may be served by two or more different sanitation districts, or conversely, although a given area is in a single sanitation district, it may receive its water from a number of different suppliers. Matching up the sewage output with the water input would, in many cases, result in an administrative nightmare, as well as great additional expense which would have to be passed on to the consumers.

This problem is not limited to Los Angeles County. It is nationwide, although many jurisdictions may yet be unaware that they have the problem, because they have not yet applied for, and have not yet been refused, Federal

aid.

However, a few jurisdictions have been identified since they have applied for grants and have been denied.

Besides Los Angeles County, Calif., Cook County, Ill., which includes Chicago, is affected. So are several cities in Indiana. San Francisco and Santa Rosa, Calif., are affected. So are Fairbanks, Alaska, Wellesley, Mass., Hampton, N.H., Woonsocket, R.I., Phoenix, Ariz.

Those are just some of the areas that have already been identified. I am certain that there are many more which will be found to be ineligible for Federal aid because they use the ad valorem tax to pay for sewage collection and treatment.

The goal of the law seems to be to provide for an equitable sharing of the cost of operating and maintaining sanitation systems and a financial incentive for people and industries to conserve water and thereby avoid unnecessary loading of the sewage system. I am doubtful that such a laudable goal can be achieved, when adoption of the type of system necessary to carry out that goal will automatically result in a greater expense to the consumer, rather than a saving. The overall purpose of Public Law 92–500 is to clean the Nation's water, but so long as the added expense to the taxpayer defeats

eligibility for grants, water will not be cleaned.

This legislation which I strongly support, provides that an ad valorem tax is to be regarded as an acceptable form of user charge for sewage collection and treatment, provided that it results in an equal distribution of costs among the various classes of users. The ad valorem tax can be structured to insure that each user pays his fair share. This legislation would in no way hinder the primary goal of the Federal water pollution control program, namely, to clean up our rivers, lakes and streams but would permit the program to operate as efficiently and economically as possible.

A chronology of my efforts to authorize the use of ad valorem taxes as an acceptable form of user charge is as fol-

1. Background: Section 204 of the Federal Water Pollution Control Act (33 U.S.C. 1284) requires local authorities to have a system of sewage treatment user-charges as a prerequisite to Federal financial assistance.

2. Chronology of Events Oct. 18, 1972—Enactment of Federal Water

Pollution Control Act (P.L. 92-500). Sept. 1973—EPA adopts guidelines for "user charges" which exclude ad valorem

Mar. 14, 1974—Danielson urges EPA to revise regulations so as to permit ad valorem taxes.

Apr. 5, 1974—EPA approves ad valorem tax as an acceptable user charge (PG 28).

July 2, 1974 General Accounting Office disapproves ad valorem taxes (reverses EPA). Sept. 16, 1974—Danielson introduces H.R. 16662 to reinstate ad valorem taxes (referred

to Public Works Committee).
Sept. 24, 1974—Public Works Committee
requests comments from EPA Comptrolller General, and the Office of Management and

Oct. 31, 1974—Comments received from

GAO (Neutral comments-not for against).

Jan. 28, 1975—Danielson introduces H.R.

2183 for the 94th Congress (identical to old

May 13, 1975—Subcommittee on Investigations and Review, Committee on Public Works and Transportation recommends user charge alteration to permit ad valorem tax and incorporates Danielson amendment into Committee bill.

Oct. 1976-94th Congress adjourns without passing Public Works Committee bill. Feb. 7, 1977-H.R. 3199 introduced includ-

ing provisions of Danielson amendment. Mar. 29, 1977—Public Works Committee reports H.R. 3199 favorably to full House.

3. The Situation in Los Angeles County: In Los Angeles County, of the 78 incorporated cities, 72 are members Angeles County Sanitation District", a "special district" organized under the laws Angeles of California, (all cities except Avalon, Bur-bank, Glendale, Hidden Hills, San Fernando and Santa Monica, and the vastly largest part of the City of Los Angeles).

Abandonment of the existing ad valorem tax system in favor of a new user charge system would require one of the following two actions:

1,200,000 sewage meters (not including City of Los Angeles).

\$2,000,000 per year for an administrative system that will measure sewage output will measure sewage output based on water input.

4. Other Areas Currently Using Ad Valorem

Tax User-Charges:
a. In California: San Franciso, Santa

Elsewhere: Phoenix, Arizona, Chicago, Illi-

nois, several cities in Indiana, several cities in New England region.

Mr. VOLKMER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to take just a few minutes, not the entire 15 minutes, for a short colloquy with the gentleman from Missouri as regards a matter that was brought up before, not exactly in the same area, it does not quite cover the area I would like to cover, that is in the very small towns I have in my district of 500 to 1,000 population that right now are having a great deal of difficulty with pollution.

I would like to know if the gentleman can tell me what would be available to them. They do not even have funds, in other words, to come up with an engineer or planning or anything else, yet they have problems, they have pollution and health hazards.

Mr. OBERSTAR. Mr. Chairman, will the gentleman yield?

Mr. VOLKMER. I yield to the gentle-

man from Minnesota. Mr. OBERSTAR. Mr. Chairman, thank the gentleman for yielding. The

gentleman raises an important point. The matter is an issue in my own congressional district. I have great sympathy for the problem the gentleman refers to. Small communities have been bypassed in previous years in operating this program for funding for sewage treatment plants and collector and interceptor sewers, but thanks to the efforts the Environmental Protection Agency, they have corrected that situation with a regional guidance memo to the regional offices of the EPA. Thanks to the guidance memo, the State agency can reserve a portion of its funds for small communities. The request to do so must be made by the State's pollution control agency. The situation is working very well in Texas, which is the first State in which that system has been brought up.

Mr. VOLKMER. Mr. Chairman, in other words, if the State institutional body would request it, it can be done?

Mr. OBERSTAR. Yes. I believe it can. The State can reserve as much of a portion as the State desires to set aside.

Mr. VOLKMER. So there are no disqualifications from the EPA itself to disqualify these people?

Mr. OBERSTAR. No. In fact, EPA is very encouraged about this program. I think the gentleman is making a valuable contribution.

Mr. VOLKMER. Then, what I have to do is go back to my State and try to urge them to do what the State of Texas has done.

Mr. OBERSTAR, I would strongly suggest that, and point to the example of Texas where the system has worked very

Mr. ICHORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I apologize to the Members, but I do rise to support H.R. 3199, and commend Chairman Johnson. Chairman Roberts, the ranking minority member of the committee (Mr. HARSHA), and all the members of the committee for bringing this bill to the House. But, I am caught in a very peculiar parliamentary situation with respect to Senator Johnston's amendment to H.R. 11.

I refer to Senator Johnston's amendment to H.R. 11, adopted by the Senate on March 10, 1977, which prohibits deferral or recission of fiscal year 1977 funds for Federal construction projects listed in Public Law 94-355 and Public Law 94-351. In Senator Johnston's words:

This amendment is intended to undo the prospective action of the Executive with respect to water projects.

An amendment to Senator Johnston's amendment offered by the newly elected junior Senator from Missouri, Senator DANFORTH, who has been influenced by ecologists who have taken the word logic out of ecological, exempted the Meramec Park Lake project from Senator Johnston's prohibition against deferral or rescission of fiscal year 1977 moneys for water resource projects and from the application of Public Law 93-251 which establishes the discount rates for costbenefit ratios. It was adopted on the Senate floor by a voice vote.

In Senator Johnston's words:

The real effect of the Danforth amendment is to except it from the statement on policy and the statement of intent of this Congress with respect to water resource projects. We are telling the President not only to follow the law, but we are telling him he is doing wrong by not following the law. We are excepting the Meramec project from that broad statement of policy by the Danforth amend-

In essence the Johnston amendment as amended by Senator Danforth tells the President that the Senate will override any rescission or deferral on water resource projects and reminds the President of existing law-Public Law 93-251, the Water Resources Development Act of 1974—governing the use of interest rates in determining cost-benefit ratios and then exempts the Meramec Park Lake project from the existing laws of the

In other words the President would be permitted to act illegally toward the Meramec project.

There is some question in my mind and I know also in the minds of many members of the Public Works Committee as to whether the Johnston amendment really means anything, but I was concerned that it might in the words of Senator Johnston permit the President to act illegally toward Meramec?

The Johnston amendment of course was nongermane to H.R. 11 but unfortunately the Senate does not have the rule against nongermaneness. H.R. 3199 and H.R. 11 will be worked out in conference. Under the rules of the House it would not be in order for me to offer the original Johnston amendment to H.R. 3199 as it would not be germane. It was my intention to prevail upon the House and Senate conferees to delete the Danforth amendment in conference but due to the highly unusual parliamentary situation I am advised by the parliamentarian that to add the Meramec Lake to the other 18 projects would make the conference report subject to a point of order since it would be outside the scope of the versions of the bills of the two Houses. Since it is doubtful that the Johnston amendment has any effect whatsoever and since the Meramec is in somewhat different situation than other projects as the Missouri General Assembly is now considering the possibility of a referendum which the Governor of Missouri has agreed to abide by. I have not objected to any deferrals until the legislature of Missouri finally resolves the question of a referendum.

The House is often taken in a particular situation like this so it is exceedingly difficult for the House to work its will. I certainly would not ask the House to hold the public works bill and these important water pollution amendments in the interest of one individual water project.

Therefore, I must proceed by letting the House work its will on the Meramec project when the House receives the public works appropriation bill.

The CHAIRMAN. The time of the gentleman from Missouri (Mr. Ichord) has expired.

(By unanimous consent, Mr. ICHORD was allowed to proceed for 1 additional minute.)

Mr. ROBERTS. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman

from Texas (Mr. Roberts). Mr. ROBERTS. I thank the gentle-

man for yielding.

Mr. Chairman, I sympathize with the gentleman. I agree with the gentleman, and I regret that is the situation in which we find ourselves.

The CHAIRMAN. There being no further amendments, the question is on the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The CHAIRMAN. Under the rule, the Committee rises

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. Stratton, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes, pursuant to House Resolution 468, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment. The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill

The bill was ordered to be engrossed and read a third time, and was read the third time

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROBERTS. Mr. Speaker, on that I demand the yeas and navs.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were-yeas 361, nays 43, not voting 28, as follows:

The Clerk announced the following pairs:

Mr. Annunzio with Mr. Aspin. Mr. Teague with Mr. Dickinson. Mr. Milford with Mr. Jeffords.

Mr. Heftel with Mr. Conyers. Mr. Rangel with Mr. Michael O. Myers. Mr. Rostenkowski with Mr. Diggs.

Mr. Pepper with Mr. Tsongas. Mr. Jones of Oklahoma with Mr. Wampler. Mr. Staggers with Mr. Drinan.

Mr. Clay with Mr. Young of Florida. Mr. Moorhead of Pennsylvania with Mr. Udall.

Mr. Flowers with Mr. Simon. Mr. Roncalio with Mr. Walgren.

Messrs. VANIK, RUSSO, BRODHEAD. and NOLAN changed their votes from "yea" to "nay."

Mr. LUNDINE changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the bill (H.R. 3199) just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. JOHNSON of California. Speaker, pursuant to House Resolution 468, I call up from the Speaker's table the bill (H.R. 11) to increase the authorization for the Local Public Works Capital Development and Investment Act of

1976, with the Senate amendment thereto.

The Clerk read the title of the bill.
The Clerk read the Senate amendment.

as follows:

Strike out all after the enacting clause and insert:

TITLE I—PUBLIC WORKS EMPLOYMENT
SEC. 101. This title may be cited as the
"Public Works Employment Act of 1977".

SEC. 102. (a) There are authorized to be appropriated not to exceed \$4,000,000,000 for the period ending September 30, 1978, for the purpose of making grants for projects for which applications have been submitted under title I of the Public Works Employ-

ment Act of 1976 (90 Stat. 999).

(b) Projects eligible for such grants shall those projects considered under title I of the Public Works Employment Act of 1976 (90 Stat. 999) prior to December 23, 1976, and not selected for funding and those projects for which applications under such Act were submitted prior to December 23, 1976, and not considered for funding under such Act because such applications were not received in a timely manner or in the judgment of the Secretary of Commerce were improperly rejected for consideration, except that units of local government which have projects pending, the grant total of which is less than 150 per centum of the residual benchmark for the unit, may submit projects not to exceed in aggregate 150 per centum of said benchmark.

(c) (1) Up to 2½ per centum of the funds appropriated under this section shall be available for projects requested by Indian tribes or Alaska Native villages; and such funds shall be set aside as the exclusive source of funds for such projects before any allocation of the funds appropriated under this section among the States is made.

(2) Up to 1 per centum of the funds authorized under this section may be reserved by the Secretary of Commerce, acting through the Economic Development Administration, to be available for projects that in the judgment of such Secretary were erroneously not selected for funding as of December 23, 1976, due to procedural dis-

crepancies.

- (3) Any allocation among the States of funds appropriated under this section and not reserved pursuant to this subsection shall be made 65 per centum on the basis of the ratio that the number of unemployed persons in each State bears to the total number of unemployed persons in all the States and 35 per centum on the basis of the relative severity of unemployment among the States with an average unemployment rate for the preceding twelve-month period in excess of 6.5 per centum: Provided, That no State shall receive less than three-fourths of 1 per centum nor more than twelve and one-half per centum of the amount appropriated under this section: Provided, how-That no State whose unemployment data was converted for the first time in 1976 to the benchmark data of the current population survey annual average compiled the Bureau of Labor Statistics shall receive percentage of funds appropriated under this section less than the percentage of funds allocated to the State from funds appropriated for title I of the Public Works Employment Act of 1976 (90 Stat. 999) prior to January 1, 1977.
- (d) Funds appropriated under this section shall be distributed and all grants under this section shall be made in accordance with the provisions of title I of the Public Works Employment Act of 1976 (90 Stat. 999), except that—
- (1) in lieu of the provisions of section 108(d) of such title, 85 per centum of all amounts appropriated to carry out this section shall be granted for projects given priority under clause (1) of the first sentence

of section 108(c) of such title, and the remaining 15 per centum shall be available for projects given priority under clause (2) of the first sentence of such section 108(c). The Secretary of Commerce, acting through the Economic Development Administration, may waive any of the requirements of this paragraph for any State which receives the minimum allocation pursuant to section 108(a) of such title, and such Secretary may waive the requirement that the remaining 15 per centum be available for projects under clause (2) of the first sentence of such section 108(c) for any State in which the State unemployment rate exceeds the national unemployment rate;

(2) the Secretary of Commerce, acting through the Economic Development Administration, may require all State and local governments that have submitted applications eligible for funding under this section to use unemployment data for the most recent twelve-month period for which data are available, before consideration for grants under this section. Such Secretary may also require all such State and local governments to revise estimates of project cost, as ap-

propriate;

(3) in determining whether certain possible grants may result in an undue concentration of funds under this section in a particular area, the Secretary of Commerce, acting through the Economic Development Administration, may take into consideration grants made in such area under title I of the Public Works Employment Act of 1976 (90 Stat. 999), relative to the severity of unemployment in such area;

(4) any project requested by a State or by a special purpose unit of local government, which is endorsed by a general purpose local government specifically for the purposes of this paragraph, shall be accorded the priority and preference to public works projects of local governments provided in section 108(b) of such title;

(5) a project requested by a school district shall be accorded the full priority and preference to public works projects of local governments provided in section 108(b) of such title:

(6) section 108(f) of such title shall not apply, and section 108(e) of such title shall apply only in cases where the requested project will be constructed within the community or neighborhood on which the qualifying unemployment rate is based;

(7) in comparing projects requested by different applicants which are otherwise considered to be the same in priority and preference, the Secretary shall take into consideration the immediate job-creating potential of such projects and the relative time necessary to complete such projects;

- (8) grants under this section shall be made only for projects for which the applicant gives satisfactory assurances that the project will be designed and constructed in accordance with the standards for accessibility for public buildings and facilities to the handicapped and elderly under the Act of August 12, 1968 (42 U.S.C. 4151-4156), as amended. The Architectural and Transportation Barriers Compliance Board is authorized to insure that the construction and renovation done pursuant to this section complies with the accessibility standards for public buildings and facilities issued under the Act of August 12, 1968, as amended;
- (9) grants shall be made under this section only for projects for which the applicant gives satisfactory assurances that the project will not have a significant adverse effect on the human environment, unless the Secretary of Commerce determines that full consideration to the effect of the project on the human environment has been given in accordance with section 102(2)(C) of the National Environmental Policy Act of 1969 and the regulations of the Council on Environmental Quality thereunder;

- (10) in making grants for projects for construction, renovation, repair, or other improvement of buildings, the Secretary shall also give priority and preference as between such building projects to those projects which will result in conserving energy, including but not limited to, projects to redesign and retrofit existing public facilities for energy conservation purposes, and projects using alternative energy systems; and
- (11) consideration shall be given to those projects which demonstrate a probability of reducing unemployment by (A) stimulating private investment; (B) generating construction in addition to the project; and (C) creating new long-term employment opportunities in accordance with an applicant's long-range economic development plans.

SEC. 103. If any funds authorized in section 102 of this Act are appropriated for the fiscal year ending September 30, 1978, projects eligible for grants under such appropriation shall include projects eligible for grants under the provisions of title I of the Public Works Employment Act of 1976 (90 Stat. 999) and projects for construction, renovation, repair, or other improvements of health care or re-habilitation facilities owned and operated by private nonprofitmaking entities. The Secretary of Commerce, acting through the Economic Development Administration, shall receive and consider new applications for grants under this section in addition to applications received under title I of the Public Works and Economic Development Act of 1976 (90 Stat. 999). Any projects for which applications have been submitted prior to enactment of this section shall be revised and new information required to be submitted, as appropriate.

SEC. 104. (a) The President is authorized and directed to study public works investment in the United States and the implications for the future of recent trends in such

investment.

(b) The study authorized by this section shall include, but not be limited to, the following:

(1) the historical scope and nature of public works investment, including—

 (A) shifts in the types of public facilities constructed over the last thirty years and the implications of such shifts;

- (B) the patterns of regional distribution of investment;
- (C) the role of the Federal Government, States, and local communities in funding public facilities;
- (D) the impact upon unemployment in minority groups:
- (2) the proportion of the gross national product devoted to public works investment over the last thirty years;
- (3) methods by which the aggregate need for public works can be determined;
- (4) how public works are financed and how financing arrangements affect the pattern and type of investment; and
- (5) the level of maintenance or renovation of existing public facilities needed, compared to that provided.
- (c) The President shall submit to Congress a report with respect to its findings and recommendations no later than eighteen months after enactment of this section. A preliminary report putting forth the study design shall be submitted to Congress within four months after enactment of this section.

Sec. 105. Pursuant to regulations prescribed by the Secretary of Commerce in consultation with the Secretary of Labor and consistent with existing applicable collective bargaining agreements and practices, special consideration shall be given to the employment of qualified disabled veterans (as defined in section 2011(1) of title 38, United States Code) and those qualified Vietnamera veterans (as defined in section 2011(2) (A) of such title) who are under twenty-

seven years of age, in projects carried out under this title.

SEC. 106. (a) Notwithstanding any other provisions of law, no grant shall be made under this Act for any local public works project unless at least 10 per centum of the articles, materials, and supplies which will be used in such project are procured from minority business enterprises. For purposes of this paragraph, the term "minority business enterprise" means a business at least 50 per centum of which is owned by minority group members or, in case of publicly owned businesses, at least 51 per centum of the stock of which is owned by minority group members. For the purposes of the preceding sentence, minority group members are citizens of the United States who are Negroes, Spanish-speaking, Orientals, Indians, Eskimos, and Aleuts.

This section shall not be interpreted to defund projects with less than 10 per centum minority participation in areas with minority populations of less than 5 per cen-tum. In that event, the correct level of minority participation will be predetermined by the Secretary in consultation with the Economic Development Administration and based upon its list of qualified minority contractors and its solicitation of competitive

bids from all minority firms on that list. Sec. 107. The Secretary of Commerce, acting through the Economic Development Administration, may allow any applicant which has received a grant for a project under section 102 of this title to substitute another project or projects (including the transportation and providing of water to drought-stricken areas) if in the judgment of such Secretary (1) the Federal cost in the aggregate of such project or projects does not exceed the grant made under section 102 of this title; (2) the project or projects pro-posed for substitution are consistent with section 106(d) of the Public Works Employment Act of 1976; (3) if the project was selected on the basis of section 102(d)(7) of the Public Works Employment Act of 1976, the project or projects proposed for substitution are similar in immediate job-creating potential and relative time necessary for completion; and (4) notwithstanding any provision of section 106(a) of the Public Works Employment Act of 1976, which shall not apply to projects substituted under this section, the project or projects proposed for substitution will in fact aid in alleviating drought or other emergency or disaster related conditions or damage.

SEC. 108. (a) Notwithstanding any other provision of law, no grant shall be made under this Act for any local public works project unless only such unmanufactured article, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, and supplies mined, produced, or manufactured, as the case may be, in the United States, will be used in such

project. (b) This section shall not apply in any case where the Secretary determines it to be inconsistent with the public interest, or the

cost to be unreasonable, or if articles, materials, or supplies of the class or kind to be used or the articles, materials, or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in sufficient and reasonably available commercial quan-

tities and of a satisfactory quality.

Sec. 109. (a) The President is also authorized and directed to study public works in-

vestment in the United States.

(b) The study authorized by this section shall be separate and independent from the study authorized by section 104 of this Act and shall include, but not be limited to, the following:

(1) economic stimulus created by public

(2) tax expenditure per job;

(3) evaluation of the criteria for assessing public works needs relative to other national spending priorities:

(4) impact on construction costs in the private sector; and

(5) the comparison between public works and private sector construction costs on similar facilities

(c) The President shall submit to Congress a report with respect to such study no later than eighteen months after enactment of this section. A preliminary report putting forth the study design shall be submitted to Congress within four months after enactment of this section.

TITLE II-FEDERAL WATER POLLUTION CONTROL ACT AUTHORIZATIONS

SEC. 201. Section 517 of the Federal Water Pollution Control Act, as amended (Public Law 92-500), is amended by striking the word "and" before the words "\$350,000,000" word "and" and by striking the period at the end thereof and inserting the words "and \$350,000,000 for each of the fiscal years ending June 30, 1976, September 30, 1977, and September 30, 1978.".

SEC. 202. (a) Section 104 of the Federal Water Pollution Control Act, as amended (Public Law 92-500), is amended by adding

the following new subsection:

(v) There are authorized to be appropriated to the Environmental Protection Agency for the following categories of research, development, and demonstration under this Act not to exceed \$148,800,000 for each of the fiscal years ending September 30, 1977, and September 30, 1978, of which each year

(1) \$89,900,000 shall be for programs authorized by paragraph (1) of subsection (u)

of this section.

(2) \$5,600,000 shall be for programs authorized by paragraph (4) of subsection (u) of this section.

"(3) \$2,000,000 shall be for programs authorized by paragraph (5) of subsection (u) of this section

'(4) \$20,000,000 shall be for programs authorized by paragraph (6) of subsection (u) of this section,

"(5) \$24,700,000 shall be for programs authorized by section 105(h) of this Act,

"(6) \$4,600,000 shall be for programs authorized by section 107 of this Act, and

(7) \$2,000,000 shall be for programs au-

thorized by section 113 of this Act.' (b) Subsection (a) of section 106 of the Federal Water Pollution Control Act, amended (Public Law 92-500), is amended by striking the word "and" after the words "1973" and by inserting after the words "1974;" the following "and (3) \$75,000,000 for each of the fiscal years ending June 30, 1975, June 30, 1976, September 30, 1977, and Sep-

(c) Subsection (c) of section 112 of the Federal Water Pollution Control Act, as amended, is amended to read as follows:

'(c) There are authorized to be appropriated \$25,000,000 per fiscal year for the fiscal years ending June 30, 1973, June 30, 1974, June 30, 1975, June 30, 1976, September 30, 1977, and September 30, 1978, to carry out sections 109 through 112 of this Act.

SEC. 203. (a) Section 207 of the Federal Water Pollution Control Act as amended (86 Stat. 839), is amended by striking the period at the end of the sentence and adding for each of the fiscal years ending September 30, 1977, and September 30, 1978, subject to such amounts as are provided in appropriation Acts, not to exceed \$4,500,000,000.".

(b) The first sentence of subsection (a) of section 205 of the Federal Water Pollution Control Act (86 Stat. 837) is amended by striking out "June 30, 1972," and inserting in lieu thereof "June 30, 1972, and before September 30, 1976,".

(c) Such section 205 is further amended by

adding at the end thereof the following new subsection:

"(c) (1) Sums authorized to be appropriated pursuant to section 207 for each fiscal beginning after September 30, 1976, shall be allotted by the Administrator on October 1 of the fiscal year for which au-thorized. Sums authorized for the fiscal years ending September 30, 1977, and September 30, 1978, shall be allotted in accordance with the following table:

Propo	Proportional share

If the sums allotted to the States for	a fiscal		

If the sums allotted to the States for a fiscal year are made subject to a limitation on obligation by an appropriation Act, such limitation shall apply to each State in proportion to its allotment.

(2) For the fiscal years 1977 and 1978, no State shall receive less than one-third of 1 per centum of the total allotment under the first paragraph of this subsection, except that in the case of Guam, Virgin Islands, American Samoa, and the Trust Territories, not more than forty one-hundredths of 1 per centum in the aggregate shall be allotted to all four of these jurisdictions. For the purpose of carrying out this paragraph there are authorized to be appropriated, subject to such amounts as are provided in ap propriation Acts, not to exceed \$40,000,000 for each of the fiscal years ending September 30, 1977, and September 30, 1978.".

SEC. 204. (a) Section 208(f) (2) of the

Federal Water Pollution Control Act (33 U.S.C. 2188) is amended to read as follows:

'(2) For the two-year period beginning on the date the first grant is made under paragraph (1) of this subsection to an agency, if such first grant is made before October 1, 1977, the amount of each such grant to such agency shall be 100 per centum of the cost of developing and operating a continuing areawide waste treatment management planning process under subsection (b) of this section, and thereafter the amount granted to such agency shall not exceed 75 per centum of such costs in each succeeding one-year period. In the case of any other grant made to an agency under such paragraph (1) of this subsection, the amount of such grant shall not exceed 75 per centum of the costs of developing and operating a continuing areawide waste treatment manage-

ment planning process in any year.".

(b) The second sentence of section 208
(f)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to such amounts as are

provided in appropriation Acts."

(c) Section 208(f)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out "and not to exceed \$150,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "and not to exceed \$150,000,000 per fiscal year for the fiscal years ending June 3, 1975, September 30, 1977, and September 30, 1978."

SEC. 205. Paragraph (2) of subsection (c) of section 314 of the Federal Water Pollution Control Act, as amended, is amended to read

as follows:

"(2) There is authorized to be appropriated \$50,000,000 for the fiscal year ending June 30, 1973; \$100,000,000 for the fiscal year ending June 3, 1974; and \$150,000,000 for each of the fiscal years 1975, 1976, 1977, and 1978 for grants to States under this section which such sums shall remain available until expended. The Administrator shall provide for an equitable distribution of such sums to the States with approved methods and procedures under this section."

SEC. 206. Subsection (b) (1) of section 205 of the Federal Water Pollution Control Act, as amended (86 Stat. 837), is amended by striking "one-year" and by inserting after the second sentence the following: "The sums first made available for obligation during fiscal year 1976 shall continue to be available for obligation until September 30, 1978.".

TITLE III—FEDERAL PUBLIC WORKS PROJECTS CONTINUATION

SEC. 301. The Congress hereby finds and declares that:

(A) the construction projects listed in Public Law 94–355, the Public Works for Water and Power Development and Energy Research Appropriations Act, 1977, and in Public Law 94–351, the Agriculture and Related Agencies Program Appropriations Act, 1977, represents the foundation of our national public works activity. Such projects are essential to the reduction of unemployment;

(B) such projects provide long-term benefits to communities, to States, and to the entire Nation in terms of water management, flood control, navigation, recreation, and en-

hanced economic activity; and

(C) such projects have been authorized by the Congress after protracted hearings and consideration extended over many years. Appropriations have been made and are being made pursuant thereto. It is the judgment of Congress that such projects should not be discontinued except by following the legislative process provided by the Constitution of the United States and the provisions of Public Law 93-344, the Congressional Budget and Impoundment Control Act of 1974.

Sec. 302. Notwithstanding the deferral and rescission provisions of Public Law 93-344,

all appropriations provided in Public Laws 94–355 and 94–351 for construction projects or for investigation, planning, or design related to construction projects shall be made available for obligation by the President and expended for the purposes for which the appropriations are made, with the exception of those appropriations or expenditures relating to the Meramec Park Lake project in Missouri.

SEC. 303. With the exception noted relating to the Meramec Park Lake project in Missouri, section 302 of this Act shall be equivalent to and have the legal effect of a resolution disapproving any deferral of budget authority previously provided for construction projects in Public Law 93-355 or in any prior law appropriating funds for the United States Army Corps of Engineers or the Department of the Interior Bureau Reclamation, or for construction projects in Public Law 94-351 or any prior law appropriating funds for construction projects in the Department of Agriculture, as provided for in section 1013(b) of Public Law 93-344, the Congressional Budget and Impoundment Control Act of 1974. With the exception noted relating to the Meramec Park Lake project in Missouri, section 302 is also equivalent to a congressional statement of intent not to uphold any rescission of budget authority with regard to funds appropriated for construction projects in Public Law 94-355 or Public Law 94-351 or for construction projects in any prior law appropriating funds for the United States Army Corps of Engl-neers, the Department of the Interior Bureau of Reclamation, or the Department of Agriculture, as provided for 1012(b) of Public Law 93-344.

SEC. 304. It is hereby reiterated that the interest rates or rates of discount to be used to assess the return on the Federal Government's investment in projects of the United States Army Corps of Engineers or the Department of the Interior Bureau of Reclamation, shall be those interest rates or rates of discount established by Public Law 93-251, the Water Resources Development Act of 1974, or by any prior law authorizing projects of the United States Army Corps of Engineers or the Department of the Interior

Bureau of Reclamation.

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. Johnson of California moves to concur in the Senate amendment with an amendment that contains the texts of H.R. 11 and H.R. 3199, as passed, as follows:

TITLE I

That section 102 of the Local Public Works Capital Development Investment Act of 1976 is amended by adding at the end thereof the following:

"(4) 'public works project' includes the transportation and providing of water to

drought-stricken areas,".

SEC. 102. Paragraph (2) of section 102 of the Local Public Works Capital Development and Investment Act of 1976 is amended by striking out "and American Samoa," and inserting in lieu thereof the following: "American Samoa, and the Trust Territory of the Pacific Islands.".

SEC. 103. Section 106 of the Local Public Works Capital Development and Investment Act of 1976 is amended by adding at the end thereof the following new subsections:

"(e) No part of the construction (including demolition and other site preparation activities), renovation, repair, or other improvement of any public works project for which a grant is made under this Act after the date of enactment of this subsection shall be performed directly by any department, agency, or instrumentality of any State or local government. Construction of

each such project shall be performed by contract awarded by competitive bidding, unless the Secretary shall affirmatively find that, under the circumstances relating to project, some other method is in the public interest. Contracts for the construction of each project shall be awarded only on the basis of the lowest responsive bid submitted by a bidder meeting established criteria of responsibility. No requirement or obligation shall be imposed as a condition precedent to the award of a contract to such bidder for a project, or to the Secretary's concurrence in the award of a contract such bidder, unless such requirement or obligation is otherwise lawful and is specifically forth in the advertised specifications. No grant shall be made under this Act for local public works project unless the State or local government applying for such grant submits with its application a certification acceptable to the Secretary that no contract will be awarded in connection with such project to any bidder who will employ on such project any alien in the United States in violation of the Immigration and Nationality Act or any other law, convention, or treaty of the United States relating to the immigration, exclusion, deportation, or expulsion of aliens.

"(f) (1) Notwithstanding any other provision of law, no grant shall be made under this Act for any local public works project unless only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only

such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, and supplies mined, produced, or manufactured, as the case may be, in the United States. will be used in such project. This subsection shall not apply in any case where the Secretary deter-

ply in any case where the Secretary determines it to be inconsistent with the public interest, or the cost to be unreasonable, or if articles, materials, or supplies of the class or kind to be used or the articles, materials,

or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in sufficient and reasonably available

States in sufficient and reasonably available commercial quantities and of a satisfactory quality.

'(2) Except to the extent that the Secretary determines otherwise, no grant shall be made under this Act for any local public works project unless the applicant gives satisfactory assurance to the Secretary that at least 10 per centum of the amount of each grant shall be expended for minority business enterprises. For purposes of this paragraph, the term 'minority business enterprise' means a business at least 50 per centum of which is owned by minority group members or, in case of a publicly owned business, at least 51 per centum of the stock of which is owned by minority group members. For the purposes of the preceding sentence, minority group members are citizens of the United States who are Negroes, Spanish speaking, Orientals, Indians, Eskimos, and Aleuts."

"(g) No grant shall be made under this Act for any project for which the applicant has not given assurances satisfactory to the Secretary that the project will be designed and constructed in accordance with the standards for accessibility of transportation and public facilities to the handicapped and elderly under the Act entitled 'An Act to insure that certain buildings financed with Federal funds are so designed and constructed as to be accessible to the physically handicapped', approved August 12, 1968 (42 U.S.C. 4151 et seq.)."

SEC. 104. (a) Subsection (a) of section 108 of the Local Public Works Capital Development and Investment Act of 1976 (Publice Law 94-369) is amended by inserting immediately after "any one State" the fol-

lowing: "unless a State has no Indian tribe in such State in which case the minimum percentage to be granted within such State shall be three-fourths of 1 per centum'

(b) Such subsection (a) of section 108 is further amended by adding at the end thereof the following new sentence: "Notwithstanding any other provision of this Act, not more than 21/2 per centum of all amounts appropriated to carry out this title shall be granted to Indian tribes under this Act for

local public works projects.".

(c) Subsection (b) of such section 108 is amended by adding at the end thereof the following new sentence: "In making grants for projects for construction, renovation, repair or other improvement of buildings for which application is made after the date of enactment of this sentence, the Secretary shall also give priority and preference as between such building projects to those projects which will result in conserving energy, including but not limited to, projects to redesign and retrofit existing public facilities for energy conservation purposes, and projects using alternative energy sys-

(d) The first sentence of subsection (c) of such section 408 is amended by striking out "three most recent consecutive months" each place it appears and inserting in lieu thereof 'twelve most recent consecutive months"

(e) Subsection (d) of such section 108 is amended to read as follows:"(d) Whenever a State or local govern-

ment submits applications for grants under this Act for two or more projects such State or local government shall submit as part of such applications its priority for each such

(f) Subsection (f) of such section 108 is

hereby repealed.

(g) Subsection (g) of such section 108 is amended by inserting "for improving socio-economic conditions" immediately before the period.

SEC. 105. The first sentence of section 109 of the Local Public Works Capital Development and Investment Act of 1976 is amended by striking out "by contractors or subcontrators"

SEC. 106. Section 111 of the Local Public Works Capital Development and Investment Act of 1976 (Public Law 94-369) is amended

to read as follows:

'SEC. 111. Notwithstanding any provision of this Act, other than subsection (a) of section 108, amounts appropriated after the date of enactment of this section to carry out this title shall be allocated by the Secretary among the States not later than the 30th day after the date of enactment of such appropriation bears to the average number of the average number of unemployed persons in each State during the 12-month period ending on the date of enactment of such appropriation bears to the average number of unemployed persons in all the States during such 12-month period.

Sec. 112. Notwithstanding any other provision of this Act, the Secretary is authorized to make a grant for a public works project under this Act to any State or local government whose application for a grant for such project under this Act made after the date of enactment of this Act was not received, was not considered, or was rejected, if, as determined by the Secretary, such application was not received, was not considered, or was rejected solely because of an error by an officer or employee of the United States. Not to exceed 1½ per centum of the amount authorized by section 114 of this Act may be

expended to carry out this section.

'SEC. 113. Whenever a State certifies to the Secretary that such State has standards for construction of jails, and that all such standards will be met in connection with any grant made under this Act for a project relating to jails, such State standards shall be the sole standards criteria governing approval of such jails for the purpose of any grant made under this Act.

"Sec. 114. There is authorized to be appropriated not to exceed \$6,000,000,000 to carry out this Act.".

Sec. 107. The Secretary of Agriculture and the Secretary of the Interior shall immediately initiate the construction of those Federal public works projects (A) which are the responsibility of their respective departments, (B) which have been authorized, and (C) which can be commenced within 60 days of the date of enactment of this section and completed no later than the 180th day after commencement of construction. No funds authorized by section 114 of the Local Public Works Capital Development and Investment Act of 1976 (Public Law 94-369) may be used to carry out this section.

TITLE II SHORT TITLE

SEC. 201. This title may be cited as the "Federal Water Pollution Control Act Amendments of 1977".

AUTHORIZATION APPROVAL

SEC. 202. Funds appropriated before the date of enactment of this Act for expenditure during the fiscal year ending June 30, 1976, and the transition quarter ending September 30, 1976, under authority of the Federal Water Pollution Control Act, are hereby authorized for such purposes.

AUTHORIZATION EXTENSION

SEC. 203. (a) Section 104(u)(2) of the Federal Water Pollution Control Act (33 U.S.C. 1254) is amended by striking out "1975" and inserting in lieu thereof "1975, \$2,000,000 for fiscal year 1977, and \$3,000,000 for fiscal year 1978,".

(b) Section 104(u)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1254) is amended by striking out "1975" and inserting in lieu thereof "1975, \$1,000,000 for year 1977, and \$1,500,000 for fiscal

year 1978,".

(c) Section 106(a) (2) of the Federal Water Pollution Control Act (33 U.S.C. 1256) is amended by striking out "and the fiscal year ending June 30, 1975;" and inserting in lieu thereof "and the fiscal year ending June 30, 1975, and \$100,000,000 per fiscal year for the fiscal year ending September 30, 1977, and the fiscal year ending September 30, 1978;".

(d) Section 112(c) of the Federal Water Pollution Control Act (33 U.S.C. 1262) is amended by inserting "\$6,000,000 for the fiscal year ending September 30, 1977, and \$7,000,000 for the fiscal year ending September 30, 1978," immediately after "June 30,

1975,"

(e) Section 208(f) (3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out "and not to exceed \$150,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof 'and not to exceed \$150,000,000 per fiscal year for the fiscal years ending June 30, 1975, September 30, 1977, and September 30, 1978.".

f) Section 314(c)(2) of the Federal Water Pollution Control Act (33 U.S.C. 1324) is amended by striking out "and \$150,000,000 for the fiscal year 1975" and inserting in lieu thereof "\$150,000,000 for the fiscal year 1975; \$50,000,000 for fiscal year 1977; and \$60,000,000 for fiscal year 1978".

(g) Section 517 of the Federal Water Pollution Control Act (33 U.S.C. 1376) is amended by striking out "and \$350,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "\$350,000,000 for the fiscal year ending June 30, 1975, \$100,-000,000 for the fiscal year ending September 30, 1977, and \$150,000,000 for the fiscal year ending September 30, 1978.".

SEWAGE COLLECTION SYSTEM GRANTS

Sec. 204. Section 202 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding any other provision of this title, in any case where the total of all grants made under section 201 for the same treatment works exceeds the actual construction costs for such treatment works such excess amount shall be a grant of the Federal share of the cost of construction of a sewage collection system if-

"(1) such sewage collection system was constructed as part of the same total treatment system as the treatment works for which such section 201 grants were approved,

"(2) an application for assistance for the construction of such sewage collection system was filed in accordance with section 702 of the Housing and Urban Development Act of 1965 (42 U.S.C. 3102) before all such section 201 grants were made and such section 702 grant could not be approved due to lack of funding under such section 702.

The total of all grants for sewage collection systems made under this subsection shall not exceed \$2.800,000.".

PLANS, SPECIFICATIONS, ESTIMATES, AND PAYMENTS

SEC. 205. Section 203(a) of the Federal Water Pollution Control Act (33 U.S.C. 1283) is amended by adding at the end thereof the following new sentence: "In the case of a treatment works that has an estimated total cost of \$1,000,000 or less (as approved by the Administrator) upon completion of an approved facility plan, a single grant may be awarded for the combined Federal share of the cost of preparing construction drawings and specifications, and the building and erection of the treatment works.".

USER CHARGES

SEC. 206. Clause (A) of paragraph (1) of subsection (b) of section 204 of the Federal Water Pollution Control Act (33 U.S.C. 1284)

- (1) by striking out "proportionate share" and inserting in lieu thereof "proportionate share (except as otherwise provided in this paragraph)"; and
- (2) by adding at the end of such paragraph (1) the following: "In any case where an applicant uses an ad valorem tax system and the Administrator determines such system results in the distribution of operation and maintenance costs for treatment works within the applicant's jurisdiction, to each user class, in proportion to the contribution to the total waste water loading of the treatment works by each such user class, and such applicant establishes surcharges which will insure that each industrial user will pay its proportionate share on the basis of volume, strength, and other relevant factors, then such ad valorem tax system and surcharges shall be deemed to be a user charge system meeting the requirements of clause (A) of this paragraph.".

ALLOTMENT

SEC. 207. (a) The first sentence of subsection (a) of section 205 of the Federal Control Act (33 Water Pollution U.S.C. 1285) is amended by striking out "June 30, 1972," and inserting in lieu thereof "June 30, 1972, and before September 30, 1976,".

(b) Such section 205 is further amended

by adding at the end thereof the following

new subsections:

"(c) Sums authorized to be appropriated pursuant to section 207 for the fiscal year beginning October 1, 1976, shall be allotted by the Administrator not later than the tenth day which begins after the date of enactment of the Federal Water Pollution Control Act Amendments of 1977. Sums authorized to be appropriated pursuant to section 207 for each fiscal year beginning after September 30, 1977, shall be allotted by the Administrator on October 1 of the fiscal year for which authorized. Sums au-

thorized for the fiscal years ending September 30, 1977, and September 30, 1978, shall be allotted in accordance with table Committee Print Numbered 94-39 of the Committee on Public Works and Transportation of the House of Representatives.

"(d) If the sums allotted to the States for a fiscal year are made subject to a limitation on obligation by an appropriation Act, such limitation shall apply to each State in pro-portion to its allotment. So much of any allotment not subject to such a limitation on obligation shall remain available for obligation for the fiscal year during which it can first be obligated and for the period of the next succeeding sixteen months, the remaining amount of the allotment shall remain available until expended. The amount of any allotment not subject to such a limitation on obligation which is not obligated by the end of such sixteen-month period shall be immediately reallotted by the Administrator on the basis of the same ratio as is applicable to sums allotted for the then current fiscal year, except that none of the funds reallotted by the Administrator shall be allotted to any State which failed to obligate any of the funds being reallotted. Any sum made available to a State by reallot-ment under this subsection shall be in addition to any funds otherwise allotted to such State for grants under this title during any fiscal year.

"(e) Notwithstanding any other provision of this section, sums made available between January 1, 1975, and March 1, 1975, by the Administrator for obligation shall be available for obligation until September 30, 1978.". REIMBURSEMENT AND ADVANCED CONSTRUCTION

SEC. 208. (a) Subsection (a) of section 206 of the Federal Water Pollution Control Act (33 U.S.C. 1286) is amended by striking out "July 1, 1972," and inserting in lieu thereof "July 1, 1973,".

- (b) Subsection (e) of such section 206 is amended by striking out "\$2,600,000,000" and inserting in lieu thereof "\$2,950,000,000"
- (c) Notwithstanding section 206(c) of the Federal Water Pollution Control Act and section 2 of Public Law 93-207, in the case of publicly owned treatment works on which construction was initiated between July 1, 1972, and June 30, 1973 (both dates inclusive), applications for assistance under such section 206 shall be filed not later than the ninetieth day after the date of enactment of the Federal Water Pollution Control Act Amendments of 1977.

CONSTRUCTION GRANT AUTHORIZATIONS

SEC. 209. Section 207 of the Federal Water Pollution Control Act (33 U.S.C. 1287) amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "and for the fiscal year ending September 30, 1977, subject to such amounts as are provided in appropriation Acts, not to exceed \$5,000,000,000 and for the fiscal years ending September 30, 1978, and September 30, 1979, subject to such amounts as are provided in appropriation Acts, not to exceed \$6,000,000,000 per fiscal vear.".

FEDERAL SHARE OF MANAGEMENT PLANNING PROCESS COSTS

SEC. 210. Section 208(f)(2) of the Federal Water Pollution Control Act (33 U.S.C. 2188) is amended to read as follows:

"(2) For the two-year period beginning on the date the first grant is made under paragraph (1) of this subsection to an agency, if such first grant is made before October 1. 1977, the amount of each such grant to such agency shall be 100 per centum of the costs of developing and operating a continuing areawide waste treatment management plan-ning process under subsection (b) of this section, and thereafter the amount granted to such agency shall not exceed 75 per centum of such costs in each succeeding one-year period. In the case of any other grant made to an agency under such paragraph (1) of this subsection, the amount of such grant shall not exceed 75 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process in any year.".

CONTRACT AUTHORITY

SEC. 211. The second sentence of section 208(f)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1288) is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to such amounts as are provided in appropriation Acts.".

NEW PROVISIONS

SEC. 212. Title II of the Federal Water Pollution Control Act (33 U.S.C. 1281 et seq.) is amended by adding at the end thereof the following new sections:

"CERTIFICATION

"SEC. 214. (a) (1) The Administrator may carry out any of his responsibilities for actions, determinations, or approvals under sections 201(g) (2) and (3), 203 (a) and (d), 204 (a), (b) (1), and (b) (3), and 212(2) (B) of this Act with respect to projects or proposed projects for treatment works by accepting a certification by the State water pollution control agency of its performance of such responsibilities.

(2) Nothing in this section shall affect or discharge any responsibility or obligation of the Administrator under any other Federal law, including the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

- "(b) The Administrator shall not accept any certification provided for in subsection (a) of this section unless the Administrator determines after public hearings that the State water pollution control agency has the authority, responsibility, and capability to take all of the actions, determinations, or approvals for which certification is submitted under subsection (a) of this section and the Administrator has determined that the State is following practices that conform the Federal construction grant regulations under section 201 of this Act, including specifically that any person having a significant financial interest in the construction of treatment works will not be a member of any State board or body which processes an application for a grant under this
- "(c) If the Administrator determines after public hearings that a State water pollution control agency, with respect to any require-ment, condition, or limitation for which he has accepted a certification under subsection (a), fails to meet the requirements of this section, he shall suspend his acceptance of certification as to such requirement, condition, or limitation with respect to any project, or may suspend such acceptance with respect to all projects in such State, as he determines necessary, and during such suspension he shall be responsible for such requirement, condition, or limitation.

(d) The Administrator shall conduct interim and final inspections and audits, and shall require such information, data, and reports as he determines necessary to carry

out this section.

"(e)(1) The Administrator shall reserve an amount not to exceed 2 per centum of the allotment made to each State under section 205 on or after February 1, 1975. Sums so reserved shall be available for making grants to such State under paragraph (2) of this subsection for the same period as sums are available from such allotment under subsection (b) of section 205, and any such grant shall be available for obligation only during such period. Any grant made from sums reserved under this subsection which has not been obligated by the end of the period for which available, and any reserved amount at the request of the State, shall be added to the amounts last allotted

to such State under section 205 and shall be immediately available for obligation in the same manner and to the same extent as such last allotment

"(2) The Administrator is authorized to grant to any State exercising, or proposing to exercise, certification authority under this section, from amounts reserved to such State under this subsection, the reasonable costs, as determined by the Administrator, of carrying out such authority.

"(f) The Administrator shall promulgate such rules and regulations as may be necessary to carry out this section. The initial rules and regulations necessary to carry out this section shall be promulgated not later than the ninetieth day after date of enactment of this section.

"DETERMINATION OF PRIORITY

"SEC. 215. Notwithstanding any other provision of this Act, the determination of the priority to be given each category of projects for construction of publicly owned treatment works within each State shall be made solely by that State. These categories shall include. but not be limited to (A) secondary treatment, (B) more stringent treatment, (C) infiltration-inflow correction, (D) major sewer system rehabilitation, (E) new collector sewers and appurtenances, (F) new interceptors and appurtenances, and (G) correction of combined sewer overflows.

"REQUIREMENTS FOR AMERICAN MATERIALS

"Sec. 216. Notwithstanding any other provision of law, no grant shall be made under this title for any treatment works unless only such unmanufactured articles. materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles. materials, or supplies mined, produced, or manufactured, as the case may be, in the United States will be used in such treat-ment works. This section shall not apply in any case where the Administrator deter mines it to be inconsistent with the public interest, or the cost to be unreasonable, or if articles, materials, or supplies of the class or kind to be used or the articles, materials. or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in sufficient and reasonably available commercial quantities and of a satisfactory quality.".

TIME REQUIREMENTS

SEC. 213. Section 301 of the Federal Water Pollution Control Act (33 U.S.C. 1311) is amended by adding at the end thereof the following new subsections:

"(g)(1) The Administrator may modify the time for achieving the requirements of subsection (b) (1) of this section for any publicly owned treatment works and any point source (other than a publicly owned treatment works) to extend such time beyond the dates specified in such paragraph, the Administrator determines that the construction of the treatment works, or the application of best practicable control technology necessary for the achievement of such requirements cannot be completed or applied (as the case may be) by the dates specified in such paragraph.

"(2) No time modification granted by the Administrator under this subsection for any point source (other than a publicly owned treatment works) shall extend beyond July 1, 1979. No time modification granted by the Administrator under this subsection for any publicly owned treatment works shall extend beyond July 1, 1982, except in the case of treatment works which the Administrator determines are based on innovative technology relating to the abatement and control of water pollution in which

case time modifications may extend up

to, but not beyond, July 1, 1983.

"(3) No time modification shall be granted this subsection unless the applicant shall have first submitted to the Administrator, and the Administrator shall have approved, a schedule of compliance the modified date. Failure to meet the approved schedule of compliance shall be a violation of this section and shall be subject to enforcement under section 309 in the same manner as any other violation of this section. The Administrator shall promurgate such rules and regulations as may be necessary to carry out this paragraph.

"(4) Any point source (other than a

publicly owned treatment works) which has, either on the date a time modification is granted a publicly owned treatment works under paragraph (1) of this subsection or not later than the sixtieth day after the date such time modification is granted, a contract (enforceable against such point source) to discharge its effluent into such publicly owned treatment works shall not be subject to the requirements of subsections (b) (1) (A) and (C) of this section until the date such treatment works must meet the requirements of subsections (b) (B) and (C) of this section.

"(h) Notwithstanding any other provision of this Act, any owner or operator of a point source which is subject to the requirements of subsection (b) (1) (A) (i) of this section

who-

"(1) received a research and development grant pursuant to section 105(c) of this Act to develop new technology for the treat-ment of industrial waste and was unsuccessful in accomplishing the goal set forth in the grant agreement; and

"(2) did not commence the necessary construction to comply with the requirements of such subsection (b) (1) (A) (i) until it became apparent that the research and development project would be unsuccessful,

shall be deemed to be in compliance with the requirements of such subsection until July 1, 1978, or the date of the completion of such construction, whichever date first

STATE REPORTS

SEC. 214. Subsection (b) of section 305 of the Federal Water Pollution Control Act (33 U.S.C. 1315) is amended—

- (1) by striking out "January 1, 1975, and shall bring up to date each year thereafter," in paragraph (1) and inserting in lieu there-of "April 1, 1975, and shall bring up to date by April 1, 1976, and biennially thereafter,";
- by striking out "annually" in para-(2) graph (2) and inserting in lieu thereof the following: "October 1, 1976, and biennially".

TOXIC AND PRETREATMENT STANDARDS

SEC. 215. (a) The first sentence of paragraph (2) of subsection (a) of section 307 of the Federal Water Pollution Control Act (33 U.S.C. 1317) is amended by striking out to be held within thirty days"

(b) Paragraph (6) of subsection (a) of section 307 of the Federal Water Pollution Control Act (33 U.S.C. 1317) is amended by adding at the end thereof the following new sentence: "In any case where the Adminis-trator determines that compliance within one year from the date of promulgation is technologically infeasible for a category of the Administrator shall establish sources. the effective date of the effluent standard (or prohibition) for such category of sources at the earliest date which compliance can be feasibly attained by such sources, but in no case shall such date be more than three years after the date of promulgation.".

PERMITS FOR DREDGED OR FILL MATERIAL

SEC. 216. (a) Subsection (a) of section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) is amended by

adding immediately after "navigable waters" the following: "and adjacent wetlands"

Such section 404 is further amended by adding at the end thereof the following new subsections:

"(d)(1) The term 'navigable waters' as used in this section shall mean all waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shorevard to their ordinary high water mark, including all waters which are subject to the mean high water mark (mean higher high water mark on the west coast).

"(2) The term 'adjacent wetlands' as used in this section shall mean (A) those wetlands, mudflats, swamps, marshes, shallows, and those areas periodically inundated by saline or brackish waters that are normally characterized by the prevalence of salt or brackish water vegetation capable of growth and reproduction, which are contiguous or adjacent to navigable waters, and (B) those freshwater wetlands including marshes, shallows, swamps, and similar areas that are contiguous or adjacent to navigable waters, that support freshwater vegetation and that are periodically inundated and are norcharacterized by the prevalance of vegetation that requires saturated soil con-

ditions for growth and reproduction. (e) Except as provided in subsection (f) of this section, the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands is not prohibited by or otherwise subject to regulation under this Act (except for effluent standards or prohibition under section 307), or section 9, section 10, or section 13 of the Act of March 3,

"(f) If the Secretary of the Army, acting through the Chief of Engineers, and the Governor of a State enter into a joint agreement that the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands of such State should be regulated because of the ecological and environmental importance of such waters, the Secretary, acting through the Chief of Engineers, may regulate such discharge pursuant to the provisions of this section. Any joint agreement entered into pursuant to this subsection may be revoked, in whole or in part, by the Governor of the State who entered into such joint agreement or by the Secretary of the Army, acting through the Chief of Engineers.

'(g) In carrying out his functions relating to the discharge of dredged or fill material under this section, the Secretary of the Army, acting through the Chief of Engineers, is authorized to issue those general permits which he determines to be in the public

interest.

"(h) The discharge of dredged or fill material-

"(1) from normal farming, silviculture, ranching activities, including, but not limited to, plowing, terracing, cultivating, seeding, and harvesting for the production of food, fiber, and forest products;

"(2) for the purpose of maintenance of currently serviceable structures, including, but not limited to, dikes, dams, levees, groins, riprap, breakwaters, causeways, and abutments and approaches, and other transportation structures (including emergency reconstruction); or

"(3) for the purpose of construction or maintenance of farm or stock ponds and irrigation ditches

prohibited by or otherwise subject to regulation under this Act.

"(i) The discharge of dredged or fill material as part of the construction, alteration, or repair of a Federal or federally assisted project authorized by Congress is not prohibited by or otherwise subject to regulation under this Act if the effects of such discharge have been included in an environmental impact statement or environmental assessment for such project pursuant to the provisions of the National Environmental Policy Act of 1969 and such environmental impact statement or environmental assessment has been submitted to Congress in connection with the authorization or funding of such project.

(j) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section relating to the adjacent wetlands in that State if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secredeems necessary, including, but not limited to, suspension and revocation for

cause of such a delegation.

"(k) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section and by sections 9, 10, and 13 of the Act of March 3, 1899, relating to any fresh water lake located entirely within the boundaries of such State (other than such lake constructed, in whole or in part, by either the Secretary of the Army, acting through the Chief of Engineers, or the Secretary of the Interior) if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as Secretary deems necessary, including, but not limited to, suspension and revocation for cause of such a delegation.".

EMERGENCY FUND

SEC. 217. Section 504 of the Federal Water Pollution Control Act is amended by designating the initial subsection therein as subsection "(a)" and adding the following new subsections at the end thereof as follows:

(b) There is hereby established a contingency fund to provide assistance for emergencies, including, but not limited to, those which present an imminent and substantive endangerment to the public health or welfare, those which require protection of persons where the endangerment is to the livelihood of such persons, and those re-sulting from natural and other disasters.

There is authorized to be appropri-(c) ated not to exceed \$5,000,000 to carry out subsection (b) of this section. The amounts appropriated under this subsection shall remain available until expended. There is authorized to be appropriated such sums annually as are necessary to maintain such fund at a \$5,000,000 level.

"(d) The Administrator shall submit a report annually to each House of Congress on his activities in carrying out subsections

and (c) of this section.

(e) This section shall not be construed to relieve the Administrator of any requirement imposed on the Administrator by any other Federal laws. Nothing contained in this subsection shall (1) affect any final action taken under such other Federal law, or (2) in any way effect the extent to which human health or the environment is to be protected under such other Federal law.".

JUDICIAL REVIEW

SEC. 218. Subsection (b) (1) of section 509 of the Federal Water Pollution Control Act is amended by striking out "and (F) in issuing or denying any permit under section 402," and inserting in lieu thereof the following: "(F) in issuing or denying any permit under section 402, (G) in promulgating or revising guidelines for effluent limitations under section 304(b), and (H) in making any determination as to a program for State certification under section 214,"

RULE AND REGULATION REVIEW

SEC. 219. Title V of the Federal Water Pollution Control Act is amended by renumbering section 518 as section 519 and by inserting immediately after section 517 following new section:

"RULE AND REGULATION REVIEW

'Sec. 518. (a) Any rule or regulation issued under authority of this Act after the date of enactment of this section may by resolution of either House of Congress be disapproved, in whole or in part, if such resolution of disapproval is adopted not later than the end of the first period of sixty calendar days when Congress is in session (whether or not continuous) which period begins on the date such rule or regulation is finally adopted by the department or agency adopting same. The department or agency adopting any such rule or regulation shall transmit such rule or regulation to each House of Congress imupon its final adoption. Upon mediately adoption of such a resolution of disapproval by either House of Congress, such rule or regulation, or part thereof, as the case may be, shall cease to be in effect.

(b) Congressional inaction on or rejection of a resolution of disapproval shall not be deemed an expression of approval of such

FINANCIAL DISCLOSURE

SEC. 220. Section 501 of the Federal Water Pollution Control Act (33 U.S.C. 1361) is amended by adding at the end thereof the following new subsection:

(g) (1) Each officer or employee of the Environmental Protection Agency who-

"(A) performs any function or duty under

this Act; and

"(B) has any known financial interest in any person who (i) discharges pollutants from any point source, (ii) discharges oil, hazardous substances, or sewage from any vessel, (iii) discharges oil or hazardous substances from any onshore or offshore facility, (iv) is otherwise subject to regulation under this Act, or (v) is applying for or receiving financial assistance under this Act, shall, beginning on October 1, 1977, annualfile with the Administrator a written statement concerning all such interests held by such officer or employee during the ceding calendar year. Such statement shall be available to the public.

(2) The Administrator shall-

"(A) act within ninety days after the date

of enactment of this section—
"(i) to define the term 'known financial interest' for purposes of paragraph (1) of

this subsection; and

"(ii) to establish the methods by which the requirements to file written statements specified in paragraph (1) will be monitored and enforced, including appropriate provisions for the filing by such officers and employees of such statements and the reby the Administrator of such statements; and

"(B) report to the Congress on June 1 of each calendar year with respect to such dis-closures and the actions taken in regard thereto during the preceding calendar year.

- "(3) In the rules prescribed in paragraph of this subsection, the Administrator may identify specific positions within the Environmental Protection Agency Agency which are of a nonregulatory and nonpolicy-making nature and provide that officers or employees occupying such positions shall be exempt from the requirements of this subsection.
- "(4) Any officer or employee who is subject to, and knowingly violates, this subsection, shall be fined not more than \$2,500 or

imprisoned not more than one year, or both.".

COST RECOVERY STITUY

SEC. 221. (a) The Administrator of the Environmental Protection Agency (hereafter in this section referred to as the "Administrator") shall study the efficiency of, and the need for, the payment by industrial users of any treatment works of that portion of the cost of construction of such treatment works (as determined by the Administrator) which is allocable to the treatment of such industrial wastes to the extent attributable to the Federal share of the cost of construction. Such study shall include, but not be limited to, an analysis of the impact of such a system of payment upon rural communities. No later than the last day of the twelfth month which begins after the date enactment of this section, the Administrator shall submit a report to the Congress setting forth the results of such study.

(b) During the period beginning on the date of enactment of this section and ending on the last day of the eighteenth month which begins after the date of enactment of this section (both dates inclusive), no officer or employee of the Federal Government shall enforce, or require any recipient of a grant under section 201(g)(1) of the Federal Water Pollution Control Act (33 U.S.C. 1284) to enforce, any provision in an application for a grant or in a grant agreement under such section which requires any payments by industrial users pursuant to section 204(b) (1) (B) of such Act.

(c) For purposes of this section, the terms "industrial user" and "treatment works" have the same meaning given such terms in the Federal Water Pollution Control Act.

SECONDARY TREATMENT FACILITY SITE

SEC. 222. The Administrator of the Environmental Protection Agency shall reimburse the city of Boston, Massachusetts, an amount equal to 75 per centum, but not to exceed \$15,000,000, of the cost of constructing a modern correctional detention facility on a site in such city, on condition (A) that such city convey to the Commonwealth of Massachusetts all of its right, title, and interest in and to that real property owned by such city on Deer Island which is the site of the existing correctional detention facility for use by such Commonwealth as the site for a publicly owned treatment works providing secondary treatment and (B) such Commonwealth convey to such city all of its right, title, and interest to the real property on New Chardon Street in such city owned by such Commonwealth for use by such city as the site for such correctional detention facility. There is authorized to be appropriated \$15,000,000 to carry out the purposes of this section.

Mr. JOHNSON of California (during the reading). Mr. Speaker, I ask unanimous consent that the amendment be considered as read and printed in the

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from California (Mr. Johnson).

The motion was agreed to.

A motion to reconsider was laid on the table.

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, pursuant to House Resolution 468, I move to insist on the House amendment to the Senate amendment to H.R. 11 and to request a conference with the Senate thereon

The SPEAKER. The question is on the

The motion was agreed to.
The SPEAKER. The Chair appoints the following conferees: Messrs. John-SON of California, ROBERTS, ROE, ANDER-SON of California, BREAUX, NOWAK, ED-GAR, HARSHA, DON H. CLAUSEN, and HAM-MERSCHMIDT.

PERMISSION FOR COMMITTEE ON THE JUDICIARY TO HAVE UNTIL 6 P.M., APRIL 11 TO FILE REPORT ON H.R. 5864, AMENDMENTS TO RULES OF CRIMINAL PROCEDURE

Mr. MANN. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary have until 6 p.m. Monday, April 11 to file the report on H.R. 5864, a bill to approve with modifications certain proposed amendments to the Federal Rules of Criminal Procedure, to disapprove other such proposed amendments, and for other related purposes.

The SPEAKER. Is there objection to the request of the gentleman from

South Carolina?

There was no objection.

PERSONAL EXPLANATION

Mr. FOUNTAIN. Mr. Speaker, I departed from a luncheon meeting with President Sadat of Egypt to vote on H.R. 5717 without knowing that suspension votes had been postponed to be voted on every 5 minutes.

Consequently, I am not recorded on the next vote, H.R. 7, the Elementary and Secondary Career Education Act of 1977. I would like for the record to show that had I been recorded, I would have

voted "Aye."

LIFELINE AND ELECTRIC REFORM BILL BY MR. ALLEN AND OTHERS

(Mr. ALLEN asked and was given permission to address the House for 1 minute to revise and extend his remarks and include extraneous matter.)

Mr. ALLEN. Mr. Speaker, today I am introducing a new "Lifeline and Electric Rate Reform Act" to reduce residential electric rates throughout the country and provide incentives for all users to stop the wasteful use of electricity and conserve all forms of energy.

The bill, which as backed and cosponsored by 24 House Members from all sections of the Nation, including HENRY REUSS, chairman of the House Banking Committee, and Tennesseans ED JONES, AL GORE, JR., JIMMY QUILLEN, and HAR-OLD FORD, would encourage the conservation of electric energy by all users, prohibit quantity discounts or declining block rates, and give the lowest rates to residential customers and small businesses

This legislation will put an end to discrimination by electric utilities which charge higher rates to residential consumers and small businesses, as compared with the much lower rates they charge giant industries and their most favored classes of users.

The bill would also establish national minimum standards or guidelines for electric ratemaking, to be formulated by the Electric Energy Office proposed by President Carter to assist all State regulatory agencies to carry out the provisions of the act.

The bill would put an end to and prohibit any increases in rates or fuel cost adjustments without prior approval by the proper regulatory agency after

full public hearings.

Under the act, residential customers will be charged the lowest rate for their basic needs or what is termed a "subsistence quantity" of electricity. "Subsistence quantity" is defined as the average number of kilowatt-hours of electricity used by all residential users in the area served by any utility. Electricity used in excess of the "subsistence quantity" will be sold at a progressively higher schedule of rates, with the highest permissible rate for residential users not to be above the average rate charged the most favored class of customers.

The same principle would apply to nonresidential users. The basic requirement of electrical energy of such nonresidential users would be at the lowest rate made available to such classes of users. Any amount of electricity used in excess of such basic requirements would

be graduated upward.

These provisions would discourage the wasteful and excessive use of electrical energy by all users of electric energy, and would apply to all electric utilities in all 50 States, including TVA and other federally owned agencies.

This bill is truly designed to relieve the residential users of the unfair burden they are having to bear under the upsidedown rate structures that now prevail in the electric industry. Under this legislation everyone will have economic incen-

tive to save energy.

The bill would cover all production, distribution and sale of electric energy to other than ultimate consumers by local distributors whose operations are regulated by authority of State governments, under guidelines to be provided by the Federal Energy Office. An Electric Energy Office would be established in the Federal Power Commission or its successor, and would require all utilities and distributors to furnish monthly reports. The reports will show supply and demand with 6- and 12-month projections. The Commission is required to maintain all such data and to furnish monthly reports to the President.

The bill would become effective 1 year after passage, except that the Electric Energy Office would be created by Executive order within 30 days after passage and the lifeline electric rate guidelines would be set up by the Electric Energy Office within 45 days of the effective

date.

Cosponsors of the bill, in addition to Chairman Reuss and the Tennessee House Members, include: Jerry Patterson of California; Joe Moakley of Massachusetts; Walter Jones of North Carolina; Ron Mottl of Ohio; Tom Harkin of Iowa; John Burton of Cali-

fornia; James Scheuer of New York; Robert Nix of Pennsylvania; Ed Beard of Rhode Island; James Blanchard of Michigan; Shirley Chisholm of New York; Tim Lee Carter of Kentucky; Stephen Neal of North Carolina; Romano Mazzoli of Kentucky; Bruce Vento of Minnesota; Herman Badillo of New York; John Conyers of Michigan; Herbert Harris of Virginia; and Charles Wilson of Texas.

LEGISLATION TO DENY TITLE 38 BENEFITS TO UPGRADED VIET-NAM ERA VETERANS

(Mr. SATTERFIELD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SATTERFIELD. Mr. Speaker, I am introducing today a bill which would deny title 38 veterans benefits to those Vietnam era veterans, who by upgrading of military discharges under the special discharge review program announced by Secretary of Defense Brown on March 29, would for the first time qualify for such benefits

Under that review program, more than 435,000 Vietnam servicemen who served from August 4, 1964, through March 23, 1973, will be eligible to apply to a discharge review board to upgrade an undesirable or general discharge on the basis of special criteria designed to assure a high incidence of success. It also provides a procedure by which individuals now carried in a deserter status may return to military control, obtain a discharge, then apply to a discharge review board to have it upgraded.

It is estimated that more than 173,000 Vietnam era servicemen may apply for upgrading an undesirable discharge and, if successful they would qualify for full veterans benefits. To permit this to occur would be an insult to our Nation's veterans who have earned their benefits by full and honorable service to their

country.

When this program was announced it was termed "an act of forgiveness." In my view, acting in a spirit of compassion to forgive past offenses is one thing: rewarding the offender with benefits which others are required to earn through honorable service is quite another.

Aside from the principle involved, the VA has estimated that the cost of 30,000 additional recipients of veterans benefits will increase the total cost of veterans benefits by more than \$100 million. At a time when funds for VA programs are already marginal such a new demand could result in a diminution of service, both in quality and quantity, now provided to veterans. Those with nonservice disabilities would be especially affected. To permit this to occur would be unconscionable.

My bill does not challenge the spirit of compassion which is the heart of the President's program: but it would preserve the integrity of the VA system.

A veteran would still be eligible to have his discharge upgraded and thus remove any stigma which may attach to it. His right to veterans preference in

civil service employment and participation in veterans jobs programs administered by the Secretary of Labor would not be affected. Only those benefits actually administered by the Veterans' Administration would be covered.

Mr. Speaker, there are other aspects of this review program which compel further comment. For example, it is alleged that the program will consider the upgrading of undesirable discharges on a case-by-case basis only. However, that program will make no distinction between discharges given for different reasons. An examination of the broad criteria which will control discharge reviews reveals that the program will result in blanket upgrading of discharges, with very few exceptions. Very few of the individuals whose discharges will be upgraded under this program were originally discharged for reasons relating to a moral objection to the war in Vietnam. In fact, few discharges had any relevant connection with Vietnam.

Moreover, there is no rational justification for distinguishing between those who are eligible for upgrading under this program and those who are not. Why should a serviceman who received an undesirable discharge for an offense unconnected with Vietnam on March 28, 1973, be entitled to have his discharge upgraded when a serviceman who received an undesirable discharge for the same reason on March 29, 1973, will not? Indeed what reason can there be to justify this kind of preferred treatment for a man who elected to take an undesirable discharge administratively rather than face a court-martial while denving use of the review program to another who committed a similar or perhaps a less heinous offense but insisted on a trial by court-martial and as a result received a bad conduct discharge? The assumption that undesirable discharges during the period between 1964 and 1973 are more worthy of being upgraded than undesirable discharges granted at some other time must be described as arbitrary.

Furthermore, this program is bound to create new inconsistencies which will lead to further reviews of all discharges by correction boards or courts. This will inevitably lead to destruction of our clearly defined and established system of discharges ranging from dishonorable to bad conduct to undesirable to general to honorable. In the process there is a real danger that a precedent will be established which ignores the distinction between good and bad military service during a time of open hostilities. Should that occur, then the reliability of any system of conscription in a future emergency will be seriously compromised.

POWER TO WHICH PEOPLE?

(Mr. MICHEL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MICHEL. Mr. Speaker, in remarks I made on the floor yesterday, I was critical of the President's proposed electoral reforms, particularly his suggestion that there be public financing of congressional campaigns. I stated that this would be unfair to challengers and would give incumbents an almost insurmountable edge. Yes, campaign expenditures would be "equal" under such a law. As I pointed out, however, the incumbent would be "more equal than others" since he can command media attention and has wide name recognition while the challenger would have to spend most of his funds on simply getting his name before the public.

Today's Wall Street Journal has an editorial giving more reasons why such a change in our electoral laws is not desirable. The editorial, "Power to Which People?" says in part:

The cry for public financing of campaigns is being heard once again in the land—this time for Congress. Bills have been introduced in the House and Senate; the leadership has endorsed the idea, and so has the President.

Mr. Speaker, I would like the record to show that although I am a Member of the minority leadership I have never endorsed any scheme of public financing of congressional races. I will be speaking out again on this issue when the proper time comes, but for the present I want to place in the Record the Wall Street Journal's editorial that so concisely and accurately sums up the case against these so-called reforms, especially the old shell game of public financing which simply redistributes political power:

POWER TO WHICH PEOPLE?

The federal election amendments of 1974, with their limits on contributions and their public funding of presidential campaigns, were promoted as reforms that would have far-reaching effects on our political life. And the verdict is now coming in on just what those effects were. In particular, the recent reports by Michael Malbin of the National Journal should give some pause to anyone who thought that this kind of lawmaking would bring a purer and less partisan government in its wake.

Mr. Malbin found first that the FEC, established to administer the new regulations, has spent its first election year reeling from to embarrassment and back. It has spent 35 man-years auditing the reports of candidates who got federal funds. It has been sued by the League of Women Voters for disallowing contributions the league had planned to use to pay for the presidential debates. It has also incurred serious criticism for the extent to which some of its rulings infringe on the freedom of political expression. The commission's problems do not arise from some specially perverse bureaucratic malice or ineptitude. Some of them are birth pangs; but more of them come from the scope of the law itself, from the huge variety of activities the law presumes to regulate and

Even more striking than these administrative problems is the clarity with which one can see who won and who lost from the new laws. Incumbents, professional fund-raisers, ideological zealots and wealthy candidates have all been gainers. But the biggest winner was organized labor. In the presidential general election, private contributions to the candidates themselves were just about eliminated, but labor could still spend unlimited money to communicate with its own union members. The unions used this advantage to spend what Mr. Malbin estimates to have been \$11 million for Jimmy Carter in 1976—half as much as the Carter campaign itself was allowed to spend.

Business did nowhere near so much for

Ford—and, given the nature of its relationship with its stockholders, it was hardly likely that it could equal labor's massive expenditures.

Now there is nothing particularly sinister in this movement of influence. One can imagine presidential counselers a lot less worthy than George Meany. In fact labor has reason to feel a bit cheated; it doesn't seem to be getting quite the spoils it paid for.

It's clear, though, that the result of the last electoral "reform" was not a transfer of power from "the interests" to "the people"; it was a transfer of power from individuals with one kind of political resources to individuals with another. There's not much evidence that the nation as a whole got more accurately represented by the change, any more than the 1972 reforms of the Democratic Party led to a convention that better represented the opinions of most Democrats.

The cry for public financing of campaigns is being heard once again in the land—this time for the Congress. Bills have been introduced in the House and Senate; the leadership has endorsed the idea, and so has President Carter. "It would be a tragic irony," he explained, "if the 1974 law, which reduced the pressure special interests could place on presidential candidates, increased the pressures on candidates for Congress, as the large contributors look for new means of gaining influence with their political funds."

If public funding for congressional elections does come, it will come with less administrative agony than it did last time around; and it is unlikely to go so far as the presidential law in eliminating private contributions. But it will not be a politically neutral reform any more than the original was; like its predecessor, it will redistribute influence rather than somehow creating a politics free of any influence at all. In battles like this one, it is only natural that the "reformers" should want to appropriate the legitimacy that comes from calling themselves the true representatives of the people. But the rest of us might remember that the issue is one of power.

LEGISLATION TO PAY BONUS TO VIETNAM ERA ARMED SERVICES MEMBERS

(Mr. SCHULZE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SCHULZE. Mr. Speaker, I am today introducing legislation to authorize the payment of a Federal bonus to members of the U.S. armed services who served during the period described as the Vietnam era. The bill would authorize the payment of \$100 to anyone who served on active duty during that period, and it would authorize an additional \$400 to be paid to those active duty personnel who served in or adjacent to the Indochina theater of operations during the Vietnam era. The eligibility to receive the \$400 increment will be based upon prior pay records wherein the serviceman received combat pay.

Mr. Speaker, in the furious days of the Vietnam conflict, impassioned pleas were made on behalf of those who answered their country's call and served in the Armed Forces of the United States. More recently, when President Carter unilaterally pardoned those who did not choose to serve their country in the Vietnam era, public statements again alluded to the priority that should be given those who served their Nation in uni-

form. Many died, many were wounded, but many more came home.

President Carter has said that by issuing the pardon, we would be putting behind us those emotional days. Whatever you or I or American citizens generally may think about the pardon, I believe that there is unanimity that the other side of the coin is whether or not we have done all which we might do to assist those veterans who served on active duty during that era. Rates of unemployment are highest among returning veterans. Many are unskilled and have problems in attempting to enter the job market. Others who secured employment were the first to be laid off since they were the most recently hired. There are Federal programs which are designed to help their needs in training and education. My legislative proposal does not attempt to substitute for those actions. In some ways, my proposal can be viewed as simply a symbolic act by this Congress to let every veteran of that conflict know that we have not forgotten him and we do not intend to forget him.

My proposal does not distinguish between those who served with honor in Vietnam but who, subsequent to their return to noncombat assignments elsewhere in the world, became involved in disciplinary action that may have led to their receiving less-than-honorable discharges. I believe that we must measure that man on the sole basis of his serving his country under fire, and thank him as well. So my proposal would focus only on that period of service in the theater of operations while he was drawing combat pay. If that service was honorable, then he would be eligible to re-

ceive the bonus.

I hope that my colleagues will agree with my proposal and join in support of it. The text of my bill follows:

H.R. 6046

A bill to provide a \$100 bonus to each Vietnam-era veteran and an additional \$400 bonus to each Vietnam-era combat veteran

Be it enacted by the Senate and House of Representative of the United States of America in Congress assembled, That this Act may be cited as the "Vietnam-era Veteran Bonus Act".

SEC. 2. (a) The Secretary of Defense shall make a lump-sum payment of \$100, as provided in subsection (b), with respect to each qualified Vietnam-era veteran

qualified Vietnam-era veteran.

(b) (1) A qualified Vietnam-era veteran shall be entitled to receive a payment under subsection (a) upon filing an application in accordance with section 4.

(2) In the case of a qualified Vietnam-era veteran who is deceased before receiving a payment under paragraph (1), the survivor of such veteran (as determined in accordance with section 1447 of title 10, United States Code) shall be entitled to receive the payment under subection (a) with respect to such veteran upon filing an application in accordance with section 4.

(c) For purposes of this section, the term "qualified Vietnam-era veteran" means any

Vietnam-era veteran who-

(1) in the case of an individual who is a former member of the Armed Forces at the time an application with respect to such individual is made under subsection (a), was discharged or separated from the Armed Forces under honorable conditions, and

(2) in the case of an individual who is a member of the Armed Forces at the time an application with respect to such individual is made under subsection (a), is not awaiting execution of or serving a sentence of a court martial which includes a discharge or separation under other than honorable conditions, and includes a Vietnam-era veteran who died while on active duty.

SEC. 3. (a) The Secretary of Defense shall make a lump-sum payment of \$400, as provided in subsection (b), with respect to each qualified Vietnam-era combat veteran.

(b)(1) A qualified Vietnam-era combat veteran shall be entitled to receive a payment under subsection (a) upon filing an application in accordance with section 4.

(2) In the case of a qualified Vietnam-era

combat veteran who is deceased before receiving a payment under paragraph (1), the survivor of such veteran (as determined in accordance with section 1447 of title 10, United States Code) shall be entitled to receive the payment under subsection (a) with respect to such veteran upon filing an application in accordance with section 4.

(c) Any payment with respect to a qualifled Vietnam-era combat veteran under this section shall be in addition, and not in lieu of, any payment with respect to such veteran under section 2.

(d) For purposes of this section, the term "qualified Vietnam-era combat veteran" means any Vietnam-era veteran—

(1) who at any time during the Vietnam era received special pay for duty subject to hostile fire under section 310 of title 37, United States Code,

(2) whose entitlement to such special pay arose out of the involvement of the United States in the Vietnam conflict, and

(3) whose service during the period for which such veteran received such pay was honorable service.

Sec. 4. (a) An application for a payment under this Act shall be filed in such form and manner as the Secretary of Defense shall prescribe. Any such application shall be filed not later than the end of the three-year period beginning on the date on which funds are first appropriated under this Act.

(b) The Secretary of Defense shall take appropriate measures to identify individuals who are eligible for payments under this Act and to inform such individuals and the general public of the provisions of this Act and of the requirements established by the Secretary under subsection (a) for filing applications for payments under this Act.

SEC. 5. For purposes of this Act: (1) The term "Vietnam-era veteran" means any individual who served in the Armed Forces on active duty (other than for train-

ing) at any time during the Vietnam era. (2) The term "Vietnam era" means the period beginning on August 15, 1964, and ending on May 7, 1975.

(3) The term "Armed Forces" means the

Army, Navy, Marine Corps, and Air Force, including the Reserve components thereof.

AMENDMENT TO ATOMIC ENERGY COMMUNITY ACT OF 1955

(Mr. LUJAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LUJAN. Mr. Speaker, I am introducing today a bill to amend the Atomic Energy Community Act of 1955, as amended, to authorize, but not require, the Administrator of the Energy Research and Development Administration to continue to make financial assistance payments to the Los Alamos School Board and the county of Los Alamos, N. Mex. Present provisions of the Atomic Energy Community Act provide that this authority terminate at the end of ini-

tial 10-year periods of assistance payments. The dates which mark the end of the 10-year periods and the expiration of the authority of the Administrator to make assistance payments were June 30. 1976, for the schools and June 30, 1977, for the county. This bill will extend the authority of the Administrator to continue to make assistance payments to the schools and the county of Los Alamos on essentially the same basis that the 1967 amendment of the Community Act previously extended the authorization for the Administrator to continue payments to the former AEC communities of Oak Ridge, Tenn., and Richland, Wash., after expiration of their initial 10-year period of payments.

The amount of the assistance payments would be determined under the criteria now in the Community Act. The Administrator would be authorized to enter into contracts not exceeding a 10year term with the schools and the county at Los Alamos. Such contracts have been used to spell out the obligations and responsibilities of the parties as well as the mechanics of requesting, supporting, and making the payments. A 1967 amendment to the Community Act required that any appropriation for assistance payments must first be authorized by Congress. This would require that funds to satisfy any contractual obligations entered into by ERDA and the schools and county would be requested to be included in authorizing any appropriation acts. Six months prior to expiration of the 10-year periods for which ERDA would be authorized to contract with the schools and the county, recommendations would have to be made the Administrator to the Congress to the need for further assistance payments. In the absence of further legislation at that time, assistance payments could be continued on a year to year, or as needed, basis subject to congressional authorization and appropriation of funds.

During the 94th Congress I introduced H.R. 9948, which would have amended the Community Act to authorize continuance of assistance payments to the county and schools at Los Alamos just as the bill I am introducing today will do. The Administrator of ERDA and the Office of Management and Budget supported the need for continued assistance payments. A hearing was held on H.R. 9948 and an identical Senate bill, S. 2435. The record made at the hearing before the Subcommittee on Legislation of the JCAE provides a convincing case that continuance of financial assistance payments should be authorized. Unfortunately, because of the press of other business the JCAE did not report the bills out during the 94th Congress, although I am not aware of any objections to the bills by any members of the JCAE.

Los Alamos, N. Mex., is one of the communities originally constructed by the Army during V. orld War II to support research and development, and the production of atomic weapons. The community was later transferred to the Atomic Energy Commission and remained a Government-owned and managed community until 1962, when the

transfer of much of the property to private ownership and self-government began. Because of its construction as a defense installation, the one-industry nature of the town, and the tax-exempt status of that one industry due to its ownership by the Federal Government. the schools and the county require financial assistance from the Federal Government to provide an adequate level of service to the community. The adequate level of service expected by the Federal Government is that which will permit retention and recruiting of the highly qualified people necessary for the important research and development program at the Los Alamos Scientific Laboratory.

It is for these reasons, based on the origin and long history of the community as federally owned and managed, the tax-exempt nature of the one industry and the requirements and burdens on the schools and local government by the Federal activities, that I introduce this legislation today.

IN DEFENSE OF RICHARD SPRAGUE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. McKinney) is recognized for 60 minutes.

Mr. McKINNEY. Mr. Speaker, it appears that the Select Committee on Assassinations has overcome the "internal strife"-real or alleged-that has for a short time impeded its work. However, there is one matter that has yet to be resolved and which for me will continue to be an impediment until the record has been made straight. The matter to which I refer is the vindication of Richard

I have never been one to aggravate festering wounds, Mr. Speaker. However, I feel a moral responsibility to a man who came to serve at the request of Congress and who left under a barrage of the cruelest, most vindictive accusations I have ever heard. That Richard Sprague was not even granted the opportunity to repudiate the charges made against him only adds to the unfortunate situation to which this Congress has subjected itself and for which it must accept full responsibility.

It is not my intention at this time to attack any other Member of Congress, but rather to protect the right of a man to be presumed innocent until proven guilty. Richard Sprague's right to operate and depart under that presumption has been violated. The fact that Mr. Sprague's resignation was accepted prior to the substantiation of any of the charges levied against him and prior to any opportunity for Mr. Sprague to refute those charges is a violation of every principle of this Nation. Thus, Mr. Speaker, I take this opportunity, on behalf of Mr. Sprague, to clear his name and attempt to right the severe wrongs that were done him while in the employment of this body.

Four of the most serious attacks on Mr. Spreague's personal integrity were: Charge.—As reported in the New York

Times of February 12, 1977:

Richard A. Sprague was accused of violating the Rules of the House of Representatives by . . . refusing to file a statement of his outside income . . . It was said that Mr. Sprague had refused in writing to provide a financial statement of his outside income, which is required by Rule 44.

Facts.—The pertinent provision of House Rule XLIV reads as follows:

Members, officers, principal assistants to Members and officers and professional staff members of committees shall ... by April 30 of each year . . . file with the Committee on Standards of Official Conduct a report disclosing certain financial interests as provided in this rule.

There was no requirement that any of the committee staff file a financial statement in 1976 because no staff member had been hired prior to October 1976. Further, no staff member is presently in violation of House Rule XLIV, which requires that a financial statement be filed by April 30, 1977. This date is 25 days away.

At the time that this particular charge was made—February 12, 1977—the chairman at that time had ordered committee staff members to submit financial statements by February 15, 1977. The charge was at least untimely in that it preceded by 3 days the deadline he had set for the filing of the statements.

The necessary forms for disclosure of finances only can be obtained after the chairman of the committee in question has submitted to the Committee on Standards of Official Conduct a list of personnel to whom the forms should be sent. This list was never presented to the Committee on Standards of Official Conduct.

Charge.—It has been stated that Mr. Sprague has taken several trips in recent years to Las Vegas and it has been asked of him who had paid for those trips. It was also charged that Mr. Sprague has taken several trips to the Fountainbleau Hotel in Miami Beach and a statement was made. "We all know who owns the Fountainbleau," insinuating an association between Mr. Sprague and various disreputable individuals.

Facts.—Mr. Sprague has been in Las Vegas on one occasion when he lectured at a conference of a National Trial Lawyers Association along with other nationally prominent attorneys. He spoke in the evening of the day he arrived and left the next day. Mr. Sprague has never stayed at the Fountainbleau Hotel in Miami Beach.

Charge.—It has been charged that Mr. Sprague has engaged in fee-splitting with a well known Washington lawyer—whose name I have chosen to omit—particularly in connection with the Yablonski murder case and a civil suit involving the United Mine Workers.

Facts.—The charge is simply untrue. Fee-splitting is a violation of professional ethics covered in the Lawyers Code of Professional Responsibility. No court or bar association has ever found Mr. Sprague in violation of this ethical rule.

Mr. Sprague has also been subjected to severe and unfounded criticism on his performance as Chief Counsel of the Select Committee on Assassinations. While it should suffice to state that 12 members of that committee have repeatedly endorsed his performance as chief counsel, for the sake of Mr.

Sprague's integrity I will outline the most serious charges.

Charge.—The following article was submitted from the San Antonio Light—March 9, 1977—to the Congressional Record—March 28, 1977—charging Mr. Sprague with personally contacting Cuban officials in New York without first consulting the committee or proper U.S. Government agencies:

. . . in a bitter attack against Sprague, said the committee chief counsel made contact with the Cuban delegate to the United Nations, without the knowledge and consent of the Committee leadership.

"Sprague has, through his ego-maniacal naivete, exposed the committee, the Congress and the country to the most insidious of forces not friendly to our nation and its

"I asked him what kind of consultation and coordination he had made with the executive branch of government, and he became irritated and clammed up. He refused to discuss the matter further."

Facts.—The entire committee was advised in executive session of the Cuban situation as it arose and before any contacts with any foreign officials were made. The State Department was not only consulted on this matter, but their representatives had high praise for the committee's delicate handling of the matter. In fact, it was on the basis of the State Department's specific suggestions, that the method of contacts with foreign officials was formulated.

Charge.—It was stated in the Con-GRESSIONAL RECORD of March 28, 1977 that expense vouchers were submitted for the month of December 1976 totaling more than \$9,900. It was further stated that the vouchers were improperly accounted for and that the biggest single expense was long-distance telephone calls made by Mr. Sprague to Philadelphia.

Facts.—The amount of the vouchers for that period totalled \$11,488.80, with each item clearly accounted for. The total telephone bill for that period was \$826.85. Calls to Philadelphia totaled \$114.48 for which the committee was totally reimbursed by check, by Mr. Sprague. In fact, after all 1976 expenses have been paid, the committee expense account will show a surplus of nearly \$5.000.

Charge.—It was charged that the committee was overspending its budget under House Resolution 222 by \$20,000 per month. It was further contended in a statement in the Congressional Record of March 28, 1977 that committee members had intentionally ignored pleas for fiscal responsibility.

"When I pointed out that the Committee was overspending, as it has now in the range of exceeding \$100,000 over what the House mandates was the limit, not a word."

Facts.—The committee has at no time exceeded the financial limitations under the continuing resolution, House Resolution 11, or the resolution recreating the committee, House Resolution 222.

The committee statement for the first 3 months of this year leaves a surplus balance of \$433.86, with the expenses for that period totalling \$13,890.21. It has been possible to remain within the proper financial limits due to the willingness of

the committee staff to take voluntary reductions in pay.

Charge.—In a statement in the Congressional Record of March 28, Mr. Sprague was charged with violating House Rule XI(6)(a)(3)(B):

Mr. Sprague appears to maintain an active law practice, with offices at 1622 Locust Street, Philadelphia, Pa., and, furthermore, is engaged in the teaching of law at Temple University, also in Philadelphia. It is plain that since the Rules of the House apply to this Committee, Mr. Sprague is in clear violation of the requirement that he have no outside employment.

Facts.—Such is not the case. House Rule XI(6)(a)(3)(B) reads, in pertinent part, as follows:

The professional staff members of each standing committee . . . shall not engage in any work other than committee business . . .

This rule refers to standing committees and is not applicable to select committees.

House Resolution 222, which established the Select Committee on Assassinations, specifically exempted our committee from the provisions of House Rule XI(6) (a).

Furthermore, when Mr. Sprague accepted, at our request, the position of chief counsel of the Select Committee on Assassinations, he did so with the assurance that he would be allowed to continue his law practice and teaching responsibilities to the extent that such activities did not interfere with his work on the committee. At no time did I find Mr. Sprague inaccessible nor his work as chief counsel in any way hindered by his other activities. In fact, even on weekends Mr. Sprague always contacted his office and made it known where he could be reached in an emergency.

Charge.—In a statement for the Con-GRESSIONAL RECORD of March 28, Mr. Sprague was deemed responsible for hiring 23 people on January 1, 1977, and thus placing the committee in financial jeopardy.

Facts.—The conditions by which these people were hired have been misrepresented. While 23 people did join the staff at that time, they were in fact hired long before January 1, some as early as October. The beginning of the new year was a convenient time for them to leave their former positions—many had to fulfill previous obligations to former employers—as well as relocate themselves and their families in the Washington area. It must also be remembered that this hiring was done with the advice and consent of the then chairman

Perhaps the most unfortunate charges levied against Mr. Sprague were those that called his professional integrity into question. The possible damage done to his professional career as a result of these charges is most regrettable. I hope that again by providing answers to these charges, any misconceptions regarding Mr. Sprague's integrity can be laid to rest.

Charge.—An article from the January 2, New York Times, states that while Mr. Sprague was first district attorney of Philadelphia he used a county detective to follow the husband of Mr. Sprague's friend.

Facts.—As Mr. Sprague has stated

publicly, the county detective indeed followed the gentleman but did so on his own time, in the evening, and in no way involved his work with district attorney's

Charge.—An article from the New York Times of January 2 cited a report by the Philadelphia citizens crime commission criticizing the Philadelphia district attorney's office during the period when Mr. Sprague served as first assistant district attorney. The major findings of the study stated that there was too much power in the office of the first district attorney, problems with the administration of the DA's office and that money had been wasted by that office.

Facts.

To this day, the office of first district attorney in Philadelphia retains all the power that had existed during the period that Mr. Sprague held that position.

The budget of the Philadelphia DA's office has increased annually in accordance with the responsibilities of an ever

increasing caseloads.

At no time was Mr. Sprague subject to any criticism for his performance as a result of the report from the crime commission

In the past several months this Congress has had the unfortunate opportunity to hear a litany of charges raised against Richard Sprague. It would be of little benefit to anyone to list and refute every unnecessary accusation against him. I am satisfied that with the publication of this statement most of the serious charges made will have been refuted. However, there is one final accusation made against Mr. Sprague which I cannot let pass. It has been charged in a statement to the Congressional Record of February 16, 1977, that Mr. Sprague was in violation of House Rule (XLIII).

Rule XLIII states:

A Member, officer or employee of the House of Representatives shall conduct himself at all times in a manner which shall reflect creditably on the House of Representatives.

If the activities of the Select Committee on Assassinations have brought embarrassment upon the House of Representatives it most certainly is not attributable to Richard Sprague. In the midst of a constant attack upon his personal integrity, professional standards and performance as an employee of the House, Dick Sprague remained silent. Even with the submission of his resignation, and despite the fact that this unprecedented public maligning of an employee of the House of Representatives has persisted, Mr. Sprague has conducted himself as a gentleman. By his silence, Mr. Sprague has spared this Congress from some severe and justified criticism. I am not certain that I understand his reluctance to speak out, but I certainly admire him all the more for it.

Mr. Speaker, I think in the case of Richard Sprague we have seen a "witchhunt" and a divestation of human rights that I never expected to see again a part

of our democratic process.

I think a man has been systematically, publicly destroyed by falsehood, by rumor, by innuendo and by just plain callous cruelty in a clear denial of his civil and human rights.

I would hope we would never again forget that every man has a right to his own defense in our Nation, and that a basic tenet of our freedom is that all men are innocent until proven guilty in a court of law, through due process.

Thank you, Mr. Speaker.

GENERAL LEAVE

Mr. McKINNEY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the subject of my special order of today.

The SPEAKER. Is there objection to the request of the gentleman from Con-

necticut?

There was no objection.

CONGRESSMAN LENT DISCLOSES 1976 FINANCIAL STATUS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LENT) is recognized for 5 minutes.

Mr. LENT. Mr. Speaker, as has been my practice since 1972 and because of the concern with possible conflicts of interest and the financial status of all public officials expressed by many citizens, I am pleased to disclose at this time pertinent information regarding my financial status for the year 1976. This financial disclosure follows the March 12, 1974, recommendations of the Ad Hoc Committee on Financial Disclosure of the New York State delegation to Congress. which consists of 39 Members of the House:

First. Sources of all noncongressional income-law firm of Hill. Lent & Troescher, Esqs., Lynbrook, N.Y. I received income from the practice of law, rent, speaking honorariums, interest and dividends. I do not practice in the Federal courts or before Federal agencies.

Second. Unsecured indebtedness in excess of \$1,000-None, other than ali-

Third. The sources of all reimbursements for expenditures in excess of \$300 per item-I had congressional expenses not compensated for by the Federal Government of \$12,693. Of this sum, \$8,084 was paid out of the Fourth Congressional District Congressional Club.* \$1,609 was paid out of the Lent for Congress fund; \$3,000 was paid by the Na-

*During 1976, the Congressional Club consisted of individuals who paid annual dues of \$100 each to maintain a fund used exclusively to help me defray the cost of newsletters, reports and questionnaires sent to constituents, and to pay travel, dues, office, telephone, community relations, and other expenses directly related to my job as Congressman. The entire proceeds of this fund were included as income on my 1976 intax returns, and the amounts expended were deducted as official Congressional expenses, pursuant to 1973 IRS Ev. Rul. No. 73-356. In accordance with new rule LXV, Rules of the House, adopted March 2, 1977, the Congressional Club account ceased to accept dues after March 2, 1977. Such funds as then existed in said account will be completely expended on or before January 3, 1978 in accordance with the provisions of said rule XLV.

tional Republican Congressional Committee "REACH" account.

I had additional cost-of-living expenses directly related to my job as Congressman, including the maintenance of living quarters in Washington. D.C., travel, and so forth, estimated at \$7,900 for which I was not reimbursed. I was allowed the statutory maximum deduction of \$3,000 for these living expenses on my 1976 income tax return-IRC section 162(a). These expenses were entirely paid from personal funds.

Fourth. The identity of all stocks, bonds and other securities owned outright or beneficially: Research Cottrell Corp., common stock; Michigan General Corp., common stock: Scudder, Stevens and Clark, common stock fund; Scudder, Stevens, and Clark, special fund; Growth Industries Shares Fund; and New York City Municipal Assistance Corporation Bonds. I own no other se-

curities.

Fifth. Business entities-including partnerships, corporations, trusts, and sole proprietorships-professional organizations, or a noneleemosynary nature, and foundations in which I am a director, officer, partner, or serve in an advisory or managerial capacity-I am partner in the law firm of Hill, Lent, and Troescher, Esqs., Lynbrook, N.Y., and am a partner with Robert H. Troescher in the ownership of our law office property at 81 Hempstead Avenue, Lynbrook, N.Y.

Sixth. I paid \$7,450 in Federal and New York State income taxes for the year 1976. I have filed a report of my earnings and sources of earnings with the House Committee on Standards of Official Conduct pursuant to Rule XLIV of the House of Representatives every year that I have been in Congress.

CURTAILING GOVERNMENT-GENERATED INFLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. Bolling) is recognized for 20 minutes.

(Mr. BOLLING asked and was given permission to revise and extend his remarks and include extraneous matter.)

Mr. BOLLING. Mr. Speaker, despite -percent unemployment and substantial unused industrial capacity, inflation again has reached ominous proportions in the United States. During the 3 months ending in February, the Consumer Price Index rose at a 9.1-percent annual rate. The Wholesale Price Index went up by 8.4 percent, foreshadowing more bad news for consumers ahead.

This upsurge in the indexes is due partly to the volatile prices of farm products, which jumped during this 3month period at a 26-percent annual rate after a period of declines. Customary market fluctuations were magnified somewhat by winter crop losses. Retail food prices rose consequently at a 12percent rate. A brief breakdown of wholesale and consumer price increases appears in table 1 included with this statement.

Part of the recent increase in consumer prices, however, reflects the fact that

wholesale industrial prices moved up at an 8-percent annual rate throughout the latter half of 1976. This component encompasses energy prices, which rose by 18 percent at wholesale and 12 percent at retail, led by prices of natural gas. This bulge of cost increases now is passing through to the consumer level.

Everyone recognizes that price rises for farm and fuel products do not signal general excess demand but instead stem from special factors in these sectors. It must be emphasized, however, that excess demand cannot account for 1976 price increases in the nonfuel industrial sectors either. In fact, the opposite was true: Inadequate and declining demand growth exerted a drag on industrial productivity gains as the process of restarting idle capacity came to a halt. Productivity growth slowed with GNP growth in every quarter throughout the year. These losses of productivity caused production costs-and therefore prices-to rise faster after a short lag. This pattern of relationships is shown unmistakably in table 2 included with this statement.

If not followed by sharp new upward price currents, this spate of price increases should run its course within 2 or 3 months, especially if the economy resumes its growth. But a continuation of these higher inflation rates beyond this period-whatever its causes-could have fateful consequences for the Nation by reviving the self-fulfilling fears of accelerating inflation that lie barely below the surface of today's economy.

For this reason I think it is important to call attention to a number of recent and pending Government decisions that could aggravate the already threatening inflation outlook. These include decisions on energy prices, farm prices, tariffs on imported TV sets, quotas on imported sugar, a boost in the minimum wage, and others.

To illustrate what I mean, let me point out that the large increases in natural gas prices already approved will permit homeowners' rates to rise this year by perhaps 50 percent or more, after increases of over 20 percent annually in the past 3 years. While higher gas prices clearly were needed, gas heating costs alone could raise the Consumer Price Index this year by one-half percentage point. Costs of gas passed through in the prices of other goods and services will boost it somewhat more. These effects must be borne in mind when we consider new proposals to phase in even faster increases. The same will be true for proposals to boost gasoline taxes, which the President is rumored to be considering.

As another example, recent increases in milk price supports will raise retail milk prices by 5 to 6 percent and those of butter, cheese, and other milk products by somewhat less. Whatever the virtues of the decision to raise support levels, it is estimated by the Council on Wage and Price Stability to cost about \$1.3 billion in higher grocery bills and taxpayer payments to producers. Actions on other farm price supports are pending in Con-

Also pending are presidential decisions on the International Trade Commission's recommendations for an increase in the tariff on television sets and for quota restrictions on the quantity of imported sugar. The recommended tariff increase on TV sets would raise the retail prices of sets in the United States by close to 20 percent. These decisions are due by early May. Last week the President rejected a recommendation to increase tariffs on nonrubber footwear that would cost consumers an estimated \$2.4 billion and would raise the CPI by about 0.3 percent, according to the Council on Wage and Price Stability. The President chose to seek voluntary export limits by major supplier countries. Congress can override the President's decision within the next 60 days.

Congress also is considering a boost in the minimum wage. Undoubtedly the minimum should be increased to protect low-paid workers from the effect of inflation. This action inevitably raises future price levels, however. If not phased in judiciously, therefore, it could tend to be self-defeating.

These arguments do not imply that no action should be taken where action is required in the interests of equity or efficiency. We must be cognizant, however, of the cumulative effects of our decisions in these many different areas of the economy. The next few months will be critical in our struggle to subdue inflation and to get the economy moving to-

ward sustained prosperity. To avoid adding seriously to inflation at this critical time, necessary Government-approved price increases should be phased in gradually. The effects of different decisions should not be permitted to come simultaneously. This is a time for Government to do everything possible to avoid price increases. To achieve the necessary coordination in this area, I am writing to the Acting Director of the Council on Wage and Price Stability to suggest that the Council draw up proposals to minimize the inflationary impact of Government decisions affecting prices and wages.

It also should be emphasized that, if Government actions can raise prices, then Government actions can lower them. For instance, President Carter and Secretary Califano have proposed to limit price increases for medical care, which have been exceptionally large for several years. Moreover, a bill that many people think would lower air fares is under consideration before a Senate subcommittee with administration backing. The President has promised a comprehensive antiinflation program soon in which reductions in costs of regulation and redtape are expected to play a major role. I await his proposals with great interest. I hope also that the President will find ways to moderate price increases in the private economy that are imposed by arbitrary power not responsive to market conditions.

In closing, let me reemphasize that the stakes riding on our ability to bring inflation down in the next few months are very large. If we fail, a self-fulfilling inflationary psychology will reassert itself. Managers will begin to boost prices faster to beat anticipated future cost increases. Workers will demand bigger raises to

cover present inflation and to hedge against the future. And lenders will increase the inflation premiums contained in interest rates. Worst of all, widespread misunderstanding of the role of the Federal budget in this situation could make it impossible to conduct a fiscal policy adequate to get the economy's productive juices flowing again. If this happens, then the full recovery that we all hope for will be supplanted by a new period of stagflation and malaise, and the consequences of such a turn for our country would be very serious indeed.

I include the following:

Mr. ECKHARDT. Mr. Speaker, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. I thank the gentleman for yielding.

Mr. Speaker, I am delighted to hear the gentleman from Missouri (Mr. BoL-LING) bring up what seems to me a statement warning about an existing situation that seems to me to be one of our greatest and perhaps our most neglected problems today, and that is inflation.

I was a little disturbed to see an article—I believe it was in the Washington Post, and I hope that it was an inaccurate statement of any prophecy with respect to the price of gas-which indicated that there were some plans afoot to provide a limitation on the price of gas which would be based on a Btu equiva-lent of foreign oil. That runs around \$2.25 plus an increase above that of some 15 cents, perhaps, as a margin. So it is

¹ Seasonally adjusted.
2 Seasonally adjusted annual rates.

Source: Bureau of Labor Statistics.

said it would run gas prices up to \$2.45 per Mcf.

It is not selling anywhere near that

price in the intrastate market.

Mr. Speaker, I think that this is at least something we ought to be watching, because it could develop into a very inflationary tendency, I think, in our economy if the price of gas should move from the presently high intrastate gas average in 1976 of approximately \$1.75 to \$2.45, and I would hope that the administration would be most sensitive to that danger.

Mr. BOLLING. Mr. Speaker, I thank the gentleman from Texas (Mr. Eck-

HARDT) for his contribution.

LEGISLATION TO ESTABLISH IDI-TAROD TRAIL IN ALASKA AS A NATIONAL HISTORIC TRAIL

The SPEAKER pro tempore (Mr. SCHEUER). Under a previous order of the House, the gentleman from Alaska (Mr. Young) is recognized for 10 minutes.

Mr. YOUNG of Alaska. Mr. Speaker, in a great display of the Alaskan frontier spirit men and women hitch up their dog teams in the early spring and race a grueling 1,049 miles from Anchorage to Nome on the Iditarod Trail.

This year, my wife, Lu, and I were in the small Bering Sea community of Nome to watch the mushers cross the finish line. The champion musher crossed the line to the sounds of sirens and an excited crowd's cheering after 16 days on the exhausting trail. The second place winner was only 4 minutes behind the winner. After mushing freezing temperatures, 36 of the 47 mushers who started completed the race.

Dogracing is an integral part of Alaska's history. The first "All Alaska Sweepstakes" was held in 1908 and the first Iditarod Sweepstakes race was held

Eskimos and Athabascan Indians used portions of the Iditarod Trail for hundreds of years before the white men came to Alaska. But, in 1896, the cry of 'gold" went out and the Iditarod became the main artery to the interior of the State.

Roadhouses, postal cabins and small communities developed along the trail as miners poured into the vast bush country of Alaska. The Iditarod Trail received its heavy use from miners as they mushed or walked over it in search of their fortune. Some found that fortune. Between 1910 and 1920 over \$3 million in gold was brought out over the Iditarod. The trail became a busy bush roadway which played a primary role in the development of the interior.

Today, some of the historic sites still remain along the trail. A few of the cabins and roadhouses which once bustled with activity still stand as silent reminders of a vibrant past. Traces of mining activity are rapidly being reclaimed by nature, but can still be seen. Five of these old sites along the trail are already listed on the National Register of Historic Places.

Today, I am introducing legislation to establish a new category in the National Trails System, the National Historic Trails. The Iditarod, as well as other trails across the Nation, belongs in this category. This bill differs from legislation introduced in the Senate with the clause allowing for roads, pipelines and other transportation modes to cross the

H.R. -

A bill to establish National Historic Trails as a new category of trails within the National Trails System, to include the Iditarod Trail, Alaska, in the National Trails System as a National Historic Trail, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the National Trails System Act (82 Stat. 919; 16 U.S.C. 1241) is amended as follows:

(a) In section 2(b) delete "and scenic" and

insert, "scenic and historic".

(b) In section 3 redesignate subsection

"(c)" as "(d)", and insert prior thereto a "(c)" as "(d)", and insert prior thereto a new subsection (c) as follows:

- "(c) National Historic Trails, established as provided in section 5 of this Act, and designated in accordance with the criteria in section 7 of this Act, which will be extended trails that follow as closely as possible the original trails or routes of national historical significance. Although designation of such trails or routes shall be continuous, an established or developed trail may not be con-
- (c) In the new section 3(d) delete "or national scenic" and insert ", national scenic, or national historic".
- (d) In the heading of section 5 "SCENIC" insert "AND NATIONAL HISTORIC"; in the first sentence of section 5(a) after "scenic" insert "and national historic"; and in section 5(b) after "national scenic" wherever it appears insert "or national historic"

(e) In section 6 delete in the first sentence "or national scenic" and insert ", national scenic, or national historic"; and in the second sentence delete "or scenic" and insert ", scenic, or historic".

(f) In section 7 in the first sentence of subsection (a) after "Scenic" insert "and National Historic", and after "facilities" omit the period and insert "and may be crossed by roads, pipelines, or other transportation modes"; in subsection (b) and in the first ; in subsection (b) and in the first sentence of subsection (c) after "scenic" wherever it appears insert "or national historic"; in the penultimate sentence of sub-section (c) delete "and scenic" and insert scenic, and historic"; in subsection (d) delete "or scenic" and insert ", scenic, or historic"; in subsection (e) after "scenic" ever it appears insert "or historic"; in the first sentence of subsection (h) delete "or scenic" and insert ", scenic, or historic"; in the second sentence of subsection (h) after 'scenic" insert "or historic"; and in the first sentence of subsection (i) delete "or scenic" and insert ", scenic, or historic".

(g) Section 7 of such Act is further amended by adding at the end thereof the

following new subsection:

"(j) To qualify for designation as a National Historic Trail, a trail must meet all three of the following criteria:

- "(1) It must be a trail established by historic use and historically significant as a result of that use. The trail need not exist as a trail at present to qualify, but its location must be known sufficiently to permit evaluation of public recreational potentials.
- "(2) It must be of national significance with respect to any of several broad facets of American history such as trade and commerce, migration and settlement, or military campaigns. To qualify as nationally signifi cant, historic use of the trail must have had a far-reaching effect on broad patterns of American culture. Trails significant in the history of native Americans (Indians, Aleuts, and Eskimos) may be included.

"(3) It must have significant potential for public recreational use based on historic interpretation and appreciation. The potential for such use generally is greatest along crosscountry segments developed as historic trails. and at historic sites associated with the trail. The presence of recreation potential not related to historic appreciation is not sufficient justification for designation under category."

(h) In section 8(a) at the end of the first sentence insert the following sentence: "The Secretary is also directed to encourage States to consider, in their comprehensive statewide historic preservation plans and proposals for financial assistance for State, local, and private projects submitted pursuant to the Act of October 15, 1966 (80 Stat. 915), as amended, needs and opportunities

for establishing historic trails."

SEC. 2. (a) The Iditarod Trail, Alaska, a trail of approximately one thousand six hundred miles extending from Seward to Nome, Alaska, following the route(s) as generally depicted on the map identified as "Proposed Iditarod Trail, Numbered

is hereby designated a national historic trail within the National Trails System. The Iditarod National Historic Trail shall be administered by the Secretary of

the Interior.

(b) Within three years from the date of this Act an inventory and evaluation of all sites, structures, and other properties located along or immediately adjacent to the designated route possessing historical, architectural, archeological or cultural value shall be conducted by the administering agency in consultation with concerned public and private landowners or managers. This inventory and evaluation shall, among other things, identify properties eligible for inclusion in the National Register of Historic Places and formulate plans for the protection and preservation of significant historical and archeological properties.

(c) There is authorized to be appropriated \$150,000 for the purpose of acquiring lands or interests in lands, signing, conducting an inventory and evaluation of historical

and archeological sites, and other actions necessary to implement this Act.

THE YOUTH INCENTIVE ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. SARASIN) is recognized for 10 minutes.

Mr. SARASIN. Mr. Speaker, today I am introducing the Youth Incentive Act. We are all aware of the countless numbers of proposals that have been dropped to solve the crisis unemployment problems of youth. Most of these proposals have come laden with many promises and are usually submitted with lengthy descriptions of the serious nature of youth unemployment. Most all, for example, cite the fact that more than half of the Nation's unemployment consists of those under the age of 24, that more than half of the Nation's major crime is committed by teenagers. Ironically, many of these bills simply avoid addressing the problem. They do not target in on those most in need, they do not target in on areas where youth unemployment is most concentrated, and in some instances they are open to all youth regardless of economic background.

This bill attacks the problem of youth unemployment head on and is targeted to where the problem is greatest. legislation will guarantee a part-time job to any economically disadvantaged youth who resides in an area of substantial unemployment, who continues or renerters high school or into a program that leads to high school equivalency. For the same youth, it guarantees a full-time summer job.

My proposal works through the CETA prime sponsors, who would be responsible for working with the schools and community organizations to develop youth

incentive jobs.

Mr. Speaker, this bill pulls no punches. It is designed to get the most seriously economically disadvantaged youth back into school. It is designed to get such youth who clearly are responsible for a major share of the Nation's crime problem off the streets. It is designed to encourage youth to complete their high school education, which a recent Bureau of Labor Statistics—BLS—report entitled "Special Labor Force Report 193, Educational Attainment of Workers, March 1976," showed is critically important to their future employability.

Most of the youth proposals submitted thus far are only stopgap measures. The administration bill would provide for a community services program and for a young adult conservation corps designed to last only 18 months. The obvious question is what happens to the youth after the 18 months is over, and what has it done to further their education and employment? The BLS report reveals that workers who have not completed high school are more likely to be unemployed than those who have and that labor force participant rates are highly correlated with workers' educational attainments. For example, workers who had only one to 3 years of high school in March 1976 had a jobless rate of 13.5 percent, this compared with 8.2 percent for workers who had completed high school. That is a whopping 5-percent difference; and I might add that the unemployment rate continues to fall dramatically as formal schooling continues. The unemployment rate for workers with one to 3 years of college is only 6.3 percent, and for college graduates is a minimum 2.8 percent, or about the fractional level of unemploy-

In addition, the labor force participation of workers was checked in elementary school education as extremely low and BLS estimated it to be 38 percent; a very large percentage of the so-called "discouraged worker" and labor force dropout involves those who have not completed high school.

There is no guarantee, of course, that completion of high school will assure anyone permanent security in the labor market. In fact, the level of education of the American workforce has been rising steadily and in March 1976 was 12.6 years on the average, up from 12.2 years a decade earlier when unemployment was much lower. This means that a person without a high school education has an even tougher time today in finding permanent employment than he did 10 years ago, and it is this individual who finds his or her way to the welfare rolls and to underemployment, unemployment and a checkerboard work career.

Make-work public service job approach to the youth unemployment problem is not the way to go. Youths themselves reject it. At a recent hearing held by our subcommittee in New York City we received considerable testimony from those very kids we are trying to affect; namely, gang leaders, school dropouts, criminals and the like, who strongly urged the committee to avoid the mistakes made by the neighborhood youth corps program. The testimony of this hearing is revealing and encouraging. The youths who testified indicated that they did not want to receive welfare handouts. That what they wanted to do was complete their education, but that they need work experience along the way. They also testified to the immense need to improve our elementary and secondary education, but even so the high school degree was critical to their future needs.

My bill works to prevent any jobs from becoming make work. The bill provides incentives to include on-the-job training and apprenticeship training as part of the part-time work experience, and even includes full-time institutional training in place of such employment.

There are those who on first glance would feel that providing a job guarantee to such youth would be inordinately expensive. Naturally, such a charge would be made if one does not look at the facts. In 1975, according to a Congressional Budget Office analysis, there were enrolled in school 4,551,000 youth between the ages of 16 and 19 and 1,230,-000 dropouts in the same age classification. The unemployment rate of the dropouts was the highest of all youth at 29.9 percent; for inschool youth it was 17.1 percent. Still, a very high rate of unemployment. But while the unemployment rate is high, the actual gross numbers of such youth is not very large, and, if we include the economically disadvantaged criteria, is even smaller. According to the Census Bureau's definition of low income in 1973, not too dissimilar from the current figure used to determine economically disadvantaged, 9 percent of the inschool group came from low-income families but more than 25 percent of the out-of-school youth were classified as low income. The actual gross numbers of youth who would be eligible without any kind of targeting into areas of unemployment is 817,000. Adding in the summer program, the entire cost of the program, I estimate, would be \$1.5 billion, assuming 100 percent participation. This total, which does not exceed the amount included in the Budget Act, and, in fact, assumes existing outlays for the current summer youth employment program leaving about \$500 million for other programs. In my view, this would be a far more cost-effective approach than any other program I have yet seen. If we are to affect youth unemployment where it is the worst, namely in our inner cities, and to provide those youth most likely to give greatest cost to society if they are unemployed, then the one way we can go is to target our resources to them.

A section by section analysis of the Youth Incentive Act follows:

SECTION-BY-SECTION ANALYSIS

The Youth Incentive Act creates a new Title VII to the Comprehensive Employment and Training Act of 1973. Purpose

Section 701 states the purpose of the bill which is to guarantee part-time employment during the school year and full-time employment during the summer months to economically disadvantaged youth, ages 14-19, who continue their secondary education, to enable such youth to complete their high school education.

Job guarantee program

Section 702 authorizes the Secretary to enter into arrangements with CETA prime sponsors to provide guaranteed jobs to eligible youth, and establishes procedures to insure adequate appropriations for the job guarantee.

PART A-SCHOOL YEAR

Description

Section 703 describes the school year program, which consists of part-time employment for eligible youth.

These jobs can either be individual jobs, or employment on projects, submitted by community based organizations with a demonstrated knowledge of youth needs, local education agncies, colleges and universities, non-profit service organizations, voluntary youth organizations, unions, cultural and other private non-profit associations, local and State governments including the prime sponsor, and selected private employers.

Jobs are to last no less than six months, and not more than nine, beginning no earlier than September 15 of each school year and ending no later than June 15, and youth are required to meet the minimum academic and attendance requirements of the school in which they are enrolled.

Conditions for assistance

Section 704 details the conditions which prime sponsors must meet to receive assistance. Prime sponsors must submit a plan to the Secretary of Labor as part of his Title I CETA plan describing how it will go about arranging for jobs for eligible youth, the number of such youth, and that consultation has taken place with relevant local agencies, including the schools, community based organizations and the schools, and private corporations.

The prime sponsor must assure that the job will not replace existing jobs, that youth will have to meet the minimum requirements of employment, including good work habits and punctuality, and must continue to meet the school's attendance requirements.

The jobs are restricted to no more than twenty hours a week, and prime sponsors must assure that substitution of Federal for local funds will not occur. Minimum wage will be paid, except where job-training is also included in the job, where the wage may be 85% of the minimum, the balance being applied to the training. The minimum may be waived for youth 14 and 15, but in no event can it be less than \$1.50.

Review of plans

Section 705 describes the Secretary's procedures in approving the prime sponsor plan. No plan submitted under this title shall be approved or disapproved on account of any failure of plans submitted under Title I and the same holds true for the Title I plan. In addition, prime sponsors are required to notify the Secretary no later than March 1 of each fiscal year of his intention to operate a youth incentive program during the next fiscal year. If by September 1 the prime sponsor has not submitted an acceptable plan the Secretary is required to make alternative arrangements to provide the employment guarantees.

Eligible activities

Section 706 requires that any employment provide needed community services designed to contribute the fiscal, social or economic or cultural improvement of the community. Included is environmental quality projects,

health care, education, welfare, transportation, community improvement and the like. This section also prohibits substitution of Federal for local funds be it in the public or non-profit private agency.

Conditions governing private sector employment

Section 707 states that any private-forprofit employer who hires an eligible youth during the school year will be required to provide that same youth with a full-time summer job out of his own pocket under the same conditions as is described in the Part B Summer Youth Incentive Program.

Consultation with community groups youth advisory committees

Section 708 requires consultation of prime sponsors with a variety of community groups including community based organizations and voluntary youth organizations, school officials and others and also requires a youth advisory committee to be established as part of the prime sponsor planning council with at least four youth representatives from the community on the committee.

Application to prime sponsors

Section 709 describes the procedures for applicants in the community to submit to the prime sponsors requests to hire eligible youth for youth incentive jobs. These requirements are kept purposely brief and include the requirement that the youth be in school, that the work not exceed 20 hours per week, that the youth is not a relative of anyone hiring him or her, and that the job will not displace any existing workers. In addition, any private-for-profit employer will assure that no member or officer of the firm or business will benefit either directly or indirectly from employment of such youth.

Determinations by prime sponsors

Section 710 requires the prime sponsor to give preference to certain applications; specifically, those which involve the greatest number of disadvantaged youth, those which involve youths in the planning, administration and evaluation of the proposed project. Third, those that are coordinated with appropriate educational agencies, and fourth those that are generally of the greatest benefit to the community. A special priority is given to those applications submitted by local education agencies or community based organizations of demonstrated effectiveness. This section also requires that the prime sponsor assure that applicants meet minimum standards of fiscal accounting and/or will provide such assistance as is necessary to assure such minimum standards are met.

Reports

Section 711 requires each applicant who has been funded for a youth incentive job to submit a financial report and a client characteristics report. Unlike existing CETA programs, there are only three reports required: two of which are the financial reports to be submitted on January 15 and on June 15 of each year, and the client characteristics report to be submitted at the end of the program.

Program costs

The prime sponsor may utilize only three percent of the funds allocated for administrative costs for those employment projects which are subcontracted by the prime sponsor. The subcontractor in turn can use up to 12%. When the prime sponsor elects to establish its own youth incentive program, the prime sponsor may utilize up to 15%. This 15% is to be used under the same conditions as applies to the Public Service Employment programs under CETA. (Section 712)

PART B—SUMMER YOUTH INCENTIVE PROGRAM Description

Section 713 states that the purpose of this program is to provide full-time and/or part-

time employment with training to disadvantaged youth.

Conditions for receipt of assistance

Section 714 requires the prime sponsor to submit a plan no later than April 15 for his summer program. This plan is to count as a plan modification to his Title I program plan.

Program procedure

Section 715 establishes priority for summer youth employment incentive programs to those applicants who receive funds during the school year and who desire to continue their project or employment through the summer provided that such employment becomes full time This section also provides that eligible youth may enter a full-time course of instruction in lieu of such employment or in a matching employment-training program. Special consideration is also to be given to those proposals for the summer program submitted by disadvantaged youth themselves under the supervision of a qualified institution, government agency or private non-profit organization. The section also allows youth who have received their high school diploma or equivalency certificate at the completion of the school year to continue in employment through the summer following their completion of high school. In addition, no employment in the private-for-profit sector is allowed under the summer program, although on-the-job training may be provided for as under Title I. Any employment or projects are not to begin before June 15 and will not end later than September 15 and in this program three reports are again required, two financial reports and one client characteristics report. Project applicants are required to submit the summer program proposals no later than May 1 preceding the summer in which the program is to begin.

Definitions

Section 716 defines various terms used in the act. The term "disadvantaged youth" means a youth between the ages of 14 and 19 inclusive who is either a member of a family which receives cash welfare payments, who is a member of a family who has any annual income, in relation to family size, which does not exceed the poverty level, or is a ward of a court of competent jurisdiction who is deemed by the appropriate officers of such court to be in need of assistance under this program.

Income exclusion

Section 717 states any income earned by the youth shall not be counted in determining eligibility for other federal or federally assisted programs.

Authorization of appropriations

Section 718 authorizes such sums as may be necessary for FY 78 and for each succeeding fiscal year.

FOOD AND NUTRITION PROGRAM CONSIDERATION AND REORGANI-ZATION ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kansas (Mr. Sebelius) is recognized for 15 minutes.

Mr. SEBELIUS. Mr. Speaker, today, I introduced the Food and Nutrition Program Consolidation and Reorganization Act of 1977, which is similar to S. 1094 introduced on March 23 by the junior senator from my neighboring State of Oklahoma, the Honorable Henry Bellmon.

This is a block grant bill that would consolidate, for State reorganization and administration, the following current Federal categorical food and nutrition programs: The food stamp program provided for under the Food Stamp Act of 1964; such child feeding programs provided for under the National School Lunch Act and the Child Nutrition Act of 1966 as the national school lunch program, the school breakfast program, the child care food program, the summer food service program for children, the special milk program, the special supplemental food program for women, infants and children-WIC program-the supplemental food program, the nonfood assistance program—equipment—State administrative expenses, the nutritional training and survey program, and special developmental projects; and the commodity supplement food program. The expanded food and nutrition education program conducted by the extension service at land grant universities is included in S. 1094 but not in mine.

While each of these programs individually serves a very useful purpose, they are administered by various agencies within the U.S. Department of Agriculture, Department of Health, Education, and Welfare, and Community Services Administration. The multiple eligibility of these programs provides builtin disincentives that encourage people to remain unemployed, collect welfare payments, and rely on the numerous Government feeding programs rather than on the fruits of their labor.

There is unnecessary duplication and overlap. The benefits derived from one program are not counted as benefits in another program. Unfortunately, the combined effect of the aid to families with dependent children program—AFDC—food stamps and medicaid in many States is a lure and a snare. In high benefits States, benefits from these three programs can produce a tax equivalent annual income of \$7,000 to \$8,000 for a family of four. These benefits are not taxable and no doubt are a strong incentive not to work. It is proof that we are marching toward a welfare state.

Dr. Richard P. Nathan, Senior Fellow at Brookings Institution, advocated an incremental approach to welfare reform in an article published in the spring 1976 issue of Public Welfare.

In the article, he stated:

Finally, it is conceivable that in a general cash program all benefits distributed to the poor would not be counted toward reducing the income deficiencies leading to official poverty. Yet none of the \$12 billion in food and housing benefits are counted by the Census Bureau in determining who is poor and by how much they are poor. (In many cases, of course, cost to the government of providing goods or services is a very poor guide to setting an income value of the goods or services to the beneficiaries. This is because often the services could be provided more cheaply in the private market or because, given a choice, beneficiaries would not have spent the same amount for the goods or services. But in most instances, and especially with respect to subsidized food and housing, the value to recipients, is significantly above zero, which is the value the Census Bureau now implicitly assigns.)

From the subcommittee's perspective, we are drifting toward an ever greater number of programs with potentially disruptive consequences. Its conclusion was that we need fewer, rather than more noncash programs.

Later on, Dr. Nathan stated that cen-

sus data significantly overstate real poverty in the United States because inkind benefits such as medicare, food, housing, free school lunches, et cetera, are not included in census data on personal income.

CBO states in its 1977 Food Stamp Budget Issue Paper:

While the (food stamp) program was never specifically designed to remove participating households from poverty, the inclusion of the food stamp bonus benefit in a household's income definition does move over one-quarter of the pre-food stamp poor households out of poverty. Assuming that a dollar in food stamps has the same value as cash to the recipient, currently it is estimated that nearly 4 million of the 14.4 million pre-transfer poor persons are moved out of poverty as a result of counting the food stamp benefit in their income.

CBO has estimated that in 1975, 57 percent of the households receiving food stamps were also receiving some other form of public assistance, and only 19 percent went to households classified as working poor. Although it was originally designed to provide households "an opportunity to obtain a nutritionally adequate diet," liberalization of the program in recent years has enabled food stamp recipients to spend 43 cents of every dollar of bonus food stamps transferred on nonfood purchases.

The program has become a virtual cancer. Participation has increased to almost 18 million and at the same time the food stamp program is such an administrative nightmare that currently 46 percent of the cases are in error and 28 percent of the program's dollars are misspent. Total program costs—including both State and Federal outlays—increased from \$272 million in fiscal year 1969 to approximately \$5.9 billion in fiscal year 1976.

The average monthly transfer for an individual increased from slightly more than \$6.60 in 1969 to approximately \$23.90 in 1976. Administrative costs went from \$22 million—7.8 percent of the total cost—to nearly \$370 million—6.2 percent of the total cost—over the same period.

Child feeding programs have also ballooned, from a cost of \$497 million in 1965 to \$2.471 billion in 1976. Including the cost of the nutrition program for the elderly, the community food and nutrition program and food distribution programs, the 1976 Federal obligations amount to \$8.325 billion, revealing more than a 1,000 percent increase in our Nation's food program expenditures between 1965 and 1976, and comprising about two-thirds of the USDA budget.

Unfortunately, the public does not view all of these welfare-related programs together. The bill I am introducing is an attempt to do that. It would place the food and nutrition programs administered by the USDA under a central administrative unit, except for the expanded food and nutrition program conducted by the USDA Extension Service at land grant universities.

THE PLANNING PERIOD AND THE STATE PLAN

Each State which chooses the consolidation program would be eligible for a planning grant to be used over a 2-year period prior to the actual program

consolidation. During this period, a single State agency would be designated to perform the required assessments, formulate the State plan, receive and apportion the funds, monitor the progress of the programs, prepare general guidelines, and examine all required reports and audits.

The State plan would be initiated with a comprehensive assessment of the food and nutritional requirements of the needlest people of the State. It would also incorporate the results of a comprehensive assessment of the need for nutrition education among the people of the State.

An open planning process requiring the participation of interested citizens, local organizations, units of general local government, and appropriate State agencies would be required. The State plan would establish program priorities, and would insure that funds would be coordinated with other State and Federal funds so as to avoid duplication of effort and to insure program effectiveness.

The State plan would contain procedures for, and results of, the needs assessments; the goals to be achieved by the consolidated programs; program descriptions; policies and procedures to be followed: description of the organization structure for program administration; procedures for necessary monitoring and technical assistance with respect to agencies, institutions, and organizations within the State; audit requirements; procedures to eliminate unnecessary paperwork and duplication; methods for insuring that local agencies develop and implement program plans; an appeal process for local agencies; and the requirement that the Secretary of Agriculture would make timely notification to the State as to whether or not its State plan complies with the require-ments of the act, and if it does not, in what respects it is deficient.

Upon consolidation, States would not be bound to pattern State food and nutrition programs after existing programs. They would be free to design a package of programs which would meet the needs of populations as revealed by their assessments.

LEVEL OF FUNDING, BONUS, AND LIMITATION ON ADMINISTRATIVE EXPENDITURES

Upon consolidation, the State would receive funds equal to the total funding it received under the categorical programs described above in the most recent fiscal year in which the State participated. In no event would the State receive less than it would have received had it remained under categorical programing. This amount would be adjusted annually to reflect changes in the price of food. Federal funds would be required to supplement, not supplant, State and/or local funds.

Each State which elects and qualifies for the consolidation would also be eligible for an additional amount of funds up to 10 percent of the consolidated Federal funds, providing the State matches that amount with an equal amount of funds from non-Federal sources—considering Federal-State revene sharing funds to be non-Federal.

No more than 71/2 percent of the funds

made available to a State under this bill could be used for administrative purposes. The State would not lose funds if it used less than 7½ percent for administration.

CONTROLS

In addition to the procedural and auditing safeguards required in the State plan, States would be required to perform annual program evaluations, using an evaluation model designed by the State. No later than the end of the fifth fiscal year after enactment of this bill, the Comptroller General would evaluate the entire consolidation experience and make recommendations for legislation as he sees fit.

To insure implementation of programs for conformity with the act, the Secretary of Agriculture would undertake such monitoring efforts as he deems necessary. States would be notified in advance of monitoring visits. Where noncompliance is found, the Federal representatives would recommend the appropriate corrections to the State agency. The Secretary of Agriculture would provide advice, counsel, and technical assistance upon request.

Thereafter, in case of continued noncompliance, the Secretary of Agriculture shall reduce the amount otherwise payable to the State by an amount not to exceed 7½ percent. Continued noncompliance would subject States to a possible injunction and termination.

Funds under this act would be subject to title VI of the Civil Rights Act of 1964, title IX of the Education Amendments of 1972, and section 504 of the Rehabilitation Act of 1973.

There would be a provision for the participation of nonpublic school children, and criminal penalties for individual fraud.

FEDERAL ADMINISTRATION

During the 4-year phase-in period in order to accommodate the dual track of regular categorical and consolidated programing, the Secretary of Agriculture will establish a separate, identifiable administrative unit within the Department of Agriculture, drawing from personnel of the categorical programs. Upon completion of the phase-in period, the administrative units of the old categorical programs will be terminated, and the new administrative unit will have sole administrative authority.

Mr. Speaker, there are two main reasons for enacting this legislation. First, with the replacement of categorical program proliferation with this one consolidated program, we as legislators are giving States the ability to best meet the needs of their own constituency. It is ridiculous to attempt to legislate social programs at the Federal level because needs vary not only from State to State. but also from locality to locality. Yet with this consolidated approach advocated by Senator Bellmon and myself, States would still receive the same level of Federal funding they currently receive. We are not changing the philosophy that the Federal Government has a responsibility in the area of welfare; indeed, it does. Rather, recognizing that States are much more aware of constituent needs in this area than the Federal

Government could ever hope to be, we are simply designating States as the distributor of benefits.

Second, such a consolidation approach would not only enhance the quality of the benefits to the recipients but it would also be a most cost effective procedure. By October 1, 1982, the huge, complex administrative morass of Federal bureaucracy would be greatly reduced, and what administrative system is established in the States would be centralized in one focal point. Therefore, many of the program dollars currently spent for administration would be eliminated.

Mr. Speaker, like Senator Bellmon, I am convinced that neither the executive nor legislative branches of the Government here in Washington are able to write programs that fit every community in this country. We believe that the best route for reforming our Federal food and nutritional programs is to give the States greater flexibility through this block grant process. States are better able to tailor their own needs.

There is a rising tide of concern in Kansas and across the Nation regarding the abuses within the food and nutrition programs and the need to provide adequate assistance to the truly needy. I trust and hope that we will respond to this concern and enact comprehensive and meaningful reform such as I have introduced.

LEGISLATION RELATED TO PRESI-DENT CARTER'S DISCHARGE PRO-GRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. Hammerschmidt), is recognized for 5 minutes.

Mr. HAMMERSCHMIDT. Mr. Speaker, last week I introduced legislation that would deny automatic veterans' benefits to those individuals with other than honorable discharges who will have their discharges ungraded under the reduced standards of the Carter administration's special discharge review program. That program was announced in all its particulars today, and I find it necessary to reintroduce my bill to conform with the different terminology used in today's announcement.

The substance of the bill, however, has not changed. It is an eminently fair piece of legislation designed to allow President Carter to elevate Vietnam-era discharges according to his new standards, but at the same time to preclude those standards from applying for the purpose of determining veterans' benefits. Its purpose is not spite, but equity. There are only so many apples in the Veterans' Administration barrel, and those who have met present standards for entitlement are the ones who deserve them. I see no justice in requiring the taxpayers of this country to dig into their pockets in order to pay out veterans' benefits to those who either could not or would not perform the type of service that would entitle them to benefits.

There is nothing in my bill that would deny recipients of Carter-mandated discharges from applying under existing standards. This is the process that otherthan-honorable discharge recipients

have followed for years, and it is the fairest measure for all parties concerned.

RICHARD SPRAGUE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. Anderson) is recognized for 15 minutes.

Mr. ANDERSON of Illinois. Mr. Speaker, on March 30, the Select Committee on Assassinations voted 11 to 1 to accept the resignation of Richard Sprague, our chief counsel. This action was taken with great reluctance on my part, and I am sure on the part of every member of this committee.

I think it is important to remind my colleagues that Dick resigned his post with the same honor and integrity as he accepted it. I believe he took the job because he felt as I do that the pursuit of the truth is more important to history and this country than an individual's career or personal remuneration. Dick left his lucrative law practice to take a position which offered less money and more work.

Why was Dick Sprague offered the opportunity to head this perilous but rather uniquely historic investigation? He was chosen because former chairman, Tom Downing, sought him out as a man with a reputation for hardnosed investigating and years of experience to prove his competence. Having accepted the job, Dick set out to methodically conduct two definitive investigations simultaneously.

He went to work, hiring a staff of more than 70 people. To many, this size staff seemed excessive. However, this was part of his game plan to provide this committee with the necessary resources to conduct a major congressional inquiry.

He established a good working relationship with all of the members of this committee and we at all times had complete confidence and trust in him. At the risk of eulogizing a man hardly dead and whose career is well-founded, let me personally say I found Dick Sprague to be a man of uncompromising strength and purpose. He wanted just one thing for this committee—the truth. I trust we will reach that goal, and I regret he will not be here to share it with us.

PRESIDENT CARTER DESERVES SUP-PORT IN HIS FIRST MAJOR EN-COUNTER WITH THE SOVIETS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. Kemp) is recognized for 10 minutes.

Mr. KEMP. Mr. Speaker, President Carter deserves the support of Congress and the American people in what was and is his first major encounter with the Soviets at last week's SALT negotiating sessions in Moscow.

As my colleagues know, I had expressed some concern before last week over both the presumed content of the American proposals. I had specifically pointed out the necessity of incorporating throw-weight comparisons and a number of new Soviet warfare systems in any new agreement. I was, therefore, very encouraged to read the specifics surrounding the

American proposals, disclosed after the negotiations by top American officials.

We should be not only encouraged by the President's steadfast commitment to human rights and interlocking that with other commitments made by this country in the foreign policy and defense areas, but we should also be impressed with the President's resolve to proceed with major new U.S. weapon systems if the Soviets fail to deal with us in good faith at the next round of arms scheduled for May in Geneva.

It is very important we understand what the Soviets' motives may be here. There was a thorough discussion of those motives, and our reactions to them, in this morning's Washington Post in that paper's lead editorial, and I quote:

It is a formidable performance but our own eyes are dry. The charge of inconsistency is simply unfounded. Mr. Carter offered the Russians essentially the last Ford proposal, a relatively modest measure that they had rejected before and that they rejected again last week. As an alternative, he offered a much bolder proposal for genuine reductions of offensive strategic arms.

There is a more plausible explanation of Soviet policy. It is this. Mr. Carter posed the Russians some tough choices. They chose not to respond. One can think of various explanations, including the hope that by hanging tough they could coax out a sweeter offer without making any concessions of their own. Another possibility is that Leonid Brezhnev's illness may have induced in the Soviet political system an inability to take large and important decisions—something similar to the condition that afflicted the American political system at the height of Richard Nixon's Watergate immobilization.

This is not to say that the American tactics were flawless. Quite the contrary. As we suggested earlier, Mr. Carter may well have laid on the human rights line too thick. Though the Russians had adequate forewarning, the scope of the proposals Mr. Vance brought to Moscow probably did startle them. Certainly there were no grounds for expecting quick Soviet approval. But these are hardly the determinants of Soviet policy in an area so crucial as strategic arms. To confuse the expressions of a Soviet manner with a failure of American substance is unjustified. Analytically it is questionable and politically it is needlessly damaging to assert that American "miscalculation" was somehow the engine of a great diplomatic debacle.

Fortunately, the situation is not irredeemable. The essence of the American position—to trade limits on the American weapons that Moscow most fears for limits on the Soviet weapons that Washington most fears in order to hold a strategic balance—remains sound. The details of it as presented in Moscow are hardly cast in concrete. The Russians may need a while to decide to look closely at it. The United States should use the interval to regain its internal balance and to contemplate the tactics best suited to gain a fair hearing for an approach that is, we believe, firmly in the mutual Soviet-American interest.

It was clear to me from that editorial and the contrasting column across the page by Joseph Kraft that the President has staked out a position which reflects a deeper understanding of Soviet power, motives, and maneuvers than those of either Secretary of State Vance or President Assistant Brzezinski. I think they would have gone with a softer line. The President has been shown, by the reaction of the Soviets, to have been right in his calculation that the Soviets really

may not want an arms limitation agreement which reduces the quantity and danger of nuclear arms in a real way.

At this point in this afternoon's proceedings, I wish to include a very fine article on last week's negotiations from this week's issue of Human Events. It follows:

CARTER DESERVES SUPPORT IN FIRST MAJOR SOVIET ENCOUNTER

President Carter's execution of U.S. foreign policy has come in for some severe criticism from these quarters, but we think the President deserves some solid praise for the way he has faced up to his first major Soviet challenge. He has not grovelled. He has not shivered in his shoes. To our way of thinking, he has—at least in the area of arms negotiations—shown more initiative and more nerve than President Ford or Henry Kissinger ever thought of showing. Our initial impression of last week's developments is that, while the Soviets may be "testing" the President, as many people believe, the President is also telling the Soviets he does not intend to be triffed with

In seeking an arms agreement with the Soviets, the President, for instance, has made it quite clear that he is not going to be bullied into silence when it comes to human rights issues within the Soviet Union. When Soviet party secretary Leonid Brezhnev barked that our raising of the issue would prove an obstacle to negotiations, and some handwringers cautioned the President to lower his voice, Carter, according to Jody Powell, tartly commented: "Some people are concerned every time Brezhnev sneezes."

When the Soviets last week firmly rejected both of the disarmament proposals Secretary of State Cyrus Vance offered to put before the Russians for discussion, the President refused to panic on his human rights stand.

In the first place, he told reporters, he had no shred of evidence that the Soviets rejected his proposals because of his position on the subject, though he acknowledged that he couldn't "certify that there is no linkage in the Soviets' minds." The President was then asked: "Mr. Carter, if necessary to achieve any progress, are you willing to modify your human rights statements?"

The President's response, in our view, disclosed spunk. Instead of skirting the issue or offering some mushy response, he stressed: "No... I will not modify my statements. My human rights statements are compatible with the consciousness of this country. I think that there has been repeated recognition in international law that verbal statements or any sort of public expression of a nation's beliefs is not an intrusion in other nations' affairs."

The Soviets, he went on, "have, in effect, ratified the rights of human beings when they adopted the United Nations Charter. The Helsinki Agreement, which will be assessed at Belgrade later on this year, also includes references to human rights themselves. So I don't intend to modify my position."

Kissinger and Ford wouldn't say "boo" to Brezhnev, and most Americans recall with shame how this duo, ever so sensitive to Soviet feelings, coldly snubbed Alexandr Solzhenitsyn when he was here in the Nation's Capital. But Carter has had the courage to say boo. It's downright refreshing. Indeed, it's the way most Americans expect a U.S. President to respond. But the Carter response is more than just "style." What the Soviets fear Carter is saying—and we hope their fears are fully justified—is that he will

not be pushed around. And that's substance. The Soviets plously insist we are interfering in their internal affairs, but this is an extreme form of chutzpah. For the Soviets have been grossly wading into every nation's

internal affairs since the Bolsheviks seized power in Russia, and normally their "intrusion" includes armies, terrorists, subversion and spies. Just last week, the Soviet President, Nikolai Podgorny, was touring Africa, setting the stage to put the continent ablaze with wars of national liberation against Rhodesia and South Africa.

Carter's talk about human rights, then, helps to restore a bit of symmetry to the equation. While he is not interfering in a legal way with the Soviet Union, he is saying to its leaders that he is willing to invade their troubled turf with verbal encouragement to the dissidents—a major source of concern for the Soviet leaders. Well, if the Soviets persist in attempting to systematically export aggression, what in the world is wrong with the President trying to fight back?

But we were not only encouraged by the President's steadfast commitment to press ahead on human rights, even in the face of stiff Soviet objections and a turndown of his disarmament offerings. We were also somewhat impressed by the thrust—if not all the details—of his rejected proposals, and his calm threat to go ahead with major new weapons systems if the Soviets fail to deal with us in good faith at the next round of arms talks scheduled for May in Geneva.

The one proposal of the President's would have ratified the 1974 Vladivostok accords permitting each side to have 2,400 intercontinental nuclear delivery systems, but it would have permitted the U.S. to continue developing its cruise missile program and the USSR to develop its Backfire bomber.

The Soviets rejected this, it is believed, because they want to do all they can to stop our development of the cruise missile.

The second proposal, the one warmly embraced by Carter, would have forced the Soviets to live up to the spirit of SALT—that is, it was designed to substantially reduce their existing nuclear throwweight advantage, in exchange for our foregoing a number of advanced strategic weapons and placing constraints upon the cruise missile.

Gen. Daniel Graham, the former head of the Defense Intelligence Agency and considered one of the beakiest hawks around, told Human Events that this proposal was far better than anything that Kissinger and Ford had to offer the Soviets, even though it would still have left the Soviets with some important advantages.

But the Soviets were clearly disenchanted with Carter's whole approach, said Graham, because they perceive his entire strategy as trying "to disentangle the U.S. from the one-sided SALT agreements" we have repeatedly accepted.

We are unable to know, of course, if the President plans to "hang tough," as he has promised, and wait out the Soviets, or whether he will rush in with new concessions to ensure that there is a new SALT agreement by October when the SALT I agreement is scheduled to expire. But, for the moment, we are happy with our new President.

WINNERS ANNOUNCED IN "KEEP CHICAGO CLEAN" ESSAY CONTEST

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. Annunzio) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, I want to call to the attention of my colleagues the winners in the essay contest sponsored by Mayor Bilandic's Citizens Committee for a Cleaner Chicago, myself, and Illinois State Representative William J. Laurino.

The essay contest, in conjunction with a program called "Pitch in for Chicago,"

is part of a nationwide antilitter project which invites all Americans to join in the important task of ridding our country of litter, and I am delighted to contribute \$25 savings bonds to five of the winners, along with Representative Laurino, who will contribute savings bonds to the other five. The 10 runners-up will receive a city of Chicago citation presented by Mayor Michael A. Bilandic.

The pupils in grades 5 through 8 from 10 schools in the 39th Ward area of the 11th Congressional District of Illinois, which I am proud to represent, were asked by their principals and teachers to write an essay entitled "How I Can Help Keep Our Community Clean and Beautiful." The teachers selected the best entry from their room and the best of those were then judged by the principals and their staff, who selected the top two entries for their schools.

In order for our democracy to remain strong and viable, it is necessary for all our citizens to participate. A program such as this helps to prepare our youngsters to assume their obligations and responsibilities in a democratic society such as ours for they are not only future citizens but future officeholders.

On Wednesday, April 13, Representative Laurino and I will present each first place winner with a \$25 U.S. savings bond, and each runner-up with a special citation of recognition, and I wish to take this opportunity to extend to them my heartlest congratulations and warmest good wishes for their future.

Mr. Speaker, I proudly announce the winners in the "Keep Chicago Clean" essay contest: Tammy Latham, 4244 North Pulaski Road, of Belding School, Agenor E. Osuch, principal; Annie Kotscharjan, 4951 North St. Louis Avenue, of Von Steuben School, William Schertler, principal; Mike Pitts, 5039 North Kimberly Avenue, of St. Edwards School, Sister Mary Brian, principal; Lisa Morton, 6239 North Lenox Avenue, of Queen of All Saints School, Sister Regina Crowley, principal; Trisa Ignacio, 4429 North Whipple Street, of Our Lady of Mercy School, Joseph LoCashio, principal; Ursula Wojcik, 3517 West Carmen Avenue, of Volta School, Crescentia M. LeDonne, principal; Valerie Bazaros, 4945 North Kedvale Avenue, of Palmer School, Theodore W. Wallschlaeger, principal; David Searle, 4300 North Monticello Avenue, of Haugan School, Ursula Blitzner, principal; Karen Chien, 6203 North Hiawatha Avenue, of Sauganash School, Charles Stanley, principal; and Helen Skoubis, 6200 North Monticello Avenue, of Solomon School, Elizabeth La Palermo, principal.

Mr. Speaker, I am also proud to announce the runners-up in the contest: Florence Erickson, 4917 North Lawndale Avenue; Ronald Bugar, 5130 North Kolmar Avenue; Sheila Learn, 4401 North Hamlin Avenue; Mary Shultz, 6218 North Keystone Avenue, Robert Kazel, 6131 North Harding Avenue; Joann Ritro, 4028 West Cullom Avenue; Annabelle Sinense, 4916 North Albany Avenue; Tim Neja, 4427 North Kenneth Avenue; Barbara Ann Jenkinson, 4021 West Rosemont Avenue; and Rose Ann Blair, 3322 West Wilson Avenue.

Mr. Speaker, I also wish to include in the RECORD copies of the winning

"KEEP CHICAGO CLEAN" ESSAY CONTEST WINNERS

TAMMY LATHAM

There are many things that could be done to help keep our community clean. However, this chore calls for the help of all, not just some. If some people don't do their part, it will make the task more difficult. There are certain things that I, myself, must do, such as: always remember not to litter, pick up trash that might be lying on the sidewalks, and remind others of their responsibilities. If I were to do these things, I am sure that this would help our community. If others could also remember these things and do their part in cleaning up our community, it would soon become a more beautiful place in which to live.

ANNIE KOTSCHARJAN

I can keep my community clean and beautiful by putting litter in the right place and by encouraging people to do the same. I'd try to organize a club that would get kids and are willing to help clean a park, pick up litter in the street, and make posters that would say 'Keep Your Neighborhood Clean'.

When spring comes, I can get kids from the neighborhood or anyone to chip in a few cents which would help buy trees, plants, shrubs, bushes, and flowers. Then anyone who wanted to use a little muscle power could help plant seeds and put in bushes.

I would then take my friends to the polluted river. We would try to pick up all the things that were making the river look bad like rusted cans, and pieces of paper.

However, clean communities are not just spring and summer happenings, but a winter project also. I like to shovel snow to make it easier for a person to walk. This could be done by my friends and I if someone was unable to shovel. I think cooperation is the key to a clean and beautiful neighborhood.

MIKE PITTS

"Wouldn't you like to live in the cleanest city in the world? How can we keep Chicago clean?" we ask ourselves. Let's pretend Chicago is a big house and we are a family. Every member has a chore so let us make a list of chores to keep our house, Chicago,

clean. Here are a few:
We throw away a lot of useful items in the garbage can which can be recycled such as bottles, old newspapers, and cans.

Vacuuming is one of the chores in home which is like raking leaves and sweeping the streets. In your home you don't cook for no reason, so do not build unnecessary fires. In your house you do not throw away your food, so do not waste our natural resources like gas and oil. Our sink and bathroom pipes are cleaned regularly to prevent clogging and buildup. We must not throw sewage and garbage in the water to keep the waterways

from clogging and looking filthy.

As you can see there are various ways to keep Chicago clean; but only if we all pitch in to make our home clean.

LISA MORTON

I live in one of the nicest neighborhoods in Chicago. There used to be a lot of nice neighborhoods in Chicago, but because some people did not care, their neighborhoods became garbage-ridden and run down. When saw what was happening to their neighborhoods, they moved out and left behind a slum area because it was inconvenient to help clean up. We would not want this to happen to our neighborhood and there are many ways to prevent it.

One of the things we should do is to start with our own property. If you see a can or paper on your lawn, pick it up. Keep every-thing in good repair. Maintain the little things around your house so they don't turn into big repair jobs. After that, look at your own community and neighborhood and see what can be done. Organize groups to go around picking up junk and garbage. If your group finds a lot of trash you can sort it out and see what could be recycled. Then, some of the trash could be put to a good use. If you're walking by yourself and you see cans or paper on the street pick it up. Don't just let it lay there.

We should also try to keep our school and shopping area clean just as we keep our own property clean. When we go shopping at the stores, we should not throw candy wrappers on the sidewalks, streets, empty lots, etc., but in the garbage cans that are provided for that use. When we are playing at the playground we should not damage the equipment put there for our enjoyment. We should not deface buildings by writing on them. We should encourage the stores in our neighborhood to stay by shopping at them. Otherwise, business will start to decrease and vastores invite careless attitudes and sometimes vandalism.

There is also forest preserve land in our community which has been set aside for our summer and winter enjoyment. It's always disappointing to see some of the property destruction in these areas. For example, people should not destroy picnic tables, tip over garbage cans, or fail to clean up their camping ground. People should not pollute the river by throwing waste materials into the water.

These are some of the ways we can keep our neighborhoods clean and beautiful. If people in every neighborhood would do their share and help each other, the city's many neighborhoods would once again be pleasant places to live. That's why we have the slogan "Pitch In For Chicago."

TRISA IGNACIO

The first thing I could do to keep my neighborhood clean is to be a good example in my community by not throwing trash on the streets but instead picking up those I see and putting them in their place.

Next I can gather my friends and go to different parks picking up scraps people left on the grass and bike paths.

I can also teach kids in my neighborhood whom I babysit to throw garbage in its place and nowhere else. If they don't throw the trash in a wastebasket, I'd tell them not to throw candy, gum wrappers, paper or any over and over again until they learn.

I can paint posters with words that can catch people's eyes and convince them not to litter. I can also repaint old posters and make them brighter than they were before.

Another way to keep my neighborhood clean is to speak to the kids in my class who live in my neighborhood. I'd tell them that if we wanted our neighborhood to be clean and unpolluted we would have to pitch in and work together in order to do a good job. And when other people from different communities see how clean our neighborhood is, they would work to make their community cleaner, too. And soon all of Chicago would be clean.

URSULA WOJCIK

Some of the things that I can do to help keep our Albany Park Community clean and beautiful are (1) make sure that I don't throw candy, gum wrappers, paper or any other kind of litter on our streets and sidewalks. (2) get my friends to join me in doing our part to keep our beautiful Gompers Park free of litter and a pleasant place in our neighborhood. (3) get all the children to work at keeping the river free of pollution.

Last summer I organized a club called the K.O.N.C. Club. (Keep our Neighborhood Clean) Our club members went around the neighborhood picking up paper, cans, Some members mowed lawns for neighbor-hood people. Then in the fall many of us raked lawns for people. I plan to do the same thing this year. Keeping our community clean and beautiful is an all-year around job.

VALERIE BAZAROS

Pollution is a problem, but we can wipe it out if we try. This contest was to find out what the children want to do about pollu-

My solution is simple; a contest. Palmer could, in April, or May have a contest to clean up the neighborhood. Each room in the school will participate. The teachers will have a specific area to clean up. There will also be a time limit of about thirty minutes. The room that collects the most garbage wins. The garbage would be weighed in pounds or ounces. The winning room would get a certificate or trophy.

If this works for our neighborhood, imag-

ine what it might do for the city!

DAVID SEARLE

You can pitch in to keep Chicago clean by making sure your own property is free of litter. You should always make sure the lids are on the cans in the alley to help keep the wind and stray dogs and cats and even kids from throwing trash around.

To help keep the streets and rest of your neighborhood clean, everyone should throw his empty cans, candy wrappers, and other garbage into the cans provided by the city. When there are no such baskets on the corners, you should keep the litter in your pocket or bag until you come to a trash If you walk your dog, you should bring a shovel to remove the waste.

Finally, you can organize others in the block to help clean up any vacant lot or eye sore. It's up to everyone to make Chicago beautiful. It's everyone's duty to pitch in and keep Chicago clean.

KAREN CHIEN

Sauganash is one of the finest residential areas in Chicago. Because of this, people should be proud of it and keep up their neighborhood as best as possible.

To keep Sauganash looking clean and beautiful we should learn to pick up after ourselves and try to remember to keep every-thing looking clean and neat. Wildlife should be encouraged so people can be closer to nature. Trees and other plants should be planted to beautify the neighborhoods. We should also organize volunteer groups that would be assigned to keep different sections of the community clean. Houses should be kept in good condition and lawns should be well taken care of. Above all, we should all stop polluting the air for what we don't see now may kill us later.

No one person could do this all so each and every resident of Sauganash should help improve our growing community.

HELEN SKOUBIS

As we all know, there are many communities in our big city. They all start out to be clean and beautiful. Some are kept up and stay that way, others are not that clean any more.

When I visit one of those communities and I return to mine, then is when I notice the big difference. Then I remember the words of my parents and teachers: "Don't throw that down." "Pick it up." "Put it in the waste basket." "Keep off the grass." I'm proud to live in a good and clean community. Here are some ways that I can help to keep it clean and beautiful.

1) I will not litter.

2) I will help keep my yard clean and tidy, also my part of the alley and sidewalk.

I will remind my father when it is time to trim the bushes, rake the leaves and mow the lawn.

4) My job after a picnic will be to clean up or see if there is any litter left.

5) I will tell all my friends to do the

If everyone could do just their small part in their community, this could lead to the

next and the one after that and so on until the whole community will be "America the Beautiful."

IF SECTION 504 WERE FULLY IM-PLEMENTED THE HANDICAPPED WOULD BE SET FREE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. Koch) is rec-

ognized for 5 minutes. Mr. KOCH. Mr. Speaker, at noon today, along with my colleagues, CHRIS Dodd, and Pat Schroeder, and Clarence Mitchell of the National Association for the Advancement of Colored People-NAACP—I attended a press conference called by the American Coalition of Citizens with Disabilities, Inc. We were there to support 36 million disabled American citizens in their demand that Secretary of HEW Joseph A. Califano issue regulations implementing section 504 of the Rehabilitation Act of 1973 as required by the Congress. These regulations are long overdue and should have been signed and issued in the prior administration.

It would be an abomination if President Carter's new administration failed to forthwith carry out the law of this country as well as his own pledges to the

handicapped.

Listening to Dr. Frank Bowe read his statement, a copy of which I am appending, brought me close to tears—not out of pity, because the leaders of the handicapped and the handicapped themselves do not ask for pity, but out of an enormous feeling of admiration for the courage of these people in overcoming handicaps: They are simply demanding the right to participate as equals for opportunities for jobs they are capable of doing. They want no special consideration in employment, but simply the right to apply and not be rejected on the basis of their handicap, when the handicap is not job related.

It is outrageous that we have permitted this situation to go on for so many years, abusing our fellow citizens in this way and losing their productivity and genius. The handicapped across the country are at this very moment demonstrating in front of HEW buildings, urging that the Secretary of HEW sign the necessary regulations implementing section 504. We here in the Congress must take every step necessary to assure that these regulations are signed, by speaking out, by considering additional legislation, by holding oversight hearings, and by telephoning Secretary Califano.

I telephoned Secretary Califano this afternoon, to urge that he do only that which is decent and what is required by the law itself. Regrettably, when I called, the Secretary of HEW was not in, but I left word with his office and with the General Counsel of HEW, asking that my

inquiry be answered promptly.

I subsequently received a return call from Klenn Kamber, project manager of the 504 Work Group who advised me that the Secretary had told demonstrators picketing HEW here in Washington that he would sign the regulations no later than early May, but that he was not committed to them in their exact current form. I regret the delay on his

part and even more his lack of commitment to signing the regulations in their current form. I urge everyone interested in redressing the legitimate grievances of the handicapped to write to Secretary Joseph Califano requesting his immediate signature to the regulations as is.

I urge every Member in this Chamber to read the appended statement of Dr. Bowe. If it does not move you to action, I ask you to examine your conscience.

In the course of the press conference, Dr. Bowe recited from memory the text of section 504, to wit:

No otherwise qualified handicapped individual in the United States . . . shall, solely by reason of his handicap, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.

It was as though he were reciting the Declaration of Independence or the Magna Carta. And in fact that is exactly what it is. If section 504 were fully implemented, the handicapped would be set

I am appending a copy of the statement of Dr. Frank Bowe:

STATEMENT OF ACCD DIRECTOR BOWE

Despite the passing of the April 4 deadline, Secretary of Health, Education, and Welfare Joseph A. Califano has not issued regulations implementing Section 504 of the Rehabilitation Act of 1973, the civil rights act for this nation's 36 million disabled citizens. He did not promise strong language protecting the long-violated rights of disabled people. He did not pledge enforcement that would honor President Carter's campaign promise to "vigorously seek out and redress discrimination against the handicapped." The Secretary has failed to fulfill the promise of equal rights in education, employment, health and social services the Congress made three and onehalf years ago. Equally of concern to us, the present course of action of the Secretary and his staff to seriously weaken draft regulations prepared after the most extensive and intensive period of preparation any Federal agency has undertaken in recent memory defies the promises of the President, the express desires of the Congress, and the repeated urging of disabled Americans themselves.

The disabled people of this country must now call these facts to the attention of President Jimmy Carter and the American peo-ple. It is to the President, who has taken world-wide and unprecedented action on human rights; to the Congress which has repeatedly demonstrated strong, support for prompt and vigorous implementation and enforcement of a law it enacted by the largest override of a Presidential veto ever recorded up to that time; and to the thousands of Americans who have supported civil rights for disabled people through letters, telegrams, phone calls, and visits with their representatives in government that we now turn.

We believe Mr. Califano must listen to disabled citizens, to the President, to the Congress, and to concerned Americans. He must now develop strong regulations and an effective enforcement program to end the blatant and systematic denial of equal opportunity for people who have abilities which must be developed if this country is to achieve its goal of equality for all citizens. He must realize that his delay and his present attempts to build loopholes, waivers, and exemptions into the regulations excuses rather than prohibits discrimination. Each day his inaction fails to protect one million disabled children youth who are out of school altogether and four million who receive inadequate and inappropriate services from school districts

receiving Federal funds, six million disabled people who cannot use public transportation or take advantage of other essential health and social services funded with billions of Federal dollars, uncounted millions of disabled adults fully qualified for employment who are denied equality of opportunity by employers receiving Federal support, hundreds of thousands of disabled people who are paid only half the minimum wage by workshop employers subsidized with Federal money, and tens of millions of Americans seeking to re-enter the mainstream of society after 200 years of exclusion.

I believe disabled people must make the President, the Congress, and the American public aware of the tragic consequences of further delay, of the inclusion of waivers and loopholes such as those now being built into the regulations, and of the absence of a vigorous enforcement program. Today, at 1:00 P.M. and simultaneously in Atlanta, Boston, Chicago, Dallas, Denver, New York, Philadelphia, San Francisco, and Seattle thousands of disabled Americans whose rights are being jeopardized will come to HEW offices to call for their rights. They will tell their own stories-of discrimination in employment, of denial of education, of failure to receive needed health services, of inaccessibility of buildings and transporta-tion systems built with Federal funds. They will be joining the long line of civil rights protesters who have found dramatic action necessary to obtain equal treatment in this country. I have learned that many disabled individuals are now determined to go to HEW and to stay there until adequate regulations are signed and an enforcement program begun.

Disabled people are first-class citizens in this country and expect to be treated that way. Meaningless policy statements will not be accepted. Waivers, exemptions, and loopholes will not be accepted. Continued de-lays will not be accepted. Lack of enforcement will not be accepted. Disabled people seek prompt, strong, and vigorous implementation and enforcement of their rights and will settle for nothing less. The time has long since come but positive action is still possible. Thousands of disabled Americans join me today in calling upon the President to alter Secretary Califano's present course of action and to ensure full protection of the civil rights of America's 36 million dis-

abled citizens.

Disabled people in this country have waited 200 years for their most elementary human and civil rights. They are determined to continue their action for as long as it may take until they are protected from un-just discrimination. If the President does not respond now, we will carry our cause to the White House Conference on Handicapped Individuals in May.

To paraphrase a recent candidate for the Presidency, disabled people do not intend to

COMMONSENSE APPROACH NEEDED FOR ENVIRONMENTAL MATTERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. WAGGONNER) is recognized for 10 minutes.

Mr. WAGGONNER. Mr. Speaker, the commonsense approach to problems has always been an American trademark. As a nation, and as individual citizens, we have tackled tasks that seemed insur-mountable to others and solved them. The key has always been informed, concerned commonsense.

In recent years, however, we seemed to have lost our national reliance on commonsense, and instead approached many

problems with our emotions. The area of environmental protection is a prime example of where we have allowed our emotions to rule our heads.

No one wants to see this great and beautiful land wantonly destroyed, just as no one wants to further endanger already endangered animals and plants. Americans as a whole have a close attachment to this land and want to see it preserved and protected for future Americans. We have become acutely aware of our responsibility toward nature; and we will continue to fulfill this responsibility.

But as a nation we are also realistic. We know that we need dams for electric power and irrigation. We need highways, navigable rivers and ports for transportation. We need coal, oil, and natural gas for energy. We need to cut trees for homes and wood products.

The Washington Post editorial, entitled, "The Lousewort and the Law," points out that "in almost all of perhaps 200 cases where endangered species and some projects have seemed to collide, a means of coexistence has been found." In these cases, we have used our heads—our commonsense—to find the proper solution. And in each case man and nature have been able to live in harmony together.

The same commonsense attitude should now be applied to the multimillion dollar public works projects that have become entangled and stalled because of snail darters, louseworts, rare clams, and an assortment of other flora and fauna. This was not the intent of Congress in passing the laws now being applied to the projects, nor was it the intent of the multitude of Americans who supported passage of the laws. It is time to display some of the commonsense and rational judgment that has been our hallmark in the past.

been our hallmark in the past.

The full text of the Post editorial follows my remarks:

THE LOUSEWORT AND THE LAW

The furbish lousewort may be a lovely plant, if you like scraggly snapdragons. And the snail darter may be more delightful than the average three-inch fish. But something is awry when a clump of louseworts along the Upper St. John River can louse up planning for the Dickey-Lincoln Dam—or when a federal court, to save the snail darter, stops the nearly-complete Tellico Dam down on the Little Tennessee River.

Misty-eyed environmentalists are delighted to see such obscure bits of nature hold sway over huge public works. They are also coming to regard the endangered species act as a weapon of last resort against projects that they oppose on broader grounds. The more pragmatic dam-fighters recognize, however, that many more snail-darter type showdowns or more lousewort jokes can endanger the law itself. Already some members of Con-gress are grumbling that when they approved the act, they had in mind good causes such as saving bald eagles and keeping commercial foragers from ripping off great cacti in the West. They didn't mean to give automatic priority to a whole assortment of undistinguished flora and fauna with precarious existences and funny names.

What Congress should bear in mind as it considers changes in the law is that in almost all of perhaps 200 cases where endangered species and some project have seemed to collide, a means of coexistence has been

found. Often all that's required is some care and redesign. Down on the Gulf Coast, after a great brouhaha, the last habitat of the Mississippi sandhill crane may be preserved by rerouting Interstate 10. In California several types of butterflies may be saved by setting aside some small preserves, including parts of an oil refinery, Los Angeles airport and an Army rifle range. Some species, too, are more adaptable than you might think. One rare butterfly is hanging on amid the television towers of Twin Peaks in San Francisco, while some endangered birds are reported to be thriving along various freeway shoulders and medians.

ous freeway shoulders and medians.

The Tellico case is the first in which a choice seems to be unavoidable. Supporters of the project want Congress to exempt it from the law. Some opponents welcome hearings as one more chance to advance all of their arguments against finishing the dam. By taking that tack they are acknowledging that, in the rare instance in which accommodations cannot be worked out, a project should not be canceled just because of one endangered fish or flower. We have not reached a conclusion about the Tellico dam on its merits. But we do think the decision should not be dictated by the snail darter alone. The same applies to the lousewort and the studies of the Dickey-Lincoln project that are now under way.

EDUCATIONAL TAX CREDIT ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. Le Fante) is recognized for 10 minutes.

Mr. Le FANTE. Mr. Speaker, today I am again introducing legislation I originally submitted on the opening day of the 95th Congress. The bill will provide a tax credit for certain educational expenses. Legislation of this nature is not new to the Congress, but unfortunately the decree of action has not matched the immediacy of the problem.

The measure I, and 25 of my colleagues, are proposing will provide a tax credit for postsecondary education expenses. The credit can be subtracted directly from the amount of taxes owed for expenses paid by an individual for himself, his spouse, or any dependents. The amount of the credit will total \$100 in 1978, \$200 in 1979, and \$300 in 1980 and thereafter.

The credit will cover tuition, fees, books, and supplies needed for courses at an eligible institution. Room and Board are not included, and an individual must be a full-time student attending a postsecondary school.

Mr. Speaker, similar legislation was introduced last year in the other body by Senator William Roth of Delaware, and twice it was approved by the full Senate as an amendment to the tax reform bill. The House Ways and Means Committee did make a commitment to bring the tax credit to a vote before the second Senate vote, but unfortunately a heavy legislative schedule prevented a House vote before the 94th Congress adjourned.

Meanwhile, the cost of a college education has been spiralling upward. According to the College Entrance Examination Board, total expenses for resident students at 4-year public institutions went up 8 percent from 1975-76 to 1976-77, and 6 percent in private institutions during the same period. This legislation makes no distinction between enrollment in public and private schools.

The result of these price increases—which by no means is a recent trend, only a recent example—has grossly affected attendance in colleges and universities among students of middle-income families.

In a report to Congress in 1976, the Congressional Research Service said that student enrollment from families earning between \$5,000 and \$15,000 went down 14 percent from 1971 to 1974 in institutions of higher education. At the same time, among families earning over \$20,000, student enrollment was up 10 percent, and enrollment from low-income families remained fairly stable. A major reason for this is that too often, middle-income families cannot afford to personally pay their children's college expenses, and are not poor enough to qualify for assistance.

The questions are then raised: Are we not responsible for the future of these and all citizens? Should not everyone be entitled to a sound education?

The knowledge attained in our Nation's colleges and vocational schools is the major factor in our Nation's strength. Let us not allow the backbone of our country be weakened because of the weight of financial burden.

WE SHOULD VOTE ON PAY RAISES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. Neal) is recognized for 5 minutes.

Mr. NEAL. Mr. Speaker, yesterday I introduced legislation which would require a recorded vote on all future pay increases for Members of Congress.

I am sure my colleagues know that the conference report on the Unemployment Compensation Act Amendments of 1977, which passed both Houses of Congress yesterday, included the Senate amendment requiring rollcall votes on all pay increases recommended by the Quadrennial Commission. I think this is a step in the right direction, but it does not go far enough. Members of Congress can receive pay raises through two completely different procedures. The first method, which caused such consternation in February, is by recom-mendation of the Quadrennial Commission. As every Member knows, there was no vote on the February raise, and the public-rightfully, in my opinion-was outraged. I would have voted against this raise. It is my firm belief that we should have been allowed that opportunity.

The second method was established by an amendment to the Legislative Reorganization Act of 1946, which included those affected by the Quadrennial Commission proposals under cost-of-living increases recommended by the President's Pay Agent. The Senate amendment which we accepted today would require a vote on raises recommended by the Commission, but not by the Pay Agent. Surely these cost-of-living increases should also require a vote of

the Representatives and Senators receiving them.

I am a cosponsor of legislation which would defer all increases until the Congress following the one in which they are proposed or approved. Since House Members serve terms of 2 years, and a Congress coincides with those 2-year terms, those of us in the House of Representatives would never actually be voting on increases for ourselves, but for those Members of the House who are elected for the following Congress. Such a chance. I think, is the least we can do.

Obviously I am concerned that Members of Congress can actually vote themselves an increase under the present methods. I am even more disturbed, however, that increases can go into effect even without the benefit of a vote. For these reasons, I urge my colleagues' support of my bill to require a recorded vote on all pay increases affecting Members of Congress. Our citizens have a right to know how their elected representatives stand on such a controversial issue

THE PIPE DREAM OF ENERGY . INDEPENDENCE

(Mr. PRICE asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PRICE. Mr. Speaker, I want to invite the attention of my colleagues to some statements made by an engineer concerning our energy dilemma. For that purpose, I am asking that his statements, which were printed on the front page of the February 24 Washington Star, be printed following my remarks.

The engineer, Dr. John McKetta, specializes in the energy field and has served as an adviser to the Government many times in dealing with energy problems. You will see his points are very clear: We cannot, for the foreseeable future, gain energy independence and we must develop every practical source to stave off catastrophic consequences. I cannot help but comment that it appears our official actions all seem to ignore his advicefor example, conservation is being touted as the complete solution, utilities are cutting back on plans to build more coal and nuclear plants, drilling for additional oil is being held up, et cetera. We must start taking actions which will add to our energy supplies from our own domestic sources.

In my statement of February 23, 1977, printed on page 5095 of the February 23 Record, I point out the confusion which is being injected in the planning of electrical utilities by the many statements being made by Government officials that we can take care of all of our problems by conservation. I certainly hope that this misconception is removed in the energy plan the administration has scheduled to release in April.

The interview of Dr. John McKetta from the February 24, 1977, Star follows: HE ENDORSES USING EVERY ENERGY FORM

Dr. John J. McKetta, a University of Texas professor of chemical engineering, has served as chairman of the Interior Department's Advisory Committee on Energy and on a variety of other energy panels. He was in-

terviewed by Washington Star Staff Writer Stephen M. Aug.

Stephen M. Aug.
Question: Where would you say we are today in terms of energy independence?

McKetta. We are at the point of no return. There's no way in our lifetime and our children's lifetime that there's anything we could do in the United States to have energy self-sufficiency.

Q. So the old idea of energy independence by 1980 . . .

A. It's out. It's a pipe dream. It's a shuck.
Q. Why couldn't we be energy independent by, say, the turn of the century?

A. First of all, in order to continue a positive gross national product would mean that you are going to have to have an increase of energy of approximately 2 or 3 percent a year. And this will continue between now and the year 2000. From the supply standpoint there is nothing you can do today that would bring you more energy by the next seven or eight years. You can't open enough coal mines or increase the transportation and so forth in the next five or seven or eight years. In the United States it takes about 10 or 11 years to build a nuclear plant. You've got to find four more Alaskas. You've got to find four more Texases. You've got to triple the amount of coal, you've got to build a new reactor each -a new nuclear reactor-starting today. You've got to get approximately a mil-lion to 2 million barrels of oil from shale by the year 2000. All these things together you've got to do in order to have self-sufficiency by the year 2000 or 2010.

Q. Would you put more emphasis on developing coal mines or building nuclear plants or perhaps solar energy which takes no fuel to run?

A. Right now I'd put effort in every direction. First of all I would start a very strong program into tripling the amount of coal in the next 15 years. This evening I would start opening up trying to have as many nuclear plants started as we could get. I would try to encourage people to find more oil and gas opening up the outer continental shelf and free the people from the shackles. Right now as you know the new outer continental shelf bill is going to hold back the producing companies up until 1987 before you really develop the fields. This is really senseless. It sounds like Soviet Russia is making the rules for us rather than our own people. I would remove those shackles and go out in the outer continental shelf and start bringing in oil next year. It can be done. The reason I say oil and gas is because the present dependence is about 80 percent on oil and gas. If you and I increase this only 10 percent that helps us as much as doubling the amount of coal. But we've got to do all this at one time.

Q. The coal industry advertises that there's enough coal to last 500 years. If more of our energy demand was to come for coal how long would the coal last?

A. If coal were to supply all the energy that oil and gas is supplying today it would only last 100 years. But on the other hand you have vast amounts of shale as well as shale oil and coal and lignite. What we're looking for is by the year 2010 we will be receiving possibly 8 to 10 percent of our energy from solar and maybe by 2020 this may increase to 25 percent. By the year 2030 we will be in the fusion energy era where we will be making energy from duterium in the sea water. These are inexhaustible sources. You and I want to do something over the next 30 years. In the meantime we've got to be frugal. We're going to have to make many sacrifices and we ought to have voluntary sacrifices right now to try not only to conserve but to do without the luxurious use of energies.

energies.

Q. Would you just go ahead and build nuclear plants and not worry about how to dispose of the waste products?

A. Well, there are two things we want to look at. First, the nuclear reactive waste is dangerous. Radiation is dangerous. But remember gasoline is extremely dangerous. You and I keep it in our cars every night; 10, 15 or 20 gallons in our car each night of this highly dangerous gasoline. Automobile driving is dangerous. So there are dangers in every area. But reasonable people will take moderate risks if the benefits are great, or they'll take small risks if the benefits are moderate or they won't take any risks if the benefits are small. Fortunately there have been no accidents in the nuclear field. There have been no deaths in any nuclear reactor, power reactor facility, no over-radiation cases, and remember we've been in business for over 20 years. So from the standpoint of accidents I think that we've learned how to handle plants and so forth.

Q. Is one way to encourage frugality to simply make energy so expensive that people can no longer afford to use it?

A. I don't think that you should intentionally make energy more expensive. I think that what happens is that you have to encourage people to go out and look for energies. And one way that you are going to en-courage them is by making sure that they get a good return on their investment. And if they don't, then they aren't going to look. You understand that in 1954 we had as high as 38,000 independent drillers for oil and gas. In 1974 we had less than 3,800. The people left the business because the risks were too great for the return of their money. Now we're back up to about 10,000 people in the business. And the risks are still great. But the return is a little better. And a lot of it on the basis that we do have intrastate gas whose price is maybe as high as \$1.75 or \$2.

THE OFFICIAL FLOW TO PRIVATE INDUSTRY

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, much has been said over the years about the 'revolving door" problem of officials of Government leaving their public positions and going to work in industries affected by the Government agencies for which they formerly worked. All too frequently a member of a regulatory agency turns to the regulated industry for his next employment. Examples are legion. The "revolving door" also admits the same people back into Government, too, so that it is often the case that a person spends a few years regulating from the Government side, then goes to an industry that does business with the Government or is regulated by it, and then again returns to industry. And so on.

In the New York Times of Sunday, April 3 there was an excellent article on the "revolving door" problem, written by Thomas Goldwasser. Not only does his article recount some eggregious tales of conflict of interest from movement back and forth between industry and Government, but also spells out legal action which could prevent it. I commend this article to the attention of my colleagues:

THE OFFICIAL FLOW TO PRIVATE INDUSTRY
(By Thomas Goldwasser)

President Carter's guidelines on conflict of interest have been heralded as the first step in restoring trust in our public officials. At least the President and his advisers, who wrote the new code, have promised as much. However, scrutiny of what has been offered

confirms the cliche that the more things change, the more they stay the same.

From the early days of his campaign to his first fireside chat, Mr. Carter vowed to put a stop to the pernicious "revolving door" flow of high officials between the Government and industry. This practice, which was extant long before Dwight D. Eisenhower warned of the coziness of the military-industrial complex, allows the highest ranking Government decision makers to approve large contracts for industry one day and to join forces with these same companies the next. This has always gone on in Washing-

ton with impunity.

The Carter Administration's noble intentions apparently have not been matched with meaningful remedies. They add little to what is already on the books. For many years Sections 207 and 208 of Title 18 of the United States Code have been the Federal statutory provisions governing conflict of interest. Section 208 specifically precludes a Government official from negotiating for employment with a private firm that has a financial interest in any matter before the Government in which he participated "per-

sonally and substantially.

Section 207 permanently prohibits former Government officials from acting as agents in a governmental proceeding concerning the matter in which they were involved while in Government service. Furthermore, for one year these officials are prohibited from personal appearances before a Government agency concerning a matter which was "under their official responsibility" during their final year of employment by the Gov-ernment. Violation of these provisions is punishable by a fine of up to \$10,000 and/or imprisonment for not more than two years.

With all their fanfare, the Carter innovations offer only a single improvement: a twovear stricture on post-Government employment. Hardly enough to regain public confidence. Robert Lipshutz, White House counsel, concedes that "the laws on the books, if properly enforced, might reach all the prob-

Stringent enforcement of the code, as it now stands, would suffice. Despite highsounding promises from previous administrations, action always lagged far behind.

Let's look at some examples.

Title 18 was in effect but did not stop Alan S. Boyd, the first Secretary of Trans portation, from accepting the presidency of the Illinois Central Railroad just three months after his department awarded a \$25.2 million grant to the Chicago South Suburban Mass Transit District for 130 commuter railroad cars to be leased to the Illinois Central. Mr. Boyd's familiarity with transportation, especially with high officials in the industry, really paid off.

On Dec. 28, 1968, less than a month before Mr. Boyd was to leave office, the Illinois Central grant was announced. Late in January Mr. Boyd's acceptance of the railroad's presidency was made public. Representative Jack Brooks, Democrat of Texas, demanded an investigation. Supposedly carried out under the aegis of Mr. Boyd's successor as Secretary of Transportation, John A. Volpe, the inquiry was actually directed by Under Secretary John E. Robson, a holdover from the Boyd era. In effect, Mr. Boyd was "investigated" and declared not guilty by himself.

Mr. Boyd's defense was that he had insulated himself from knowledge concerning the Illinois Central grant. However, a memo from Mr. Robson to Mr. Boyd of Oct. 22, 1968, unequivocally showed that Mr. Boyd was kept abreast of negotiations about the grant with the Illinois Central's chief executive officer, William B. Johnson, Mr. Robson assured Mr. Boyd that the chances for approval were

Mr. Boyd became president of the railroad on April 1, 1969. The following day Mr. Volpe, on the advice of Mr. Robson and other Boyd holdovers in the Transportation Department. exonerated Mr. Boyd in a brief press release.

Last month Mr. Boyd took up new duties as a special representative named by Presi-Carter, Mr. Boyd heads the negotiating team for the United States in its efforts to arrive at a new air services agreement with Britain. And Mr. Robson is now chairman of the Civil Aeronautics Board.

Hamer H. Budge, while chairman of the Securities and Exchange Commission, negotiated directly with the Investors Group Companies, the Minneapolis mutual fund giant, to become its president. At the same time-with Title 18 on the books-the company had significant business pending before the S.E.C. So did Investors Diversified Services, the world's largest mutual fund complex, which manages the Investors Group and is inextricably connected with it.

Again there was an uproar. The Senate Banking and Currency Committee's subcommittee on securities held hearings at the end of July 1969, immediately after it became known that Mr. Budge had received, and was seriously considering, a second, more appealing Investors Group presidency offer. The original negotiations took place in May, just three months after Mr. Budge, a commissioner, had been elevated to S.E.C. chairman.

Although two Democratic Senators-William Proxmire of Wisconsin and Harrison A. Williams Jr. of New Jersey-scolded Mr. Budge, no sanctions resulted. In January 1971 Budge assumed the company's presidency, a post he still holds. Now he can conduct the company's business before the agency he formerly headed. The company, though, does not seem eager to publicize its former status. In a mutual fund prospectus, Mr. Budge's biographical sketch ends this way: "Mr. Budge was an executive of a Federal agency and was head of such agency from February 1969 to January 1971."

As Assistant Secretary of Defense for Installations and Logistics, Thomas D. Morris was the Defense Department's primary procurement officer. He first served in that position from January 1961 to the end of 1964. Beginning in August 1967, he resumed the assignment, Mr. Morris left the Government in February 1969 to become a vice president of Litton Industries, a major defense contractor. During the year preceding Mr. Morris's departure from Washington, Litton jumped from 36th to 14th among the nation's defense contractors as the amount of Litton's contracts grew from \$180 million to \$456 million.

Three months after Mr. Morris joined Litton, news broke of a giant \$1.4 billion Defense Department contract for Litton to build nine Landing Helicopter Assault ships. A few months later Mr. Morris joined Dart Industries. Soon afterward Litton received another major defense contract: \$1.8 billion to build 30 DD-963 antisubmarine destroyers.

When suspicion was voiced on Capitol Hill. guess who the United States Comptroller General, Elmer B. Staats, asked to investigate the two Litton contracts? Mr. Morris. He was named Assistant Comptroller General for Management Systems.

Construction of the ships, with huge cost overruns, is far behind schedule. Now President Carter has named Mr. Morris to be the Department of Health, Education and Welfare's first inspector general, a position that was created by Congress last year. Mr. Morris's primary task is to eliminate waste and abuse in H.E.W.'s myriad programs.

Recently a large Chicago bank organization recruited two of the Treasury Department's highest officials: the Comptroller of the Currency, James E. Smith, and the Under Secretary for Monetary Affairs, Edwin H. Yeo 3d. Treasury, each had a major role in regulating bank policy.

Mr. Smith, who left the Government a few months ago, is executive vice president of the First Chicago Corporation, which owns the First National Bank of Chicago. Mr. Yeo, who left Washington with the Ford Administration, has become an executive vice president of the bank. Before assuming their policymaking Government posts, Mr. Smith was a lobbyist for the American Bankers Association and Mr. Yeo was vice president of the Pittsburgh National Bank.

In the early stages of formulating the Carter rules, there appeared to be hope that something significant might be done, Mr. Lipshutz, the White House counsel, suggested that the Administration might seek a court injunction to prevent a Government official from accepting a higher paying industry position that violated the conflict-of-interest law. However, when President Carter's plan was issued, no punitive action was spelled out.

President Carter's plan also avoids the question of Government-wide enforcement. According to the Administration, there can be no universal remedy because the many Federal agencies oversee too many private groups. Thus it would be virtually impossible for a Government servant to avoid a conflict of interest when he joins the private sector-any business he joins would undoubtedly have been regulated by his agency.

So the President plans to leave it to each agency to work out its own standards. This has never worked before, and there is no reason to believe it will now. For example, while Mr. Budge was negotiating for his mutual fund job, the S.E.C. had strict administrative fules of its own, in addition to the Federal

The S.E.C.'s Rule 5B says: "No employee shall undertake to act on behalf of the Commission in any capacity in a matter that, to his knowledge, affects even indirectly any person outside the Government with whom he is discussing or entertaining any proposal for future employment, except pursuant to the direction of the Commission, his division director or other office head, or his regional administrator.'

If punishment under Section 208 is deemed too harsh, at least do not let the exiting public servant accept his lucrative conflict-of-interest position. Of course a man of Mr. Boyd's caliber should not be precluded from using his transportation expertise in private employment. But many high-paying jobs await any retiring Cabinet officer, so he should not have been allowed to negotiatemuch less accept—the presidency of a company that had just received \$25.2 million of Government largesse from the agency he

A valid distinction must be made between middle and lower level Government employees and those at the highest rung of Federal service. At the highest level a decision awarding a contract, for example, is final. What a Cabinet officer decides is done. Persons working at a lower level, however, are subject to having their decisions overruled by superiors. This does not condone impropriety by underlings, but there are some safeguards against their decisions becoming agency policy.

It is important to bear in mind that the American taxpayers are bankrolling public officials as they negotiate with private industry for high-paying jobs. It is often difficult to tell which side they are on. "What you expect," Ralph Nader asks, "when these people use the Government to make themselves more employable at high salaries in the private sector? It's on-the-job train-

ing.

The real reason for ending the "revolving door" flow of executives was spelled out clear ly in a 1960 report by the New York City Bar Association: "The risk is not bribery through the device of job offers. The risk is that of sapping governmental policy, espe-cially regulatory policy, through the nagging and persistent conflicting interests of the Government official who has his eye cocked toward subsequent private employment. To turn the matter around, the greatest public risks arising from post-employment conduct may well occur during the period of Government employment, through the dampening of aggressive administration of Government policies."

Little has been done so far to stem the flow of high officials between the Government and industry. Maybe the Carter Administration can make the transition from symbolic gestures to vigorous enforcement.

OIL COMPANY PROFITS INDICATE PLENTY OF MONEY FOR EXPLORATION

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, the oil companies and their supporters have been crying for deregulation on the grounds that only by hiking prices can afford new exploration. The March 21 issue of Business Week reveals that there may not be much truth to the argument of "hardship" among the oil companies. Indeed, most companies appear to have done astonishingly well in the fourth quarter of 1976 and for the full year as well. For example, Exxon should be able to do a lot of exploring with its \$2.6 billion profits. Since many Members have expressed concern, would like to share the Business Week chart with my colleagues:

INTRODUCTION OF PRESIDENT CARTER'S SBA NATURAL DISASTER BILL.

(Mr. SMITH of Iowa asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SMITH of Iowa. Mr. Speaker, on March 23, President Carter requested legislative action to assist those hurt by the impact of the 1976-77 drought. The President, as part of this program, has requested legislation to provide temporary authority for the Small Business Administration to make additional low interest loans to facilitate water conservation practices and emergency actions to mitigate the impacts of the 1976-77 drought.

Today, I am introducing this legislation by request. The Subcommittee on SBA and SBIC Authority and General Small Business Problems, which I am privileged to chair, will commence hearings at 10 a.m. on Wednesday, April 6, 1977 in room B-363 of the Rayburn Building. The subcommittee will be considering the President's proposal and natural disaster bills introduced by Congressmen Meeds, Trible, Howard, Marks, Byron, John Burton, and Johnson of Colorado.

Basically, the President has proposed that SBA be authorized to make low interest—5 percent—loans with a maximum term of 30 years to small businesses injured by the drought. The loans would be of two types:

First. Economic injury—to remedy the effects of actual or prospective substantial economic injury from drought.

Second. Short-term water projects—to improve water conservation practices, or to rehabilitate, replace, or augment water supply facilities adversely affected by drought.

Under the Small Business Act, SBA currently operates loan programs which might be used for these purposes.

Under section 7(b) (2), the SBA makes loans to small businesses located in an area affected by a disaster if the concern has suffered substantial economic injury as a result of the disaster. Loans under the President's proposal would be similar to those economic injury loans currently being made by SBA except: First, under the President's program, the interest rate would be 5 percent instead of 6% percent—the cost of money to the Federal Government; and second, and, under the President's proposal, SBA would be authorized to declare the area a drought impact area and commence making loans without the need for any declaration by anyone else instead of there being the necessity of a disaster declaration in order for the current economic injury program to be applicable.

Under section 7(a) of the Small Business Act, which is SBA's regular business loan program, the SBA makes loans to small businesses with these loans being used for virtually any legitimate business purpose, and this would probably include water conservation and augmentation projects. The basic differences be-

tween the existing program and the one proposed by the President is that under the existing loan program, interest would be at the rate of 6% percent as compared to 5 percent under the President's, and the maximum term of the loan would be 10 to 20 years as compared to 30 years under the President's proposal.

Also, I should point out the matter of funding. The drought assistance program by the President would include an appropriation of \$50 million solely for these purposes. SBA's existing economic injury loan program is one of a number of nonphysical disaster loan programs which is funded at \$80 million and the entire regular business loan program for direct and immediate participation loans is funded at \$195 million.

The Presidentially requested bill also contains a provision which would declare that actions taken pursuant to the act shall not be deemed to be major Federal actions significantly affecting the quality of the human environment for purposes of the National Environmental Policy Act of 1969.

I have been advised that under NEPA, major Federal actions significantly affecting the environment require the preparation and review of an environmental impact statement. It is the administration's intent that well drilling et cetera, not be deemed actions on which such statements need be filed as this would unduly delay carrying out the program.

I also include for printing in the Record a statement of the Small Business

Administration on drought assistance:
The President's March 23 message to Congress outlined the severe effect of the prolonged drought which poses a serious threat to the livelihood of countless farmers, ranchers and businessmen. Certainly, SBA intends to do everything possible to assist small business concerns in drought disaster areas.

The Small Business Administration's Emergency Drought Disaster Loan Program is to be established as part of a coordinated, multi-agency Presidential initiative to facilitate water conservation practices and to provide immediate relief from the impact of the 1976–77 drought.

The program will provide emergency drought assistance loans at a 5 percent rate for a period of up to 30 years to assist small business concerns to overcome the impact of actual or prospective economic injury suffered as a result of drought. Eligibility requires an actual or expected decrease in business activity of at least 20 percent below normal levels.

Small Business concerns affected by currently-designated drought disaster areas covering some 26 states will become eligible for emergency drought assistance. In addition, any areas to be designated by the President, the Secretary of Agriculture or the Administrator of the Small Business Administration will also become eligible for emergency drought assistance.

Emergency loan applications may not be accepted after September 30, 1977. Funds for drought disaster assistance under the Act must be committed before October 1, 1977. Project measures authorized under this bill must be completed by November 30, 1977, unless due to special circumstances the Administrator makes an exception.

An additional \$50 million appropriation is being requested to fund this new program.

HEARING SCHEDULE ON ALASKA LANDS LEGISLATION

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to in-

clude extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, on March 22, I inserted in the RECORD for the information of Members the schedule of hearings which our Subcommittee on General Oversight and Alaska Lands will be holding in the contiguous 48 States regarding H.R. 39 and other bills designating Alaska lands to be included in the National Conservation Systems. At that time, I also stated that we would be visiting southeast Alaska during the early days of July, to become familiar with the areas in that part of the State. and to hold hearings as well.

Today, I am inserting the schedule of times and locations for the hearings in southeast Alaska. They are as follows:

Tuesday, July 5-Bicentennial Building, Sitka, Alaska, 9:30 a.m.

Thursday, July 7—National Guard Armory, Junea, Alaska, 9:30 a.m. Saturday, July 9—High school, Ketchikan, Alaska, 9:30 a.m.

Mr. Speaker, the subcommittee will be devoting much of August to additional field trips, hearings, and meetings with local residents in the rest of the State of Alaska, so that we may become familiar with all the various areas dealt with by H.R. 39. I expect to have the remainder of our schedule ready in the near future, and will insert it into the RECORD when it is complete.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders

heretofore entered, was granted to:
Mr. Bolling, for 20 minutes, today, and to revise and extend his remarks

and include extraneous matter.

Mr. KEMP, for 10 minutes, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. MARRIOTT) to revise and extend their remarks and include extraneous material:)

Mr. Young of Alaska, for 10 minutes,

today.

Mr. WHALEN, for 10 minutes, today. Mr. Sarasin, for 10 minutes, today.

Mr. HAMMERSCHMIDT, for 5 minutes, today

Mr. Evans of Delaware, for 5 minutes. today.

Mr. SEBELIUS, for 15 minutes, today.

Mrs. Heckler, for 5 minutes, today. Mr. Anderson of Illinois, for 15 min-

utes, today.

(The following Members (at the request of Mr. RAHALL) to revise and extend their remarks and include extraneous material:)

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today. Mr. Koch, for 5 minutes, today.

Mr. WAGGONNER, for 10 minutes, today. Mr. Le Fante, for 10 minutes, today.

Mr. BRADEMAS, for 5 minutes, today. Mr. UDALL, for 5 minutes, today.

Mr. NEAL, for 5 minutes, today.

Mr. Tsongas, for 10 minutes, April 6, 1977.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted

Mr. PRICE, and to include extraneous

Mr. CLEVELAND to include extraneous matter in his remarks on the bill H.R. 3199.

Mr. Don H. CLAUSEN, and to include extraneous matter, on H.R. 3199 in the Committee of the Whole today.

Mr. McKinney to follow the remarks of Mr. Don H. CLAUSEN on the bill H.R.

Mr. HAMMERSCHMIDT, to revise and extend his remarks following the remarks Mr. Anderson of California.

(The following Members (at the request of Mr. MARRIOTT), and to include extraneous matter:)

Mrs. Pettis. Mr. Winn.

Mr. DERWINSKI in three instances.

Mr. FISH.

Mr. WHALEN.

Mr. LOTT.

Mr. CRANE. Mr. GRASSLEY.

Mr. STEERS

Mr. SAWYER.

Mr. McClory in two instances.

Mr. STEIGER.

Mr. PURSELL.

Mr. HILLIS. Mr. O'BRIEN.

Mr. GILMAN in two instances.

Mr. HAMMERSCHMIDT.

Mr. SNYDER.

Mr. ABDNOR.

Mr. KEMP in three instances.

(The following Members (at the request of Mr. RAHALL), and to include extraneous matter:)

Mr. JENRETTE in five instances.

Mr. Nolan in two instances.

Mr. KILDEE in two instances.

Mr. TEAGUE in 12 instances.

Mr. CORNWELL.

Mr. CARNEY.

Mr. AKAKA.

Mr. BINGHAM in five instances.

Mr. Breckingidge in 10 instances.

Mr. McDonald in five instances.

Mr. EDWARDS of California

Mr. Gonzalez in three instances.

Mr. Anderson of California in three instances.

Mr. EILBERG in two instances.

Mr. Charles H. Wilson of California.

Mr. LEHMAN.

Mr. MOAKLEY.

Mr. SIMON.

Mr. FRASER.

Mr. DRINAN.

Mr. Jones of Tennessee.

Mr. Pattison of New York.

Mr. MURPHY of New York in two instances.

Mr. BEARD of Rhode Island.

Mr. JACOBS.

Mr. Corman in five instances.

Mr. Jones of North Carolina.

Mr. RANGEL.

Mrs. Spellman.

Mr. Applegate in two instances.

Mrs SCHROEDER

Mr. GAMMAGE.

Mr. FORD of Michigan.

Mr. MILLER of California.

Mr. PATTEN.

Mr. TRAXLER.

Mr. VANIK in three instances.

Mr. HAWKINS.

Mr. LEVITAS.

Mr. PEPPER in two instances.

Mr. AuCoin.

Mr. Dodd.

Mr. ROYBAL.

Mr. BOWEN

Mr. KOSTMAYER.

Mr. NEAL.

Mr. FITHIAN.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 266. To amend Public Law 92-314 to authorize appropriations to the Energy Re-search and Development Administration for financial assistance to limit radiation exposure from uranium mill tailings used for construction, and for other purposes, to the committee on Interior and Insular Affairs and Interstate and Foreign Commerce.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 3365. An act to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institu-

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought; and

S. 1025. An act to amend the Securities Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal year

BILL PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 4800. An act to extend the Emergency Unemployment Compensation Act of 1974, and for other purposes.

ADJOURNMENT

Mr. RAHALL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 5 minutes p.m.), under its previous order, the House adjourned until tomorrow, Wednesday, April 6, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1186. A letter from the Director, Selective Service System, transmitting a report on the agency's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1187. A letter from the Assistant Secretary of State for Congressional Relations, transmitting reports on political contributions made by Ambassadors-designate James F. Leonard and Donald F. McHenry and their families, pursuant to section 6 of Public Law 93-126; to the Committee on International Relations.

1188. A letter from the Administrator, Agency for International Development, Department of State, transmitting the first report on the famine prevention and freedom from hunger program, pursuant to section 300 of the Foreign Assistance Act of 1961, as amended (89 Stat. 866); to the Committee on International Relations.

1189. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

1190. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to regulate activities involving recombinant deoxyribonucleic acid; to the Committee on Interstate and Foreign Commerce.

1191. A letter from the Administrator, Federal Energy Administration, transmitting a report on construction of refineries by independent refiners and small refiners, pursuant to section 123(b) of Public Law 94–385; to the Committee on Interstate and Foreign Commerce.

1192. A letter from the Secretary, Interstate Commerce Commission, transmitting notice of the Commission's request for an extension in Investigation and Suspension Docket No. 9139, "Transit Charges, Lumber and Forest Products, Nationwide," pursuant to section 15(8) (a) of the Interstate Commerce Act, as amended (90 Stat. 37); to the Committee on Interstate and Foreign Commerce.

1193. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend title 28, United States Code, to provide in civil cases for juries of six persons, to amend the Jury Selection and Service Act of 1968, as amended, with respect to the selection and qualification of jurors, and to extend the coverage of the Federal Employees Compensation Act to all jurors in U.S. district courts; to the Committee on the Judiciary.

1194. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to provide for the defense of judges and judicial officers sued in their official capacities; to the Committee on the Judiciary.

1195. A letter from the Acting Administrator, American Revolution Bicentennial Administration, transmitting the fourth report of the American Revolution Bicentennial Board, covering the period June-December 1976, pursuant to section 10(1) of Public Law 93-179; to the Committee on Post Office and Civil Service.

1196. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on Skagway, Alaska, requested by resolutions of the Senate and House Committees on Public Works adopted January 22, 1968, and July 10, 1968, respectively; to the Committee on Public Works and Transportation.

1197. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on Bolinas Beach, Calif., requested by a resolution of the House Committee on Public Works adopted October 19, 1967; to the Committee on Public Works and Transportation

1198. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on the Russian River, Calif., requested by a resolution of the House Committee on Public Works adopted July 1, 1968; to the Committee on Public Works and Transportation.

1199. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on the Walpio River, Kohala-Hamakua Coast, Island of Hawaii, Hawaii, authorized by section 209 of the River and Harbor Act of 1962; to the Committee on Public Works and Transportation.

1200. A letter from the Comptroller General of the United States, transmitting a report on the status of the Navy's FFG-7 class guided missile frigate shipbuilding program (PSAD-77-42, March 28, 1977); jointly, to the committees on Government Operations, and Armed Services.

1201. A letter from the Comptroller General of the United States, transmiting a report on the status of the Army's Copperhead and the Navy's 5-inch and 8-inch guided projectile programs (PSAD-77-26, April 1, 1977); jointly, to the Committees on Government Operations, and Armed Services.

1202. A letter from the Comptroller General of the United States, transmitting a report on the status and problems in constructing the National Visitor Center (PSAD-77-93, April 4, 1977); jointly, to the Committees on Government Operations, and Public Works and Transportation.

REPORTS OF COMMITTEES ON PUB-LIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DINGELL: Committee on Interstate and Foreign Commerce. H.R. 130. A bill to provide for the protection of franchised distributors and retailers of motor fuel; to encourage conservation by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers; and to prevent deterioration of competition in gasoline marketing; with amendment (Report No. 95-161). Ordered

to be printed.

Mr. MURPHY of Illinois: Committee on Rules. House Resolution 473. Resolution providing for the consideration of H.R. 5262. A bill to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank and the Asian Development Fund, and for other purposes (Rept. No. 95-162). Referred to the House

Mr. ULLMAN: Committee on Ways and Means. H.R. 4007. A bill to amend the Internal Revenue Code of 1954 to designate the home of a State legislator for income tax purposes, and for other purposes; with amendment (Rept. No. 95-163). Referred to the Committee of the Whole House on the State of the Union.

Mr. ULLMAN: Committee on Ways and Means. H.R. 3340. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for expenses allocable to the use of any portion of a dwelling unit in the trade or business of providing day care services whether or not such portion is exclusively used in such trade or business; with amendment (Rept. By Mr. HUGHES:

H. Res. 474. Resolution to amend the Rules of the House aof Representatives to require committee approval of certain travel proposals, and for other purposes; to the Committee on Rules.

By Mr. SCHEUER (for himself, Mr. ANNUNZIO, Mr. ASHLEY, Mr. BEN-JAMIN, Mr. BEVILL, Mr. BLOUIN, Mr. BONKER, Mr. CAVANAUGH, Mr. CRANE, Mr. D'AMOURS, Mr. DAVIS, Mr. EDGAR, Mr. EDWARDS of Oklahoma, Mr. Eng-LISH, Mr. Evans of Georgia, Mr. FITHIAN, Mr. FORD of Michigan, Mr. FUQUA, Mr. GUYER, Mr. HARRIS, Mr. HIGHTOWER, Mr. HOWARD, Mr. HUB-BARD, and Mr. HUGHES) :

H. Res. 475. Resolution to establish a Select Committee on Population; to the Committee

on Rules.

By Mr. SCHEUER (for himself, Mr. ICHORD, Mr. JOHNSON of California, Ms. LLOYD of Tennessee, Mr. Mc-CLORY, Mr. MANN, Mr. MARKEY, Mr. NEDZI, MS. OAKAR, Mr. PERKINS, MS. PETTIS, Mr. PICKLE, Mr. PURSELL, Mr. REUSS, Mr. SANTINI, Mr. SIKES, Mr. SIMON, Mr. SKELTON, Mr. STARK, Mr. STOKES, Mr. VAN DEERLIN, Mr. WALGREN, Mr. WALKER, Mr. WOLFF, and Mr. WYDLER):

H. Res. 476. Resolution to establish a Select Committee on Population; to the Commitee on Population; to the Committee on Rules

By Mr. SCHEUER (for himself, Mr. YATES. Mr. YATRON, and MAHON):

H. Res. 477. Resolution to establish a Select Committee on Population; to the Committee on Rules.

By Mrs. SMITH of Nebraska:

H. Res. 478. Resolution expressing the sense of the House of Representatives that the effect on our society of the level of violence depicted on television requires more consideration and study; to the Committee on Interstate and Foreign Commerce.

By Mr. STEIGER (for himself, Mr. Marlenee, Mr. Quayle, Mr. Edwards of Alabama, Mr. Vander Jagt, Mr. Thornton, Mr. Preyer, Mr. Meeds, Mr. Railsback, Mr. Marriott, Mr. Michel, Mr. Flowers, Mr. Oberstan, Mr. Long of Louisiana, Mr. Glaimo, Mr. Pursell, and Mr. Stangeland):

H. Res. 479. Resolution to require that the Congressional Record contain a verbatim account of remarks actually delivered on the floor, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions wre introduced and severally referred as follows:

By Mr. EVANS of Colorado:

H.R. 6102. A bill to provide for conveyance of certain lands in Lake County, Colo., to Robert D. Elder; to the Committee on Interior and Insular Affairs.

By Mr. FORSYTHE:

H.R. 6103. A bill for the relief of Harold N. Holt; to the Committee on the Judiciary.

By Mr. HANLEY:

H.R. 6104. A bill for the relief of Gerald Levine; to the Committee on the Judiciary. By Mr. HORTON:

H.R. 6105. A bill for the relief of Dr. Ching W. Tang; to the Committee on the Judiciary.

By Mr. NOLAN:

H.R. 6106. A bill for the relief of Gordon Beck; to the Committee on the Judiciary. By Mr. PATTERSON of California:

H.R. 6107. A bill for the relief of Lehi L. Pitchforth, Jr.; to the Committee on the Judiciary.

By Mr. SARASIN:

H.R. 6108. A bill for the relief of Alberto Garcia; to the Committee on the Judiciary. By Mr. STANGELAND:

H.R. 6109. A bill for the relief of Virginia J. Mariano; to the Committee on the Judiciary. By Mr. MADIGAN:

H. Res. 480. Resolution to refer the bill (H.R. 5164) for the relief of J. L. Simmons Co., Inc., to the Chief Commissioner of the

Court of Claims; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

78. By the SPEAKER: Memorial of the Legislature of the State of North Dakota, relative to requiring Federal agencies to enhance lands under their control; to the Committee on Agriculture.

79. Also, memorial of the Legislature of the State of Hawaii, relative to expansion of the Federal Comprehensive Employment and Training Act; to the Committee on Education and Labor.

80. Also, memorial of the Legislature of

the State of Idaho, relative to the proposed construction of a highway through the Burgdorf Hot Springs area in Idaho; to the Committee on Interior and Insular Affairs.

81. Also, memorial of the Senate of the Commonwealth of Puerto Rico, relative to the 60th anniversary of the granting of American citizenship to the people of Puerto Rico; to the Committee on Interior and Insular Affairs.

82. Also, memorial of the Legislature of the State of North Dakota, requesting that Congress propose an amendment to the Constitution of the United States relative to the right to life; to the Committee on the Judiciary.

83. Also, memorial of the Legislature of the State of Hawaii, relative to extension of the Federal supplemental unemployment benefits program; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

74. By the SPEAKER: Petition of the Student Government Association, Broward Community College North Campus, Pompano Beach, Fla., relative to federally insured student loans; to the Committee on Education and Labor.

75. Also, petition of Gerard J. Bouley, mayor. Woonsocket, R.I., relative to providing Federal funds for low-cost spaying and neutering clinics, to the Committee on Interstate and Foreign Commerce.

76. Also, petition of the Overseas Federation of Teachers, (AFL-CIO), relative to the General Accounting Office report on rates charged certain patients in overseas medical facilities; jointly, to the Committee on Government Operations, and Armed Services.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 5262

By Mr. HARKIN:

Title V is amended to add the following new subsection:

"(b) In addition, the United States Government, in connection with its voice and vote, in the institutions listed in subsection (a) is authorized and directed to vote against any loan, any extension of financial assistance or any technical assistance to any country which engages in a consistent pattern of gross violations of internationally recognized human rights, including torture or cruel, inhumane or degrading treatment or punishment, prolonged detention without charges, or other flagrant denial of the right to life, liberty, and the security of the person, and including providing refuge to individuals committing acts of international terrorism such as hijacking of an aircraft, unless such assistance is directed specifically to programs which serve the basic human needs of such country.

Title V is amended by striking subsection

(e).

By Mr. MOORE:

Page 7, immediately after line 22, insert the following:

"TITLE VIII-PALM OIL LOANS

SEC. 801. The United States representatives to the International Bank for Reconstruction and Development (IBRD), the International Development Association (IDA), the International Finance Corporation (IFC), the Internamerican Development Bank (IADB), the Asian Development Bank (ADB), the Asian Development Fund (ADF), and the African Development Fund (AFDF) shall oppose and vote against any loans or other financial assistance for establishing or expanding production of palm oil."

Redesignate the succeeding Section accordingly.

SENATE-Tuesday, April 5, 1977

(Legislative day of Monday, February 21, 1977)

The Senate met at 4 p.m., on the expiration of the recess, and was called to order by Hon. Edward Zorinsky, a Senator from the State of Nebraska.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Hear first the words of the 51st Psalm, the 17th verse:

The sacrifices of God are a broken spirit: a broken and a contrite heart, O God, Thou wilt not despise.—Psalms 51: 17.

Let us pray.

Almighty God, whose love redeems all men who trust in the Saviour, may our daily prayer this Holy Week open our minds and hearts to the meaning of the cross. Thou has revealed Thy highest truth in suffering and sacrifice, in self-giving rather than self-getting. Remind us that the way to the highest life is the way of death and resurrection—dying to sin, rising in righteousness. As we make our pilgrimage to the cross show us that the way to sacrifice is the way to fulfillment, and the way of selfless service is the pathway to Thy kingdom.

In the name of Him who transformed a cross of shame into a symbol of victory. Amen.

APPOINTMENT OF ACTING PRES-IDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following etter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 5, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. Ebwasen

on official duties, I appoint Hon. EDWARD ZORINSKY, a Senator from the State of Nebraska, to perform the duties of the Chair during my absence.

James O. Eastland, President pro tempore.

Mr. ZORINSKY thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Monday, April 4, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are some nominations on the calendar which are cleared for action. I ask unanimous consent that the Senate go into executive session to consider nominations under Federal Highway Administration, Department of Defense, U.S. Air Force, and nominations placed on the Secretary's desk in the Air Force, Army, Navy, and Marine Corps.

Mr. BAKER. Mr. President, I only say to the majority leader that my calendar shows that all of these nominations for Federal Highway Administration, Department of Defense, and the Air Force,

are cleared on our side.

I can also clear the three nominations of the Department of HUD if the majority leader wishes to do that at this time.

Mr. ROBERT C. BYRD. I appreciate that. I do not think I will proceed with those nominations at the moment, in the Department of HUD.

Mr. BAKER. I thank the majority

leader

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

FEDERAL HIGHWAY ADMINISTRATION

The second assistant legislative clerk read the nomination of William Meredith Cox, of Kentucky, to be Administrator of the Federal Highway Administration.

The ACTING PRESIDENT pro tempore. Without objection, the nomination

is considered and confirmed.

DEPARTMENT OF DEFENSE

The second assistant legislative clerk read the nomination of John C. Stetson, of Illinois, to be Secretary of the Air Force.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

NOMINATIONS PLACED ON THE SECRETARY'S DESK IN THE AIR FORCE, ARMY, NAVY, AND MARINE CORPS

U.S. AIR FORCE

The second assistant legislative clerk proceeded to read sundry nominations in the U.S. Air Force.

Mr. ROBERT C. BYRD. Mr. President,

I ask unanimous consent that the nominations under U.S. Air Force and under the category of Nominations Placed on the Secretary's Desk in the Air Force, Army, Navy, and Marine Corps be considered and confirmed en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(All nominations confirmed today are printed at the conclusion of Senate proceedings.)

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR COMMITTEE ON RULES AND ADMINISTRATION TO HAVE UNTIL APRIL 18 TO FILE REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that notwithstanding the order of January 4, and the extension on March 31, that the Committee on Rules and Administration be given until April 18, to file its report on Senate Resolution 5, to amend the Standing Rules of the Senate—relative to cloture, the Journal, rulings on quorum, and reading of amendments and conference reports. The committee voted today to report the resolution, but to accommodate all parties concerned the report cannot be conveniently ready until April 18.

The ACTING PRESIDENT pro tem-

pore. Is there objection?

Mr. BAKER. There is no objection, Mr.

President

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my time. The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

PRESIDENT ANWAR SADAT

Mr. BAKER. Mr. President, it is with a great deal of pleasure that I note the presence in Washington of President Anwar Sadat of Egypt. On the two occasions in the past when I have had the opportunity to visit Egypt, the President and Mrs. Sadat were generous and gracious hosts; and I would hope that his visit here proves to be as enjoyable and constructive as were mine and the many of my colleagues who have also traveled to Egypt.

As you know, Mr. President, President Sadat, among others, has emerged as a truly moderate leader of significant stature, not only in the Middle East, but in the world at large. In a world badly in need of moderate, deliberate leadership, the President's voice is a welcome one.

More now than ever before, it is an important commodity in the Middle East; and I welcome President Carter's initiative to invite all the leaders, Prime Minister Rabin, President Sadat, King Hussein, Crown Prince Fahd, and President Assad, in whose ability and willingness to reconcile their differences lies the key to progress toward peaceful and productive interrelationships in the Middle East.

We should note, Mr. President, that President Sadat's position in the vanguard of moderation has not been an easy one, either domestically or among the other Arab States; but through his leadership, in an area of the world once dominated by rancor and violence, the position of moderation has become a

respectable one.

I would conclude by saying that whatever encouragement we can give, whatever assistance we can provide to insure that the influence of all these leaders prevails before the opportunities for peace are lost should be forthcoming. Moreover, we should remember that it will only be through their leadership that the quality of the peace, when peace comes, will be such that the legtimate aspirations of all the parties are recognized and eventually realized.

FORD-MITRE REPORT

Mr. BAKER. Mr. President, the report of the Nuclear Energy Study Group, which was sponsored by the Ford Foundation and administered by the MITRE Corp. was released recently. Preceding, as it does, the submission of the administration's energy proposal, there are a number of points in the report worth noting.

The Ford-MITRE report concludes that, under normal operation, nuclear power is considerably more desirable on the basis of both health and environmental considerations than the burning of coal to produce electricity. It further concluded that nuclear power was somewhat cheaper than coal and that the problem of disposal of radioactive waste can be satisfactorily solved. With these three conclusions, the Ford-MITRE report has swept away the most serious objections of those opposed to nuclear power.

On other points, I find fault with the study. The report overstates the close relationship between recycling of plutonium and the danger of proliferation of nuclear weapons. While it is technically possible to use the plutonium recovered from spent fuel to make a weapon, this is not the easiest approach. In fact, none of the six nations that are now known to possess nuclear weapons obtained plutonium from the reprocessing of commercial fuel.

The plutonium recovered from power reactors contains a mixture of isotopes which make it difficult to use in weapons production. It is much easier to develop nuclear weapons through the use of en-

richment technology, without commercial reprocessing; and ERDA is currently studying ideas and techniques that would make it even more difficult to fashion weapons from reprocessed plutonium.

The conclusion of the Ford-MITRE report that the reprocessing option should not be pursued is based upon two assumptions. First, the reprocessing of plutonium in the United States would represent a major increase in the danger of nuclear proliferation. Second, that previous estimates of our uranium reserves are much too low. Mr. President, I believe both assumptions are subject to serious challenge, and we should consider the options carefully.

In fact, Mr. President, by forgoing the reprocessing option and thus putting additional strain on the limited supply of uranium, we may well achieve what we hope to prevent: the proliferation of reprocessing facilities in nations who would otherwise be dependent on the United States as a reliable supplier of enriched uranium.

Considering that prospect, and in view of the seriousness of our energy problem, I urge my colleagues to carefully consider the consequences before we cross reprocessing off our list of energy options.

SENATE CODE ON OFFICIAL CONDUCT

Mr. BAKER. Mr. President, I notice the presence of the distinguished Senator from South Carolina (Mr. Thurmond) in the Chamber, and I would like to take this opportunity to extend to the Senator my sincere gratitude and appreciation for resolving a quandary that has plagued my staff during the recent consideration of the Senate Code on Official Conduct.

You see, Mr. President, I, too, have a member of my staff who is engaged to a lobbyist; and you can imagine the consternation experienced in my office when we discovered that under the ethics code that member of my staff would be prohibited from accepting her engagement ring.

At one point, we thought we had the problem resolved when it was pointed out that she had already received the ring and that the resolution was not yet in effect. The mood of optimism did not last long, however, because, as we all know, if there is one piece of legislation with which compliance with the spirit as well as the letter is important, it is in the legislation of the morality of the Senate

With that in mind, I again determined that I should inform this member of my staff that she would be required to give it and/or him up. And I should say, parenthetically, Mr. President, that there were those who advised the latter, believing that the gentleman in question had proposed to the lady in question only as a pretense to gain frequent access to my office and the members of my staff.

Needless to say, the young lady reacted to this suggestion with somewhat more fervor than one accustomed to her usual reserved manner would have thought possible. But then I had another thought, Mr. President, and I thought perhaps I had arrived at an acceptable compromise with this impatient young couple.

I told them that if they would agree not to endanger the ethics of my Senate office by plunging recklessly ahead with this engagement ring and matrimony business, I would, ostensibly for other reasons, sunset this particular piece of legislation some 2 or 3 years hence—at which point they could proceed with their plans. I thought that was a most reasonable compromise, and although somewhat reluctantly, they did agree to it.

You can imagine my despair, Mr. President, when I was forced to return to my office on Friday morning and report that I had been no more successful in convincing the Senate of the necessity to sunset the ethics code than Galileo had been when he made the equally radical pronouncement that the Earth was not the center of our universe. Unlike Galileo, at least I have not been placed under house arrest for being right; but I digress, Mr. President.

Once again, gloom and despair had beset the Baker Senate staff; and it appeared there was no possibility of avoiding the impasse. But lo and behold, one very alert staff member, doing a little light reading in the Record of Thursday, the 31st of March, noticed that the good Senator from South Carolina had with imagination and foresight already dealt with the problem. He had amended the ethics code to allow for just such a situation; and I and my staff, and particularly the young lady saved from the calamity of allegations of dishonorable and unethical conduct, are deeply in his debt.

Mr. President, although these remarks are somewhat humorous, naturally, they are at least half serious.

The Senator from South Carolina contributed magnificently to the deliberations on the ad hoc committee and did a diligent and effective job on the floor in managing for our side the passage of that difficult piece of legislation.

Mr. THURMOND. I thank the able Senator from Tennessee for his kind remarks.

Mr. BAKER. I thank the Senator. They are most heartfelt and sincere.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I have no other request for time under the standing order and I have no further requirement for it.

I yield back the remainder of my time under the standing order.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that I may retrieve 5 minutes of my time that I yielded back.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SUPPLEMENTAL HOUSING AUTHOR-IZATION ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the action of the Senate yesterday in passing S. 1070, as amended, be vitiated.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House on H.R.

3843.

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate the message from the House on H.R. 3843. The bill will be stated by title.

The legislative clerk read as follows: A bill (H.R. 3843) to authorize additional funds for housing assistance for lower income Americans in fiscal year 1977, to extend the Federal riot reinsurance and crime insurance programs, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill be considered as having been read the first and second times, and that the Senate proceed to its immediate consideration.

Mr. ALLEN. Reserving the right to object, will the distinguished majority leader tell us what the bill is about?

Mr. ROBERT C. BYRD. Yes. The Senate yesterday passed a companion measure, S. 1070. It would be my purpose, once the House bill is before the Senate, to strike all after the enacting clause and insert the language of the Senate bill of yesterday, after vitiating the action.

Mr. ALLEN. What does the bill have reference to?

Mr. ROBERT C. BYRD. It is the housing assistance bill.

Mr. ALLEN. I have no objection.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill be considered as having been read twice, that the Senate proceed to its immediate consideration, that all after the enacting clause be stricken, and that the text of S. 1970, as amended by the Senate on yesterday, be substituted in lieu thereof, with the amendment of the Senator from New York (Mr. JAVITS) adding section 106, to read as follows:

SEC. 106. Sec. 221(d)(4) of the National Housing Act is amended by deleting the words "other than a mortgagor referred to in subsection (d)(3) of this section," from the first sentence of the section.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill, as amended, be considered as having proceeded to the third reading, passed, and the motion to reconsider laid on the table.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of Senate amendments to H.R. 3843, and that S. 1070 be indefinitely postponed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 44— SENATE PROCEDURE

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. Baker and myself I send to the desk a joint resolution to authorize the printing and binding of an edition of Senate Procedure and providing the same shall be subject to copyright by the author.

The ACTING PRESIDENT pro tempore. The joint resolution will be stated

by title.

The legislative clerk read as follows:
A joint resolution to authorize the printing and binding of an edition of Senate Procedure and providing the same shall be subject to copyright by the author.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the joint resolution be considered as having been read the first and second time and placed on third reading and passed, and a motion to reconsider laid on the table.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to its immediate consideration, and, without objection, the joint resolution will be considered to have been read the second time at length, and, without objection, a motion to reconsider will be laid on the table.

The joint resolution (S.J. Res. 44) was ordered to be engrossed for a third reading, was read the third time, and passed. The joint resolution reads as follows:

S. J. Res. 44

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be printed and bound for the use of the Senate one thousand five hundred copies of a revised edition of Senate Procedure, to be prepared by Floyd M. Riddick, Parliamentarian Emeritus of the United States Senate, to be printed for distribution to the Members of the Senate.

Sec. 2. That notwithstanding any provision of the copyright laws and regulations with respect to publications in the public domain, such revised edition of Senate Procedure shall be subject to copyright by the author

thereof.

HOUSE CONCURRENT RESOLUTION 186—RECESS OF THE SENATE AND ADJOURNMENT OF THE HOUSE

Mr. ROBERT C. BYRD. Mr. President, I send to the desk a concurrent resolution (H. Con. Res. 186) and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate House Concurrent Resolution 186, which

will be stated.

The legislative clerk read as follows: Resolved by the House of Representatives (the Senate concurring). That when the House adjourns on Wednesday, April 6, 1977, it stand adjourned until 12 o'clock meridian on Monday, April 18, 1977, and that when the Senate recesses on Thursday, April 7, 1977, it stand in recess until 12 o'clock meridian on Monday, April 18, 1977.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the concurrent resolution.

The ACTING PRESIDENT pro tem-

pore. Is there objection?

There being no objection, the Senate proceeded to consider the concurrent resolution.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 186) was agreed to.

SENATE RESOLUTION 136—RESOLU-TION RELATING TO COMMON CAUSE AGAINST BAILAR, ET AL.

Mr. ROBERT C. BYRD. Mr. President, I yield to the distinguished Senator from

Montana (Mr. METCALF).

Mr. METCALF. Mr. President, yesterday I went to the U.S. district court to listen to a hearing in a three-judge court on the status of Common Cause against Ballar. During that hearing—which recessed at 12:30 p.m.—the counsel for the subpensed Senate employees. Mr. Cornelius B. Kennedy, agreed to provide for the court's inspection additional material sought by the plaintiff in this lawsuit.

I returned to my office and prepared the necessary Senate resolution, to authorize the production of such material. My Record statement of yesterday describes the need for a new resolution, and the nature of the material to be produced.

I wanted to have every Member of the Senate informed as to the additional material that Mr. Kennedy had agreed to supply to the court, subject to the consent of the Senate in this resolution. He agreed to supply the material in camera, sealed, for the court's inspection only at this time. Nevertheless, I want Senators to understand that every Senate administrative assistant acting in that capacity from 1973 through 1975 will have to make additional sworn statements in connection with its production.

In order to comply with the agreement that Mr. Kennedy made, I ask unanimous consent at this time that Senate Resolution 136 be agreed to.

Mr. ALLEN. Reserving the right to

Mr. METCALF. I so move.

Mr. ALLEN. Mr. President, I object. The ACTING PRESIDENT pro tempore. Does the Senator from Montana yield?

Mr. METCALF. I yield to the distinguished Senator from Alabama.

Mr. ALLEN. With the majority leader's permission, I would like to ask unanimous consent that we might have 15 minutes for a colloquy on this subject. It is a very important subject.

Mr. ROBERT C. BYRD. Mr. President, it is a subject that merits additional time. I certainly have no objection. I would ask that the time be equally divided between Mr. Allen and Mr. Metcalf.

Mr. METCALF. That is perfectly ac-

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

The ACTING PRESIDENT pro tempore. The clerk will report the resolution.

The legislative clerk read as follows: A resolution (S. Res. 136) relating to Common Cause against Ballar, et al.

The ACTING PRESIDENT pro tempore. The Senator from Alabama.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

Mr. President, first, I commend the distinguished Senator from Montana on a number of matters: first, on his introduction on yesterday of this resolution and his request that the matter be held over for 24 hours to give all Senators an opportunity to read the resolution and to study its implications on the performance of official duties by Senators. I wish to commend him also on the hard work he has done as chairman of the ad hoc committee working with the attorneys for the Senate in defense of the right of Senators to communicate with their constituents.

I commend the Senator further for the second paragraph of his resolution, wherein he states that:

The dissemination of information by a Senator to his constituency concerning legislation proposed or enacted by the Congress, the administration of such legislation by the executive branch, and the review of such matters by the courts is a part of the official business of a Senator under the Constitution of the United States.

I agree entirely with that recital in the resolution.

The substitute to which the distinguished Senator has alluded is a substitute by Common Cause in effect against the Senate itself, seeking to deprive the Members of the Senate of the privilege of using the frank in order to communicate with their constituents. There in the Democratic Conference, as I understood it, Mr. Kennedy, our distinguished attorney, was given one set of instructions, and we do not know what has been agreed to now.

I know in the Senator's statement of yesterday some of the material involved in the stipulation agreed to by Mr. Kennedy, subject to the consent of the Senate, is to be provided to the court in 2 weeks.

But no information here is given as to what information is to be furnished and, in all fairness, I think it might be advisable, since this is a matter of such great importance, not just to Senators but to all the people of the United States, to have the opportunity to be apprised by their duly elected representatives of what is going on here in Washington.

So I feel before this resolution giving the attorney carte blanche is adopted, that the matter ought to be referred to the Rules Committee and then have Mr. Kennedy come before the Rules Committee and state specifically what information is to be furnished and, possibly, the resolution might be slightly revised.

I have no objection to the thrust of what the Senator is seeking to do, but I do feel the attorney needs some sort of guidance as to the wishes of the Senate, and not to just turn him loose to act contrary to the instructions that were given him, as this Senator understands it, in the Democratic conference of some weeks

I understand that same attitude was taken by the other side of the aisle. He was given certain instructions, and it looks like now he is possibly departing from them.

I would like to see what agreement he made. We want to defend the right of the people to be informed; that is what we

are fighting for here, the right of the people to know.

It looks to me as if that right is sought to be destroyed in this suit, and I feel the Rules Committee, to which the resolution should be referred, should have the opportunity to see just what is going on before it gives its assent to the divulging of this information.

Mr. METCALF. I thank the Senator from Alabama. The Senator from Montana has insisted on the rights the Senator from Alabama has described. We prepared a detailed report on these rights, in the Ad Hoc Committee on Legislative Immunity, which was printed as a Senate Document on March 28.

Mr. ALLEN. Yes.

Mr. METCALF. Nevertheless, Mr. Kennedy, our counsel, made a commitment yesterday to the court. It was not a commitment that was agreed to either in our conference or by any member of the ad hoc committee, but it was a commitment, and I felt that, in fairness to him, in fairness to the court and in fairness to the Senate, I should submit this resolution. At the same time I did not ask for unanimous consent for its immediate consideration yesterday.

Mr. ALLEN. I think the Senator is

exactly right.

Mr. METCALF. I tried to describe just exactly what the issue is and advised the Senate I was going to call this resolu-

tion up today.

I certainly would like to appear before the Rules Committee and testify. just as I would like to have Mr. Kennedy testify, and I think some other members of the ad hoc committee feel the same way.

Obviously, if the resolution goes to the Rules Committee, we cannot meet the 2-week deadline agreed to by Mr. Kennedy for some of the material involved.

I am not committed to that deadline, the Senator from Alabama is not committed to the 2-week deadline, and certainly we can go back to the court, after a hearing in the Rules Committee, and explain the parliamentary situation.

Mr. ALLEN. I do not take issue with one single thing the distinguished Senator has done. I think he has acted entirely properly and forthrightly, and I say again I appreciate his asking that this resolution be held over because it could easily have been passed on yesterday if the distinguished Senator-

Mr. METCALF. I was the only Sena-

tor on the floor.

Mr. ALLEN. That was indeed a highminded approach to this problem. I think this matter might possibly be resolved before the Rules Committee.

I think it might be well for a representative of Common Cause to be there and to testify, and if the attorney is there possibly an agreement could be reached before the committee as to what he wanted and what could be furnished.

But I think it is most important that the Members of the Senate, for the sake of their constituents, preserve the right of Senators to communicate with their constituents because I believe the people have a right to know, and I know that is exactly the attitude of the Senator from

Mr. METCALF. There is no more basic responsibility under the Constitution of the United States than that we communicate with our constituents.

Mr. ALLEN. Yes.

I commend the Senator for what he has done, and I respectfully request that he agree and that unanimous consent be obtained that the resolution go to the Rules Committee.

Mr. METCALF. As I understand it, the Senator from Alabama objects to my taking that matter up immediately.

Mr. ALLEN. I do not object, because if I objected the matter would come over under the rule, which we do not want. I think it ought to go to the Rules Committee for serious consideration.

So I request the distinguished Senator allow me then to request that the resolution be referred to the Rules Committee.

The ACTING PRESIDENT pro tempore. It there objection? The Chair hears none, and it is so ordered.

Mr. ALLEN. I thank the distinguished Senator for his fairminded attitude.

Mr. METCALF. I thank the distinguished Senator.

NOMINATION OF PETER F. FLAH-ERTY TO BE DEPUTY ATTORNEY GENERAL-EXECUTIVE SESSION

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now go into executive session to consider the nomination of Peter F. Flaherty, to be Deputy Attorney General. The clerk will report.

The second assistant legislative clerk read the nomination of Peter F. Flaherty, of Pennsylvania, to be Deputy At-

torney General.

The ACTING PRESIDENT pro tempore. Time for debate on this nomination is limited to 2 hours to be equally divided and controlled by the Senator from Mississippi (Mr. Eastland) and the Senator from South Carolina (Mr. THURMOND).

Who yields time?

Mr. EASTLAND. Mr. President, I yield myself 3 minutes.

The ACTING PRESIDENT pro tempore. The Senator from Mississippi.

Mr. EASTLAND. Mr. President, I rise in support of the nomination of Peter F. Flaherty to be Deputy Attorney General of the United States.

Last week, the Committee on the Judiciary voted, with only one "no" vote, to report this nomination favorably to the Senate. This vote followed 2 days of thorough hearings on the nomination during which some two dozen witnesses were heard.

The determination of the committee was reached upon the basis of the record established during these hearings. The testimony and documents received during the hearings dealt extensively with the professional and personal qualifications of the nominee, highlighting his performance as a public servant, first as an assistant district attorney and later as mayor of Pittsburgh. The record clearly establishes that Mr. Flaherty is extremely well qualified to be Deputy Attorney General.

The nominee, an honor graduate of

the Notre Dame University Law School, has had a fine career as an attorney. Following 5 years of private practice, he served as assistant district attorney for Allegheny County, Pa. He later served for 4 years as a councilman in Pittsburgh and was first elected mayor of that city in 1970. He is currently serving his second term in that office, having been reelected in 1973 after winning the primary nominations of both the Democratic and Republican parties.

The record well indicates Mr. Flaherty's competence as an attorney and trial lawyer. His tenure as mayor was distingiushed by his administrative ability in managing one of this country's major cities. It was marked by his effective battle against waste and inefficiency in city government. In contrast to the financial problems that have plagued other cities, Mr. Flaherty has been able to keep Pittsburgh in top financial shape without increases in taxes.

More important, Mr. President, is the evidence that these administrative skills are matched by Mr. Flaherty's skill in balancing fairly and compassionately the human rights and interests of the many ethnic and racial elements of his city.

Despite Mr. Flaherty's fine private and public record, some opposition has been voiced to his nomination for this particular post. There has been no serious question as to the nominee's ethical or professional credentials.

Rather the few critics of this nomination indicate that their reservations are based upon Mr. Flaherty's lack of total commitment to the busing of children for the purpose of achieving racial balance in the public schools and upon their perception that as mayor he failed to fully implement policies of minority employment in his city.

Mayor Flaherty was accused of openly advocating the defiance of an order to desegregate the Pittsburgh schools. This order was issued by the State Human Rights Commission to the Pittsburgh Board of Education. Whether the commission had the authorty to issue and enforce such an order is still being litigated in the Pennsylvania courts.

Mayor Flaherty appeared before the Pittsburgh Board of Education not to advocate disobedience to the order, but rather to express his support for plans which did not involve massive busing of students to achieve racial balance. He stated at that time:

There was no question in the meeting as to whether or not we were going to comply. We know we have to comply with the Human Relations order on school desegregation. The matter is, what plan or plans should be accepted.

Mr. President, Mayor Flaherty proposed lawful alternative plans involving magnet schools which would keep the emphasis on the neighborhood school and not involve massive busing of stu-

Marianna Olson, member of the national board of directors and vice president of the Pittsburgh Chapter of Americans for Democratic Action, testified that the ADA board members had carefully reviewed Mayor Flaherty's statement before the Pittsburgh Board of Education and found it did not advocate disobedience of the law.

Specifically in regard to the issue of busing, Mr. Flaherty indicated that he has:

always believed in and supported the neighborhood school concept. I do believe that in order to achieve school desegregation we have to be creative. I have favored the magnet school as one alternative. . . I believe that at times busing does get counterproductive. . . I have expressed those concerns for massive forced busing.

Mr. Flaherty further noted:

In the City of Pittsburgh, which is 22 percent black, we are a city of over 29 different ethnic groups. While I have concerns about massive forced busing, I still recognize that the law on busing and on school desegregation is still evolving.

Perhaps most significant of the nominee's thoughts regarding this evolution of the law, Mr. President, was stated as:

I will obey the law and enforce the law regardless of what office I hold.

Mr. President, these few selections from the nominee's testimony indicate that he is a fair and reasonable man. The law regarding busing is evolving. The Committee on the Judiciary has on numerous occasions heard the pros and cons on the issue of massive busing, and highly respected experts have differed as to the best means to achieve full integration of our country's schools.

Questions were also raised concerning the area of minority hiring. These were fully answered by Mr. Strassburger, a deputy city solicitor of Pittsburgh and a professor of law at the University of Pittsburgh in the field of local government law.

He pointed out that Mr. Flaherty had always demonstrated an attitude of fairness toward all groups, and a special concern for rights of minorities. Any criticism of Mr. Flaherty is unfounded.

In fact, State statutes require the hiring by the city of Pittsburgh of the person scoring at the top of a civil service test. Mr. Flaherty tried to get as many minority personnel as possible into the uniformed services of the city. This testimony was reinforced by Mr. English, a member of the Pittsburgh Civil Service Commission. The U.S. district court, in fact, found that the city had undertaken an intensive recruitment campaign to encourage minorities to apply for positions as police officers. This resulted in a ratio of 27.5 percent minority group applicants-an excellent record in this regard.

But, because of practices in previous administrations, the court imposed a quota on police hiring. The city's law department advised that the chances of overturning that decision on appeal were good. However, Mayor Flaherty's response was not to appeal and to implement the directive of the court to meet the needs of the city in minority hiring. Further strides were made in this area in hiring of firefighters.

A charge was also made that Mayor Flaherty blocked the opening of a school being converted from a junior high school to a middle school. It was alleged that the school would have promoted school desegregation in Pittsburgh.

The answer to this is that the plan-

ning commission is an independent commission. The mayor appoints the members, and some are carryovers from previous terms. Mayor Flaherty did not meet with the commission, or with any commissioner, at any time on the Herron Hill School matter.

The commission approved many schools during Mayor Flaherty's administration, including one which would combine two schools, one black, one white. Others were also approved which had a racial mix.

The commission disapproved the Herron Hill School. Mayor Flaherty stated that his understanding was that the commission disapproved of the expansion of the school program because its study showed that the area was declining in population, and, especially important, in school population. The commission felt it would be a mistake to provide a large school where the population was declining. That, after all, is the function of planning commissions.

A letter from one of my esteemed colleagues on the committee has been circulated in opposition to this nomination. In addition to the matters which I have just addressed, the point was made that, as mayor, Mr. Flaherty was unwilling to meet with all groups, particularly minority groups. Mr. Flaherty stated that he had met with all groups, including women's groups and black groups. In addition Mayor Flaherty stated that he had met a number of times with the Reverend McIlvane, the witness who testified of this matter. The fact that there might have been times Reverend McIlvane wanted to meet and found it impossible is not surprising to me, or, I am sure, to anyone in this Chamber.

I believe a completed version of a quotation from the testimony, which has been circulated, would be enlightening

I do not expect to meet with a mayor or a governor every week. But there were times we wanted to meet with him and we found it impossible to do so. When a tension situation arose, he was willing to meet with civil rights groups. I think we could have headed off some of those tensions if there had been more frequent meetings with the mayor.

May I say that newspaper stories, and particularly editorials, which espouse a particular opinion, are not sufficient to rebut the evidence contained in the record. The opposition to Mayor Flaherty seems to be based to a great extent upon such articles. In fact, they simply wrongly characterize Mr. Flaherty's actions, based upon that newpaper's point of view at that time.

Mr. President, during the hearings the nominee expressed his awareness of the sensitivity of the position to which he has been nominated. He stated:

The Department of Justice should be ultimately and paramountly the representative of the people, the protector of their individual rights and liberties.

The Department of Justice should be a source of inspiration and hope for the people in their legal system.

From my perspective, both by listening to the man during hearings and examination of other testimony, I do not

believe that he will be one to shrink from doing his duty on this issue. Not only will he uphold the law of this land, but I believe that he will take the initiative to see that all possible means are explored to achieve the full enjoyment of rights of all Americans.

Mr. President, I strongly urge my colleagues to vote, without further delay, to confirm Mr. Flaherty as Deputy Attorney General of the United States.

The ACTING PRESIDENT pro tem-

pore. Who yields time?

Mr. METZENBAUM addressed the Chair.

The ACTING PRESIDENT pro tempore. Does the Senator from Mississippi yield time to the Senator from Ohio?

Mr. EASTLAND. I think his side should yield to him. How much time does the Senator want.

Mr. METZENBAUM. I do not have any time.

Mr. EASTLAND, I say, how much time does the Senator want?

Mr. METZENBAUM. Twenty minutes. Mr. EASTLAND. Who is to handle the time on the other side?

The ACTING PRESIDENT pro tempore. The time is under the control of the Senator from Mississippi and the Senator from South Carolina.

Mr. EASTLAND. I yield the Senator 20 minutes

Mr. METZENBAUM. Mr. President, I ask unanimous consent for the privilege of the floor for two of my staff assistants, Mary Jane Due and James Bildner.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, at this time I ask for a rollcall in connection with this nomination.

The ACTING PRESIDENT pro tempore. Is there a sufficient second?

There is not a sufficient second at this time.

The yeas and nays were not ordered.

Mr. METZENBAUM. Mr. President, I rise today to express opposition to the confirmation of Peter Flaherty to the position of Deputy Attorney General of the United States, the second highest position in the Justice Department. Quite frankly, I do so with great reluctance.

During 5½ hours of testimony before the Judiciary Committee, I had an opportunity to question and examine Mr. Flaherty, and his record, at some length. While I found him to be a man of esteemed character and an able attorney, some of his actions as mayor of Pittsburgh raise serious questions concerning his confirmation.

Specifically, three areas of the mayor's record disturb me-first, Mr. Flaherty, as mayor, displayed an unwillingness to meet with women's, religious, and minority groups-second, the mayor's hiring practices were so discriminatory that minority and civil rights groups needed to resort to Federal district court to get an order to force him to hire more women and minorities on the police force-and finally, the most serious objection of mine concerns statements made by the mayor advocating defiance of the law. While I expect that Mr. Flaherty will be confirmed by this body, Mr. President, I feel it important that my colleagues understand the nature of my concerns. Mr. President, testimony has been presented to the Judiciary Committee which indicated that Mr. Flaherty has been unwilling to meet with women, religious, human relations organizations, and minority groups during his tenure as mayor. It seems that on more than a few occasions, the mayor was unavailable to meet with those who sought to discuss community problems with him. Reverend McIlvane, a Catholic pastor representing the Pittsburgh area religious and race council, testified that his group—

... never had a formal meeting with the mayor . . . there were times we wanted to meet with him and found it impossible to do so . . .

Reverend McIlvane was not alone in his criticism. The president of the Pittsburgh Chapter of the NAACP and a representative of women's groups in Pittsburgh echoed this same sentiment.

The Attorney General, Griffin Bell, in his confirmation hearings before the Judiciary Committee, indicated that he would actively seek to make the Department of Justice an open one—accessible to all people. Mr. Flaherty's actions suggest an indifference to this kind of commitment and an insensitivity to the special needs of minority groups.

Even stronger evidence of the mayor's inability to work with minority groups can be found in the hiring practices of the police force between 1970 and 1975. During this period of 5 years, no blacks or females were hired on the police force, and yet 25 white males were hired-despite the mayor's awareness of the need to balance the police force. This hiring record was finally challenged in the district court by the State attorney general, the Fraternal Order of Police, the NAACP, and the National Organization of Women. And in that case the court ordered the mayor to add more women and blacks to the police force, which he promptly thereafter did.

Members of the Senate, that is not the issue. The issue is not a question of busing. The issue is not a question of integrated schools. The issue is whether or not Mr. Flaherty, up for confirmation to the second highest position in the Department of Justice, in acting as mayor urged the defiance of the law.

Mr. President, these actions disturb me very much—but by themselves, they would not necessarily lead me to vote against Mr. Flaherty. There is, however, evidence of conduct by the mayor which simply cannot be condoned.

No principle is more basic to our system of government than the idea that no person—government official or private citizen—may defy the law. Yet, evidence adduced during the course of the Judiciary Committee hearings satisfied me that Mr. Flaherty took a contrary position. There will be those who might attempt to confuse this issue with that of busing and integrated schools.

Let me briefly review the facts. In 1972, the State Commission on Human Relations ordered the Pittsburgh School Board to develop a comprehensive plan to integrate the schools. The order did not mention busing. Following this order,

Mr. Flaherty, at his own request, inserted himself into the matter. Never before had the mayor of Pittsburgh appeared before the school board. But Mr. Flaherty asked for time to appear. On that occasion, he urged the board, according to newspaper reports, to "defy State orders which would require forced busing to improve racial balance" though no specific plan—busing or otherwise—had as yet been formalized. In his talk to the board, the mayor told them that:

This order cannot be enforced. Don't believe that it can be enforced when the community is against it... You cannot be forced to carry out that which cannot be carried out.

Mr. President, this kind of statement implies that the test of a law is whether a specific community is for or against it—and implies a right in every public official to make his own evaluation of the community's attitudes before complying with a law. Such a posture is completely inconsistent with the role of a public official, and especially one who is being considered for the No. 2 law enforcement position in the Justice Department.

Mr. Flaherty did not take this position on only one occasion. He did so on more than one occasion. Five days after his first appearance before the school board, he appeared at a public meeting, and at that time he urged the school board to defy the integration now plans ordered by the State Human Relations Commission. At that time he told the board members:

You are not under a clear-cut mandate from the courts to bus.

He was correct on two counts: There was no mandate to bus. It was only an order of the Human Relations Commission to develop a plan to integrate the schools; and second, there had been no court order. But it was a legal commission order.

In response to the mayor's actions, an editorial appeared in the Pittsburgh Post-Gazette which stated that:

Mayor Flaherty has as much right as any other citizen to speak out in the school busing controversy. But it is most unbecoming for him or any responsible citizen to advocate defiance of law.

The Post-Gazette editorial went on to distinguish Mr. Flaherty's positions from those of another public official in Pittsburgh who expressed the same opposition as Mr. Flaherty, but who advocated a lawful means of proceeding. Even the editorial used the word "busing," but as of that time there still was no order for busing, and I do not know if there is as of this moment.

The editorial stated that:

We aren't sure how the problem is to be solved, but it's fairly clear that it won't be solved in an atmosphere of turmoil and civil disobedience. On the contrary, it will only get worse

Mr. Flaherty did not attempt to ameliorate this situation, nor did he attempt to clarify whether he was advocating defiance of the law—though repeated newspaper stories continued to use the same language.

Mr. Flaherty suggested at the hearing

that he never did advocate defiance of the law. Two newspaper stories reported it that way. One newspaper editorial and a telegram received by some of us from the lady who was president of the school board at that time interpreted that as being exactly his position. I have in my hand a copy of that telegram, in which Mrs. Gladys B. McNairy states:

I was President of the Pittsburgh Public School Board November 1972, when Mayor Pete Flaherty demanded that we defy the order of the Pennsylvania Human Relations Commission to submit a comprehensive plan for school desegregation after several years of vacillation.

She goes on to say:

It troubles me to have an official second in command to the Attorney General in office that demands compliance to the laws of our country.

If in fact he did not advocate defiance of the law, as he now claims, the very least he should have done—as the mayor of the city—would have been to clarify his public posture. That he did not do.

That he did not do; and, to the best of my knowledge, the first time that he indicated that he had not advocated defiance of the law was when he appeared before the Committee on the Judiciary which raised this issue.

Mr. President, I am not talking about a simple mistake or an oversight by Mr. Flaherty. Every American, whether a public official or not, has an obligation to abide by the law. No American, regardless of his position or his views, has the right to advocate defiance of the law.

For these reasons, Mr. President, I intend to vote against the confirmation of Mr. Flaherty. It is my sincere hope that my vote of protest against his confirmation will make Mr. Flaherty sensitive to some of the concerns that have been expressed during his confirmation hearings and alert him to his responsibility to advocate conformity with the law—whether or not he personally agrees with it.

The PRESIDING OFFICER. Who

Mr. HATCH, Mr. President, I yield 10 minutes to the distinguished Senator from Massachusetts.

Mr. BROOKE. Mr. President, I thank the distinguished Senator from Utah for yielding time.

Mr. President, last week, for the second time in less than 3 months, I found it necessary to put a hold on a presidential nomination to the Department of Justice. As with the nomination of Griffin Bell, my reason for holding up the nomination of Peter Flaherty was not based on opposition to his confirmation. Rather, it was because once again I believed that the Senate was being asked to vote on an important nomination without having had an opportunity to study the record of the nominee.

I was first informed last-Wednesday evening that there would be a vote on the Flaherty nomination within a day or two. I immediately inquired whether the Senate Judiciary Committee had issued a report on the nomination. To my astonishment I was told that there would be no committee report. I then asked whether there was a published

transcript of the hearing record. The answer was yes, but the transcript was

not yet available.

Mr. President, I had hoped that after the debate on the confirmation of Griffin Bell, the Senate would take its constitutional responsibility of "advice and consent" more seriously. But, regrettably, it appears that this is not so. For once again there has been an attempt to rush a controversial nomination through the Senate without proper procedural safeguards.

We cannot allow such senatorial complacency. When there are questions raised about a nominee, there should be a committee report. How else can Sena-tors who are not on the committee conducting the hearings make a reasoned decision on the nomination. Reports give us the thrust and spirit of the hearings. Reports deal with the questions that were asked of the nominee. And reports can indicate the weight the committee gave to the evidence which was presented to it. Not to have a report on such a nomination is a disservice to the country, to the nominee and to the

In the future, we must demand a report. And we must demand that every Senator have an opportunity to read and study that report, and all other available material on the nomination. To do less is to fail to meet our con-

stitutional duties.

Having read the transcript of the Judiciary Committee hearings over the weekend, I have serious reservations about the civil rights record of Peter Flaherty when he was mayor of Pittsburgh. Sadly, at a time when the city of Pittsburgh needed progressive leadership on the issue of school desegregation, Mr. Flaherty provided none. Instead he vielded to the temptation of resorting to antibusing rhetoric. It is an illustrative example of the failure of our leaders to lead.

However, the critical issue before the Senate Judiciary Committee was not whether Peter Flaherty was for or against busing to achieve desegregation. Rather it was whether Peter Flaherty defied or advocated defiance of a lawful order to desegregate the Pittsburgh

school system.

Let us review the record on this issue. In 1967 the Pennsylvania Supreme Court held that the State Human Relations Commission had the authority to require schools in the State of Pennsylvania to desegregate.

In June of 1971, the Commission, after a year of trying to secure by reconciliation and persuasion a desegregation plan for Pittsburgh, issued an order that the Pittsburgh schools be desegregated within a 3-year period. The Pittsburgh Board of Education appealed this order to the Commonwealth Court of Pennsylvania.

While the court was considering this appeal, Mayor Flaherty appeared on May 16, 1972 at a public hearing before the Pittsburgh Board of Education. He urged rejection of "any school reorganization plan which would involve forced busing or the disruption of neighborhood schools."

Several months later, on August 17,

1972, the Commonwealth Court of Pennsylvania affirmed the order of the commission to desegregate the Pittsburgh schools. The school board did not appeal.

On November 15, 1972, Mayor Fla-herty, for the second time, testified at a school board hearing urging the rejec-

tion of any busing plan.

The testimony before the Senate Committee on the Judiciary regarding these events is not conclusive. On the one hand, we have respected leaders of the national and Pittsburgh NAACP stating that Mr. Flaherty, at these public hearings, urged defiance of the Human Relations Commission order to desegregate the Pittsburgh school system. Several stories appearing in the Pittsburgh press at that time support that view.

On the other hand, we have other respected members of the Pittsburgh community, including several black leaders and representatives of the Americans for Democratic Action, asserting that while Mr. Flaherty opposed busing, he never advocated defiance of the law. Indeed they maintain that he suggested alternative ways to desegre-

gate the schools.

Mr. Flaherty himself testified before the Committee on the Judiciary that he did not defy or advocate defiance of the law. And in a communication with me this morning, he stated that the press reports of his appearances before the Pittsburgh school board were inaccurate. He maintains that at those hearings, he did not urge defiance of the order to desegregate, but instead urged that the school board reject any proposed plan which would include forced busing.

After studying the record, it is not clear what the facts are. The record is, at best, murky. There are numerous examples of conflicting testimony. And, like the Griffin Bell hearings, key witnesses

were not called to testify.

Examining the hearing transcript underscores why it is so imperative that the committee prepare detailed reports on controversial nominations.

But we have no report. And we must now cast a vote without the benefit of the assistance such a report would give.

In my judgment, the available evidence does not support a sufficient case against the confirmation of Peter Flaherty. This does not mean that a good case cannot be made against his confirmation. However, as I have stated many times in the past, absent a clear demonstration of incompetence or lack of integrity, I believe that the President has a right to nominate those individuals who reflect his political, legal and philosophical views, even though I may personally disagree with those views. So, while I have serious doubts about the Flaherty nomination, I must, in this instance, give him and the President the benefit of these doubts.

I am also hopeful that the confirmation process has made Mr. Flaherty more sensitive to the issues which have been raised and that, as Deputy Attorney General, he will vigorously enforce the

Nation's civil rights laws.

Therefore, Mr. President, with reservations. I shall vote for the confirmation of Peter Flaherty to be Deputy Attorney

Mr. President, in conclusion, I commend the distinguished Senator from Ohio (Mr. METZENBAUM), who has taken the leadership in bringing this matter to the attention of the U.S. Senate. I think he has performed a great service to the Senate and to the American peo-

I am not a member of the Committee on the Judiciary, but I am a lawyer by training and I have served in my State as its attorney general. I try to be as objective as I possibly can in all cases. I put a hold, as I said, on this nomination because I wanted to read the Senate Judiciary report. There being no report, I was left with the next best evidence. That next best evidence happened to be the transcript.

That transcript was replete with omissions and inconsistencies. And it was apparent from reading the transcript that key witnesses were not called, witnesses who may have given us more enlightenment and more evidence which would have helped us make this difficult de-

Mr. President, the failure to compile more of an evidentiary record gives me nothing to base my opinion on other than what I have had before me. And in good conscience, I cannot vote against the confirmation of Peter Flaherty, though I disagree philosophically with him, though I disagree with the statements he made, and though I would have much preferred that the President appoint someone who had exercised moral and progressive leadership on the issue of school desegregation at a time when his own city of Pittsburgh was experiencing very troubling times.

Having said all that, Mr. President, I must conclude that I personally do not find sufficient evidence to vote against his confirmation. Therefore, I must reluctantly vote to confirm Peter Flaherty, with a prayer-yes, I say with a prayerthat he will see the wisdom of following the law of the United States of America as that law is written, regardless of his philosophical views; that he will do what is right and protect the civil rights and the civil liberties of all Americans.

Mr. MATHIAS. Will the Senator yield? The PRESIDING OFFICER (Mr. MAT-SUNAGA). The time of the Senator has

expired.

Mr. BROOKE, I ask for 2 more minutes to yield to the Senator from Maryland.

Mr. HATCH, I yield 2 more minutes. The PRESIDING OFFICER. The Senator from Maryland is recognized.

Mr. MATHIAS. I thank the Senator from Massachusetts for the very careful analysis he has given to the Senate of his views on this nomination.

I say, first of all, that I think the Sen-

ator from Massachusetts has proven once again his own objectivity, his own very finely tuned sense of the processes of Government and politics in this country, his own very accurate scale of justice in coming, as he has, to this conclusion.

I am sure it would have been very easy for him to have read the most inflammatory headlines and have reached a judgment other than that judgment that he has just announced to the Senate. I am sure he could have done that and would not have had to apologize to anyone for having reached that conclusion. But, having weighed the evidence in the scales, he comes down on the side that a case has not been made which is sufficient to cause him to oppose this nomination.

I must say, Mr. President, that, as so often in the past, I find myself in agreement with the Senator from Massachusetts. If we were to take the worst construction of that episode in Pittsburgh, and a worst construction would be, to me, that the mayor of a great city had urged defiance of a lawful order of a legally constituted authority on any subject—busing or anything else; it would not matter what the subject was; the fact that he had urged defiance of a lawful order—then I do not think we could condone it.

Mr. Flaherty's testimony, however, is that that is not what he intended to do and opinions differ on this. But even, again, if it were true, we are not electing a President of the United States on this vote. We are not confirming the Attorney General of the United States. We are talking about confirmation of a Deputy Attorney General.

The President and the Attorney General are going to set the policy in the

Department of Justice.

I think, once again, they should be reminded that it is their policy that the country will look to and that we have to have confidence in the fact that their policy will be just.

I am sure that was in the mind of the Senator from Massachusetts in reaching this conclusion, that the responsible officials of this Government setting the policy for the whole Government are the President and the Attorney General.

During the confirmation hearings in the Judiciary Committee, I raised a number of questions with Mr. Flaherty, questions such as electronic surveillance without warrants in national security cases, questions of problems of juvenile delinquency, questions of the operation of the Law Enforcement Assistance Administration—the LEAA.

I think in all of these areas the record ought to be stronger than it is. But I will say this, at the conclusion of those hearings I had a personal conversation with Mr. Flaherty which I would like to put on record now in which he gave me assurance of his desire to strengthen that record, to reinforce that record by his

experience in the department.

I have to take those assurances at face value. I say to the Senator from Massachusetts, I say for the record and, therefore, to Mr. Flaherty, that we are taking those assurances at face value. We are going to put confidence in him, we are going to expect him to perform on those promises, and if he does I think the position that the Senator from Massachusetts has taken this afternoon will be proven to be the right decision.

I thank the Senator for yielding.

Mr. BROOKE. Mr. President, I say to my distinguished colleague from Maryland that I hope Mr. Flaherty will live

up to the assurances he gave to the distinguished Senator from Maryland.

I thank my colleague for, as usual, his very in depth and very wise statement. I am very grateful for what he has said in giving me further assurance that the decision I had personally arrived at is the right decision.

I thank my colleague.

Mr. METZENBAUM. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient

The yeas and nays were ordered.

Mr. BIDEN. Mr. President, will the Senator yield me 10 minutes?

Mr. HATCH. I yield 10 minutes to the distinguished Senator from Delaware.

Mr. BIDEN. Mr. President, I rise today to urge this body to confirm Peter Flaherty to be Deputy Attorney General of the United States and, unlike my distinguished colleagues from both Massachusetts and Maryland, I do not do it at all reluctantly, I do it enthusiastically.

I have known Pete Flaherty for some time, Mr. President, and I feel that President Carter has made an excellent choice.

Pete Flaherty is tough, he is honest, he is a superb administrator, in addition to being a fine lawyer—he is an exceptionally fine lawyer.

Quite frankly, Mr. President, I was somewhat disappointed by the comments and the letter I received from one of my colleagues in which he expressed his strong opposition to Mr. Flaherty.

In that letter, the distinguished Senator from Ohio accepts, in my opinion, almost without reservations, the charges made by Mr. Flaherty's opponents at the Judiciary Committee's hearing on the nomination and I think tends to ignore Mr. Flaherty's sworn testimony in response to these charges.

Mr. President, I would like to set the record straight on this matter, or at least set it in the framework I think it is in.

The letter expresses three areas of concern about Mayor Flaherty's past record:

First. His unwillingness to meet with women's, religious and minority groups; Second. The need to obtain a Federal Court order to force him to hire men and women on the public force; and,

Third. Statements he made advocating defiance of the laws of the land.

I will now quote from the letter:

Testimony before the Judiciary Committee raised doubts about Mr. Flaherty's willingness to meet with all groups during his tenure as Mayor. On more than a few occasions, the Mayor was unavailable to meet with women and minority groups. When asked by the Committee whether he had even been able to meet with the Mayor, Rev. McIlvane, a Catholic pastor representing the Pittsburgh area religion and Race Council, responded:

"We never had a formal meeting with the Mayor. I do not expect to meet with the Mayor or governor every week, but there were times we wanted to meet with him and we found it impossible to do so . . ."

This sentiment was enhanced by the President of the Pittsburgh chapter of the

NAACP and a spokeswoman for women in Pittsburgh.

Mr. President, I must take sharp issue with this. First of all, we all know that being mayor of a big city is one of the most difficult and time-consuming jobs in the country. There is absolutely no possibility of satisfying even a small number of the requests for meetings with the mayor.

In reference to the comment that this sentiment was echoed by the president of the Pittsburgh chapter of the NAACP, I would like to make an important clarification for the record, by reading Mayor Flaherty's response to this charge during the hearing. Mr. Flaherty said:

Mr. Flaherty. I have had many meetings with the—as a matter of fact, the previous President of the NAACP—I know that the present Pittsburgh president is against me and just went into office in January. His name is Harvey Adams.

The preceding president, who was President of the NAACP for three or four years in the City of Pittsburgh was Leon Howard. I met with him many times. As a matter of fact, he has sent this committee a Mailgram supporting my nomination for this post; I received a copy of this letter. I hope you have received that communication. To answer your question more directly: yes, I met with Leon Howard many, many times while he was President of the NAACP. I met with many other black leaders as well. Being mayor of the city, I have met with black leaders many times during the course of my mayoralty.

Mr. President, in response to the charges by Rev. McIlvane and a women's group I would like to read from the testimony, Mayor Flaherty's response:

Mr. Flaherty. I have met with Reverend McIlvane a number of times, Senator. I do not recall how many. I have met with the NOW organization when they have requested meetings, which has not been often; I would have to say that. But I remember Reverend McIlvane making that statement to you yesterday. I have met with Reverend McIlvane on a number of occasions on different matters that came up in the city.

ters that came up in the city.
Senator METZENBAUM. Informal meetings in your office? That is, it was not just a formal—

Mr. Flaherty. Informal meetings; also, he was a model cities commissioner. I met with him on model cities business as well.

I know he was active in the model cities movement. I am not sure that he was a commissioner. I believe he was.

Mr. President, in response to the issue of hiring practices of the public force between 1970 and 1975, I would also like to read the questions and answers on this subject from the testimony.

When I took office in 1970, there was a list already published that had been administered through the preceding administration. As my previous safety director, John Bingler, testified yesterday, he hired the first 25 officers; they were all white. We had no other choice. That was the list that was handed to us that we inherited from the preceding administration.

At that point in time, I met with John Bingler and I said that we have to come up with a new test, one that will remove cultural bias from the city. I hired the most professional psychological testing group I could find in the City of Pittsburgh to devise a test to remove cultural bias. They did. They devised such a test to remove cultural bias.

We worked on it, I would say, at least a year

The Civil Service Commission worked on with this testing group so that police officers, men, women, minorities, would all have an equal chance at the test. In addition to that, we began a recruiting drive in the black community. We published ads in the black newspaper. We had ads over the predominantly black radio station.

Now, Mr. President, to the serious charge that Mayor Flaherty made advocating defiances of the law in regard to school desegregation order by the Pennsylvania Human Relations Commission. I would like to say this. In building this case, Senator METZENBAUM has relied on a news account of Mr. Flaherty's appearance before the Pittsburgh school board and a newspaper editorial, and has totally ignored Mayor Flaherty's sworn testimony on this issue.

Before I go further, I would like to point out I doubt whether there is a Senator in this room who would be willing to rely on the editorial judgment of the newspapers in his city in order to determine an accurate characterization of what he said. If that were the case, I know in my city I would be in serious, serious shape. But, thank God, that is not

the case.

Mr. President, I would like again to read the questions and answers from the testimony, at least some of the questions and answers, on this subject.

Senator METZENBAUM. Mayor, unquestionably, I am sure you recognize that the most serious charge made against you yesterday has to do with the fact that you are to be the second highest official in the Department of Justice.

A newspaper story reports that "Mayor Peter Flaherty last night urged the Pittsburgh Board of Public Education to defy orders which would require forced school busing to improve racial balance.'

Your quote apparently-and I ask you if it is a correct quote-"this order cannot be enforced. Don't believe that it can be enforced when the community is against it. You cannot be forced to carry out that which cannot be carried out."

Now, at that point, there really had been no busing order. All there had been was an

order to develop a plan to integrate the schools. But whether there had or there had not really is quite immaterial to the question of whether or not-at least to me in this hearing-you advocated defiance of a legal order of a state body.

I think that is very relevant.

Mr. FLAHERTY. I did not advocate defiance, and I have heard the word here. I believe that such words are really an editorial assessment of my views in opposition to busing at the meeting that I attended.

As I understand the Human Relations order, it was an order by an administrative agency that the City of Pittsburgh, within a certain time frame, come up with a plan for school desegregation. When I appeared at the meeting, the question before the city school board was not whether they should comply or not comply with the order. The question was only how are we going to comply with the order of school desegregation.

There were a number of plans being discussed. They followed basically two patterns. One was the plan or plans for massive busing across town. The second group of plans was for alternate plans, plans that would provide for magnet schools or other measures.

I testified that I thought busing would be counterproductive. I did not support the plan or plans which favored the massive busing, which favored disbanding the neighbor-

hood school concept. I favored that we look into other alternatives and suggested that other alternatives be explored. I never used the word "defy."

There was no question in the meeting as to whether or not we were going to comply. We know we have to comply with the Human Relations order on school desegregation. The matter is, what plan or plans should be accepted.

The PRESIDING OFFICER. The time of the Senator from Delaware has expired.

Mr. BIDEN. Will the Senator yield 5 additional minutes or can I seek 5 minutes from the majority, since we have not used that time, since I happen to be in the majority?

Mr. THURMOND. On behalf of the Senator from Mississippi I yield 5 minutes on his time. We are short on our

Mr. BIDEN. I thank the Senator very much. I appreciate his yielding.

The PRESIDING OFFICER. The Senator from Delaware is recognized for an additional 5 minutes.

Mr. BIDEN. I am still quoting:

Senator METZENBAUM. Mayor, I have difficulty in following what you are saying because there is no public evidence that you were advocating a solution other than bus-ing. As a matter of fact, there is an editorial which reads as follows:

"Mayor Flaherty has as much right as any other citizen to speak out in the school busing controversy, but it is most unbecoming for him or any responsible citizen to advocate defiance of law. That attitude is responsible for much of the social unrest that has torn this country in recent years." I skip a

"We are not sure how the problem is to be solved, but it is fairly clear that it won't be solved in an atmosphere of turmoil and civil disobedience. On the contrary, it will only get worse. The best course to a solution of this agonizing problem is the orderly path of litigation either to enforce the laws or, if they are too onerous, to change them; but not to make a mockery of them."

Then it goes on to say, "While a short-term solution to the integration problem

continues to be divisive and elusive, it seems to us that County Commissioner Thomas J. Forster, who is also against compulsory busing to achieve integration, is on the right

track to a long-term solution.'

I am having difficulty because you are saving that the NAACP could have as many meetings as they wanted; they say they never could have meetings. You are saying that you did not urge defiance of the law; the newspaper quotes it and then writes an editorial and compares you to another person, who is also against busing, but takes a different approach.

There were other articles in the paper which say, "Pete renews attack as busing" it goes on.

The concern I have is that it is the responsibility of the Department of Justice to enforce the law of the land as interpreted by the courts and legislated by Congress

It concerns me as to whether or not there is evidence in your background that indicates that when it would be politically expedient to do so or perhaps a matter of conviction and conscience, that you were pre-pared to stand before a crowd and urge either defiance or, if that be the inappropriate word to use, use your own languagewhich I do not understand you to disavow as being a direct quote of yours as contained in the story and as I read it to you before. That does concern me.

Mr. FLAHERTY. Senator, I can only say that I did oppose busing. There is no way that I could go before the school board as mayor of the City of Pittsburgh and that not be a story.

The character of my opposition may be charged as defiant, but I assure you that I at no time would urge anyone to defy the whether I agreed or disagreed whether I was in public office or out of public office. My record shows that I obey the law and that I enforce the laws equally.

I can assure you that I would not urge anyone to defy the law of the land.

Mr. President, I ask unanimous consent at this point to have printed in the RECORD the prepared statement dated Tuesday, May 16, 1972, a statement by Mayor Pete Flaherty, at a public hearing, Pittsburgh Board of Education.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MAYOR PETE FLAHERTY

Three years ago before I entered the Mayor's Office I made it clear at that time that I was opposed to the use of forced busing. Six months ago I met with the Student editors from the Pittsburgh High Schools and advised them of my position. In recent weeks I have met with Mrs. McNairy and Dr. Kishkunas to express my views to them personally, and, on May 3, 1972, I wrote to each of you in order to express formally my conviction that any plan for forced busing would cause large numbers of parents to remove their children from the public schools or to leave the City of Pittsburgh. My letter also pointed out that the additional costs of a forced busing plan would come at a time when the people simply cannot afford further increases in their already excessive tax burden. For these reasons I urged you to reject any reorganization plan involving forced busing or the disruption of neighborhood schools

I realize full-well that the solution is not an easy one. But, despite the difficulties it to me that it would be unrealistic and short-sighted to take steps which would be counterproductive. Reorganization plans which would drive more people out of the City and out of the public school process are in the best interests of education. The end result of such action would be more

division rather than less.

The people of this City have made it clear that they want their neighborhood schools preserved and that they do not want to be forced to bus their children out of their neighborhoods. In many cases they have selected their homes and their neighborhoods because of the accessibility of schools. They and their children should not be penalized by having their own rights infringed upon. which parents have for their children and the natural concern of parents for the safety and well-being of their children cannot be overcome by any social reform, however appealing it may be philosophically. We govern with the consent of the governed and not in spite of them.

As we try to find acceptable solutions to the problems facing us, you should, I believe, continue to advance your primary purpose of providing education by rehabilitating and upgrading the neighborhood schools and by giving serious thought to the development of other magnet schools such as East Hills.

My task and yours should be to work for the continued viability of the City of Pittsburgh and to encourage people to remain To achieve these goals, it is essential that the City maintain a favorable educa-tional and tax climate. For these reasons, I urge you to reject any school reorganization plan which would involve forced busing or the disruption of neighborhood schools.

Mr. BIDEN. I will not read this statement in its entirety but only one paragraph:

As we try to find acceptable solutions to the problems facing us, you should, I believe, continue to advance your primary purpose of providing education by rehabilitating and upgrading the neighborhood schools and by giving serious thought to the development of other magnet schools such as East Hills.

Mr. President, in summary, I believe that Mayor Flaherty's record is an excellent one. And I respect the very strong feelings of the Senator from Ohio when he considers busing a civil rights matter—which I do not—and that he feels very, very strongly about Mr. Flaherty's not taking other action which he may have taken.

To the best of my knowledge, however, there is no evidence in the record, there is no evidence I heard in the portion of the hearings I attended, nor in the record which I reviewed, which comes up with a transcript or a quote that Mayor Flaherty in fact suggested that the law be defied.

I would further like to point out that I think that it is a very dangerous precedent for us to sit here and allow to go unresponded the comments by our colleagues that editorially characterize the activities or actions of a nominee or, for that matter, any one of us.

Quite frankly, I have a particular concern about this. I feel that if, in fact, the majority of our colleagues felt that, based on a record which only quotes an editorial and quotes unsubstantiated comments from members who testified before the committee who, in turn, relied upon editorial comment to back up their point, if we accept that as a basis to reject a man, I feel a bit in jeopardy, quite frankly. For example, in my particular case, in the city of Wilmington, Del., I think that I have a civil rights record of which I can be proud.

That is where I come from; that is the movement I come out of. I represented that spectrum as a defense lawyer. That is the civil rights area, and I am sure that before it is all over the newspaper—if the Senator will yield me 1 more minute—I am sure I would not like to rely on the characterizations of my opponents, and the editorial board of our major newspaper characteristically has been in that posture, to characterize how I articulated my objection to a very, very controversial social issue.

So, in conclusion, Mr. President, I urge all my colleagues to support Mayor Flaherty in his bid to become the No. 2 man in the Justice Department and to look at the entire record, look at his entire statement, his responses, and also his overall record as mayor of a large city.

I thank the Senator very much, and I thank him for yielding time.

Mr. THURMOND. Mr. President, I yield myself such time as I may require. The PRESIDING OFFICER (Mr. MATSUNAGA). The Senator from South Carolina is recognized.

Mr. THURMOND. I thank the Chair. Mr. President, I rise in support of the nomination of Peter F. Flaherty to the post of Deputy Attorney General.

Peter Flaherty was born June 24, 1924. He graduated from Allegheny High School in Pittsburgh, Pa., in 1941. Fol-

lowing graduation, he enlisted in the Air Force. During World War II he served as a navigator on a B-29 bomber in the South Pacific. While in service, he was awarded the Air Medal and two Bronze Battle Stars. Peter Flaherty was discharged from the service with the rank of captain in 1946. After his military service, he studied for 2 years at Carlow College in Pittsburgh before entering the Notre Dame Law School. An honor graduate of the Notre Dame Law School, he later was awarded a master's degree in public administration from the University of Pittsburgh in 1968. After graduation from the University of Notre Dame Law School in 1951, Peter Flaherty entered the private practice of law in Pittsburgh. He served later as an assistant district attorney in Allegheny County and prosecuted hundreds of cases. He has a solid background of broad experience in various facets of criminal justice. In 1966, Mr. Flaherty was elected to a 4-year term on the Pittsburgh city council. He was elected mayor of Pittsburgh in 1969. When he ran for a second term, he was nominated by both the Democratic and Republican Parties in the primary election. He is a board member of the U.S. Conference of Mayors-National League of Cities and is a former president of the Pennsylvania League of Cities. He has given most freely of his time in civic matters. Peter Flaherty has served as a member of the board of trustees, University of Pittsburgh, Duquesne University, Carnegie-Mellon University, and has assumed a leadership role in many civic organizations.

I have carefully reviewed the record of Peter F. Flaherty as a mayor, lawyer, and man. In addition to my own review, I have had the benefit of the views of his critics and supporters. In my opinion, Peter Flaherty will be an able Deputy Attorney General of the United States.

In the words of a Pittsburgh newspaper, Peter Francis Flaherty is "the most controversial, most enigmatic, most unpredictable, most independent, most hardheaded, most mysterious, most tightfisted, and most beloved mayor" in Pittsburgh's history.

A distinguished American had this to say of Peter Flaherty:

In Pittsburgh, a Democratic Councilman, Peter F. Flaherty, ran for Mayor in 1969 on a platform of introducing greater efficiency into city government, and he was elected. Almost at the start, he tried to eliminate feather-bedding in city jobs, and municipal employees went on strike. After two weeks, they came back to work, somewhat chastened. Even in that heavily-unionized city, he made it clear that it was the administration, not the unions—or, for that matter, business interests—that ran the government. During his four-year term, Flaherty trimmed the city payroll by 25 percent, mostly through attrition, and was able to replace deficit financing with balanced budgets, and even small surpluses.

Fred Gualtieri, speaking on behalf of the Boilermakers Union Local 154 of Pittsburgh, Pa., in a mailgram to me said:

I would like to support the confirmation of Peter Flaherty for Deputy Attorney General of the United States. It goes without saying that Peter Flaherty is sincere, honest, reliable, straightforward and has tremendous administrative ability. The perfect man has never been found, but Pete Flaherty comes closer to filling that bill than anyone else who has ever been appointed to that office. Washington's gain will be Pittsburgh's loss, but not all loss because the entire country will gain with Peter Flaherty in office as Deputy Attorney General of the United States.

Mayor Stanley M. Makowski of the city of Buffalo, N.Y., in a letter said:

Let me emphasize that I believe that Mayor Peter F. Flaherty is especially well-qualified to serve as Deputy Attorney General in President Carter's new administration. As someone who has worked with him at United States Conference of Mayors functions, I am pleased to declare that I have learned a great deal from this talented and skillful leader. It has also been an honor for me to have Mayor Flaherty visit Buffalo on several occasions. I want to stress that Pete Flaherty is a man of solid integrity who is deeply committed to the principles enumerated in our Constitution. I feel assured that the administration of justice will be entrusted to this fair and compassionate man.

I received mail not only from Pittsburgh, but many other areas of our country in support of Mayor Flaherty.

Mayor Flaherty seems to have broad support among all segments of the population, and in his hearing before the Committee on the Judiciary a statement was given by Samuel L. Evans, president of the American Foundation for Negro Affairs, accompanied by Andrew W. Swift. Mr. Evans said this:

Mr. Chairman, my name is Samuel L. Evans. I am President and National Chairman of the American Foundation for Negro Affairs. I am Chairman of the Family of Leaders in Pennsylvania, representing some 150 black leaders.

We are glad to come here today to speak on behalf of Mayor Flaherty.

Now, over on page 134 of the transcript, the statement continues, and I quote:

We give our unqualified endorsement to Mayor Flaherty because of his ability and strength to stand alone for his ideas, even against tremendous odds. We ask the committee to give Mayor Flaherty of Pittsburgh its unanimous vote for confirmation for U.S. Deputy Attorney General. We assure you that you will have the support of a large segment of Americans who voted for President Carter and who look to his leadership for the full implement of his program.

Mr. President, I could go on and quote many others on this nomination, but I will not take the time to do so.

I just want to say, in closing, in an era when many large cities have fallen into difficult financial straits, Pittsburgh, under the leadership of Peter Flaherty, has operated within the budget. This man has certainly demonstrated that he is a leader, a capable and determined administrator, and astute lawyer. I am convinced that Peter F. Flaherty will be a capable Deputy Attorney General. I believe he will do a good job for our country. Thus, I am happy to support his nomination.

Mr. President, I now yield to Senator HATCH such time as he requires.

The PRESIDING OFFICER. The Senator from Utah is recognized.

Mr. HATCH. I thank the Senator. I surely admire the statement made by the Senator from Massachusetts and I

admire him for his fair and, I think, considered stance in this matter.

I also appreciate the comments of Senator Mathias and, of course, Senator Eastland, Senator Thurmond, and Senator Biden.

Mr. President, I would like to speak in support of Peter Flaherty to be the Deputy Attorney General of the United States. I was born and raised in Pittsburgh and practiced law in Pittsburgh before moving to Utah. I have known Peter Flaherty for approximately 15 years.

As mayor of Pittsburgh for some 8 years he has had an excellent record for an incorruptible administration. The city he has managed has one of the lowest crime rates and one of the highest fiscal ratings in the Nation. As mayor, Pete Flaherty has brought blacks and minorities into the mainstream of government. The affirmative action plan in Pittsburgh has been cited as one of the finest in the United States.

Let me cite to you some of the testimony at his hearing where the Judiciary Committee approved him by a vote of 10 to 1, Mrs. Marianne Olsen a member of the National Board of the Americans for Democratic Action, and vice president of the Pittsburgh chapter, urged confirmation of Pete Flaherty in these words:

Pete Flaherty has pursued an active program of minority hiring and promotion in the city of Pittsburgh. Minority Groups formerly under-represented have moved into positions of influence. I cannot help but feel that this view is shared by the black community in Pittsburgh since Pete Flaherty always made strong showings in his elec tions, particularly in wards populated primarily by minorities. The Pittsburgh Chapter of Americans for Democratic Action was asked to take a stand in support of the NAACP's position. However, the Board of Di-rectors voted overwhelmingly not to support the NAACP in this matter. Some local attorneys who sit as ADA board members carefully reviewed Mayor Flaherty's statement before the Pittsburgh School Board and found that he did not advocate disobedience of the law. Instead they feel his statement proposed lawful alternatives for racial integration, such as management schools, which have worked successfully in Pittsburgh.

Other testimony recited that-

Mayor Flaherty deserves highest credit for his management of a city which Fortune Magazine recently called one of only two cities in the Northeast which is in excellent fiscal health.

Another witness stated:

He is a tough-thinking administrator who cuts to the heart of issues and is strong enough to withstand the pressures of special interest groups, no matter from what segment of the community they come. He has been willing to incur the wrath of groups—even his own police department—to do what he considered necessary and correct for the overall good.

Witnesses commended Pete Flaherty's administrative abilities saying that he has not bent under pressure when dealing with severe and taxing problems. He is a highly respected administrator.

Again on Pete Flaherty's civil rights record, I refer to testimony from Eugene Strassburger, a member of the Legal Committee of the American Civil Liber-

ties Union of Pittsburgh and of the Civil Rights Committee of the Pennsylvania Bar Association, a law professor, a man whom I know and whose family I know, an excellent person, a person who certainly would not testify in favor of Mayor Flaherty had he thought that Mayor Flaherty had a bad civil rights record. Mr. Strassburger stated that he has had a great deal of contact with Mayor Flaherty and found Pete Flaherty to be devoted to minority rights.

May I quote several statements made before the committee by Mr. Strassburger:

In all of his dealings with me, Mayor Flaherty has always exhibited an attitude of fairness toward all groups, as well as a special concern for the rights of minorities.

Let me give you several examples. First, there is the area of minority hiring. The city of Pittsburgh is governed by Pennsylvania civil service statutes that require the hiring of the individual scoring at the top of a civil service test. The Mayor's sworn duty is to uphold the law. Mayor Flaherty, through the Civil Service Commission he appointed, attempted to get as many minority personnel into the uniformed services of the city as possible. The United States District Court specifically found: We find that the Civil Service Commission in 1975 undertook an intensive recruitment campaign to encourage blacks and women to apply for a position as police officer. This was not only a highly commendable effort but it resulted in a ratio of 27.5 percent minority group applicants. This exceeds the ratio of blacks in the general population."

Finally, the charge has been made that the City Human Relations Commission has stagnated under Mayor Flaherty's leadership. That simply is not in accord with the facts

as I know them.

As an example, in 1973 I had the honor of representing the commission in the Supreme Court of the United States, and we were successful in requiring the Pittsburgh Press to end its sex-segregated want-ad columns. More than a dozen civil rights organizations and women's groups joined with us as amici curiae. This case set a precedent which was followed throughout the country. I think that the record clearly shows Mayor Flaherty's concern for minorities.

At the hearings we also heard from a black member of the Pittsburgh Civil Commission. Let me quote a new lines from his lengthy statement:

My name is Ed English. I am self-employed and also a member of a three-man Civil Service Commission for the City of Pittsburgh. Incidentally, I am a life member of the NAACP.

From my lowly position as a member of the Civil Service Commission for Pittsburgh, I think that the choice of Mayor Flaherty for Deputy Attorney General could not have been a better one. He is a man of integrity and honesty and will be a tremendous asset to that department. The Justice Department will gain, and Pittsburgh will lose a very good administrator.

Being a Civil Service Commissioner, I was pretty close to the action. I cannot single out a single discriminatory act in the city's hiring policies that came to that commission;

and, believe me, I was watching.

We have the first two black Directors of Departments; the first black Assistant Superintendent of Police; the first black Superintendent of a Bureau, the Bureau of Automative Equipment; the first black Deputy Fire Chief; the first black magistrate—when he accepted a higher-paying position outside city employment, he was replaced by a black; the first woman Director of Parks and Rec-

reation; the first woman Deputy Planning Director; the first woman Police Inspector; the first woman Assistant Executive Secretary to the Mayor; the first woman Consumer Advocate to be appointed is a woman; the first black woman Criminal Justice Planner.

A woman was Controller of the Model Cities Agency until she resigned in the fall of 1974 at her request because of pregnancy. The first woman as Chief Clerk to supervise the Municipal Court System was another; when she was promoted, she was replaced by a woman.

We had the first woman to be appointed Chief Clerk in the Departments of Supplies, Fire and Parks and Recreation. We had the first nine black women police officers and the first nine white women police officers. We had the first black woman Firefighter.

Mr. Flaherty himself testified under oath before the Judiciary Committee that he did not violate or defy the order of the Human Relations Commission. The word defy was never used by the mayor and appeared to be only a newspaper's characterization of the mayor's stated opposition to forced student busing. Mayor Flaherty advised the committee that the question before the school board was not whether they would desegregate the schools, but how. The school board meeting at which he testified in March 1972 was to discuss plans for desegregation and it is clear from the record that Mayor Flaherty did not urge disobedience, but in fact proposed lawful alternative plans.

As of this date, litigation is still pending before the Pennsylvania Supreme Court on the validity of the Human Relations Commission and its orders in school desegregation. It is also questionable whether there ever has been a final order by the Pennsylvania Human Relations Commission, because of the matter still pending on appeal before the Pennsylvania Supreme Court.

Finally, may I point out that although the incoming president of the Pittsburgh Chapter of the NAACP who just took office in January of this year opposed the Flaherty nomination, the past president of the NAACP in Pittsburgh, who served for several years while Pete Flaherty was mayor, indicated his support of Pete Flaherty as Deputy Attorney General and urged the Senate to approve Pete Flaherty.

I consider Pete Flaherty to be a talented and capable individual and suitably qualified to serve our Nation well as Deputy Attorney General, and I urge colleagues to confirm the nomination of Pete Flaherty for that position.

I might also add that Pete Flaherty is an excellent family man, he is a man of integrity, honesty, and decency, just the type of person we should have for Deputy Attorney General.

I cannot conceive of anything improper that Pete Flaherty would do as Deputy Attorney General. In fact, to the contrary. I would think he would be one of the fairest men in Government. He has been known as a worker, he is a worker, and he is a decent man.

So again I urge colleagues to confirm his nomination and I shall certainly vote for confirmation.

I thank the Chair.

Mr. METZENBAUM. Mr. President, on

behalf of Senator Eastland, I yield myself 8 minutes.

The PRESIDING OFFICER. The Senator from Ohio is recognized for 8 min-

Mr. METZENBAUM. Mr. President, let us stipulate that Mr. Flaherty is a fine family man, he is a very decent human being, he is probably an able lawyer, and he did a good job as mayor of the city of Pittsburgh.

The major issue facing the Senate today, the one that I raise and consider to be the most relevant, has to do with the question of whether or not he did or did not advocate defiance of the law.

The distinguished Senator from Delaware made much of the fact that neither one would pay any attention to, nor any Member of the Senate wish to be judged on the basis of, editorials written in local newspapers. But that is not what the evidence is. The editorial had to do only with editorial comment, and the newspaper reports, which did not come from one newspaper but came from two separate newspapers in the city of Pittsburgh, both indicated without any equivocation that the mayor advocated defiance of the law.

Mr. HATCH. Mr. President, will the Senator yield for a question?

Mr. METZENBAUM. I will yield on the Senator's time, but not on mine.

Mr. HATCH. That will be fine.

Is it not true that, at least I heard while I was in the hearings of the Committee on the Judiciary, Mayor Flaherty denied that he defied the law or even indicated that he would defy the law, and is it not also true that a member of the Americans for Democratic Action came in and said that they reviewed the record and there was no evidence whatsoever that he had defied the law or urged defiance of the law? Is that not true?

Mr. METZENBAUM. Let me say that certainly Mayor Flaherty indicated that he did not urge defiance of the law before our committee, and there was some communication from the ADA, and the Senator from Utah is more familiar with the ADA communication than I am—but I did hear Mayor Flaherty's testimony.

Mr. HATCH. That is true, but I think the point that was made by the Senator from Delaware (Mr. BIDEN) was that he would hate to be judged by any newspaper report, because sometimes they are right and sometimes they are wrong. It was not just an editorial but newspaper reporting, especially when the man himself came in and said that he did not urge defiance of the law, did not participate in that way, and independent witnesses who examined the record confirmed it. And that is where I think the distinguished Senator from Ohio, who is my friend and for whom I have deep respect and regard, is wrong.

Mr. METZENBAUM. I will address myself further to that point.

I had one advantage over the other members of the committee in having been present at the hearings. Although Senator Harch was present at the hearing much of the time, I did have that advantage over the Senator from Delaware, and I would like to say to him

that there was more evidence than hearing the newspaper reports.

Mr. HATCH. But I think all the Senators, whether they were there or not, have read the record, and the record was somewhat deficient.

Mr. METZENBAUM. That is correct. Mr. President, may I return to my own time? I assume that the time for the inquiry was not deducted from my time, but from that allotted to Senator Thurmonn

The PRESIDING OFFICER. The Senator is correct.

Mr. METZENBAUM. It is not only what someone thinks he said, because what Mr. Flaherty was saying was interpreted by all those present as indicating defiance of the law. And certainly no less a person than the president of the school board sent a telegram indicating:

I was president of the Pittsburgh Public School Board November 1972 when Mayor Peter Flaherty demanded that we defy the order of the Pennsylvania Human Relations Commission to submit a comprehensive plan for school desegregation after several years of vaciliation.

She was there when the mayor appeared before them and did just that.

Maybe the mayor did not understand just what he was doing, but whether he did or did not, it is not always a question of what you or I do or say, it is a question of what people think we are doing or saying.

Mr. HATCH. Will the Senator yield further?

Mr. METZENBAUM, At the conclusion of my remarks, if I may, so I do not lose my train of thought.

Mr. HATCH. Fine.

Mr. METZENBAUM. I will be very happy to yield at the conclusion of my remarks.

The facts are that when you put together the witnesses who testified before us, and there were many of them, and when you put together the newspaper articles and reports, and when you put together with them the telegram from the lady who was chairman of the school board, and the mayor knew of all of these prominent stories indicating he was urging defiance, and yet in no instance did he ever say he was not urging defiance-let me read you that which he actually did say. The Senator from Delaware read one paragraph of his statement, but he failed to continue reading, because if he had, he would have read the last line, which said:

For these reasons, I urge you to reject any school reorganization plan which would involve forced busing or the disruption of neighborhood schools.

That is really what the issue is all about. There was no order for forced busing. All there was was an order to develop a plan to integrate the schools, and he was urging them to reject any plan that did not conform with what he felt should be the procedure.

The mayor also appeared before us, as read by the distinguished Senator from Delaware, and said that he was always willing to meet with all groups. The only trouble is that when all the groups appeared before our committee, as the

Senator well knows, he heard them use this kind of language:

Shortly after his election as Mayor for his first term, Mr. Flaherty met with the National Organization for Women and other groups at the request of these groups for the purpose of discussing the staffing of the police and other city departments. He never again met with these groups. He has refused every subsequent request by these groups for a meeting. He has initiated no meeting. Typicall, he does not reply to letters.

The fact is that whether he came before us and said he was willing to meet with groups or not, those who came before us testified he was unwilling to do so. The matter of the Catholic pastor from the Commission on Religion and Race, the spokesman for the NAACP, and the ladies from the NOW organization all bear that out.

When he said that there were 25 who were hired from the civil service list, and that was his only choice, that was not actually his only choice as to a matter of hiring blacks and women. The fact is he could have asked for another civil service list.

I think the real question still comes back to the basic one, and I understand full well the distinguished Senator from Maryland and the distinguished Senator from Massachusetts having concern with that which is in the Record, because you get a much more meaningful reaction when you are able to hear the witnesses, test their credibility, understand that which they are saying, and accept it as being credible and believable or not.

The question is whether Mayor Flaherty advocates defiance of the law. My opinion is that Mayor Flaherty will be confirmed here this afternoon by an overwhelming majority, because of a number of considerations, but I hope that this debate will serve to alert him to the concerns and sensitivity of many people in this country to the matter of complying with the law and advocating compliance with the law, to the need to bring blacks and women and other groups in under an open door policy. and to his own failure to hire blacks and women until he was ordered to do so by a Federal court order.

I am not going to keep Mayor Flaherty from being confirmed, but I hope I will make a better Deputy Attorney General out of him than he might otherwise have been. And I must say to the distinguished Senator from Maryland, who said, "It is not as if we were confirming an Attorney General or a President or a Vice President," that the Deputy Attorney General has full responsibility over all criminal actions, according to Attorney General Griffin Bell.

I think the position is significant. I think it is important, and I hope that Pete Flaherty will understand the need to be cognizant of his total responsibilities under the law.

Mr. THURMOND. Mr. President, I yield 2 minutes to the distinguished Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 2 minutes.

Mr. HATCH. Mr. President, I have deep respect for the Senator from Ohio (Mr. Metzenbaum), as I have indicated here today, but I do not think he has answered my questions.

The Senator has admitted that Pete Flaherty is a man of decency, honor,

and integrity, and so forth.

Mr. METZENBAUM. That is correct;

I agree to all that.

Mr. HATCH. The Senator agrees that he is. He came in and said he did not urge defiance of the law, although editorials and articles from the newspapers indicated that he had. If the choice were mine, I would tend to give him the benefit of the doubt.

In response to one question the Senator asked him, whether he would obey the laws of the land as Deputy Attorney General, here was his response:

Yes, Senator, I would enforce and obey the laws of the land, regardless of whether I had a personal view that would be different.

He made that clear—again, he is a man of decency, integrity, and honor.

I think we cannot ignore some of the most important testimony that was given. The Americans for Democratic Action did not want to support Peter Flaherty, but they had to come in themselves, after examining the record, and admit—

Mr. METZENBAUM. Mr. President, will the Senator yield?

Mr. HATCH. Yes.

Mr. METZENBAUM. Did a spokesman for Americans for Democratic Action appear before the committee?

Mr. HATCH. Yes; Marianne Olsen, a member of the national board.

Mr. METZENBAUM. I thought it was a letter.

Mr. HATCH. I understood she had appeared. Well, I am quoting from her letter, then

Mr. METZENBAUM. I know nothing at all about the lady, or her background, or what her relationship has been.

Mr. HATCH. This is a part of the record. What she says is that—

Pete Flaherty has pursued an active program of minority hiring and promotion in the city of Pittsburgh. Minority Groups formerly under-represented have moved into positions of influence. I cannot help but feel that this view is shared by the black community in Pittsburgh.

She goes on to say:

Some local attorneys who sit as ADA board members carefully reviewed Mayor Flaherty's statement before the Pittsburgh School Board and found that he did not advocate disobedience of the law.

I agree with the Senator from Ohio that he is a man of integrity, decency, and honor, a good family man, the type of man who would ordinarily make a good Assistant Attorney General. I think I would give him the benefit of the doubt on the questions the Senator raises.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HATCH. One more minute.

Mr. THURMOND. I yield the Senator 1 additional minute.

Mr. HATCH. I can appreciate the Senator's desire to put him on notice that he should advocate, and I agree with the position that he should advocate, as Deputy Attorney General, equal rights for all people, whether they be black, Spanish-American people, Latins, whatever or whoever they are. I agree that that is a noble aim on the Senator's part; but I would prefer and personally advocate that he deserves the benefit of the doubt.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. THURMOND. How much time does the Senator desire?

Mr. HUMPHREY. A couple of minutes would be very helpful.

Mr. THURMOND. I yield 2 minutes to the Senator.

The PRESIDING OFFICER. The Senator from Minnesota is recognized for 2 minutes.

Mr. HUMPHREY. Mr. President, I know Pete Flaherty for many years. Mr. Flaherty is a former mayor of Pittsburgh and is a longtime friend of mine. I have known him not only as a personal friend, but also as a public official.

I disagree with his stand on school desegregation, and he knows that. I expressed my concern about it at the time

of his action.

It should be noted-and it has been made clear in the record-that, as the mayor of the city of Pittsburgh, he did a great deal to bring minority representation into all of the city administrationthe police department, the public works department, and many other departments of Government. I do not have at my desk the material relating to Mr. Flaherty, but I can vouch for him as a public official and a lawyer and his sincerity in terms of civil rights. He is a remarkable, talented, gifted man, and he will make an excellent officer in the Department of Justice. He has qualities of fairness and decency about him that I think are much needed by our Govern-

I rise at this time, in these 2 minutes, to express my support for him even though one of my closest friends in this body is in opposition. I respect the Senator from Ohio deeply, but I have known Pete Flaherty since the 1960's. I have known him well, have campaigned with him, and I have worked with him. I have known him as mayor and have worked with him as mayor of the city of Pittsburgh. When I say "worked with him," I mean I have helped him on certain projects. I believe he is one of the outstanding citizens of our country.

Mr. JAVITS. Mr. President, will the Senator yield me 2 minutes?

Mr. THURMOND. I yield 2 minutes to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for 2

Mr. JAVITS. Mr. President. I intend to vote for Peter Flaherty to be Deputy Attorney General in spite of some reservations

A question has been raised about whether Mr. Flaherty advocated defiance of an order of the Pennsylvania Human Relations Commission requiring desegregation of the Pittsburgh school system. Mr. Flaherty emphatically denied that he ever advocated defiance of an

order but just urged that busing not be included in any plan developed by the Pittsburgh school board. Newspaper stories indicated that Mr. Flaherty urged defiance of the order but witnesses called before the committee came down on both sides of the question. In short there is no clear record that Mr. Flaherty ever advocated defiance of the order of the State human relations commission.

I am concerned about Mr. Flaherty's attitude on school desegregation but that is not enough of a reason to oppose the President's nominee if he does not lack competence or integrity.

My office has been in contact with Mr. Flaherty and in addition to denying that he ever advocated defiance of any desegregation order he made several other statements relating to his conduct if confirmed as Deputy Attorney General.

confirmed as Deputy Attorney General.
First, in response to questions, Mr.
Flaherty stated that in cases where the
Justice Department intervened as amicus
curiae in school desegregation suits
which called for busing as a remedy for
unconstitutional segregation, he would
abide by the decision made by the Assistant Attorney General for Civil Rights
as to the Department's position and
would not attempt to use his office to
press his individual views on busing.

Second, in response to questions, Mr. Flaherty stated that in suits instituted by the Department of Justice to stop unconstitutional school segregation, even if the Department asked for a remedy which included busing, he would abide by the decision of the Assistant Attorney General for Civil Rights and would not use his position to press his views which are generally opposed to busing.

Finally, Mr. Flaherty stated that he would at all times vigorously enforce the law in all areas, including school desegregation, regardless of his personal views.

I expect that Mr. Flaherty will live up to these commitments and I hope that his actions will be monitored by the Senate

ADDITIONAL STATEMENTS SUBMITTED ON FLAHERTY NOMINATION

Mr. PROXMIRE. Mr. President, there is much in Mayor Flaherty's career as mayor which I warmly applaud. He has been a powerful and rare example of the political as well as economic wisdom of holding down spending. He has fought and beaten the spenders over and over again.

Mayor Flaherty also deserves cheers for his rugged independence, his insistence on being his own man. At one time or another he has alienated most of the powerful political and financial groups in Pittsburgh by telling them they cannot have their way, and insisting that the broad public interest and the broad taxpayer interest must be served.

But Mr. President, for this job—as No. 2 man in the Justice Department, Mayor Flaherty's background leaves more than a little to be desired.

His experience and background is not impressive. He did practice law for 5 years. He did serve as an assistant district attorney for a few years.

And, of course, he has been mayor of Pittsburgh since 1970. That is pretty thin background in a country that has scores of men and women who have served as State attorneys general, or who have won distinction over many years as brilliant practicing lawyers or who have achieved renown on the bench, or in the Justice Department itself.

Whenever a lawyer is nominated for any job in this Government that requires—not legal experience—but a particular kind of expertise—the approval is overwhelming in the Senate simply because they have been brilliant and successful lawyers. This has been true of each of the last three appointees as head of the Department of Housing and Urban Affairs, and the result has been a dismal failure of this Nation's housing and urban programs.

Any one of those three HUD Secretaries might have been far better qualified for the spot Mr. Fiaherty has been

nominated for than he is.

Mr. President, I am also concerned about Mayor Flaherty's insensitivity to minority rights, especially in a Department of Justice headed by Attorney General Bell whose zeal for equal justice for blacks is hard to discover without a microscope.

For blacks in this country—the Department of Justice should be an agency they can count on to go to fight and fight hard for the kind of justice the black man will only get with a struggle.

Neither Bell nor Flaherty's record indicate they will make that kind of fight.
And finally I join other Senators who are concerned with Mayor Flaherty's attitude toward obedience to the law.

Mayor Flaherty is reliably reported to have urged the school board in Pittsburgh to "defy State orders which would require forced busing to improve racial balance."

Mr. President, I happen to agree with Mayor Flaherty on busing. I have con-

sistently opposed it.

But I cannot vote to confirm for the
No. 2 job in the Justice Department a
mayor who has advocated legal disobe-

dience.

No citizen should ever voice such counsel in this democracy, where he has recourse to change an unjust law, and above all—above all—Mr. President, the No. 2 man in the Department of Justice of the United States should not be on record as having counseled against obeying the laws in this country.

I will vote against the nomination.

Mr. BAYH. Mr. President, I rise to voice my support of Peter Flaherty for the Office of Deputy Attorney General. I have listened carefully to the arguments presented by my colleagues who are prepared to oppose this nomination. Frankly, they voice some of the similar concerns which have crossed my mind during the hearings and during the period in which I have considered this nomination. I do not mean to make light of these considerations, nor to doubt the sincerity behind them. However, on reviewing the record and in determining the role Mr. Flaherty will be asked to fill by Attorney General Bell. It is my considered opinion he is well qualified to serve as Deputy Attorney General.

The matter which concerned me the most has been discussed earlier by those who oppose the nomination, thus, I will not dwell at length on this matter. The charges of lack of sensitivity on human rights and civil rights were foremost in my deliberations. I was particularly concerned about those charges which were leveled at Mayor Flaherty relative to his statements on the Pittsburgh school busing controversy.

could not support Mr. Flaherty if I felt that he had urged his constituents to ignore a court order. I could not support Mr. Flaherty if I felt he was insensitive in the area of civil rights. Needless to say, there is significant divergence of opinion in the record on both of these matters. I have studied the record carefully and believe that the assessment of the Pittsburgh Chapter of Americans for Democratic Action properly summarizes what I believe to be the facts in this matter. I ask unanimous consent to place a statement of Marian Olson which expresses the opinion of the Pittsburgh Chapter of Americans for Democratic Action in the RECORD.

The PRESIDING OFFICER. Without

objection, it is so ordered.
(See exhibit 1.)

Mr. BAYH. It is inconceivable to me that had Mayor Flaherty been guilty of these charges in this important area, that he would have received the support of an organization which so closely scrutinizes such matters throughout the country.

I think it is fair to say that Mayor Flaherty has significantly improved the participation of minority citizens in city government during his term as mayor. There are those who feel that more should have been done, but it is only fair to say that much progress has been made.

Perhaps most significantly of all, I feel that those who in all good conscience oppose the nomination have not addressed themselves to the primary responsibility which Mayor Flaherty will be asked to perform. It is clear from reviewing the testimony of the Attorney General that Flaherty's primary role will be that of an administrative officer. There can be little doubt that Mayor Flaherty has proven he is a good administrator. One might fairly suggest that Flaherty's record in certain areas is not as strong as one would like. Perhaps, he should have done a little more of "this" and a little less of "that." Perhaps he should have spoken out a little more vigorously "here" and been quiet "there." But Peter Flaherty ran a tight ship in Pittsburgh. He administered and managed the affairs of that city in a distinguished fashion. I think he has the qualifications to administer the Justice Department in that same fashion. Therefore, I intend to vote for the nominee.

EXHIBIT 1

STATEMENT OF MARIANNE OLSON
Mr. Chairman and members of the committee. Thank you for allowing me to appear before you today. I come here to urge you to confirm Pete Flaherty as Deputy Attorney General.

By way of introduction, let me state that I have long been concerned with the need for a government which is responsive to the needs of its citizens and I have had a lifelong devotion to the principles of human rights and civil rights.

I am a member of the National Board of Directors and Vice President of the Pittsburgh Chapter of Americans for Democratic Action. I am the former State Chairperson of the New Democratic Coalition of Pennsylvania and presently serve on the National Executive Board of the New Democratic Coalition. I have associated myself with these and similar groups because they give high priority to the goals and ideals which I share.

Honesty and integrity constitute the foundation from which all good government must start. Unfortunately in our community in recent years there have been a series of indictments and convictions of state and local officials of both political parties for various unlawful acts in the course of their official responsibilities. These indictments have confirmed many of the worst suspicions of members of the public of the way government was being operated. In the midst of this, the administration of the City of Pittsburgh stood as the one branch of government which was absolutely above reproach. Mayor Flaherty's administration would not bend the law or tolerate any bending of the law or favoritism in the enforcement laws of our city. Even those who politically opposed Mayor Flaherty can not deny that his reputation for honesty was totally unassailable. At a time in our country when locally and nationally elected officials, rather than enforcing the laws, appeared to be breaking them, Pete Flaherty's example was badly needed to retain confidence in government. This reputation for incorruptability bodes well for a man entering one of the highest law enforcement posts in the nation.

Since Mayor Flaherty's nomination there have been charges that he has a poor record on human rights issues. I have never observed the abrogation of the rights of any individuals or groups by Mayor Flaherty or his administration. I think his record denies this charge. Many elected officials mouth platitudes about their concern for minorities, but we find that rather, they speak much and do little. Pete Flaherty has quietly pursued an active program of minority hiring and promotion in the City of Pittsburgh. Groups formerly underrepresented have moved to positions of influence and power in city government.

I cannot help but feel that this view is shared by many members of the black community in Pittsburgh since the Mayor made a strong showing in wards populated primarily by minorities in his re-election against a strongly-funded candidate of the Democratic organization in 1973. The Pittsburgh Chapter of Americans for Democratic Action was asked to take a stand in support of the NAACP's position; and the Board of Directors voted overwhelmingly not to support the NAACP in this matter.

Some local attorneys who sit as ADA Board Members carefully reviewed Mayor Flaherty's statement before the Pittsburgh Board of Education and found it did not advocate disobedience of the law in their opinion. Instead, they feel his statement proposed lawful alternatives for racial integration such as magnet schools which have worked successfully in Pittsburgh. The decision of the Human Relations Commission to which Mayor Flaherty addressed himself was not a final decision and it is still being appealed in the Pennsylvania courts.

At a time when we decry the plight of large cities everywhere, and we call them inoperable and unmanageable, the City of Pitsburgh stands out as a good place to live; a city with a low crime rate, services which truly serve the people, and taxes which do not drive the average person to despair. Mayor Flaherty deserves highest credit for his management of a city which Fortune Magazine recently called one of only two

cities in the Northeast which is in excellent fiscal health.

He is a tough-thinking administrator who cuts to the heart of issues and is strong enough to withstand the pressures of special interest groups no matter from what segment of the community they come. He has been willing to incur the wrath of groups, even his own police department, to do what he considered necessary and correct for the overall good. He has not bent under pressure when dealing with severe and taxing problems. He is a highly respected administrator.

Because of his fairness to individuals and groups, his great integrity and his proven abilities as an administrator, I am sure he will serve our country well in the position to which President Carter has nominated him. I urge you to confirm Pete Flaherty as Deputy Attorney General of the United States.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a statement by Mr. Bentsen in support of Mayor Flaherty for the post of Deputy Attorney General be printed in the Record prior to the vote on the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR LLOYD BENTSEN

I consider it a privilege to give my full and unequivocal support to the nomination of Mayor Pete Flaherty of Pittsburgh for the post of Deputy Attorney General.

I have known Mayor Flaherty for some time. My observations, and those of others who know him, attest to his unique blend of abilities and high qualifications for the post to which he has been appointed.

The position of Deputy Attorney General is special in that it requires exceptional honesty, a proven background in the law and the administrative ability to direct a large department.

Mayor Flaherty possesses these attributes. He has served as a lawyer and prosecutor, acquiring legal experience that is essential for his new post. As Mayor, he has been in court himself as plaintiff, often in consumer-oriented cases, and his legal background enabled him to actively participate in the direction of litigation. Equally important, there is no substitute for the administrative talents he has demonstrated during his highly regarded tenure as the chief executive of a major urban center.

The nominee before us has served his constituents well, winning support from all elements of the electorate, and governing with the competence and fairness that has led such a broad cross-section of respected witnesses to testify in his favor. He is responsible for a well-run city administration, one that was characterized by integrity of the highest order.

In the time I have known Pete Flaherty, I have found him consistent in his support of fair enforcement of the laws and obedience to them. He is strong in his belief that government should represent and interact with all citizens. He is willing to make the tough decisions, and he calls them as he sees them. No group has been excluded, none preferred. He is unyielding in his pursuit of the just and right decision, and he is sound in his judgments.

I join with the many citizens who believe that Mayor Flaherty will make an excellent Deputy Attorney General. I believe that the Senate will be justified in its confirmation of him. He will serve in the Justice Department with distinction, and I commend and support his nomination.

(This concludes additional statements submitted on the Flaherty nomination.)

Mr. THURMOND. Mr. President, if there is no objection, I thought we might

yield back the time on both sides. I yield back the time on my side, and I yield back the time on Senator Eastland's side, if there is no objection.

The PRESIDING OFFICER. All time

has been yielded back.

The question is: Will the Senate advise and consent to the nomination of Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General?

On this question the yeas and nays have been ordered, and the clerk will

call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the
Senator from Alaska (Mr. GRAVEL), the
Senator from Mississippi (Mr. STENNIS),
and the Senator from Colorado (Mr.
HASKELL) are necessarily absent.

I also announce that the Senators from South Dakota (Mr. McGovern and Mr. Abourezk) are absent on official business.

I also announce that the Senator from Texas (Mr. Bentsen) is absent due to illness in the family.

I further announce that, if present and voting, the Senator from Texas (Mr. BENTSEN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Arizona (Mr. Goldwater), the Senator from Kansas (Mr. Pearson), and the Senator from Wyoming (Mr. Wallop) are necessarily absent.

The result was announced—yeas 87, nays 4, as follows:

[Rollcall Vote No. 99 Leg.] YEAS—87

Allen	Garn	Metcalf
Anderson	Glenn	Morgan

Riegle

So the nomination was confirmed.

Mr. THURMOND. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Presi-

dent be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER (Mr. DE CONCINI). Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, Mr. Bentsen is away from the Senate to-day due to illness in the family. If he had been present on the vote on the confirmation of Mr. Flaherty, he would have voted to confirm Mr. Flaherty.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without

objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, with no resolutions coming over under the rule.

The PRESIDING OFFICER. Without

objection, it is so ordered.

PRIVILEGE OF THE FLOOR— H.R. 1828

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that Roger Lamaster of my staff and Jim King of the staff of Senator Ford be granted privilege of the floor during consideration of H.R. 1828.

The PRESIDING OFFICER. Without

objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, there will be no more rollcall votes today.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE RECEIVED DURING RECESS

ENROLLED BILLS SIGNED

A message from the House of Representatives received on April 5, 1977, during the recess under authority of the order of April 4, 1977, stated that the Speaker had signed the following enrolled bills:

H.R. 4800. An act to extend the Emergency Unemployment Compensation Act of 1974, and for other purposes.

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought.

S. 1025. An act to amend the Securities Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal year 1977.

The enrolled bills were subsequently signed by the President pro tempore.

MESSAGE FROM THE HOUSE

At 4:09 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House has agreed to the concurrent resolution (H. Con. Res. 186) providing for an adjournment of the House from April 6 to April 18, 1977, and a recess of the Senate from April 7 to April 18, 1977, in which it requests the concurrence of the Senate.

The message also announced that the House has passed the following bills in which it requests the concurrence of the

Senate:

H.R. 1680. An act to relieve taxpayers from liability with respect to certain underpayments of estimated tax, underwithholding, and interest on underpayments of tax attributable to the application to 1976 of the sick pay and other provisions of the Tax Reform Act of 1976;

H.R. 3695. An act to amend title 38 of the United States Code in order to revise and improve the program of making grants to the States for the construction, remodeling, or renovation of State home facilities for furnishing hospital, domiciliary, and nursing home care for eligible veterans, and for other purposes;

H.R. 5027. An act to amend title 38 of the United States Code to clarify the requirement that medical services be provided by the Veterans' Administration in certain

cases;

H.R. 5029. An act to amend title 38 of the United States Code in order to authorize contracts with the Republic of the Philippines for the provision of hospital care and medical services for Commonwealth Army veterans and new Philippine Scouts for service-connected disabilities; to authorize the continued maintenance of a Veterans' Administration office in the Republic of the Philippines; and for other purposes; and

H.R. 5502. An act to authorize supplemental appropriations during fiscal year 1977 for military construction and for operation and maintenance of family housing, and for other

purposes.

COMMUNICATIONS FROM EXECU-TIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1065. A letter from the Chairman of the District of Columbia Law Revision Commission transmitting, pursuant to law, the Second Annual Report of the District of Columbia Law Review Commission (with an accompanying report); to the Committee on Governmental Affairs.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-123. Senate Concurrent Resolution No. 4043 adopted by the Legislative Assembly of the State of North Dakota requesting the Congress of the United States to adopt an amendment to the U.S. Constitution for ratification by the States which will guarantee the right of the unborn human to life throughout its intrauterine development subordinate only to saving the life of the mother, and will guarantee that no human life shall be denied protection of law or deprived of life on account of age, sickness, or condition of dependency; to the Committee on the Judiciary:

"SENATE CONCURRENT RESOLUTION No. 4043

"Whereas, 77 percent of those voting in the November 7, 1972, general election in North Dakota rejected abortion as an alternative to solving the problems of maternal and

prenatal and natal health; and

"Whereas, the United States Supreme Court on January 22, 1973, nullified the over-whelming decision of the North Dakota electorate to protect unborn human life by interpreting the United States Constitution in a way which allows the destruction of unborn human life to preserve the well-being of the pregnant woman; and

"Whereas, the sweeping judgment of the United States Supreme Court in the Texas and Georgia abortion cases is a flagrant rejection of the unborn child's right to life through the full nine-month gestation pe-

riod; and

"Whereas, human life in the womb is entitled to the protection of the laws which may not be abridged by act of any court or legislature or by any judicial interpretation of the Constitution of the United States;

Now, therefore, be it resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein:

"That the Congress of the United States is hereby urged and requested to adopt a constitutional amendment that will guarantee the explicit protection of all unborn human life throughout its intrauterine development subordinate only to saving the life of the mother, and will guarantee that no human life shall be denied protection of law or deprived of life on account of age, sickness, or condition of dependency, and that Congress and the several states shall have power to enforce this article by appropriate legislation; and

"Be it further resolved, that copies of this resolution be forwarded by the Secretary of State to the North Dakota Congressional Delegation, the Secretary of the United States Senate, the Clerk of the United States House of Representatives, and the President of the United States."

POM-124. Senate No. 1271 adopted by the Legislature of the State of New Jersey to provide for the application by the State of New Jersey to the Congress of the United States for the calling of a convention for proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary:

"SENATE, No. 1271

"Be it enacted by the Senate and General Assembly of the State of New Jersey:

"1. The State of New Jersey hereby applies to the Congress of the United States of America under Article V of the United States Constitution to call a convention for proposing an amendment to the United States Constitution to do the following:

"a. With respect to the right to life guaranteed in the United States Constitution, provide that every human being subject to the jurisdiction of the United States or any state shall be deemed from the moment of fertilization to be a person and entitled to the right to life.

"b. Provide that Congress and the several states shall have concurrent powers to enforce such an amendment by appropriate legislation.

'The purpose of the Constitutional Con-

vention shall be to only consider the above and no other business.

"2. Copies of this act shall be sent to the legislatures of all the states, to the Clerk of the United States House of Representatives and to the Secretary of the Senate in Washington, D.C., requesting the several states to also pass an identical application to the United States Congress so as to meet the Constitutional requirements for application for such a convention by two-thirds of the states.

"3. This act shall take effect immediately. POM-125. Resolution No. 244 adopted by the county legislature of Suffolk County, N.Y., opposing the implementation of a proposal by the Corps of Engineers to designate an open water disposal site for dredged material in Western Long Island Sound.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. STENNIS, from the Committee on Armed Services:

A special report entitled "Report on the Activities of the Committee on Armed Services, U.S. Senate, 94th Congress, 1st and 2d Sessions" (Rept. No. 95-85).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. MAGNUSON, from the Committee on Commerce, Science, and Transportation:

Michael Pertschuk, of the District of Columbia, to be a Federal Trade Commissioner for the unexpired term of 7 years from September 26, 1970; and

Michael Pertschuk, of the District of Columbia, to be a Federal Trade Commissioner for the term of 7 years from September 26, 1977.

Joan Buckler Claybrook, of Maryland, to be Administrator of the National Highway Traffic Safety Administration.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. MAGNUSON. Mr. President, as in executive session, I also report favorably sundry nominations in the Coast Guard which have previously appeared in the Congressional Record and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators:

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of March 29, 1977, at the end of the Senate proceedings.)

By Mr. SPARKMAN, from the Committee

on Foreign Relations:

Donald F. McHenry, of Illinois, to be Deputy Representative of the United States of America in the Security Council of the United Nations, with the rank of Ambassador.

Richard N. Cooper, of Connecticut, to be Under Secretary of State for Economic Affairs.

Charles William Maynes, Jr., of New York, to be an Assistant Secretary of State.

Barbara M. Watson, of New York, to be Administrator, Bureau of Security and Consular Affairs, Department of State. James F. Leonard, Jr., of New York, to be the Deputy Representative of the United States of America to the United Nations, with the rank and status of Ambassador Extraordinary and Plenipotentiary.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 1680. An act to relieve taxpayers from liability with respect to certain underpayments of estimated tax, underwithholding, and interest on underpayments of tax attributable to the application to 1976 of the sick pay and other provisions of the Tax Reform Act of 1976; to the Committee on Pinance.

H.R. 3695. An act to amend title 38 of the United States Code in order to revise and improve the program of making grants to the States for the construction, remodeling, or renovation of State home facilities for furnishing hospital, domiciliary, and nursing home care for eligible veterans, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 5027. An act to amend title 38 of the United States Code to clarify the requirement that medical services be provided by the Veterans' Administration in certain cases; to the Committee on Veterans' Affelice.

H.R. 5029. An act to amend title 38 of the United States Code in order to authorize contracts with the Republic of the Philippines for the provision of hospital care and medical services for Commonwealth Army veterans and new Philippine Scouts for service-connected disabilities; to authorize the continued maintenance of a Veterans' Administration office in the Republic of the Philippines; and for other purposes; to the Committee on Veterans' Affairs.

H.R. 5502. An act to authorize supplemental appropriations during fiscal year 1977 for military construction and for operation and maintenance of family housing, and for other purposes; to the Committee on Armed Services.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that today, April 5, 1977, he presented to the President of the United States the following enrolled bills:

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought.

S. 1025. An act to amend the Securities Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal year 1977.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and refered as indicated.

By Mr. MATHIAS: S. 1226. A bill for the relief of Patience Sabiti Mwine; to the Committee on the Judiciary. By Mr. McCLELLAN (for himself, Mr. Bumpers, Mr. Muskie, Mr. Spark-man, and Mr. Allen):

S. 1227. A bill to amend the Internal Revenue Code of 1954 to exempt certain corporations from the provisions requiring the accrual method of accounting for corporations engaged in farming; to the Committee on Finance.

By Mr. BROOKE (for himself, Mr. Javits, Mr. Bayh, Mr. Case, Mr. Gravel, Mr. Humphrey, Mr. Schweiker, and Mr. Williams):
S. 1228. A bill to amend the Small Busi-

S. 1228. A bill to amend the Small Business Act to expand assistance under such act to small business concerns owned by socially and economically disadvantaged persons to provide statutory standards for contracting and subcontracting by the United States with respect to such concerns, and to create a Committee on Federal Assistance to Minority Enterprise, and for other purposes; to the Select Committee on Small Business.

By Mr. NELSON (for himself and Mr. HATHAWAY):

S. 1229. A bill to amend the Internal Revenue Code of 1954; to the Committee on

By Mr. BAKER (for himself and Mr. Sasser):

S. 1230. A bill to authorize financial assistance to States for major highway repairs; to the Committee on Environment and Public Works.

By Mr. BAYH (for himself and Mr.

MATHIAS):
S. 1231. A bill to raise the limitation on appropriations for the U.S. Commission on Civil Rights; to the Committee on the Judiciary.

By Mr. BAYH: S. 1232. A bill to amend the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 801 et. seq.) to extend for 2 fiscal years the appropriation authorizations for the administration and enforcement of that act; to the Committee on the

Judiciary.

By Mr. HART (for himself and Mr. ABOUREZK):

S. 1233. A bill to provide emergency price and income protection for farmers for the 1977 crops, to assure consumers an abundance of food and fiber at reasonable prices, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. NELSON:

S. 1234. A bill to amend the Wild and Scenic Rivers Act; to the Committee on Energy and Natural Resources.

By Mr. SPARKMAN (by request): S. 1235. A bill to further amend the Peace Corps Act; to the Committee on Foreign

By Mr. KENNEDY (for himself, Mr. THURMOND, Mr. CLARK, and Mr. LEAHY):

S. 1236. A bill to amend the Internal Revenue Code of 1954 to disallow the tax deduction for first-class air travel in excess of the coach class fare for such travel and for other purposes; to the Committee on Finance.

By Mr. CULVER (for himself and Mr. WALLOP):

S. 1237. A bill to extend the authorizations for appropriations for the San Francisco Bay and Great Dismal Swamp National Wildlife Refuges, and the Tinicum National Environmental Center; to the Committee on Environment and Public Works.

By Mr. McINTYRE (for himself and Mr. Bayh):

S. 1238. A bill to provide for legal assistance to members of the Armed Forces and their dependents, and for other purposes; to the Committee on Armed Services.

By Mr. RIEGLE: S. 1239. A bill to amend the Tariff Schedules of the United States to increase from \$100 to \$250 the value of articles which may be imported duty-free by or for the account of any person arriving in the United States who is a returning resident of the United States; to the Committee on Finance.

By Mr. DOLE (for himself and Mr. BELLMON):

S. 1240. A bill to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978; to the Committee on Agriculture, Nutrition, and Foresty.

By Mr. HATHAWAY (for himself and Mr. Muskie):

S. 1241. A bill to increase the subsistence payments for students at State maritime academies or colleges; to the Committee on Commerce, Science, and Transportation.

By Mr. ROBERT C. BYRD:

S.J. Res. 44. A joint resolution to authorize the printing and binding of an edition of Senate procedure and providing the same shall be subject to copyright by the author; considered and passed.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. McCLELLAN (for himself, Mr. Bumpers, Mr. Muskie, Mr. Sparkman, and Mr. Allen):

S. 1227. A bill to amend the Internal Revenue Code of 1954 to exempt certain corporations from the provisions requiring the accrual method of accounting for corporations engaged in farming; to the Committee on Finance.

Mr. McCLELLAN. Mr. President, I am introducing a bill which is designed to correct an inequity created under section 207 of the Tax Reform Act of 1976 (Public Law 94-455) with respect to corporations engaged in farming. This measure is identical to one introduced in the House of Representatives on March 9 by Congressman Hammerschmidt with four cosponsors. Senators Bumpers, Muskie, Sparkman, and Allen have joined as cosponsors of the Senate bill.

Section 207 provided a new section 447 of the Internal Revenue Code which, in general, requires agricultural corporations to use the accrual method of accounting. Exceptions were provided from this treatment for some small corporations, corporations in which 50 percent of the stock was owned by members of the same family, or corporations for which gross receipts were \$1 million or less. These exceptions were intended to allow local family-controlled agricultural businesses to continue using the cash method of accounting.

Section 447, however, contains some serious inequities. For example, I am advised that one of the largest grain companies in the Nation, if it so chooses, could elect to use the cash method of accounting. On the other hand, some locally owned family corporations are now required for the first time to follow the new accrual rule which adversely affects their competitive position.

Mr. President, I recognize that the provisions adopted in the Tax Reform Act were intended to prevent farming operations being used as tax shelters. However, I am concerned that the remedy may have, in some instances, created an even greater harm than the abuse it was designed to curb through its adverse impact on competition, especially in the broiler industry.

Therefore, I am introducing legislation to remedy this problem. The measure would permit corporations in which 65 percent of the outstanding stock was owned by two families to continue to use the cash method of accounting. In addition, the bill would also permit a corporation in which 50 percent of the outstanding shares are owned by three families and the balance of those shares, and substantially all of the remaining shares, are owned by employees of such corporation to continue to use the cash accounting method.

I hope that this bill will serve as an appropriate study vehicle and that the Senate Finance Committee can hold hearings on it as soon as possible so that appropriate relief can be provided for this inequity.

By Mr. BROOKE (for himself, Mr. Javits, Mr. Bayh, Mr. Case, Mr. Gravel, Mr. Humphrey, Mr. Schweiker, and Mr. Williams):

S. 1228. A bill to amend the Small Business Act to expand assistance under such act to small business concerns owned by socially and economically disadvantaged persons to provide statutory standards for contracting and subcontracting by the United States with respect to such concerns, and to create a Committee on Federal Assistance to Minority Enterprise, and for other purposes; to the Select Committee on Small Business.

Mr. BROOKE. Mr. President, it gives me great pleasure to reintroduce with my colleagues. Senator Javits and Senators Bayh, Case, Gravel, Humphrey, Schweiker, and Williams the Equal Opportunity Enterprise Act of 1977. In the year since this bill has been introduced, more and more attention has been focused on the needs, the potential, and the difficulties which minority businesses in this country face. Today blacks and other minorities own less than 3 percent of the aggregate business community. Of these businesses 94 percent are single proprietorships, 84 percent have annual receipts of just \$13,000 and fewer than 20 percent have any paid employees. Two-thirds are concentrated in servicerelated industries.

The difficulties which minority businesses face cannot be overstated. And yet, we must not forget that there are also viable and strong minority businesses which have the capability to produce, to bid competitively, and to participate fairly and equitably in the Federal contracting process.

These two sectors of the minority community present compelling issues for our attention. They also call for very different responses.

On the one hand, we have to strengthen technical assistance, management training and support services which are given by the Federal Government. In this manner, minority businesses which are small, thinly capitalized and underproductive can be moved more firmly toward a dynamic and competitive posture. On the other hand, viable minority businesses must have an opportunity to participate more fully in Federal contract-

ing. Indeed, for many of these minority businesses the Federal contracting dollar represents the most ready and accessible market.

Year after year minority businesses, no matter how competent, qualified, or competitive are restricted to less than 1 percent of the Federal contract dollar. The causes of this disparity are varied. But this situation cannot continue to exist. Affirmative, consistent and remedial action on behalf of the minority business sector by the Congress is long overdue.

And I believe that our bill will focus Federal efforts in this regard beginning the process of developing an even stronger minority business sector.

This bill makes an important organizational change within the Small Business Administration. Without doubt, the SBA is the most important Federal agency to small business persons. Also without doubt, its fragmented efforts on behalf of minority small business reflect the inherent difficulties in the total Federal effort to increase business opportunities for minorities. We have many intra-agency initiatives spread out over the entire SBA, just as we have many competing offices spread throughout the Federal system. This bill would insure continuing SBA commitment to improve minority business opportunity by giving legislative stature to the Associate Administrator for Minority Small Business Procurement Assistance of the Small Business Administration. Heretofore, this office has existed at the behest of Executive Order No. 11625. Its efforts to enhance opportunities for minorities have been blunted, in part, because of this lack of legislative authority. Here and now, the Federal Government must acits ongoing responsibility for increasing minority business expertise, capital, and opportunity. Its efforts in this regard, however admirable in the past, will be bolstered by the increased consolidation and coordination of these most important programs to minority business.

This comprehensive and realistic bill if enacted will enable many who have suffered political, social, and economic hindrance in their efforts to participate more fully in our Nation's business sector to move closer to the goal of economic parity. I believe that the right to work and to profit is a right which should be shared by all Americans. Yet today, clearly some Americans still do not share in proportion to their numbers, hopes, and aspirations. Economics continue to play a central role in our society, not only in our financial institutions and financial dealings, but also in social and political decisionmaking. Minorities will continue to be disadvantaged unless and until they achieve parity. For these reasons, the efforts of minorities and, indeed, all socially and economically disadvantaged Americans to develop expertise, capital, and market will redound not only to their benefit but to the benefit of all Americans. And these efforts should be actively supported by all of us. Mr. GRAVEL. Mr. President,

Mr. GRAVEL. Mr. President, I am happy to be cosponsoring today the Equal Opportunity Enterprise Act of 1977, a bill which will provide opportunities to become self-sufficient to qualified and willing minority contractors who have been excluded from the Federal contracting market.

In Alaska, this story is one which has been the dominant strain far too long. Alaskan contractors who are both capable and willing are still not receiving contracts with the Federal Government. Instead, contracts are let to businesses outside my State, neither contributing to the full employment of Alaskans, since many of these contractors bring their work force with them, nor providing the opportunities for small Alaskan businessmen to fully participate in providing badly needed services, thereby establishing their own legitimacy as self-sufficient entities.

Because of the difficulties Alaskan businessmen have experienced in contracting with the Federal Government, I sponsored a conference on Federal contracting on February 16 and 17 in Anchorage, Alaska.

The purpose of the conference was to bring representatives of minority-owned businesses, including the Alaska Native Corporations, established pursuant to the passage of the Alaska Native Claims Settlement Act, together with Federal contracting officials in an attempt to help the businessmen and corporations better understand Federal contracting procedures and also to identify and find positive solutions to existing contracting problems.

The 2 days of meetings focused on problems relating to the securing of surety bonding, which is presently required of all contractors on jobs in excess of \$2,000; problems in the implementation of the SBA 8(a) minority contractors set-aside program; differences in contracting procedures among the various Federal agencies; and special provisions for Native businesses.

Several recommendations resulted from this conference:

 Revise federal procurement procedures to include the following:

(a) Make it mandatory that all federal agencies establish minority business enterprise programs to lend assistance to minority businesses, disseminate contract information, and provide technical assistance to minority businesses.

(b) Make it mandatory that all direct federal contracting and federally assisted contracting include minority set-aside provisions to possibly include percentage set-asides

(c) Make all federal procurement regulations standard and uniform for all agencies, including Department of Defense agencies.

2. Specifically review and revise the Miller Act along the following lines:

(a) Amend the Miller Act to eliminate requirements of federal agencies to require bonding for procurements placed by the Small Business Administration under Section 8(a) of the Small Business Act.

(b) Further amend the Miller Act to raise the level from \$2,000 to \$100,000 in bonding requirements for direct federal contracts awarded through the competitive process.

3. Review Indian Self Determination Act and the Buy Indian Act to clarify which agencies are subject to these two pieces of legislation. One interpretation is that these two pieces of legislation currently apply only to the Department of Interior. The recommendation of the conference participants is

that these two acts should apply to all federal agencies.

4. Congress should review the Small Business Administration's budget and staffing to provide adequate staffing for all regional offices to carry out their responsibilities in supporting the Small Business enterprise program.

5. Congress should include in each major contracting agency's budget a specific line item amount allowing the agency to develop a minority business enterprise program to include staffing to carry out the minority business enterprise contracting program and to provide technical assistance to the minority contractors.

 Develop federal legislation that would provide incentives to state and local governments as well as private contractors who are willing to initiate their own minority busi-

ness enterprise program.

7. Through executive order, require all federal agencies to develop a more aggressive program to inform and include minorities in the bidding process. This would include such things as using minority media, contacting minority business enterprise associations or minority contracting associations for potential bidders and removing the requirements that minority bidders be dropped from the bidding list if they fail to respond after being notified of two bids.

8. Develop a more aggressive mechanism for minority business enterprise input into the development of contracting-related leg-

islation and federal regulations.

While some of these recommendations are clearly out of the legislative arena, I feel that they are important considerations to be dealt with in determining which direction minority business assistance will take.

The Equal Opportunity Enterprise Act specifically addresses itself to several of these recommendations. It would delete the bonding requirements under the 8(a) set-aside program; set standards for Federal contracting with small and minority businesses; provide that minority firms be equitably served by the SBA; and specifically define Alaska Natives as a minority group eligible to receive set-aside contracts under the Small Business Act.

I commend my colleagues, Senator Javits and Senator Brooke, for striving to rectify the problems in the vague and inconsistent Federal policy regarding minority business enterprise. I am hopeful that this legislation will receive the support of my Senate colleagues and strongly urge Congress to act favorably and expeditiously on this legislation.

By Mr. NELSON (for himself and Mr. HATHAWAY):

S. 1229. A bill to amend the Internal Revenue Code of 1964; to the Committee on Finance.

Mr. NELSON. Mr. President, a bill that I am introducing today would correct an oversight in the Tax Reform Act of 1976. The present law has the effect of hindering the legislative intent for the National Institute for Occupational Safety and Health—NIOSH—to identify workers who may have been occupationally exposed to harmful substances.

The Senate approved an amendment to correct this oversight at the close of the last session of Congress. However, there was not time for the matter to be considered by the House of Representa-

tives.

WHAT THE BILL DOES

The bill would give NIOSH the authority to obtain from the Internal Revenue Service—IRS—addresses, based on the last date of filing income tax forms, of persons previously employed in occupations exposing them to known or suspected carcinogens. NIOSH would obtain no other data except addresses. There is no cost to the bill.

Prior to the enactment of the Tax Reform Act, NIOSH was able to obtain such information from the IRS, facilitating a notification program that began

about 3 years ago.

To date, NIOSH has obtained the addresses of 31,000 exposed workers, and has referred 4,081 for appropriate medical treatment.

The major purposes of the program are: First, to notify workers previously employed in plants where they may have been exposed to known carcinogens or other hazardous agents; second, to allow NIOSH to gather data to determine the morbidity and mortality of workers exposed to substances suspected of being hazardous; and third, to facilitate the followup of the Nation's 125,000 underground coal miners for whom periodic chest X-rays are mandated.

The ability to trace coal miners, who today are younger and more mobile than in previous years, is costly and involves a private concern, which constitutes a greater invasion of privacy. Very accurate addresses are obtainable from the Social Security Administration—SSA—but the delay in response by SSA is 4 to 9 months compared with about 6

weeks for IRS.

The Tax Reform Act contains specific provisions preventing access—with exceptions—to IRS record information, a laudable protection of private records. However, in drafting limited exceptions to the act, Congress inadvertently failed to recognize the needs of the NIOSH identification program, an important program designed to protect human health.

There is no dispute over the need for the correcting bill. The chairman of the House Ways and Means Committee, Mr. Ullman, in a colloquy with Mr. Steiger of Wisconsin, on September 16, 1976, the day the House of Representatives approved the tax reform conference report, agreed that the matter was an oversight that should be corrected. See page 30815. Congressional Record, September 16, 1976.

It is my hope that the bill again will be quickly approved so that NIOSH may continue its program. A companion bill has been introduced by Mr. Steiger in the House of Representatives (H.R.

It should be recognized that this program is only a small step in protecting occupationally exposed workers, since it does not insure that all workers who have been exposed to hazardous agents are notified. We have reason to believe that hundreds of thousands of workers similarly exposed to known carcinogens are not being notified.

Nor does it deal with the more difficult problem of controlling and preventing exposure of workers to hazardous substances. The Occupational Safety and Health Act was enacted for this purpose. At its inception in 1971, the Occupational Safety and Health Administration—OSHA—adopted a table of threshold exposure limits for 500 families of chemicals. Some of the thresholds may, in fact, be unsafe. Since 1971, OSHA has established standards for only 17 hazardous substances. Of these, one standard—for MOCA—has been overturned on procedural issues; another, for asbestos, is considered by some scientists to be unsafe.

Delays in promulgating safety standards are attributed to: First, the lack of an accepted definition for carcinogen—OSHA accepts only human evidence from epidemiologic studies, not animal or laboratory data, in establishing carcinogenicity; and second, a requirement that stringent economic impact statements be filed with the Labor Department.

It is our understanding that the OSHA Advisory Council is considering changing the basis on which it determines that a substance is carcinogenic, to allow the use of animal and laboratory data. In addition, according to Labor Secretary Marshall at his confirmation hearings, consideration is being given to requiring less stringent economic impact statements, and to other matters that will speed the establishment of safety standards.

The Environmental Protection Agency also is involved in undertaking "an integrated assessment of population exposure to environmental carcinogens," according to former EPA Administrator, Russell E. Train, as quoted in Science magazine, February 4, 1977.

The entire Federal effort, with respect to cancer research and safety protection, is now under scrutiny by the Congress. Concerns have been raised over the need to improve not only the biomedical research effort, but also the coordination of all Federal and private sector activities relating to cancer research and protection.

I ask unanimous consent that the text of the bill, a description of the problem by NIOSH, the statement by Mr. Train, a summary list of projects currently active under an agreement between NIOSH and the National Cancer Institute—NCI—an excerpt from a summary of proposed OSHA regulations on worker exposure to carcinogens, and an excerpt from the transcript of Senate confirmation hearings on Dr. F. Ray Marshall, Secretary of Labor, be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6103(m) is amended by striking the period at the end of paragraph (2) and inserting in lieu thereof a comma and the word "and"

and adding the following new paragraph:

"(3) upon written request, to disclose the mailing address of taxpayers to officers and employees of the National Institute for Occupational Safety and Health solely for the purposes of conducting health and safety studies of worker populations and the re-

ferral of sick and injured workers for medical care and treatment."

IMPACT OF TAX BILL ON NIOSH AGREEMENT WITH IRS

Problem: The Tax Reform Bill, H.R. 10612, as passed by Congress on September 16 would restrict the National Institute for Occupational Safety and Health (NIOSH) from access to IRS data for the purpose of occupational health exposure surveys.

While the Social Security Administration, Railroad Retirement Board, Department of Labor and several others are allowed limited access to certain data, NIOSH is not. With the present language of the tax bill, IRS feels that it would be illegal for IRS to continue to furnish NIOSH access to taxpayer address data, as it now does for morbidity surveys.

Explanation of Present Operation and the Need for Access to IRS Data: The National Institute for Occupational Safety and Health has had an agreement with the IRS that allowed NIOSH access to taxpayer address data (Taxpayer Address Program) maintained on all persons filing tax returns in the United States. In conducting retrospective mortality studies of worker populations, NIOSH, on a routine basis, submitted to the IRS the social security numbers and names of all members of a given study population to obtain last date of filing and the address from the most recently filed tax return. This enabled NIOSH, by the use of the last known address to subsequently locate the individual and confirm his vital status with a post office follow-up card. It is imperative that the vital status of each person in a NIOSH study population be identified as of a given cut-off date; otherwise, it is impossible to state that the individual is or is not deceased. If he is deceased and NIOSH does not know it, then the final results of the NIOSH study will be biased by the absence of the knowledge of that particular cause of death. The IRS address data enables NIOSH to discontinue other less fruitful, more expensive and timeconsuming methods for locating a given individual. Currently, it costs NIOSH less than \$.50 to locate a given study member through the IRS. Without the benefit of the taxpayer address information, this cost will skyrocket to a minimum of \$20 per person simply because we will have to rely on alternative and less productive mechanisms of follow-up. The size of these study populations may range anywhere from 200 to 8,000 members; most average around 2,000 workers.

Why Amendment to Tax Bill is needed: NIOSH is currently conducting approximately 60 morbidity, mortality, and surveillance studies that involve follow-up of worker populations to determine whether the workers are still alive and what their health status is. These studies include approximately 120,000 workers—a small proportion of the total workforce.

If access to IRS data were eliminated, it coulde cost NIOSH as much as \$2.5 million to obtain this information, as opposed to approximately \$60,000 using IRS data.

Furthermore, NIOSH is now placing workers that have been located through the Taxpayer Address Program and who are at high risk of developing cancer or other chronic diseases from previous occupational exposures into medical care systems where the subsequent development of such disease possibly can be prevented or successfully treated.

For example, workers who were employed at an asbestos plant in Tyler, Texas, which was investigated by NIOSH, are now eligible for care at East Texas Chest Hospital. Baltimore workers that NIOSH determined to be exposed to benzidine are now under care at Johns Hopkins University Hospital. NIOSH plans to use IRS data during the next fiscal year to follow-up coal miners who have been examined under the 1969 Coal Mine Health and Safety Act to notify them of the date of their next X-ray examination.

In the last 3 years, some 31,000 workers have been notified by NIOSH that they were occupationally exposed; and 4,081 have been referred for medical treatment.

NIOSH gives the National Cancer Institute names of such exposed workers. NCI contracts with medical care providers (hospitals) to provide treatment to injured workers so located.

[From Science, Feb. 4, 1977] ENVIRONMENTAL CANCER

(By Russell E. Train, Administrator, U.S. Environmental Protection Agency)

Last year the National Cancer Institute published an atlas of cancer mortality in the United States based on an analysis of death certificates for the period 1950 to 1969.* The atlas contains maps of the United States with each county color-coded to show the mortality rate for different types of cancer. From these maps it is quickly apparent that there are large variations in cancer death rates. Although part of the variation may be genetic, much of it is thought to be due to variations in exposure to environmental carcinogens-some natural, such as sunlight or molds; some due to personal habits, such as cigarette smoking; and some due to carcino-gens in air, water, and diet. Recently, for example, increased bladder cancer rates were found in certain counties where chemical industries were concentrated. If estimates are correct that 60 percent or more of all human cancers are due to environmental agents, then about 500,000 cases per year may be involved. The benefit to human health that would accrue from controlling the carcinogens responsible for even a fraction of those cases is obvious.

To determine whether known or possible carcinogens are in the environment of populations with high cancer mortality, the resources of governments, industry, and academia should be applied through a variety of approaches. The U.S. Environmental Protection Agency (EPA) is committed to undertake an integrated assessment of population exposure to environmental carcinogens. The objective of the program is to detect the carcinogens that EPA is responsible for assessing and controlling. A new part of EPA's program will first focus on carefully selected types of cancer and certain well-characterized counties where the mortality rate for those cancers is either significantly higher or lower than the U.S. average rate. Samples of air, water, and food will be analyzed for specific chemicals that are hypothesized to account for local differences in cancer rates. Differences in the results of these analyses between the high-rate and low-rate counties plus leads developed from case-control studies in the high-rate areas may also suggest new candidates for animal carcinogenicity tests. If the approach is successful, it will be used in additional areas and with other types of

It is hoped that these studies will yield insights into the problem of low-level, chronic exposure to carcinogens. In addition, they may provide an approach for systematic studies of the role of environmental chemicals in causing illnesses other than cancer. Chemicals in the environment have been implicated as causes of diseases other than cancer which, like cancer, may be irreversible, delayed in onset for many years after exposure, and caused by low levels of chemicals that produce no acute distress. Such chemicals include mutagens, teratogens, and some

agents that damage the central nervous system.

To provide a scientific basis for the regulation of hazardous environmental chemicals, EPA needs the assistance of a larger segment of the scientific community. Skills of many types of specialists and the close cooperation of all engaged in related endeavors are required. Expertise and data bases in other institutions, combined with EPA's environmental monitoring capability, will constitute potent tools for seeking agents whose control would prevent the development of cancer and other diseases in many persons.—

OSHA Regulations on Worker Exposure to Carcinogens.

III. SUMMARY OF PROPOSED REGULATORY POLICY

OSHA has drafted for review by its National Advisory Committee for Occupational Safety and Health, a proposed set of regulations to identify, classify, and regulate potential carcinogens in American workplaces. The proposal incorporates several policy considerations derived from OSHA's experience to date in applying its regulatory obligations to the issue of carcinogens. These policy considerations include:

1. That the term "carcinogen," although perhaps difficult to define precisely as a matter of science, must be defined for purposes

of regulatory activity.

That a toxic material confirmed as a carcinogen in animal tests must be treated, as a policy matter, as posing a carcinogenic risk to man.

3. That there is presently no means to determine a "safe" exposure level to a carcinogen; hence, for regulatory purposes, it will be assumed that no safe level exists.

4. That in regulating employee exposure to a carcinogen, OSHA will set the permissible

exposure limit as low as feasible.

That where suitable substitutes for a carcinogen are found to be less hazardous to the worker, no occupational exposure to

the carcinogen will be permitted.

The proposal would permit any interested party to submit information from human or animal studies to establish the carcinogenicity of a toxic material. OSHA would then be required, within a specified brief period, to classify the toxic material as to its carcinogenicity based on the criteria set forth. The degree of conclusiveness of such data will permit classification of the substance as a "confirmed" (Category I Toxic Material) or a "suspect" (Category II Toxic Material) carcinogen, or neither (Category III Toxic Material) where further data is needed. Classification of a "confirmed" or "suspect" carcinogen would be followed immediately by specific regulatory action as provided in this proposal.

EXCERPT FROM TRANSCRIPT OF SENATE CON-FIRMATION HEARINGS ON DR. F. RAY MAR-SHALL, SECRETARY OF LABOR

QUESTION

Senator Orrin G. Hatch (Utah). With regard to occupational safety and health-I am moving a little fast here-what is your position on the continued preparation of economic impact analyses in the development and promulgation of new or revised occupational safety and health standards?

ANSWER

My inclination without studying it more is to say we probably ought not to have it. This is a very technical and difficult area and the state of the art is very rudimentary and you can get great delays in enforcing the laws with those requirements attached to them.

> By Mr. BAKER (for himself and Mr. SASSER):

S. 1230. A bill to authorize financial assistance to States for major highway repairs; to the Committee on Environment and Public Works.

Mr. BAKER. Mr. President, the severity of this past winter has caused extensive damage to roads in many Eastern and Midwestern States. The extent and seriousness of this damage places it beyond the capacity of individual States to repair within a reasonable time.

In my own State of Tennessee, it is estimated that 15 counties have suffered

almost \$30 million of damage to public facilities as a result of last winter's weather. The major element of this estimate is damage done to county roads.

A quick survey conducted by the Tennessee Department of Transportation revealed that \$55 million will be needed to repair deteriorating portions of the State road system. While some of these repairs would have been necessary under any circumstances, there is little doubt that this winter greatly accelerated the breakup.

Tennessee is not the only State with this problem. A private research organization, the road information program, estimates that 21 States have been similarly affected.

Because of the severity of the problem facing these States, Senator SASSER and I are introducing a bill which will provide some Federal funds to assist States in making the most necessary repairs.

My bill authorizes \$400 million out of the highway trust fund to be administered by the Secretary of Transportation. The Secretary is required to estimate the cost of damage to Federal-aid roads caused by the unusually severe winter weather. He is then authorized to provide financial assistance to States which can show that damage has resulted from the extraordinary weather conditions. He is to distribute funds among eligible States based on the relation of their damage to total damage in all eligible States.

Mr. President, I feel some sort of Federal assistance is necessary to help States cope with what amounts to an emergency situation. I am certain that the level of funds authorized will not do the complete job, but it should alleviate the most pressing needs.

In addition, the funding level is such that it can be provided from revenues expected to accrue to the highway trust fund.

I hope that early consideration and action on my proposal will prevent unnecessary disruption of highway transportation

> By Mr. BAYH (for himself and Mr. Mathias):

S. 1231. A bill to raise the limitation on appropriations for the U.S. Commission on Civil Rights; to the Committee on the Judiciary.

CIVIL RIGHTS COMMISSION AUTHORIZATION ACT OF 1977

Mr. BAYH. Mr. President, today I take great pleasure in introducing the U.S. Civil Rights Commission Authorization Act of 1977, to provide funding for the Commission's operations in fiscal year 1978.

Mr. President, before I describe the contents of this bill. I would like to take an opportunity to express my admiration for the Commission and my appreciation for its scholarly support that this Senator and, in fact, the whole Congress has received over the years since the Commission was founded. It has been tireless in its efforts to expose discrimination and, where found, to offer the Congress and the President its learned opinions on how to redress these evils.

Over the years more than 60 percent of the Commission's recommendations have resulted in legislation—a 20-year record that is hard to match. Examples easily come to mind. For instance, in the last Congress, the Commission's work on voting rights was especially important. Its publication, "The Voting Rights Act-Ten Years After," was recognized as the definitive work on the subject. I relied heavily on it during the extended consideration of that bill on the floor and earlier in drawing up my proposals for the extension and expansion of the act. However, this is not the only area where the Commission showed its expertise.

Their studies of the Federal enforcement effort of the Civil Rights Acts, the status of the Bilingual-Bicultural Education Act, the investigation of discrimination in housing, employment, and education, affirmative action projects, and the recent school desegregation study are just some of the undertakings that show the vast range of the Commission's interest and responsibility. We are debted to the Commission for its ability to gather and dispassionately evaluate vast quantities of controversial information and report their findings to the Congress and the Federal Government so we can assure all Americans their constitutional rights.

For all this work, we, the American people, pay surprisingly little. In fiscal 1977, the total budget for the Commission was \$9,450,000. For the next fiscal year, 1978, the requested budget is only \$10,-540,000, an increase of only \$1,090,000. While, in my opinion, this is an extremely reasonable request, the figure is deceptive to the point of really overstating the increase called for; \$628,000 of the budget increase is occasioned by passage of other laws-\$300,000 is for the authorized Federal pay increase, and \$328,-000 is for the age discrimination study, Public Law 94-135. Thus, the real increase amounts only to \$462,000 over the last fiscal year. For this price we get a budget which embraces nine continuing or soon to be completed projects ranging from studies of affirmative action to research on civil rights policy and nine new projects concerning subjects such as discrimination in the military to consultations-hearings-on domestic vio-

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1231

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Civil Rights Commission Authorization Act of 1977."

SEC. 2. Section 106 of the Civil Rights Act of 1957 (42 U.S.C. 1975e), as amended is further amended to read as follows:

"Sec. 106. For the purposes of carrying out this Act, there is hereby authorized to be appropriated for the fiscal year ending September 30, 1978, the sum of \$10,540,000 and such additional amounts as may be necessary for increases in salary, pay, retirement, and

other employee benefits authorized by law which arise subsequent to the date of the enactment of the Civil Rights Commission Authorization Act of 1977."

By Mr. BAYH:

S. 1232. A bill to amend the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 801 et seq.) to extend for 2 fiscal years the appropriation authorizations for the administration and enforcement of that act: to the Committee on the Judiciary.

DEA EXTENSION-AN OPPORTUNITY FOR MANDAT-ING RATIONAL DRUG CONTROL POLICY

Mr. BAYH. Mr. President, today I am pleased to introduce by request, President Carter's proposal to extend the Drug Enforcement Administration for 2 years. The President has called for sound drug prevention and control policies. In his February message to the United Nations Commission on Narcotic Drugs he stressed that while we must curb traffic "we must combine deep compassion for the victim of addiction with a vigorous attempt to eliminate the world supply of illicit drugs through international cooperation. Toward that end, I am making the curtailment of drug abuse a high priority in my administration."

I was especially pleased by the President's sensitivity to the special impact on

our young people, he said that:

Much of this abuse occurs with young people and with this increased drug use comes the attendant family disruption and the sapping of strength from our youth.

President Carter concluded by indicating that he has designated his White House staff, under the guidance and direction of his very able assistant Dr. Peter Bourne, with whom my subcommittee staff has worked for years on drug control policy matters, to give this problem "special attention" and that he intends to take a "personal interest in this pro-

This special interest and desire to establish a rational drug abuse prevention and control policy was set in motion by the President's March 14, 1977, memorandum to relevant officials activating the White House Office of Drug Abuse Policy.

I ask unanimous consent that the text of the President's memorandum be printed at this point in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

OFFICE OF DRUG ABUSE POLICY

The President's Memorandum for the Heads of Certain Departments and Agencies. March 14, 1977:

Memorandum for: Secretary of State Secretary of Treasury Secretary of Defense Attorney General Secretary of Labor

Secretary of Health, Education, and Welfare

Secretary of Transportation U.S. Representative to the United Nations Director of the Office of Management and Budget

Director of Central Intelligence

Administrator of Veterans' Affairs Subject:

Activation of the Office of Drug Abuse Policy (ODAP) and Revitalization of the Strategy Council.

Drug abuse continues to drain our human resources, especially from our youth, with no end in sight. I am determined that we make every effort to reverse this trend, and therefore, effective with the date of issuance of this memorandum do hereby establish the recently enacted Office of Drug Abuse Policy (ODAP). I look forward to early confirmation of the nominations which I have sent to the Senate of Peter G. Bourne and Lee I. Dogoloff for the positions of Director and Deputy Director respectively.

The Office of Drug Abuse Policy shall be responsible for carrying out the Congressional mandate specified in the law. In addition, and to the maximum extent permitted by law, the Director of ODAP is hereby directed to fulfill the following respon-

sibilities.

Recommend government-wide improvements in the organization and management of Federal drug abuse prevention and control functions, and recommend a plan to implement the recommended changes;

Study and recommend changes in the resource and program priorities among all agencies concerned with drug abuse pre-

vention and control:

Assume the lead role in studying and proposing changes in the organization and management of Federal drug abuse prevention and control functions, as part of my promise to reorganize and strengthen

the government operations; and Provide policy direction and coordination among the law enforcement, international and treatment/prevention programs to assure a cohesive and effective strategy that both responds to immediate issues and provides a framework for longer term

resolution of problems.

In addition, I am abolishing the Cabinetlevel committees concerned with international narcotics control, drug abuse prevention, and drug law enforcement created by previous Administrations, and am directing that the Strategy Council, created by the Drug Abuse Office and Treatment Act of 1972, be revitalized and serve as the government-wide advisory committee for this problem area. Also, I am adding the Secretary of the Treasury and the Director of the Office of Management and Budget as fully participating members of the Council. The Director of the Office of Drug Abuse Policy shall serve as Executive Director of the Council.

The Council shall be supported by Working Groups for supply control and demand reduction, and be composed of personnel from each of the concerned agencies.

I am confident that you will provide your full support to ODAP and the Strategy Council in the performance of their tasks. JIMMY CARTER.

Mr. BAYH. I am confident Dr. Bourne will work closely with the Attorney General in order to effectuate long overdue sensible drug control policies. Mr. Bell has already established a special task force to study ways in which to improve the Department's drug control effort. The bill I introduce today extends DEA for a sufficient period so as to facilitate policy decisions emanating from these

Last summer we heard impressive and alarming testimony about our Nation's inability to focus our drug law enforcement apparatus' and our criminal justice resources on even "kingpin" profiteers. While I am especially concerned that the constutional rights of criminal defendants are fully secured, I am likewise concerned that within such a framework our citizens are fully protected. We must reallocate our resources and sharpen our prosecutorial tools and strengthen our criminal justice system so that it deters, disrupts, and detains these crim-

A sound drug enforcement policy must reflect the reality that all drugs are not equally dangerous, and all drug use is not equally destructive. The Domestic Council White Paper on Drug Abuse stresses this theme when it concludes that enforcement efforts should therefore concentrate on drugs which have a high addiction potential, and treatment programs should be given priority to those individuals using high-risk drugs, and to compulsive users of any drugs.

Our priorities in drug law enforcement must reflect reasoned judgments based on the facts. The fact is that nationally, arrests for marihuana violations have escalated from 188,682 in 1970 to 450,000 in 1974. This is not nearly as dramatic as the 1,000-percent increase between 1965-70 from 18,815 to 188,682, but it is rather astonishing that this 4year increase is more than 12 times the total marihuana arrests just 10 years

The fact is that the number of marihuana arrests as a percentage of all drug arrests has increased substantially. In 1970 these arrests amounted to 45.4 percent of total drug arrests. During the 1970-73 period 1,127,389 of the total 2,-063,900 drug arrests were for marihuana. And in 1974, the most recent year for which records are available, 70 percent of all drug arrests were for marihuana.

Available studies and research to date have found that the majority of those arrested are otherwise law-abiding young people in possession of small amounts of marihuana. In fact, a President commission found that the vast majority of users are essentially indistinguishable from their nonuser peers by any criteria other than its use

In 1969 and 1970 the subcommittee considered the adequacy of penalties for marihuana with the result that the new Controlled Substances Act provided that simple possession or distribution of a small amount of marihuana for no remuneration were both designated misdemeanors, not felonies, punishable by up to 1 year in jail and/or up to a \$5,000 fine. It was the view of many Members that the sanctions should be further reduced. Some suggested that the sanction be eliminated for such conduct.

In order to permit a thorough assessment of these issues the subcommittee recommended the creation of a Presidential commission. The Congress agreed and provided for the establishment of the Commission on Marihuana and Drug Abuse in part F of the Controlled Substances Act.

This body, known as the Shafer Commission, after its distinguished chairman, conducted an indepth study of the issues and concluded that marihuana was not dangerous enough to the user or to the

CXXIII-660-Part 9

general public for its private possession and use to remain a criminal offense.

In the last several years a growing list of States, organizations, and individuals have endorsed and adopted approaches comparable to the Shafer Commission recommendations.

Rather than ignore the law on marihuana or prosecute possession cases selectively as some would suggest, I believe that: We must recognize that the \$600 million invested annually to prosecute marihuana cases can be used in a manner more consistent with the protection of property and safety of the taxpayers who must sustain our severely overburdened criminal justice agencies; we must recognize that public interest is not served by arresting annually 500,000, mostly young people, for simple possession of small amounts of marihuana and thereby assuring that they are inhibited for life-in their education and careers by the unrelenting stigma of a criminal record; and we must recognize that the public is not going to get the highest return on their tax dollars in the national effort to curb drug traffic and drug-related crime when 7 in 10 drug arrests are for predominantly simple marihuana possession. We must reject such counterproductive drug law enforcement policy.

The subcommittee conducted the first congressional legislative hearing on the question of decriminalization of marihuana in May 1975. Our exhaustive three volume publication entitled "Marihuana Decriminalization" graphically documents the need for such a change. Then Attorney General Levi indicated to the subcommittee that the policy would be reassessed. Last summer we held hearings on the Ford drug message and the repressive OMB-DEA bill, S. 3411 and again the former administration ducked its responsibilities. I think that the pertinent exchange between myself and Mr. Bensinger, then head of DEA would be instructive and I ask unanimous consent that it be printed at this point in the RECORD:

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Senator Bayh. The President's white paper and his May address to Congress recommend focus on major traffickers that you are stressing you need help. If you accept this policy, what is going to be the policy pursued relative to marihuana?

Mr. Bensinger. The policy that our agency, and I, personnally, have directed with respect to marihuana is that it is not our principal or secondary or tertiary drug abuse priority or responsibility.

The marihuana arrests that DEA have made have decreased substantially for all classes, from 1 through 4. And the class 4 marihuana arrests have decreased 1,400 cases.

The principal efforts of our agency are directed against heroin, barbituates, and amphetamines and cocaine. We will certainly investigate and refer for prosecution cases involving marihuana as a controlled substance. But it is not a priority, Senator, and has not been emphasized in our investigative and enforcement regional deployment of resources.

Senator Bayh. What about the possibility of decriminalizing the simple possession of this drug?

Mr. Bensinger. I don't think we have

enough knowledge, medically, on marihuana, Senator. This question has been asked repeatedly of me and of our agency. It has a THC content that varies, whether it is domestic marihuana of 1 percent, to the Mexican variety of 3 to 5 percent, to some grown in Jamaica of 5 to 8 percent. It has produced studies and individual instances which have caused a slowness in reaction, a danger to one's health, some responses that have not been in No. 1, public safety of the individual, and No. 2, of the community.

I think personally until we get real definitive information from HEW, from the research organizations, certainly within our own agency, that this will not be a harmful commodity to use personally, or if used, it will not have an implication on the community, that we should say to the public we really don't have enough information, but let's legalize it anyway.

Senator Bayh. That isn't what I said, I said decriminalize it. It sounds to me that the physiological reactions you describe could be applied to alcohol as well as marihuana.

I don't want to put the good housekeeping seal of approval on it. We don't know as much as we should. But when you look at State and local cases, we are talking about three-quarters of the cases being marihuana related, which means we have misplaced priorities.

It seems, as long as we have the statutory criminal sanction, that there will be some officials who, looking for a headline, will expend time and effort to do a job in an area that doesn't have the kind of priority you are directing your testimony to, today.

Mr. Bensinger. Senator, the percentage of marihuana arrests is the smallest of any of the type of drugs that we have responsibility for enforcing the laws on.

The State and local jurisdictions have made, I would say in a year about 350,000. The Drug Enforcement Administration in terms of canabis, through 1975, we decreased the cases significantly since then, and they are less than 2,000 in terms of total arrests and are diminishing.

So the Federal effort is 90 percent on the other types of controlled substances.

Senator Bayh. Don't you think we should address our attention to a change in the Federal criminal statutes, which would provide a model for those jurisdictions that now pursue marihuana cases instead of heroin cases?

Mr. Bensinger. I think the Federal Government has a responsibility for standard setting in all fields of criminal justice, sentencing, bail, the method by which hearings are held.

So I agree with that in principle. I think we do not have sufficient evidence and information from the medical authorities to say that there couldn't be damage to individuals and to the community of marihuana was continued to be made available. That is my personal view, Senator. I think it's a period of time in this country where certain States have taken the option of removing felony sanctions, and that is certainly within their prerogative. I think we would like to have more information at the Federal level on that commodity.

on that commodity.
Senator Bayn. Do you think we will ever get enough information so that it won't be a political hot potato?

Mr. Bensinger. I think we certainly will. I think the kind of attention you have addressed on this issue will be helpful.

Senator Bayh. I don't think we will ever get enough information so it won't be a political hot potato. I think, however, we better stand up and face the realities of limited resources and place a priority on these kingpins that you and I want to put in jail forever.

With someone involved in peddling large amounts of heroin, I have no compunction about putting that person away for life. If we are going to do that, it seems to me we must summon up all of the prosecutorial and law enforcement resources we can, and direct them at those people. As long as we have the statutory temptation in other areas, I fear we are not going to do as good a job there as we could.

Mr. BAYH. Mr. President, fortunately, I believe that such misplacea drug control policy has finally been rejected. Initially, I was quite pleased by then Attorney General-designate Griffin Bell's response to my inquiry regarding such policy during the confirmation hearings. I ask unanimous consent that the text of that January 11, 1977, exchange be printed at this point in the Record.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Senator BAYH. A moment ago you mentioned that you were thinking about taking DEA out of its present status and bringing it under the Justice Department.

Judge Bell. Bringing it into the FBI. Senator Bayh. Yes, the FBI. One of the things that has been apparent and I think sad is that some people have on occasion yielded to the temptation to try to politicize the confrontation against drugs.

We are all against drugs. The question is how we solve them.

When we look at the studies that we conducted in our committee, we found out that last year about two-thirds of all the arrests and convictions in the area of narcotics were for people who possessed small amounts of marijuana.

I would like to ask you if you feel that in light of the fact that we are going to have limited law enforcement resources and also considering State and local and Federal relationship in the area of criminal law enforcement, does it not make more sense in DEA and throughout Government that we focus our efforts on the major traffickers and the major conspiracy cases, the drugs of high abuse potential, that that is really where we ought to put the emphasis?

Judge Bell. The Federal emphasis. Senator Bayh. The Federal emphasis. Judge Bell. Exactly. Exactly.

We have got to get away from the idea of making statistics. We have got to find out what it is we want to do and do it. It would be the major trafficers that we would be after.

Mr. BAYH. Mr. President, I cannot agree more. The Federal drug agencies must get out of the business of generating headlines and statistics on lower level traffickers and addicts and focus their efforts on major traffickers of high-risk drugs. I am optimistic that any substantive Carter administration legislation reject the Nixon-Ford shotgun approach which reflected no priorities regarding particular drugs or levels of traffic, not to mention its provisions which repealed the cornerstone of our criminal justice system, the presumption of innocence.

The measure I introduce today provides a timely opportunity to make permanent national drug control policies. To, in part, accomplish this objective I will recommend that the Judiciary Committee include a title that will provide for the decriminalization of marihuana. I cannot think of a more appropriate vehicle to accomplish this purpose than this measure to extend the very agency responsible for the implementation of

Federal drug control investigations and policy

I will recommend an approach similar to that undertaken by the State of Oregon which abolished criminal penalties for simple possession and substituted a civil fine up to \$100 for possession and nonprofit transfers of up to 1 ounce of marihuana. Criminal penalties for the sale of the drug for profit would remain intact. This approach maintains a policy of discouragement toward marihuana use while recognizing the current inappropriate use of law enforcement resources and the destructive impact of potentially 30 million criminal records for such common conduct.

I concur wholeheartedly with Dr. Bourne when he testified 2 weeks ago stressing that the criminal penalties for marihuana use do more damage to people than does the drug itself, but that the Carter administration position is to discourage the abuse of all drugs, including alcohol and tobacco, as a national policy. Coupled with the cost effectiveness of this policy, refocused last week by the LEAA-funded Peat, Marwick, Mitchell & Co. study released by the Governors' conference which found that States that have decriminalized marihuana possession have shown a "substantial" savings of tax dollars, there really are no other sound or humane Federal responses available.

Additionally, I intend to recommend that all Federal jurisdiction in the drug control area be limited to major cases involving major traffickers.

The fact of the matter is that if the American public knew that more dollars are spent each year to prosecute marihuana cases than the Federal Government expends on its combined drug law enforcement and drug treatment program with the results I have outlined, I would speculate that rather than the near deadlock of opinion reflected in the most recent Harris poll-January 26, 1976—on decriminalization showing 43 percent in favor and 45 percent opposed a clear majority would support my approach. Concentrating our Federal drug enforcement resources on high-level heroin and dangerous drug traffickers is sound policy, but will call for a shift in the standards for measuring success. We in Congress should deemphasize the number of arrests as a criterion of success. And as the Assistant Attorney General for the Criminal Division concluded in his July 22, 1976, speech before the fifth Controlled Substances Conference in Minneapolis, Minn.:

No statistical striving or seizure syndromes can or will substitute for the quality, prosecution of those cases which place behind bars for extended jail sentences individuals responsible for the plan of illegal drugs into American communities. Such a strategy applies limited public resources more judiciously and simultaneously reflects sensible priorities.

Since the passage of the Comprehensive Drug Abuse Prevention and Control Act-Public Law 91-513-in 1970, our subcommittee to investigate juvenile delinquency, which developed this measure, has monitored its implementation and sought to assure that the Federal agencies responsible for its enforcement acted

appropriately to curb the illegal importation, manufacture, and distribution of controlled drugs.

Mr. President, I ask unanimous consent that a list of the subcommittee's relevant publications be printed at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Report, Methadone Diversion Control Act of 1973, June 1973.

Report, Barbiturate Abuse in the United States, December 1972.

Report, Drug Abuse in the Military, December 1971.

Mr. BAYH. The 1970 act also established a comprehensive scheme for the regulation and control of dangerous drugs manufactured for legitimate purposes. It was to more specifically address this facet of the 1970 act-the Controlled Substances Act and the Controlled Substances Transport and Export Act-that the constitutional cornerstone became the commerce clause rather than the taxing authority. In any case, regarding illegal traffic in natural opiates-heroin, morphine-whether under the tax authority approach or the commerce clause it is difficult to hypothesize a case with no interstate aspect.

Regarding the dimension and abuse of domestic legally manufactured controlled substances we have made considerable progress in the last several years. We have obtained a drastic, but necessary, 95-percent reduction in domestic amphetamine production. We have secured more appropriate control over our production and distribution of other drugs with high abuse potential, including the barbiturates and methaqualone. And to prevent illegal traffic and abuse of methadone we have obtained stricter controls over its storage and distribution. In short, these and similar important steps have effectively helped to reduce illicit traffic and clandestine manufacture of controlled drugs.

I was particularly pleased that at my request the Judiciary Committee adopted language in the 1974 report on S. 3355. introduced by myself and our distinguished former colleague (Marlow Cook) extending DEA for 3 years, which reflected concern about what is commonly called the nonopiate or polydrug abuse epidemic. On page 3 of that report (Senate Report No. 93-925) in the initial paragraph under DEA Objectives the pertinent language is found:

The Committee's desire is that the Drug Enforcement Administration aim its manpower at responding to the poly-drug epidemic by further penetration of illicit traffic in narcotics and nonnarcotic drugs and by increasing regulatory activity at all levels. These efforts should complement other high priority Federal programs of drug abuse prevention, treatment and rehabilitation.

But there is still substantial room for progress. DEA has indicated that it will, this year, finally increase its compliance and regulatory support program. This is an absolutely necessary component of a rational drug control policy.

Our efforts aimed at curbing illegal traffic in illegal drugs have not experienced the same degree of success.

The subject of extensive hearings by the subcommittee last year on the effectiveness of the Nation's drug control laws-the opium poppy-is not of domestic origin, but its byproducts, or at least one of them-heroin-is certainly familiar to every American.

Indeed, we are all too familiar with the devastating effects of heroin on the individual addict, their families, and society at large. We know that heroin abuse has destructive physiological consequences, debilitating the health of the abuser and impairing an addict's ability to lead a normal productive life. The social consequences are equally devastating. In order to support a habit, the addict is driven to engage in criminal activities which threaten the safety and well-being of all our citizens. The costs in human and economic terms are enormous:

Billions of dollars are expended each year to protect our citizens from drugrelated crime:

Billions of dollars of merchandise are stolen each year to support heroin

Billions of dollars are invested annually in drug prevention, treatment, and rehabilitation programs;

Many innocent people are physically assaulted and even killed in the course of drug-related crime; and

Hundreds of thousands of otherwise productive lives are lost to the destructive and often endless cycle of heroin

We have learned—and through the course of our recent hearings are still learing—from bitter experience that there are no simple solutions to the epidemic of narcotic addiction nor to the ever-escalating levels of illegal narcotic traffic. There are no panaceas—no magic wands.

In fact, opium control presents especially difficult and compex considerations. The plant which spawns heroin to which our citizens succumb likewise issues drugs to ease the misery of the terminal cancer patient and, ironically, provides us with the antagonist medication necessary to treat those suffering acute narcotic overdose. There is little doubt that the opium poppy is a double-edged sword, life threatening and life saving

We have made some progress in curbing narcotic traffic and addiction, but we must be forever vigilant that rhetoric about "the light at the end of the tunnel" or "turning the corner" on any problem not delude us into believing that we have actually accomplished our objectives.

One thing that we established through our hearings last year was that the White House was less than candid with Congress and the American people regarding their assessment of the importance of the Turkish ban on the cultivation of opium poppies in the effort to curb heroin traffic and addiction.

Former Presidential assistants with special responsibilities in the area of drug control and abuse told the subcommittee that in October 1971 shortly after the Turkish Government announced the ban, that the plan was ill-conceived.

Dr. Jerome Jaffe, former Director of the White House Special Action Office testified that he never believed that a ban on the growth of opium poppies would be effective in stopping the spread of heroin in the United States.

Mr. Walter Minnick, former White House Staff Assistant to the President for Domestic Affairs and Staff Coordinator for the Cabinet Committee on International Narcotics Control, told the subcommittee, quite candidly, that:

The Congress and the American people were led to believe that the ban was an indispensable part of getting on top of heroin addiction.

Throughout 1972 the White House produced release after release, heralding the Turkish ban as a major breakthrough in the fight against heroin addiction and as clear evidence that the battle was well on its way to being won. This "hoopla" about the ban stepped up markedly during the fall of that year.

Apparently the Nixon administration was more concerned in 1972 with the reelection campaign than they were about controlling poppy production and solving the heroin problem.

The record developed to date by the subcommittee leaves little doubt that the Nixon administration not only created a misimpression about the ban and the policy of eradication, but that it had little time, if any, to heed the caution and advice of medical experts and others who warned that such policies could have long-term damaging ramifications including possible shortages and the emer-

gence of a strong viable Mexican connection along our southwestern border.

Even prior to former President Nixon's message to the Congress in June 1971, which set out the dual objectives of a ban on poppies and the development of synthetic alternatives to opiates, agencies experts in a confidential memorandum had alerted the White House to these likely ramifications.

Testimony presented to the subcommittee, however, revealed that White House advisers including Mr. John Ehrlichman, reportedly had decided that the poppy ban was "good politics" in that it would provide a high-profile, simple, ostensible answer to the crime problem with which heroin addiction and traffic are so intimately associated.

Even in late 1972 and 1973 when the prospect of an opiate shortage was rapidly becoming a reality, the White House ignored warnings by the medical community and others that White House "poppy politics" was responsible for the shortage as well as the failure to effectively focus on heroin traffic.

In a very short period of time Mexico had become the primary supplier of heroin to the United States, and although the Turkey ban did cause a shortage of heroin it was, as General Accounting Office investigators told the subcommittee, limited to major cities in the East and "a temporary thing at best."

The heroin problem now is worse than it was before the ban.

The American people are sick and tired of being sold a bill of goods.

As a Member of Congress who has, likewise, relied on less than candid representations at the highest levels of the executive branch in recent years, I know we were sold a bill of goods in this instance.

We are interested in developing a full and complete understanding of these issues so that sound national policies in the area can be substituted for past mistakes.

As late as February 21, 1974, President Nixon concluded his drug abuse in America message to the Congress by saying in part:

Drug abuse is a problem that we are solving in America. We have already turned the corner on heroin.

Soon though even White House officials, as they announced that all the indicators of heroin abuse were up again, were cautioning others about claiming victory in the war against the poppy and heroin. In fact, on March 5, 1975, Dr. Robert Dupont then Director of the White House Special Action Office on Drug Abuse Prevention, told the subcommittee that "we can no longer talk about having turned the corner on heroin anywhere."

Similar discouraging observations were contained in the recently released National Institute on Drug Abuse publication "Heroin Indicators Trend Report." Director Dupont reiterated the mistake that was made in interpreting what proved to be a regional temporary downtrend in usage in 1973 as a turning point in the national antidrug fight and revealed that the evidence is now clear that

since 1973 the heroin use problem in the United States has deteriorated.

Maps provided for the subcommittee use in December 1974 by GAO graphically illustrate the source of what Dr. Dupont termed the deteriorating heroin problem: Mexico

Mexico has become a significant supplier of the heroin reaching U.S. markets for illicit distribution. DEA statistics show that in the year ending June 30, 1972, 8 percent of the heroin seized in the United States was Mexican. By June 30, 1973, the amount of seized heroin from Mexico had more than quadrupled and accounted for 37.2 percent of all heroin seized in the United States. In March of 1975 DEA informed the subcommittee that 65 percent of the heroin reaching the United States comes from Mexican poppies.

By last fall Mexico had taken over as the dominant or nearly exclusive source for illegal heroin throughout the Nation, overshadowing Europe, the Near East, and Southeast Asia. According to a special October 19, 1975, DEA report to the subcommittee during the first months of 1975, 90 percent of 305 heroin samples confiscated in 13 major cities by the DEA were Mexican processed.

The special DEA report confirms the view that the route that brought Frenchprocessed Turkish heroin has been effectively blocked. Less than 2 percent of the confiscated heroin analyzed between January and June 1975, came from Europe or the Near East. In 1972, 44 percent of the sample came from those areas. During the period. Turkey halted the growing of the opium poppy from which heroin is made. Earlier last year. Turkey resumed cultivation. Let us hope that the use of the poppy-straw process of harvesting the opium will effectively prevent resurrection of the infamous "French Connection".

Thus I am extremely concerned that all necessary steps be taken to prevent the diversion and traffic in Turkish opium that has formerly contributed so heavily to the destruction of so many thousands of lives and was so intimately linked to the ever-escalating levels of violent crime.

The Turkish Government claims that it will prevent the new opium crop from getting into criminal channels. The resort to the poppy straw method of processing will help to assure the desired objective, but much more is necessary. To date slightly more than 300 agents are reportedly available to monitor 50,000 acres of poppies being cultivated in small plots. The jeeps necessary to reach remote areas as I understand it have not yet arrived. To get the job done will require a dedicated and committed effort by the Turkish Government.

Whether the Turkish Government fails to hold to their commitments or not, we are again confronted with a horrendous heroin trafficking problem.

The increasing flow of Mexican heroin toward the major cities of the Northeast and the drying up of the European supply are the most startling aspects of the first half of 1975 DEA figures. A survey completed early in 1972, showed that the furthest penetration of Mexican-proc-

essed heroin eastward was an irregular line running from Detroit to the Florida Panhandle. The GAO maps supplied to the subcommittee also illustrate the significant Mexican heroin market during the same period.

For instance, in Boston 100 percent of all confiscated samples came from Mexico in 1975 and none from Europe. In 1974, 50 percent of the Boston samples had come from Mexico and 17 percent from Europe.

In New York City, 83 percent of the samples were Mexican-processed in the first half of 1975 compared with 10 percent from Europe. In 1974, 21 percent of the samples were Mexican and 67 percent were European.

For Philadelphia, 83 percent of the samples were Mexican in 1975 and none were from Europe in 1975. In 1974, 50 percent of the samples were Mexican and 17 percent were from Europe.

The new figures show that Mexicanprocessed heroin has even established itself for the first time in the Pacific Northwest, replacing heroin from Southeast Asia.

The already entrenched position of Mexican-processed heroin in the Middle West and the Southwest was further confirmed by the new figures. For instance, Detroit samples were 93 percent Mexican in 1974 and 94 percent in 1975, while Chicago remained at 100 percent Mexican for both years.

However, in 1972, Detroit samples showed 58 percent of the heroin was processed in Europe and 30 percent in Mexico. For Chicago 44 percent in 1972 was European and 33 percent was Mexican

The Midwest, and the Chicago area in particular, has become the main line of distribution for the Mexican brown heroin. The DEA deputy regional director in Chicago relates that "we are up to our ears in Mexican heroin." It estimated that between 3.8 and 7.5 tons of heroin arrive in this principal U.S. marketplace for Mexican brown.

Since the subcommittee's extensive hearings on "poppy politics" in March 1975, I have been encouraged by the work of the Domestic Council Drug Abuse Task Force. In the fall of 1974 and early 1975 the subcommittee staff had detected signs of enlightenment regarding Federal drug enforcement policy in the approach of several individuals, including the chairman of the White House Opium Policy Task Force, who in turn became the director of the working group that developed the "White Paper on Drug Abuse." At our March 1975 hearings we were pleased to learn that this important project was well underway and that they intended to give special attention to the lack of Federal drug law enforcement coordination.

The widely publicized "tug of war" between DEA or its predecessor BNDD and the Bureau of Customs regarding jurisdiction on narcotics investigation has been at best a grave disappointment. I am confident that my colleague, Senator Nunn, and others on the Senate Government Operations Committee are dedicated to assuring that the proper governmental structure is devised to assure

integrity and streamlined narcotics law enforcement.

The Government Operations Committee interim report, "Federal Narcotics Enforcement," raises important issues regarding the respective DEA-Customs roles. It concludes that reorganization plan No. 2 of 1973, which created DEA "caused a break in the jurisdictional authority of this Government to combat drug smuggling." This less than satisfactory result followed after the approval of plan No. 2. The interim report leaves the impression that Congress had little or nothing to do with the approval of the reorganization plan No. 2, and that its role was "sharply limited," because if after 60 days from the date of submission of the plan, Congress had done nothing, the plan would be implemented.

My recollection was that another lengthy discussion and debate accompanied the consideration of reorganization plan No. 2—the vehicle that created DEA and a review of the record supported this view

A Senate Government Operations Committee Report entitled "Reorganization Plan No. 2 of 1973, Establishing a Drug Enforcement Administration in the Department of Justice" documents the extensive review given the proposed plan No. 2. It reveals that "nearly 3 months before the President submitted reorganization plan No. 2, this committee's Subcommittee on Reorganization, Research, and International Organizations began an investigation of Federal drug law enforcement" and that they con-ducted "more than 100 staff interviews of current and former law enforcement officials and prosecutors at the Federal, State, and local levels, of other present and past Government officials, including former Cabinet officers and White House aides, and of drug abuse prevention and treatment specialists."

A central aspect of this inquiry was the "uncontrolled bitter feuding and the actual sabotaging of each other's investigation" by BNDD and Customs. The report notes that "by mid-March representatives of the Nixon administration informed * * * the * * * members of the subcommittee that the President would soon submit a reorganization plan to bring the primary drug enforcement efforts together in a single agency in the Justice Department."

According to the report, testimony was taken regarding plan No. 2 in Washington from Mr. Kleindienst, Attorney General; Roy Ash, Director of Office of Management and Budget; John Ingersoll, Director of BNDD; Vernon Acree, Commissioner of Customs; Miles J. Ambrose, Director of ODALE and Special Consultant to the President for Drug Abuse Law Enforcement. When coupled with field hearings held around the country on plan No. 2 "a total of 158 witnesses were heard in 11 hearings."

The report on plan No. 2 reveals that the Government Operations Committee found that there was a strong need for the new superagency and it endorsed the reorganization plan and cited, among several, the following advantage expected to be derived from the reorganization:

First. It will put an end to the inter-

agency rivalries that have undermined Federal drug law enforcement, especially the rivalry between BNDD and the Customs Bureau.

It is interesting to note that the actual plan No. 2 submitted by the President to the Congress (H. Doc. No. 93-69, March 28, 1973) stressed the need to strengthen our narcotics law enforcement effort at our borders. It proposed in fact, in order to reduce the possibility that narcotics will escape detection at ports of entry because of divided responsibility, and to enhance the effectiveness of the DEA that all functions vested in the Justice Department respecting the inspection of persons or the documents of persons be transferred to Treasury to augment the effort of the Bureau of Customs at our borders.

According to the 1973 committee report, the hearings on plan No. 2 "did not dwell on the BNDD-Customs dispute because the chairman and members felt that no legislative purpose would have been served inasmuch as the plan acknowledged and remedied the problem by uniting the rival agencies." Apparently because President Nixon proposed the transfer of Immigration and Naturalization Service inspectors to Customs to accomplish the renewed focus at the border—thus possibly jeopardizing the rights and benefits of the inspectors—Customs lost out.

The new agency-DEA-would absorb virtually all of the Customs Service's drug enforcement functions except at the border and ports of entry. It would appear that no attention was given to beefing up Customs in a manner consistent with the rights of the Immigration and Naturalization inspectors, for example providing Customs with 1,000 additional positions. Consistent with such an approach former Assistant Secretary of the Treasury, Mr. Eugene Rossides in a memorandum he submitted for my review. April 2, 1974, recommended the return of anti-drug smuggling responsibilities, including related intelligence collection, to Customs. The Government Operations Committee should give serious consideration to this recommendation.

Thus the reorganization plan No. 2 apparently did not resolve the "tug of war" between DEA and Customs. The Domestic Council in the white paper, however, has called for a settlement of the jurisdictional disputes between DEA and Customs. At the subcommittee hearing last week, both Administrator Bensinger and Commissioner Acree expressed strong support for the December 1, 1975, memorandum of understanding between their two agencies.

I was impressed by the sincerity of these two persons at our hearing last summer, but in light of the failure of a similar prior agreement to resolve jurisdictional problems, I urge the President to clearly delineate a White House level monitoring system to assure that our drug law enforcement agencies get on with their mandates namely to curb the flow of heroin and other dangerous drugs into this country.

into this country.

Whatever agency or agencies are eventually assigned the drug law enforcement responsibilities it is my subcommittee's

mandate to assure that the Controlled Substances Act and the Controlled Substances Import and Export Act, that were drafted by the subcommittee after extensive hearings in 1969 and enacted in 1970. provide the Nation's drug law enforcement officers and our criminal justice system with the most effective constitutionally sound tools to help take the profit out of heroin and other illegal dangerous drug traffic.

I agreed with President Ford when he stressed in his April 27, 1976, message that "drug abuse constitutes a clear and present threat to the health and future of our Nation" that we must "refocus and revitalize the Federal effort," especially with regard to those who accumulate substantial wealth through such tainted trade.

This was not the first time, since 1968 that the administration has expressed support for congressional effort to curb drug traffic. Earlier proposals lacked focus and did not reflect the judicious use of limited public resources. Thus, although I was encouraged by some remarks, I would be less than candid if I did not admit that earlier rhetoric and indifference about these important issues only reaffirms former Attorney General Mitchell's enjoinder that it was more important to watch what is done than what is said. You do not help take the easy profits out of drug traffic with tough talk and hollow promises.

Through our 1975 hearings on opinion policy and those last summer on legislation introduced by President Ford the subcommittee attempted to develop a better understanding of the ramifications of the public policy developed by the Nixon administration to curb heroin traffic and abuse. I am optimistic that the current administration has learned from their mistakes.

I believe that firm and certain punishment must be the response to drug traffickers

Although there seems to be a bandwagon syndrome regarding the application of mandatory minimum penalties to all crimes, I agree with Prof. James Vorenberg-

That the rush to mandatory minimum sentences distracts attention from a general restructuring of sentencing laws as well as from the futility of efforts to run our criminal justice system "on the cheap."

But I concur with the distinguished executive director of the American Civil Liberties Union, Mr. Aryeh Neier, that:

Some people who have committed very serious crimes of violence should be given incapacitating sentences to protect everyone

The 1970 act eliminated most mandatory sentences. As the former President said in his June 17, 1971, drug abuse message to Congress:

The act contains credible and proper penalties against violators of the drug law. Several punishments are invoked against the drug pushers and peddlers while more lenient and flexible sanctions are provided for the users.

The President continued:

These new penalties allow judges more discretion, which we feel will restore credi-

bility to the drug control laws and eliminate some of the difficulties prosecutors and judges have had in the past arising out of minimum mandatory penalties for all viola-

The only provision of the 1970 act providing minimum mandatory sentences is the continuing criminal enterprise provision, section 408, which was intended to serve as a strong deterrent and to keep those found guilty of such violations out of circulation

It provides that persons engaged in continuing criminal enterprises involving violations of the bill, from which substantial profits are derived, shall, upon conviction, be sentenced to not less than 10 years in prison, and may be imprisoned up to life, with a fine of up to \$100,000, plus forfeiture of all profits obtained in that enterprise. A second conviction under this section will lead to a mandatory sentence of not less than 20 years and up to life imprisonment, a fine up to \$200,000, and forfeiture of all such profits.

Except when continuing criminal enterprises serve as the basis for an indictment, manufacture, sale, or other distribution of controlled drugs will carry penalties which vary, depending upon the danger of the drugs involved. If the drugs are narcotic drugs listed in schedules I or II, which have the highest probability of creating severe physical as well as psychological dependence, the penalties which may be imposed are up to 15 years imprisonment and a fine of up to \$25,000 for a first offense. If the drug involves nonnarcotic substances listed in schedules I or II, or any substance-whether or not a narcotic-included in schedule III, the penalties for a first offense are up to 5 years imprisonment, plus a fine of not more than \$15 .-000. If the drug is a schedule IV substance, the penalty is up to 3 years imprisonment and a fine of \$10,000, and if a schedule V substance is involved, the penalty is up to 1 year imprisonment, plus a fine of not more than \$5,000.

Where a violation of the bill involves distribution to a person below the age of 21 by a person who is 18 or more years of age, the penalty authorized is twice the penalty otherwise authorized for a first offense, with substantially increased penalties for second and subsequent violations.

President Ford's legislation would require mandatory minimum sentences for all persons convicted of trafficking in heroin and similar narcotic drugs. It called for a 3-year mandatory sentence for the first offense, and at least 6 years for any subsequent offenses or selling illegal drugs to a minor, subject in each instance to exceptions.

This approach did not focus on the financier, importer, or organized criminal leaders who control drug traffic-it did not focus on these kingpins. What we need is meaningful sentencing for major traffickers. The problem with past Federal policy and focus was clearly presented to the subcommittee last week by Hon. Sheldon B. Vance, senior adviser to Secretary of State for International

Narcotics Matters, when he told the subcommittee that-

While we can point with some satisfaction to our efforts toward improving the effectiveness of international narcotics control over the past several years, our own efforts to deal with traffickers has acquired a reputation of leniency. Minimal sentences, liberal parole and prosecutorial bargaining with cooperating defendants have caused some foreign officials to criticize the United States judicial system, often referring to it as a "revolving door." Specific complaints have been registered, primarily from Latin Ameri-can countries, about low bail, release on personal cognizance, plea bargaining, lenient sentences, and early parolling of traffickers apprehended following close collaboration with foreign law enforcement officials.

Ambassador Vance cited an especially illustrative case. He explained that-

It concerned two individuals arrested in November 1972 in New York subsequent to their delivery from Singapore of 2.5 kilos of No. 4 heroin to Special Agents of the Drug Enforcement Administration. The exhibit was delivered as a free sample toward a 23 kilo delivery scheduled for the future. They were tried without a jury in the Southern District of New York and in March 1973 were given sentences of 15 years for each of two counts, to run consecutively. On June 26, 1974, the judge reduced their sentences pursuant to their motions, making them eligible for parole.

On August 30, 1974, one of them filed an application for parole. His application was heard on October 16, 1974. An Institutional Review Hearing was held in March 1976 and parole was granted. He was delivered to the U.S. Immigration and Naturalization Service Authorities on July 15, 1976 for deportation. On July 17, 1976, upon his arrival in Singa-

pore, he was arrested by officers of the Singa-pore Central Narcotics Bureau. On July 20, 1976, the Assistant Director, Central Narcotics Bureau requested the High Court Magistrate to order his detention for the remainder of his U.S. prison sentence.

Ambassador Vance commented that-These developments have caused the Singapore authorities seriously to question the commitment and sincerity of the United States in its efforts against the international trafficking of narcotics."

And that-

Such cases and other indicators clearly show a soft and imprecise handling of narcotics offenders. This inhibits our ability to obtain cooperation from foreign governments

We need to restore credibility to the sentencing process to assure that the "kingpins" are disrupted. I endorse the Domestic Council White Paper recommendation regarding sentencing of drug traffickers to require "minimum mandatory sentences for persons convicted of high-level trafficking in narcotics and dangerous drugs." I took particular note of the task force recommendation that President Ford's proposal be expanded to include high-level traffickers of barbiturates and amphetamines.

The most effective way to curb the flow of illicit drugs is to immobilize substantial trafficking networks through the prosecution and conviction of their leaders. I concur in the White Paper recommendation that:

Federal law enforcement efforts should focus on the development of major conspiracy cases against the leaders of highlevel trafficking networks, and should move away from "street-level" activities.

In calendar year 1974, DEA special agents in the United States spent 28 percent of their time in pursuit of class I violators, or those at the high level of traffic; 19 percent investigating class II's; 45 percent of their time on class III's; and 8 percent of their time on IV's. Even fewer of the arrests made were class I or II violators.

According to DEA Administrator Bensinger, however, the trend has improved. He told the subcommittee that class I, major, heroin violator arrests have increased by 106 percent in the 9-month period ending March 31, 1976, and class IV street-level arrests have decreased significantly.

These are encouraging signs but only time will determine whether DEA has finally focused its limited resources on the class I violators. The New York Drug legislation was recently amended to reflect this priority. The so-called Rockefeller shotgun approach clogged the courts but failed to sharpen the system's focus on major traffickers. To help assure this long-term objective the subcommittee is considering provisions that would restrict Federal drug control jurisdiction and authority to major interstate and international cases.

In 1973, the subcommittee desired to significantly strengthen the hand of our law enforcement officials in dealing with one of the most dangerous types of criminals in our society-major dealers who are the purveyors of heroin to our young people. This concern was reflected in the public menace amendment to S. 800, introduced by Senators Bayn and Tal-MADGE. This amendment was aimed at the backbone of heroin trade and distribution in this country, not addicts who are supporting a habit, for whom current laws are adequate, but the highlevel traffickers who hook others. The Senate passed this amendment on April 3, 1973. It was not favorably reported from the House Judiciary Committee before the close of the 93d Congress. Similar provisions were included in S. 1880 the Violent Crime and Repeat Offender Control Act of 1975, which I introduced

There is no criminal element in this country which is more dangerous and despicable than those who are the purveyors of heroin to our young people. My approach is not aimed at addicts who are already hooked and who are trying to support their habits. For such people laws already on the books and adequate treatment—together with the capture and imprisonment of big time dealers—offer the best hope. My target is those who have hooked others and not themselves.

The Bureau of Alcohol, Tobacco and Firearms similiarly should focus their limited resources away from "the street" and periodic nickel and dime raids and toward "the suites." Such a joint focus by ATF and DEA at our Mexican border would help disrupt the very significant links between illicit traffic in drugs and firearms so well documented in the subcommittee volumes on firearms control

and recently highlighted by our colleague Senator LLOYD BENTSEN.

Last year Ford's bill neither distinguished as to amount or purity of the drug involved, it would even mandate a 3-year jail term for one who illegally transfers a portion of a methadone maintenance patient's average 100 milligram dosage. Although we have not received an assessment from the Bureau of Prisons as to the impact of the President's proposal, we can rest assured that multimillions of nonexistent dollars would be required for new prisons. This shotgun-nonspecific approach should be rejected.

While, I believe present statutes are adequate for addicts, the subcommittee is considering an amendment to the 1970 act to include an "attempt" section punishable by up to 5 years imprisonment, that would apply to nonaddict traffickers; such provision may provide the necessary impetus for such nonaddicts to cooperate in the prosecution of major trafficking cases.

A sound drug enforcement policy must reflect the reality that all drugs are not equally dangerous, and all drug use is not equally destructive. The Domestic Council White Paper on Drug Abuse stresses this theme when it concludes that enforcement efforts should therefore concentrate on drugs which have a high addiction potential, and treatment programs should be given priority to those individuals using high-risk drugs, and to compulsive users of any drugs.

Another serious problem with current Federal law and practice that is likely to be addressed during the consideration of the measure I introduce today is so-called bail reform. Last year I agreed with President Ford's concern about bail jumpers. He emphasized the President's concern about bail jumpers. He emphasized in the April 22, 1976, message one aspect of the problem when he stated:

These offenders simply fiee to their homelands upon posting bail. Then, they serve as walking advertisements for international traffickers attempting to recruit other couriers.

Yet, title II of the DEA legislation, S. 3411, would enable judges to deny bail to almost anyone arrested for a drug offense if otherwise suspected, such as nonresident aliens. Thus, the nearly 7 million aliens admitted last year under nonimmigrant status whether foreign government officers, temporary visitors for business, or pleasure, and a myriad of other bases for admission become suspect under S. 3411.

Rather than resort to preventive detention which would reverse the basic tenet of our criminal justice system—the presumption of innocence—what we lack today is a realistic application of bail within the confines of the constitutional protection of the eighth amendment. We need full and expeditious implementation of the Speedy Trial Act to assure that justice is not only fair but swift and certain.

Incidentally, I recently reviewed the status of the 540 Americans in Mexican jails, mostly on drug offenses, with an

eye to numerous allegations of torture and police brutality and general outrage at the fact that these Americans were "languishing" in foreign jails. The impact and significance of our cherished presumption of innocence was unmistakably clear when juxtaposed to the plight of these persons. The reliance in Mexico on the Napoleonic Code's "guilty until proven innocent" had assured that some innocent persons could be held as long as a year and that many would not be able to prepare an adequate defense. It is ironic that the Ford White House recommended a similar denial of basic rights for suspected citizens and nonresident aliens.

Aside from constitutional and humanitarian objections, preventive detention has failed to accomplish its goals in the District of Columbia. The 1972 Vera Institute-Georgetown University Law Center Study as well as testimony before the subcommittee last week supported this conclusion. Earl Rauh, the chief assistant U.S. attorney, testified that of the more than 30,000 felony cases handled by the District of Columbia criminal justice system the preventive detention procedure has been used only 70 times in the last 5 years. Even on practical grounds such a track record hardly bespeaks adoption of this approach on a national basis.

I will carefully consider for incorporation in the drug legislation, however, provisions that mandate the denial of bail when necessary to prevent the flight of major drug traffickers. These provisions could include specific judicial guidelines.

An additional reform under consideration concerns major narcotics traffickers who jump bail.

To help remedy this growing problem we may amend the Federal law to make the penalty for bail jumping equal to that of the underlying substantive offense.

These are the type of realistic changes we need to more effectively combat those who accumulate incredible profits from the misery of hundreds of thousands.

A primary premise of sensible legislation is that the Federal Government must act more decisively to attempt to take the easy profits out of major drug trafficking. I support provisions that would require the forfeiture of the proceeds used or intended to be used in illegal narcotic or dangerous drug transactions.

These forfeiture provisions should apply to subsequent profits or value generated by the investment of the tainted proceeds. We must disrupt major narcotic distribution lines and attempt to provide a greater degree of deterrence and risk for these kingpins.

As policymakers we must place the nature and extent of heroin traffic in perspective. As Assistant Secretary of the Treasury David Macdonald told the subcommittee last summer, it is important to recognize that what we are talking about "is big business. In terms of dollars, it is one of the largest industries in the United States and exceeds the

gross sales of many multinational corporations."

The Treasury Department estimates that the retail value of heroin sold in the United States each year is in the neighborhood of \$7 billion. In my view this is a conservative estimate. Others speculate that the domestic heroin market sales are in excess of \$10 billion annually. In 1972, the entire domestic prescription drug industry accounted for \$5.4 billion in sales, or significantly less than the domestic heroin industry, which incidentally pales by comparison with our legitimate domestic narcotic market. The drug industry employed 143,985 persons in the United States and in the latest year for which data are available paid a total of nearly a billion dollars in taxes. The outlaw drug industry paid negligible taxes, if any.

What does it mean when one says that high level drug dealing is very profitable? According to analysis of the distribution hierarchy gross profits are considerable at every level. At the higher levels of the distribution systems, however, the operating costs-basically wages and stock finance costs-are claimed to be a larger percentage of the value added than at lower levels. So-called average profits in this market would be considered astronomical in most markets with which I am familiar. The rate of return on investment is approximately as follows: 300 percent for the importer; 100 percent for the kilo connection; 145 percent for the connection-or ounce man; 114 percent for the weight dealer: 124 percent for the street dealer; and 50 percent for the juggler or the seller from whom the average street addict buys heroin.

According to Sterling Johnson, Jr., special narcotics prosecutor for New York City, an active seller at a level comparable to the street dealer-one-eighth ounce of diluted heroin selling for an average price of \$55-can clear \$500 to \$1,000 profit a day. A key dealer in the Baltimore, Md., area was recently sent to prison for a 15-year term. As the No. 2 person in Baltimore heroin trade he was clearing \$140,000 a week in 1973. Kilo importers in Harlem are reportedly clearing \$150,000 a week and their distributors a paltry \$50,000 a week. It is estimated that these dealers take home more than \$4 million every week in this one community. These figures are all "before taxes" for little revenue is collected from this multibillion-dollar-ayear business.

Obviously these illicit activities generate large flows of money both domestically and internationally. Secretary Macdonald reported to the subcommittee that "hundreds of millions of dollars, usually in the form of currency, are moved out of the United States annually to pay foreign producers and processors for their services." He went on to say that "within the United States, drugs are also a cash-and-carry business." In a recent case a major trafficker was arrested with \$1 million in cash in his possession.

I believe that as a basic theme of our drug law strategy we should attack drug smugglers and traffickers through the currency and profits generated by their illegal activity.

High-level traffickers, who may be insulated from the illegal merchandise and consequently cannot readily be convicted for drug violations are often vulnerable to financially oriented investigations. As Secretary Macdonald pointed out last summer such an approach "could have greater impact than by concentrating solely on the drug transactions themselves." In this connection the United States-Swiss Mutual Assistance Treaty in Criminal Matters, recently ratified by the Senate should help to expedite the exchange of information relative to the international aspects of this dirty, tainted trade. By carefully monitoring the vast flow of currency and monetary instruments important information is developed with respect to narcotics trafficking

To help facilitate the prosecution of major trafficker couriers, serious consideration should be given to clarify the time frame for violations relating to traffickers' proceeds and by granting additional authority to search persons suspected of smuggling tainted drug proceeds in excess of \$5,000 out of the country. This could include fines that are far more than those under present law which any major traffickers could assume as a cost of doing business.

I have been concerned that DEA reliance on techniques in which their agents and informants use Federal moneys to purchase illegal narcotics of information may be far too costly and even counterproductive. There is some evidence that these practices, known as PE—purchase of evidence—and PI—purchase of information—may actually expand the narcotic trade.

These practices should also be carefully assessed.

To even the casual student of the activities of those who control the flow of heroin and other dangerous drugs in the United States one thing is strikingly clear: they take in exorbitant profits and pay no income tax.

I was especially pleased that President Ford stressed, in his drug message, the need to reestablish the Internal Revenue Service tax enforcement program aimed at high-level drug traffickers.

The IRS program aimed specifically at major drug traffickers was announced by the former President in June 1971, and the Congress then voted emergency funds for this vital and worthwhile initiative. Though a recent review of the impact of this program by the Domestic Council Drug Abuse Task Force characterized it as "extremely successful," all is not well with this special attempt to tax narcotics merchants. In fact, since 1973, after an impressive 18-month track record, the current IRS Commissioner downgraded and eventually deemphasized-some would assert dismantled—the program.

It appears that the Internal Revenue Service is in the processes of reconsidering the viability of the NTTP. Whether this apparent reassessment was voluntary or not should be left to the speculators; but, coincidentally, the day before our first hearing on the President's drug message, July 27, 1976, the Administrator of DEA and the Commissioner of the

Internal Revenue signed a memorandum of understanding regarding the Presidential directive to reestablish a tax enforcement program aimed at high level drug trafficking.

The ostensible objectives of the new agreement as well as the development and track record of the NTTP should be a top priority for the new Commissioner and for ODAP.

In addition to provisions which will assist the detection of couriers smuggling tainted proceeds out of the country, we should assess amendments to facilitate the detection and prosecution of narcotics smugglers who use seagoing vessels, including private yachts and pleasure boats. This so-called deep-six connection has developed into an integral conduit for major narcotics smugglers and distributors.

The Commissioner of Customs, Mr. Vernon Acree, explained this growing problem to the subcommittee, in part as follows:

The high speed and fuel carrying capabilities of today's small boats permits them to travel distances which were not envisioned when the vessel reporting requirements were enacted in 1930. Thus, a small boat can journev from our eastern coast to larger vessels hovering off-shore outside the 12 mile Customs waters, or to the Bahamas or other nearby foreign islands for the purpose of picking up narcotics. They may then return to the U.S., pull into a small cove or marina and unload the drugs. Some of these boats will then call Customs to report their arrival, while others will ignore this requirement. In either case, the present reporting requirements are virtually useless since any contraband will have been removed before Customs officers arrive to inspect the vessel.

This problem has become particularly acute in States including Florida where private yachts and pleasure vessels, with easy access to nearby foreign islands, the high seas and the United States' inland waterways, complicate detection. Further magnifying the problem is the fact that hard evidence has been developed establishing that foreign flag vessels are moving multi-ton loads of marihuana and smaller portions of hashish to positions on the high seas adjacent to the United States eastern and gulf coasts. At a position usually between 40 and 60 miles offshore, the mother ship-or hovering is met, under cover of darkness, by small vessels that take on a portion of the load for introduction into the United States. The mother ship then moves to the next rendezvous point where similar discharges are made. When the mother ship is empty it returns to its country of origin without ever having entered U.S. waters.

To respond more effectively to these special distribution channels and to address the fact that many vessels consistently ignore current law changes in the relevant reporting requirements should be considered.

As I mentioned earlier we are concerned that the reorganization plan No. 2 processed by the Government Operations Committee in 973, though not without merit, has resulted in the under utilization or misdirection of intelligence gathering and dissemination, especially at our borders and most importantly our Southwestern border. The full utilization of

Customs intelligence and investigative resources is a necessary step in bringing Federal narcotics enforcement effectiveness to its highest possible level. It should be recalled that narcotics traffic is a giant, incredibly profitable industry. Even if it were taxed comparable to the level of our domestic prescription drug industry-it would owe the American taxpayers at least \$1 billion or every American citizen \$5 each year. Thus these merchants of death-by the most conservative and cautious assessment-would owe more in taxes than the combined Federal drug abuse law enforcement and Federal drug abuse prevention budgets.

There is little doubt that the drug law enforcement task at hand is substantial. Thus, it is even more essential than ever to focus resources at our borders where high purity narcotics are traded in volume. It is with this focus that we can most effectively disrupt key distribution networks.

Another unfortunate aspect of reorganization plan No. 2 is that though the Government Operations Committee cited the benefit of a single focal point for coordinating Federal drug enforcement with that of State and local authorities, the plan as approved did not contain stipulations to prevent Federal inter-ference with State and local drug law enforcement activities.

As I indicated, in the discussion of Federal drug control jurisdiction, we will consider restricting Federal enforcement agencies statutorily to interstate and international major trafficking cases. While we are concerned that Federal efforts do not erode local initiative and accountability, we believe that the Federal Government should expand its programs of assistance to State and local drug enforcement officials. The controlled substance units and diversion investigation units should be expanded to assist State and local investigation and prosecution of major diversion and trafficking

In fact, I will recommend that DEA be authorized to make grants to State and local governments for these purposes. Now that the programs are fully operational both the management and funding of these efforts should be the responsibility of DEA not LEAA.

The measure I introduce today will provide appropriate time to develop the full Carter administration drug prevention and control program and the vehicle to help set the stage for its development.

During the 6 years as chairman of the Juvenile Delinquency Subcommittee, I especially appreciate the enthusiastic support of the Senate leadership for my efforts and invite my colleagues to assist us in the enactment of a sensible statutory response to high risk drugs and to major drug traffickers. It is about time and it is clear that the taxpayers of this country demand and reserve no less:

Mr. President, I ask unanimous consent that the bill and accompanying letter be printed in the RECORD at this point.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 1232

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 709(a) of Part F of title II of the Comprehensive Drug Abuse Prevention and Control Act of 1970, as amended (21 U.S.C. 904(a)) is amended by inserting in lieu thereof:

(a) There are authorized to be appropriated \$182,000,000 for the fiscal year ending September 30, 1978, together with such additional amounts as may be necessary in each year for increases in salary, pay, retirement, and other employee benefits authorized by law, and for other nondiscretionary costs which arise subsequent to the date of enactment of this Act, and such sums as may be necessary for the fiscal year ending September 30, 1979.".

OFFICE OF THE ATTORNEY GENERAL, Washington, D.C., April 1, 1977.

The VICE PRESIDENT, U.S. Senate, Washington, D.C.

DEAR MR. VICE PRESIDENT: There is transmitted herewith a legislative proposal which amends section 709 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 940) to provide appropriations authorization to the Attorney General for fiscal years 1978 and 1979 to carry out the administration and enforcement of the Act.

At present section 709 of the Act as amended by P.L. 93-481 provides no appropriations authority beyond fiscal year 1977.

The proposed legislation would amend section 709 to authorize appropriations for the expenses of carrying out the functions of the Attorney General under the act in the amount of \$182,000,000 for the fiscal year ending September 30, 1978, together with such additional amounts as may be necessary in each year for nondiscretionary costs which arise such as increases in salary, pay, retirement, and other employee benefits authorized by law, and such sums as may be necessary for the fiscal year ending September 30, 1979.

We urge the earliest consideration for the legislation in order to provide the authority to continue domestic drug enforcement programs at all levels.

The Office of Management and Budget has advised the submission of this legislation is consistent with the program of the President.

Sincerely,

GRIFFIN BELL. Attorney General.

By Mr. HART (for himself and Mr. ABOUREZK):

S. 1233. A bill to provide emergency price and income protection for farmers for the 1977 crops, to assure consumers an abundance of food and fiber at reasonable prices, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

EMERGENCY FOOD AND AGRICULTURE ACT OF 1977

Mr. HART. Mr. President, today, I am introducing for myself and my colleague, Senator Abourezk, an emergency farm bill which responds to one of the greatest needs of our Nation's agricultural producers: Equity in the form of parity prices for their products. Over the last few months, I have visited with a good many farmers, and I have found their situation to be desperate. Emergency congressional action is needed-and justified if this Nation is to maintain its position as the world's leading exporter of food and the primary source of hope for the world's hungry people. The agri-

cultural producers of this great country must receive fair prices for their commodities if they are to stay in business and continue to produce an abundance of food.

Learning to live with an abundance of food has been one of the thorniest problems of the last three decades. A whole range of public policies has been proposed, tried, and abandoned. Yet the troubles continue. It seems as though the only common thread throughout the past has been that at the end of each passing year, there are fewer people still willing and able to care for the land and produce our food.

This past year has provided a classic example of the farmers' plight. A blistering drought, a blizzard with recordbreaking winds, and unusually bitter cold have taken a huge toll on crops and livestock. They still face the summer storms. What survives can be harvested and sold for a loss.

Mr. President, I admit that this is a rather gloomy picture, but it fairly well mirrors what a good many farmers in my State have gone through before and will probably face again. I recognize that we cannot do anything to help with the weather problems, but we can at least provide some help in relation to the prices those individuals will receive for their commodities.

This is not "special interest" legislation. When the agricultural sector of our economy is shortchanged, the impacts are felt throughout this country.

When farmers do not make enough money, small town business people soon find themselves in hard times. Employment opportunities in rural areas disappear, and young people have to move to urban areas to find jobs, thus creating more pressure on our sorely taxed public service systems. The many industries that supply farmers are also affected. Decreased demand for their goods leads to cutbacks in their production and job losses for their employees. So in the long run, every sector of our economy is negatively affected, including consumers. The consuming public will in all likelihood be trading cheap food in the short run for shortages of food and high prices in the long run.

By denying our agricultural producers fair prices for their commodities, we reinforce the trend toward covering our prime lands with asphalt and concrete. If a person cannot make a living off the land, then he has no choice but to sell it to the highest bidder.

When farmers are short of money, critical conservation programs are also slowed or terminated. Producers have no incentive to invest labor and money in land they may lose. Conservation programs are essential to this Nation if we are to maintain our productive lands and to have them available to meet the nutrition needs of our children. We cannot afford policies which discourage adequate care of the land.

Mr. President, I sense the spread of a feeling among the residents in the rural areas that they are going to be the sacrificial lambs on the economic altar. They fear they will be called upon to continue to produce and sell their goods at a loss, because they represent such a small por-

tion of the population. Every time commodity prices increase, the harbingers of doom cry "inflation, inflation." I submit that if current trends of low commodity prices and increasing costs continue, those cries will change to "depression, depression." The effects of continuing to let our agricultural sector be shortchanged cannot be isolated out in the country

Agriculture is one of the primary components of our Nation's economic base. If we allow it to fall into disrepair and crumble, then all else built on that base stands a very good chance of following.

Mr. President, the time has come to squarely face this issue of low commodity prices and act positively to make agricultural producers and all the people of rural America full partners in our Nation's progress.

Mr. President, I ask unanimous consent that a section-by-section analysis of the bill and the bill itself be printed

in the RECORD at this point.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 1233

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Food and Agriculture Act of 1977"

TITLE I—PAYMENT AND LIMITATION FOR WHEAT, FEED GRAINS, AND UP-LAND COTTON

SEC. 101. Section 101 (1) of the Agricultural Act of 1970, as amended, is amended by striking out "\$20,000" and inserting in lieu thereof "\$30,000".

TITLE II-DATRY DAIRY PRICE SUPPORT

SEC. 201. Section 201 of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof a new subsection as follows:

(d) Notwithstanding the foregoing provisions of this section, effective for period beginning with the date of enactment of this subsection and ending on March 31, 1978, the support price of milk shall be established at no less than 90 per centum of the parity price therefor, on the date of enactment, and the support price shall be adjusted thereafter by the Secretary at the beginning of each quarter, beginning with the second quarter of the calendar year 1977, to reflect any estimated change during the immediately preceding quarter in the index of prices paid by farmers for production items, interest, taxes, and wage rates. Such support prices shall be announced by the Secretary not later than thirty days prior to the beginning of each quarter.".

PRODUCER HANDLERS

SEC. 202. Section 206 of the Agricultural Act of 1970, as amended, is amended by in-serting after "Agriculture and Consumer Protection Act of 1973" the following: "and the Emergency Food and Agriculture Act of 1977".

TITLE III-WOOL PROGRAM

SEC. 301. The National Wool Act of 1954, as amended, is amended by adding at the

end thereof a new section as follows:
"Sec. 711. Notwithstanding any other provision of this Act, in 1977 wool and mohair shall be supported at not less than 100 per centum of the parity price therefor.".

TITLE IV-WHEAT PROGRAM

LOAN RATE AND TARGET PRICE

SEC. 401. Effective for the 1977 crop, section 107 of the Agricultural Act of 1949, as it appears in section 401 of the Agricultural Act of 1970, as amended by the Agriculture and Consumer Protection Act of 1973, is amended to read as follows:

'SEC. 107. Notwithstanding any other provision of law-

"(a) Loans and purchases on each crop of wheat shall be made available at no less than 90 per centum of the established price.

(b) If a set-aside program is in effect for any crop of wheat under section 379b(c) of the Agricultural Adjustment Act of 1938, as amended, payments, loans, and purchases shall be made available on such crop only to producers who comply with the provisions of such program.

(c) Payments shall be made for each crop of wheat to the producers on each farm in an amount determined by multiplying (i) the amount by which the higher of-

"(1) the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary, or

(2) the loan level determined under sub-

section (a) for such crop

is less than the established price per bushel, times in each case (ii) the allotment for the farm for such crop, times (iii) the projected vield established for the farm with such adjustments as the Secretary determines necessary to provide a fair and equitable yield. established price per bushel for the crop of wheat is determined to be \$4.98. If the Secretary determines that the producers are prevented from planting any portion of the farm acreage al-lotment to wheat or other nonconserv-ing crop because of drought, flood, or other disaster or condition beyond the control of the producer, the rate of payment on such portion shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. If the Secretary determines that, because of such a disaster or condition, the total quantity of wheat (or of cotton, corn, grain sorghums, or barley planted in lieu of wheat) which the producers are able to harvest on any farm is less than the projected yield of wheat (or of cotton, corn, grain sorghums, or barley planted in lieu of wheat) for the farm, the rate of payment for the deficiency in production below 100 per centum shall be the larger of (A) the fore-going rate, or (B) one-third of the established price. The Secretary shall provide for the sharing of payments made under this subsection for any farm among the producers on the farm on a fair and equitable basis.".

TITLE V-FEED GRAIN PROGRAM

LOAN RATE AND TARGET PRICE

SEC. 501. (a) Effective only with respect to the 1977 crop of feed grains, section 501 of the Agricultural Act of 1970, as amended by the Agriculture and Consumer Protection Act of 1973, is amended by-

(1) amending section 105 (a) (1) of the Agricultural Act of 1949, as it appears there-

in, to read as follows:

"(a) (1) The Secretary shall make available to producers loans and purchases on the 1977 crop of corn at not less than 90 per centum of the established price."; and

(2) amending section 105(b)(1) of the Agricultural Act of 1949, as it appears there-

in, to read as follows:
"(b) (1) In addition, the Secretary shall make available to producers payments for the 1977 crop of corn, grain sorghums, and, if designated by the Secretary, barley, computed by multiplying (i) the payment rate, times (ii) the allotment for the farm for such crop, times (iii) the yield established for the farm for the preceding crop with such adjustments as the Secretary determines necessary to provide a fair and equitable yield. The payment rate for corn shall be the amount by which the higher of—

"(A) the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary, or

"(B) the loan level determined under sub-

section (a) for such crop

is less than the established price per bushel. The established price per bushel for the 1977 crop of corn is determined to be \$3.42. The payment rate for grain sorghums and, if designated by the Secretary, barley, shall be such rate as the Secretary determines fair and reasonable in relation to the rate at which payments are made available for corn. If the Secretary determines that the producers on a farm are prevented from planting any portion of the farm acreage allotment to feed grains or other nonconserving crop, because of drought, flood, or other natural disaster or condition beyond the control of the producer, the rate of payment on such portion shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. If the Secretary determines that, because of such a disaster or condition, the total quantity of feed grains (or of wheat, or cotton planted in lieu of the allotted crop) which the producers are able to harvest on any farm is less than the yield of feed grains (or of wheat, or cotton planted in lieu of the allotted crop) established for the farm, the rate of payment for the deficiency in production below 100 per centum shall be the larger of (A) the foregoing rate, or (B) one-third of the established price.".

TITLE VI-UPLAND COTTON PROGRAM COTTON PRODUCTION INCENTIVES; LOAN RATE AND TARGET PRICE

SEC. 601. Effective only for the 1977 crop of upland cotton, paragraphs (1) and (2) of section 103(e) of the Agricultural Act 1949 as they appear in section 602 of the Agricultural Act of 1970, as amended by the Agriculture and Consumer Protection Act of 1973, are amended to read as follows:

The Secretary shall upon presentation of warehouse receipts reflecting accrued storage charges of not more than 60 days make available for the 1977 crop of upland cotton to cooperators nonrecourse loans for a term of 10 months from the first day of the month in which the loan is made at such level as will reflect for Middling one-inch upland cotton (micronaire 3.5 through 4.9) at average locations in the United States not less than 90 per centum of the established price. Notwithstanding the foregoing, if the carryover of upland cotton as of the beginning of the marketing year for the 1977 crop exceeds 7.2 million bales, producers on any farm harvesting cotton of such crop from an acreage in excess of the base acreage allotment for such farm shall be entitled to loans and purchases only on an amount of the cotton of such crop produced on such farm determined by multiplying the yield used in computing payments for such farm by the base acreage allotment for

"(2) Payments shall be made for each crop of cotton to the producers on each farm at a rate equal to the amount by which the higher of-

"(A) the average market price received by farmers for upland cotton during the calendar year which includes the first five months of the marketing year for such crop, as de-

termined by the Secretary, or "(B) the loan level determined under paragraph (1) for such crop is less than the established price per pound. The established price per pound for the 1977 crop of cotton is determined to be 82.84 cents. If the Secretary determines that the producers on a farm are prevented from planting any portion of the allotment to cotton because of drought, flood, or other natural disaster, or condition beyond the control of the producer. the rate of payment for such portion shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. If the Secretary determines that, because of such a disaster or condition, the total quantity of cotton which the producers are able to harvest on any farm is less than the average yield established for the farm, the rate of payment for the deficiency in production below 100 per centum shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. The payment rate with respect to any producer who (i) is on a small farm (that is, a farm on which the base acreage allotment is ten acres or less, or on which the yield used in making payments times the farm base acreage allotment is five thousand pounds or less, and for which the base acreage allotment has not been reduced under section 350(f)), (ii) resides on such farm, and (iii) derives his principal income from cotton produced on such farm, shall be increased by 30 per centum; but, notwithstanding paragraph (3), such increase shall be made only with respect to his share of cotton actually harvested on such farm within the quantity specified in paragraph (3).".

TITLE VII-SOYBEAN PROGRAM

LOAN RATE AND TARGET PRICE

SEC. 701. Effective for the 1977 crop of soy beans, title I of the Agricultural Act of 1949 is amended by adding at the end thereof a new section as follows:

"SEC. 108. Notwithstanding any other pro-

vision of law-

"(a) Loans and purchases on each crop of soybeans shall be made available at not less than 90 per centum of the established

"(b) Payments shall be made for each crop of soybeans to the producers on each farm in an amount determined by multiplying (i) the amount by which the higher of-

(1) the national weighted average market price received by farmers during the first five months of the marketing year for such crop,

as determined by the Secretary, or "(2) the loan level determined under sub-

section (a) for such crop

is less than the established price. The established price for the 1977 soybean crop is determined to be \$7.54 per bushel. If the Secretary determines that the producers on a farm are prevented from planting any portion of the farm acreage to soybeans because of drought, flood, or other natural disaster or condition beyond the control of the producer, the rate of payment on such portion shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. If the Secretary determines that, because of such a disaster or condition, the total quantity of soybeans which the producers are able to harvest is less than the yield of soybeans established for the farm, the rate of payment for the deficiency in production below 100 per centum shall be the larger of (A) the foregoing rate, or (B) one-third of the established price.".

TITLE VIII-RICE PROGRAM

PAYMENTS AND LOANS

SEC. 801. Effective for the 1977 crop of rice, paragraphs (1) and (2) of section 101(g) of the Agricultural Act of 1949 are amended to read as follows:

The established price for the purpose of making payments on rice under this sub-section shall be \$13.60 per hundredweight for the 1977 crop of rice.

"(2) The Secretary shall make available, to cooperators in the several States of the United States, loans and purchases on the 1977 crop of rice at a rate equal to \$12.24 per hundredweight.".

TITLE IX-DRY EDIBLE BEANS

SEC. 901. Effective for the 1977 crop of dry edible beans, title I of the Agricultural Act of 1949 (as amended by section 701 of this Act) is further amended by adding at the end thereof a new section as follows:

PEACE CORPS ACT AMENDMENTS

vision of law-

(a) Loans and purchases on each crop of dry edible beans shall be made available at not less than 90 per centum of the established price.

Payments shall be made for each crop of dry edible beans to the producers on each farm in an amount determined by

multiplying (i) the amount by which the higher of-

(1) the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary, or

(2) the loan level determined under sub-

section (a) for such crop.
is less than the established price. The established price for the 1977 crop of dry edible beans is determined to be \$26.40 per hundredweight. If the Secretary determines that the producers on the farm are prevented from planting any portion of the farm acreage to dry edible beans because of drought, flood, or other natural disaster or condition beyond the control of the producer, the rate of payment on such portion shall be the larger of (A) the foregoing rate, or (B) one-third of the established price. If the Secretary determines that, because of such a disaster or condition, the total quantity of dry edible beans which the producers are able to harvest is less than the yield of dry edible beans established for the farm, the rate of payment for the deficiency in production below 100 per centum shall be the larger of (A) the foregoing rate, or (B) one-third of the established price.".

EMERGENCY FOOD AND AGRICULTURE ACT of 1977

AN ANALYSIS

The "Emergency Food and Agriculture Act of 1977" is a one-year bill providing for setting the established price (target price) and loan rates for the 1977 wheat, feed grain, cotton, soybean, rice and dry edible bean crops. The purpose of the bill is to increase the established price (target price) and loan levels above those which otherwise would be in effect for the 1977 crop under the provisions of "Agriculture and Consumer Protection Act of 1973

Other provisions of the Emergency Bill

include:

Raising the payment limitations for applicable crops;

Raising the minimum price support of milk to 90 percent of parity and provides for mandatory quarterly adjustments;

Extending the Wool Act for 1977 and sets the support price for wool and mohair at not less than 100 percent of parity;

Extending the provisions of the program to include soybeans and dry edible beans;

Amending the disaster payment provisions of the program to make producers eligible for payments for losses on any amount of their production:

EXPLANATION OF PROVISIONS

TITLE I-PAYMENT LIMITATIONS

Sec. 101. Increases the payment limitation for wheat, feed grains and cotton from \$20,000 to \$30,000. This increase is adjusted in relation to the substantial increases in the costs of production, including machinery, fuel, labor, fertilizer and interest rates.

TITLE II-DAIRY PRICE SUPPORT

Sec. 201. Increases the support level for milk from 80 to 90 percent of parity. The bill also mandates the Secretary to adjust the support level on a quarterly basis. Currently the Secretary may adjust the rate if he deems it necessary; this provision requires him to do so on a quarterly basis.

Sec. 202. Extends the legal status of producer handlers for the period of the bill.

TITLE III-WOOL PROGRAM

LOAN RATE AND TARGET PRICE

Sec. 301. Establishes the support price for wool and mohair at 100 percent of parity.

TITLE IV-WHEAT PROGRAM

LOAN RATE AND TARGET PRICE

Sec. 401. Sets the minimum loan rate at 90 percent of the established price.

Sets the established price for the 1977 wheat crop at \$4.98 per bushel.

With the established price set at \$4.98 per bushel, the effective loan rate would be \$4.48. The established price of \$4.98 is the parity

price for wheat as of February 15, 1977. The prevented planting provisions are retained and the disaster payment formula is amended to provide for payment on the amount of loss suffered which is less than the allotment times the projected yield.

TITLE V-FEED GRAIN PROGRAM

LOAN RATE AND TARGET PRICE

SEC. 501. Sets the minimum loan rate at 90 percent of the established price.

Sets the 1977 established price for corn at

\$3.42 per bushel.

The payment rate provisions for grain sorghum and barley in relation to corn are the same as in the current law.

The prevented planting and disaster payment provisions are the same as for wheat.

TITLE VI-UPLAND COTTON

LOAN RATE AND TARGET PRICE

SEC. 601. Sets the loan rate for cotton at 90 percent of the established price per pound.

Sets the 1977 established price for cotton at 82.84 cents per pound.

The prevented planting and disaster payment provisions are the same as for wheat.

TITLE VII-SOYBEAN PROGRAM

LOAN RATE AND TARGET PRICE

SEC. 701. Provides that there shall be established for soybeans an established price (target price) and loan rate for the 1977

Sets the loan rate at 90 percent of the es-

tablished price.

Sets the 1977 established price for soybeans at \$7.54 per bushel.

The prevented planting and disaster payment provisions are similar to those for wheat and feed grains.

TITLE VIII—RICE PROGRAM PAYMENTS AND LOANS

SEC. 801. Sets the loan rate for the 1977 crop of rice at \$12.24 per hundredweight. Sets the 1977 established price for rice at

\$13.60 per hundredweight.

TITLE IX-DRY EDIBLE BEANS

SEC. 901. Provides that there shall be established for dry edible beans an established price (target price) and loan rate for the 1977 crop.

Sets the loan rate at 90 percent of the

established price.
Sets the 1977 established price for dry edible beans at \$26.40 per hundredweight.

The prevented planting and disaster payment' provisions are similar to those for wheat and feed grains.

By Mr. NELSON:

S. 1234. A bill to amend the Wild and Scenic Rivers Act; to the Committee on Energy and Natural Resources.

WILD AND SCENIC RIVERS ACT AMENDMENTS

Mr. NELSON. Mr. President, this legislation that amends the Wild and Scenic Rivers Act is a very straightforward proposal. It does two things: First, raises the authorization for land acquisition from its current ceiling of \$11,768,550 to \$21,768,550, an increase of \$10 million, and second, exempts the Upper St. Croix River from the 50-percent limitation on the use of condemnation authority. Both provisions are necessary, in my judgment, if the Upper St. Croix and Nemekagon Rivers are to have the perpetual Federal protection envisioned by the Congress when the Wild and Scenic Rivers Act became law.

The St. Croix, like many other segments of the National Park Service that are in the acquisition stage, is currenty suffering from the effects of inflation. Land values along prime recreational and scenic rivers all across this Nation have skyrocketed in the past few years. Land acquisition for the protection of the St. Croix, as outlined in its master plan, has been halted—the Park Service has run out of authorization. The job has not been completed, the intent of the Congress remains unmet. The Park Service estimates another \$10 million in land acquisition authority is needed to complete the task. It is my understanding that both the Park Service and the Interior Department support this additional request for funding.

The second problem facing the St. Croix is also a serious one that needs quick attention. The St. Croix and Nemekagon River project is somewhat unique. It encompasses 200 river-miles. Almost 45 of those miles, almost one-fourth of the total is owned by the Northern State Power Co.—NSP. The 1968 legislation adding the St. Croix to the national effort is based on the presumption that the company will donate a substantial portion of these lands.

We have made good progress in acquiring land and getting the program started before the authorization ceiling was reached. Over 77 miles of river have been acquired. The Park Service has yet to acquire another 28.2 miles of private lands. In addition, almost 36 miles in publicly held land remains to be brought into St. Croix program.

The problem presented by the large donation is a significant one for the river. Because of the donation of NSP land, the Park Service is now within 2,000 acres of reaching the 50-percent limitation. Once this ceiling is reached, and it will be reached as soon as the power company donates another parcel of land, the Park Service will be statutorily prohibited from acquiring any other land for the project by using the power of eminent domain, by condeming land.

In the condemnation authority is denied, the Interior Department along the Upper St. Croix, the protection of the river, the intent and purposes of the Wild and Scenic Rivers Act may never be met on one of the most outstanding River segments anywhere in the country. The St. Croix deserves the full protection of the law.

By Mr. SPARKMAN (by request): S. 1235. A bill to further amend the Peace Corps Act; to the Committee on Foreign Relations. PEACE CORPS ACT AMENDMENTS

Mr. SPARKMAN. Mr. President, by request, I introduce for appropriate reference a bill to amend further the Peace Corps Act.

It has been requested by the Director of the Peace Corps and I am introducing it in order that there may be a specific bill to which Members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask unanimous consent that the bill be printed in the Record, together with the letter from the Director of the Peace Corps to the President of the Senate dated March 25, 1977, and the sectionby-section analysis of the bill.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1235

Be it enacted by the Senate and House of Representatives of the United States in Congress assembled, That so much of Section 3(b) of the Peace Corps Act (22 U.S.C. § 2502 (b)) as precedes the first proviso thereof is amended to read as follows:

"There are authorized to be appropriated for fiscal year 1978 and for fiscal year 1979 such sums as may be necessary to carry out the purposes of this Act:"

SEC. 2. Section 3(c) of the Peace Corps Act (22 U.S.C. § 2502(c)) is amended to read as follows:

"(c) In addition to the amounts authorized for fiscal years 1978 and 1979, there are authorized to be appropriated for fiscal years 1978 and 1979 such sums as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.".

Washington, D.C., March 25, 1977. Hon. Walter F. Mondale, President of the Senate,

Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for your consideration is draft legislation which will enable the Peace Corps to continue to work on behalf of world peace and understanding in fiscal years 1978 and 1979. Also enclosed is a section-by-section analysis of the legisla-

The legislation will authorize appropriations for the Peace Corps of such sums as may be necessary for fiscal years 1978 and

It will also authorize the appropriation of such sums as may be necessary for fiscal years 1978 and 1979 for increases in salary, pay, retirement or other employee benefits which may be authorized by law.

The Office of Management and Budget has advised that there is no objection to the submission of this draft legislation to the Congress, and its enactment would be in accord with the program of the President.

Sincerely, Sam Brown.

PEACE CORPS ACT AMENDMENTS: SECTION-BY-SECTION ANALYSIS

Section 1 of the bill amends Section 3(b) of the Peace Corps Act (22 U.S.C. § 2502(b)) to authorize the appropriation of such sums as may be necessary for fiscal years 1978 and 1979 to carry out the purposes of the Peace Corps Act.

Section 2 of the bill authorizes the appropriation of such sums as may be necessary

for fiscal years 1978 and 1979 for increases in salary, pay, retirement, or other employee benefits authorized by law. This authorization is identical to that provided for fiscal year 1977.

> By Mr. KENNEDY (for himself, Mr. Thurmond, Mr. Clark, and Mr. Leahy):

S. 1236. A bill to amend the Internal Revenue Code of 1954 to disallow the tax deduction for first class air travel in excess of the coach class fare for such travel and for other purposes; to the Committee on Finance.

DISALLOWANCE OF FIRST-CLASS AIR TRAVEL AS A BUSINESS EXPENSE DEDUCTION

Mr. KENNEDY. Mr. President, on behalf of the Senator from South Carolina (Mr. Thurmond), the Senator from Iowa (Mr. Clark), the Senator from Vermont (Mr. Leahy), and myself, I send to the desk for appropriate reference a bill to eliminate the tax deduction for first class air fare.

The details of the proposal are outlined in a brief joint statement made today by the four of us, including a fact sheet on the issue. I ask unanimous consent that our joint statement, and the text of the bill may be printed in the RECORD.

There being no objection, the statement and bill were ordered to be printed in the RECORD, as follows:

JOINT STATEMENT OF SENATORS KENNEDY, THURMOND, CLARK, AND LEAHY INTRODUC-ING LEGISLATION TO ELIMINATE THE TAX DEDUCTION FOR FIRST CLASS AIR FARE

We are joining together today in introducing legislation to amend the Internal Revenue Code to eliminate the business expense tax deduction for first class air fare.

Over the years, the business deduction for travel and entertainment expenses has been a continuing source of controversy in the tax laws. In effect, with the marginal corporate tax rate at 48%, a corporation receives a 48 cents tax subsidy for every dollar of deductible business expenses that qualify as a tax deduction. For individual taxpayers, the subsidy may be even higher, since the marginal tax rate runs as high as 70%.

The bill disallows the difference between first class air fare and coach class air fare as a business tax deduction. The deduction for coach fare is a legitimate business expense and would continue to be allowed.

In addition, the bill also prohibits the use of appropriated funds for first class air travel by members of Congress and Federal officers and employees. We feel it is entirely proper that Federal officials should adhere to the same standards applicable to the private sector.

The revenue gain from the bill will be substantial. Based on CAB estimates of first class business travel by U.S. citizens, both internationally and domestically, the bill will produce new revenues of approximately \$400 million a year. As the recent Senate and House debates over the Third Budget Resolution have demonstrated, the achievement of significant revenue-raising tax reforms in the future may well be the key to success by Congress in balancing the budget while maintaining vital Federal programs.

But the principal justification for this legislation is the need for greater equity in our tax laws. The large annual tax subsidy for first class air travel is unjustified, and it should be ended.

Attached is a more detailed analysis of the legislation.

DENIAL OF TAX DEDUCTION FOR FIRST CLASS AIR TRAVEL

PURFOSE

Disallow as a deductible business expense the excess of commercial first class air travel fare over coach fare; coach fare would remain deductible.

Prohibit the use of appropriated funds for first class air travel by Members of Congress and Federal officers and employees.

REVENUE EFFECT

Based on CAB estimates of first class air travel, the amendment will produce a revenue gain of approximately \$400 million a year.

EXPLANATION

- 1. The Internal Revenue Code allows a tax deduction for "ordinary and necessary" business expenses. Over the years, the deduction has been abused in some cases as a subsidy for "expense account living." Travel and entertainment expenses have been a particular and continuing source of controversy, confusion, and injustice in this aspect of the tax law.
- 2. The amendment deals with only a small part of the issue—first class versus coach class commercial air travel. It does not affect travel by rail, ship or private aircraft and it does not affect meals, hotels, entertainment, etc., all of which raise separate and more difficult issues.
- 3. With a corporate tax rate of 48%, each dollar of deductible expenses saves the corporation 48 cents in tax. In the case of first class travel, the Treasury (and therefore the average taxpayer) pays half the cost of the first class ticket. For high bracket individuals, the saving is even greater—the Treasury may pay up to 70 cents of each dollar of expenses.
- 4. It is a legitimate business decision to travel by air instead of by car or train or bus or ship. But once the decision is made to travel by air, the business objective is achieved by travelling in coach class. The executive travels on the same flight, and arrives at the same time and in the same place. This is all that is required to implement the valid business decision, and it is all that should be allowed as a deductible business expense. The additional cost of first class travel is primarily a luxury item and should not be deductible.
- 5. There are many precedents for the legislation. The Internal Revenue Code and Regulations contain detailed rules limiting deductions for foreign travel and for luxury items like yachts, hunting lodges, gifts and entertainment. These areas of existing law denying business deductions are far more complex than the present proposal. In addition, in the Tax Reform Act of 1976, Congress enacted specific limits on the deduction for foreign conventions.
- 6. Since the bill is likely to increase the demand for coach class seats, the airline industry will meet the demand and the traveling public will benefit. A first class seat now takes up the space of one and one half coach seats. As airlines modify their cabin space, the total number of available seats per plane will increase, thereby relieving the crowded conditions and waiting lists that coach passengers now endure during peak travel periods, and producing a more rational allocation of space throughout the entire airplane.
- 7. The bill may well lead to lower air fares. In California and Texas, intrastate airlines have been offering all-coach service for several years at fares that often average fifty percent less than CAB-regulated interstate airlines. The all-coach configuration is a significant element in the success that intrastate airlines have had with low cost air transportation. To the extent the bill facilitates this development, citizens will benefit as both taxpayers and travelers.

8. Thus, the legislation is justified on

grounds of both tax equity and airline efficiency. The large annual Treasury subsidy for first class air travel should be ended.

S. 1236

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DISALLOWANCE OF FIRST-CLASS AIR TRAVEL AS A BUSINESS EXPENSE TAX DEDUCTION

Sec. 1. In General.—Section 162 of the Internal Revenue Code of 1954 (relating to trade or business expenses) is amended—

(a) by redesignating subsection (h) as subsection (i): and

(b) by inserting immediately after subsection (g) the following new subsection:

"(h) First Class Air Travel Expenses.—Notwithstanding the provisions of this section or section 212 (relating to expenses for production of income), no deduction shall be allowed for any expense paid or incurred for the transportation of any person by commercial aircraft in excess of an amount which is equal to the lowest priced, generally available, unrestricted fare, tariff, or ticket for such person on the same aircraft to the same destination at the same time of day and at the same time of year, as determined by the Secretary or his delegate."

SEC. 2. DISALLOWANCE OF TRAVEL BY SUPER-SONIC COMMERCIAL AIRCRAFT AS A BUSINESS EXPENSE TAX DEDUCTION.—Notwithstanding the provisions of section 162 (relating to trade or business expenses) or section (relating to expenses for production of income) of the Internal Revenue Code of 1954, no deduction shall be allowed for any expense paid or incurred for the transportation of any person by supersonic commercial aircraft in excess of an amount which is equal to the retail price of the lowest priced, generally available, unrestricted fare, tariff, or ticket for the transportation of such person by nonsupersonic commercial aircraft to the same destination at the same approximate time of day and at the same time of year, as determined by the Secretary or his delegate.

SEC. 3. DISALLOWANCE OF FIRST CLASS TRAVEL BY OFFICERS AND EMPLOYEES OF THE UNITED STATES TRAVELING ON APPROPRIATED FUNDS.-No funds appropriated by any Act of Congress may be obligated for the transportation of officers and employees of the United States by commercial aircraft in excess of an amount which is equal to the lowest priced, generally available, unrestricted fare, tariff, or ticket for such person on the same aircraft to the same destination at the same time of day and at the same time of year, as determined by the Secretary or his delegate. If there is no such fare ticket, the preceding sentence shall be applied in accord with regulations of the Secretary.

Sec. 4. Effective Date.—The amendments made by this Act shall apply with respect to transportation that begins after December 31.1977.

By Mr. CULVER (for himself and Mr. Wallop):

S. 1237. A bill to extend the authorizations for appropriations for the San Francisco Bay and Great Dismal Swamp National Wildlife Refuges, and the Tinicum National Environmental Center; to the Committee on Environment and Public Works.

Mr. CULVER. Mr. President, today I am introducing legislation to extend the authorization for appropriations for three national wildlife refuges. These refuges include the Tinicum National Environmental Center in Pennsylvania, the San Francisco Bay Refuge in Cali-

fornia, and the Great Dismal Swamp Refuge in Virginia. Funding for each of these areas expires at the end of fiscal year 1977.

The National Wildlife Refuge System, which consists of over 32 million acres, is administered by the U.S. Fish and Wildlife Service and is the Federal Government's most comprehensive program for conserving fish and wildlife. While the primary purpose of many refuges throughout the country is to provide breeding and wintering habitat for migratory waterfowl, these three wildlife refuges also provide unique wildlife-oriented educational and recreational opportunities for residents of metropolitan areas.

The Tinicum Marsh National Environmental Center, located near the Philadelphia National Airport, is an unlikely location for a wildlife refuge. It provides, however, habitat for over 119 species of waterfowl, over 170 species of land birds, and many varieties of mammals including the white-tailed deer and mink. Additional work still needs to be done to complete land acquisition and the development of public use and access facilities to accommodate the over 40,000 visitors who come to the center annually. The legislation I am introducing will authorize an additional \$8,850,000 to carry out this necessary work.

The San Francisco Bay National Wildlife Refuge, which was established in 1972, is another fine example of an urban refuge which provides essential feeding and wintering area for waterfowl and shorebirds. Several endangered species, including the California Least Tern and the California Clapper Rail, are found within the refuge. More than 4.5 million people live within an hour's drive of San Francisco Bay, and it is estimated that over 1 million people will visit this refuge annually once all work is completed.

The authorization of \$9 million for land acquisition and \$11.3 million for the development, operation, and maintenance of this refuge is available for fiscal years 1972 through 1977. Because of the delays resulting from surveys, appraisals, title evidence, and litigation, acquisition of the necessary lands for the refuge will not be completed before the beginning of fiscal year 1978. Development activities will begin following land acquisition. For these reasons, it is necessary to provide that the authorization of funds for the San Francisco National Wildlife Refuge be extended, and this bill would make these \$20.3 million avail-

able through fiscal year 1980.

The Great Dismal Swamp represents an unusual geological phenomenon of a complex environment of water, plant, and wildlife. Many migratory songbirds, waterfowl, and resident wildlife, including the endangered Red Cockaded Woodpecker, utilize this refuge. This area is rich with local and national historical significance, and part of the swamp was declared a national landmark in 1972. The Great Dismal Swamp National Wildlife Refuge is just one aspect of a comprehensive plan to protect this unique area.

The authorization of appropriations for the Great Dismal Swamp must be ex-

tended and increased if the U.S. Fish and Wildlife Service is to complete the acquisition and development of the refuge. The original act makes no provisions for appropriations after June 30, 1977, and limits appropriations to the cost estimates contained in a 1976 report. In that study, it was estimated that \$16.2 million would be needed to acquire 58,-360 acres for the refuge. Considering projected land cost increases during the acquisition period, it now appears unlikely that acquisition can be completed for less than \$20 million, and another \$5.5 million will be needed to develop and manage the refuge. Accordingly, this legislation amends Public Law 93-402 to authorize continued appropriations of a total amount not to exceed \$20 million for land acquisition and \$5.5 million for development of the Great Dismal Swamp National Wildlife Refuge through fiscal year 1980.

Funding for a fourth refuge, the Seal Beach National Wildlife Refuge located on the Seal Beach Naval Weapons Station in California, will also expire this fiscal year. However, the administration has indicated that reauthorization is not necessary at this time until the area has been transferred from the Navy to the U.S. Fish and Wildlife Service in the

future.

Mr. President, this legislation will assure the continued development and operation of three important and unique national wildlife refuges. The Subcommittee on Resource Protection will conduct a hearing on this bill on April 7, 1977, and as chairman of the subcommittee, I am hopeful we will be able to move quickly with our consideration of this measure. I ask unanimous consent that the text of this legislation be printed in the Record at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as

follows:

S. 1237

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Act of June 30, 1972 (86 Stat. 399), establishing the San Francisco Bay National Wildlife Refuge is amended to read as follows:

"SEC. 5. For the period beginning July 1, 1972, and ending September 30, 1980, there are authorized to be appropriated \$9,000,000 for the acquisition of lands and waters and interests therein as authorized by section 4 of this Act, and \$11,300,000 for carrying out other provisions of this Act."

SEC. 2. Section 4 of the Act of August 30, 1974 (88 Stat. 801) establishing the Great Dismal Swamp National Wildlife Refuge is

amended to read as follows:

"Sec. 4. For the period beginning July 1, 1974 and ending September 30, 1980, there are authorized to be appropriated \$20,000,000 for the acquisition of lands and waters and interests therein as authorized under section 3 of this Act, and \$5,000,000 for other purposes."

SEC. 3. Section 7 of the Act of June 30, 1972 (86 Stat. 391), establishing the Tinicum National Environmental Center, as amended by the Act of October 18, 1976 (90 Stat. 2528),

is amended to read as follows:

"SEC. 7. For the period beginning July 1, 1972 and ending September 30, 1980, there are authorized to be appropriated \$11,100,000 to carry out the purposes of this Act.".

By Mr. McINTYRE (for himself and Mr. Bayh):

S. 1238. A bill to provide for legal assistance to members of the Armed Forces and their dependents, and for other purposes; to the Committee on Armed Services

Mr. McINTYRE. Mr. President, I send to the desk for appropriate reference a bill to ensure that our armed forces personnel have access to legal assistance in connection with their personal non-military legal affairs.

The Congresswoman from Colorado, Mrs. Schroeder, a member of the House Armed Services Committee, intends to introduce this bill in the House.

I do not propose to set up a massive legal assistance program not already in existence. Indeed, in 1943, the War Department and the Department of the Navy established such a legal assistance program to aid the large number of servicemen and women. That program was and is based on the fact that adequate civilian legal services are generally not available to military personnel when they are stationed overseas, deployed at serving at remote installations, which occurs solely by virtue of the fact that a military career requires them to make frequent changes in location. Today that may prohibit service personnel from establishing the residency requirements necessary for eligibility for free legal services or from merely establishing a continuing client relationship with a local attorney.

Perhaps one example will suffice to demonstrate the difficult position in which military personnel—especially those in the lower pay grades—may find themselves because of their military status.

An Army enlisted man, abruptly transferred hundreds of miles away to a new duty station, finds that his former landlord arbitrarily refuses to return a \$100 deposit on the apartment he and his wife rented, even though the rental agreement would seem to require a refund. Few local lawyers would be able to spend time on such a small claim, particularly for an absentee client. Must the GI lose his money?

Without a military-sponsored legal assistance program, that may be this serviceman's only option.

In addition to providing help to the serviceman in trouble, it has been the policy of the military departments, through the legal assistance program, to make personnel aware of their legal rights and obligations and to provide a means whereby these problems can be resolved, if possible, before they reach the crisis stage.

As I mentioned before, legal assistance relating to personal matters has been available to service personnel since 1943. In the ensuing thirty-four years the legal assistance program has been continued by military lawyers pursuant to regulations issued by each military department. As recently as 1970, under directives by Secretary of Defense Laird, the traditional legal assistance program was expanded under a pilot program to include in-court representation for military per-

sonnel. At the end of the three-year pilot program—in 19 States—this expanded program was established permanently as part of the traditional legal assistance program.

But at no time in the long history of the legal assistance program has this service been the statutory responsibility of military lawyers.

Thus, as the war in Vietnam was phased out and the resources available to the military departments were reduced, the legal assistance program became the object of budget cuts. This trend continues today.

This deemphasis on the legal assistance program by the services has been the understandable result of the increasing legal problems faced by the military departments and the statutory requirements placed on military lawyers. Such requirements as representing service personnel in all special and general courtsmartial, as well as prosecuting, adjudicating, reviewing, and appealing those cases, investigating and adjudicating all manner of claims, reviewing and assisting in the awarding and administration of Government contracts, representing service members before administrative boards, and advising commanders on a whole range of new and extremely technical laws, including the National Environmental Policy Act and the Freedom of Information and Privacy Acts, have imposed an ever-increasing demand for legal services on an ever-decreasing number of military lawyers working with fewer funds. The increased demand for legal services in areas where military lawyers are required by statute to provide services has led to cuts in those legal services which the military departments provide at their discretion—thus the cuts in the legal assistance program.

Unfortunately, these cuts come at a time when the needs of service personnel have hardly decreased. Despite the attention given to pay scales under the policy of comparability of civilian and military pay, the scandal of double dipping by military retirees, and the general, but erroneous impression that serving in the military in the age of the All Volunteer Force is near to Nirvana—the fact is that the military men and women-especially those in the lower grades-still earn what is a modest living. Moreover, they must still endure the hardships of frequent changes of station, deployment at sea, and service at overseas or remote installations. The attitude that servicemen and women are getting an easy ride under the All Volunteer Force, while the pay is still modest and the hardships many, is, I believe, one of the reasons the notion of unionization in the military is so popular today. I, for one, find that notion undesirable and feel that if it were implemented, would be detrimental to national security. Nevertheless, I can sympathize with the attitude of the servicemen and women, especially those serving in the lower-paid grades, that unionization may be the only way to prevent the erosion of such essential benefits as the legal assistance program.

The purpose and need for the legislation is simply to provide statutory recognition and authorization for the military legal assistance programs. Until such legislation is adopted, the legal assistance program is operated solely under Department of Defense and military service directives, and frequently under local command prerogatives. As a result, the military services are unable to request specific budgetary authorizations and must continually use legal assistance as the excess legal service to be provided only after the statutorily required services relating to military discipline and other matters are performed.

The bill recognizes that the military services must have flexibility to increase their effort in one area and decrease it in other areas where the needs of the service and the Nation demand. The legislation will not alter this concept, but will insure that legal assistance will be duly considered along with other statu-

tory responsibilities.

I have not attempted to outline specifics of the program as it now operates nor how this bill would affect the program. However, I ask unanimous consent to have printed in the RECORD some questions about the bill, and the answers to those questions as well as a section-bysection analysis, will provide my colleagues with further details.

There being no objection, the material was ordered to be printed in the RECORD,

as follows:

SECTION-BY-SECTION ANALYSIS

Section 2 is designed to insure the continuation and permanency of the providing of legal services to servicemen and their dependents and is expressed in terms of an entitlement to such legal services. This is subject to such regulations as the Secretary concerned may prescribe. By utilizing the term "entitlement," the fulfillment of this entitlement is left to the Secretary of the Department concerned-i.e. by utilizing military attorneys, by utilizing contracted services of civilian attorneys, by utilizing civilian attorneys who are civil service employees, etc. The choice of the method of fulfilling this statutory entitlement is left to the Secretary.

Section 3 clearly places upon the Judge Advocates General the responsibility for the creation and operation of the legal assistance programs. The reference to 10 U.S.C. 801 is necessary so as to include the Coast Guard. The Coast Guard has no "Judge Advocate General" and the only place in the law where the term "Judge Advocate General" is made applicable to the Coast Guard is in the definitional section of the UCMJ wherein it is stated that the term "Judge Advocate General" shall include the General Counsel of the Department in which the Coast Guard is operating. The language "or his designee" is also necessary in order that the General Counsel of the Department of Transportation can delegate to the Chief Counsel of the Coast Guard the responsibility for the creation and operation of the legal assistance program for the Coast Guard.

Section 4 is designed specifically to indicate that this legislation is not authority for the expansion of the legal assistance program to include representation in court to those presently able to pay legal fees—i.e. to continue the present expanded legal assistance program to the military indigent, but not provide any requirement or authority for expan-sion to others than the military indigent. If the client can afford legal fees without undue hardship or if the case is one in which the attorney can recover a reasonable fee out of the judgment, then the legal assistance program, insofar as presentation in court is concerned, may not be expanded under the authority of this legislation.

QUESTIONS AND ANSWERS

1. Q. Who will be entitled to legal services under this bill?

A. "Armed Forces personnel and their dependents" are defined elsewhere in Title 10 of the United States Code to include active duty personnel and their dependents and certain retired personnel and their dependents. Except as limited by Section 4, it is the intent of the bill to provide legal services to these personnel and others as prescribed in the regulations of each military department authorizing legal assistance. Copies of the respective service regulations are attached. As with other military benefits, legal assistance has been made available to all grades and ranks, but the overwhelming share of legal services are provided to low and middle income service members who, like their civilian counterparts, are least able to afford the services of an attorney. A survey of Army legal assistance indicates that grades E-1 through E-5 provided 64.7% of clients served during calendar year 1975; E-6 through E-9 provided 21.2%; WO through O-3, 9.5%; O-4 through O-6, 4.5%; and O-7 through O-10,

2. Q. Who may provide legal services to service personnel and their dependents?

Active duty military lawyers, civil service attorneys employed by the military departments, and reserve military lawyers are authorized to provide legal assistance under the regulations of the military departments authorizing legal assistance. The bill presumes that the same regulations will apply after its enactment.

3. Q. Will the delivery of legal services to Armed Forces personnel at the level con-templated by this bill be detrimental to

members of the local bar?

During the five years that the American Bar Association has worked with representatives of the military services in observing legal assistance programs in operation and in visiting with numerous civilian bar leaders and practitioners, the Committee has found no evidence of any abuse of the civil process or injury to the civilian bar at any location where these programs have been established. On the contrary, the A.B.A. has found an expanded awareness of legal rights and needs in each community. Where the local bar association has encouraged and participated in these programs, there has developed a professional rapport between the military and civilian bar members, and bethe military services and the local judiciary and law enforcement authorities in a manner which has ultimately resulted in the improvement of legal services and the protection of the rights of individual service members. It has also released the local civilian bar from responsibilities for representation and defense of a number of lowincome servicemen and women. Initial con-cerns by members of state and local bar associations relating to the quality of legal representation, the danger of "harassment" actions, and the loss of revenue-producing clients, have been proven unfounded. On the contrary, where the state and local bar associations have worked with the military lawyer community, the legal assistance program has produced a higher quality representation, has reduced the areas of confrontation between military and local authorities, has increased the level and quality of civilian bar legal services, and has by pre ventive law achieved many of the objectives of the law by self-discipline.

4. Q. What legal services are included in "personal legal affairs" in Section 2 of this

A. "Personal legal affairs" in intended to mean only those types of cases authorized by the regulations governing the provision

of legal assistance issued by the military departments. Those regulations include assistance in and/or preparation of wills, powers of attorney, tax matters, domestic relations matters, consumer protection matters, landlord-tenant matters, and others. The regulations do not allow (some in fact prohibit) nor does the bill contemplate, providing legal services for the purpose of assisting a service member in any commercial endeavor, for the purpose of instituting a class action which might be a fairly attractive feegenerating case for a civilian attorney) or for the purpose of suing the Federal government (legal assistance officers are prohibited by 18 U.S.C. 205 and implementing regulations from instituting such suits against the United States)

5. Q. Will this bill require the additional expenditure of public funds (including per-

A. No. The bill does not (and is not intended to) mandate a specific level of legal assistance programs of any kind; rather, the bill merely recognizes and protects by statute a long-standing practice of the services, leaving the implementation to the best judgment of the military departments. The only cost factor is an indeterminate but perhaps identifiable continuing cost of maintaining the present program with no new costs. As a practical matter, the bill closes off the possibility of the total discontinuance of the existing practice of providing legal assistance to service members, an option which is currently available to the military departments.

If the military departments at some future

time should decide to seek funding for expansion of the in-court program throughout the United States, additional costs are some-

what difficult to estimate.

By Mr. DOLE (for himself and Mr. BELLMON):

S. 1240. A bill to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978; to the Committee on Agriculture, Nutrition, and Forestry.

WHEAT REFERENDUM

Mr. DOLE. Mr. President, the USDA has requested comments on holding a wheat referendum for the 1978 wheat crop because of the expiration of the 1973 Agriculture and Consumer Protection Act. I am introducing this bill to postpone the referendum in order to allow time for the Congress to pass a new farm bill.

By Mr. HATHAWAY (for himself and Mr. Muskie):

S. 1241. A bill to increase the subsistence payments for students at State maritime academies or colleges; to the Committee on Commerce, Science, and Transportation.

AMENDMENTS TO THE MARITIME ACADEMY ACT

Mr. HATHAWAY. Mr. President, on behalf of myself and Senator Muskie, I am introducing an amendment to the Maritime Academy Act which would increase the individual cadet subsidy for State maritime school students from \$600 to \$1,200 per year.

The cadet subsidy, which is an allowance provided to these students to help defray the cost of uniforms, textbooks, and other expenses, was originally authorized in 1958. It has stayed at the 1958 authorized rate of \$600 per year, or \$50 per month. The subsidy is paid by the

Maritime Administration on a monthly pro rata basis and credited to the students' school accounts to cover these expenses. Each subsidy is indivisible, is uniform in amount based upon attendance records, and is not transferable from one student to another by regulation of MA. Further, this increase in the individual subsidy, while providing assistance to those students eligible for it, will not affect the number of students actually receiving the subsidy. The number of cadet subsidy allowances is set by MA, and has been the same since 1972, when a ceiling of 673 was put on the number of subscribers available to each freshman class. This number was derived from the pre-Vietnam war manpower levels. The question of manpower ceilings is a separate issue from that of increasing the amount of the subsidy itself, and is not affected by this amendment.

The increase in the cadet subsidy is a just reflection of the increase in costs which have occured since 1958, and is justified on the basis of inflation alone. In addition, this increase would give the maritime students eligible for the subsidy parity with Naval ROTC students who are contract students in the ROTC program. These Naval Reserve students originally received a \$600 per year subsistence allowance, which was increased to \$1,200, or \$100 per month, several years ago. It is time that the maritime students received an equal increase.

The House Ad Hoc Committee on Maritime Education and Training recommended an increase in the cadet subsidy from \$600 to \$1,200 during the 93d Congress, after a review of the various education and training programs at the State, Federal, and industry-sponsored schools. The House subsequently adopted such an increase as an amendment to the 1976 MarAd authorization bill, but it was not retained in conference. On the Senate side, a modified increase was adopted last spring on the 1977 authorization bill, but again was deleted in conference. In each instance, the reason given was a pending report, first from the ad hoc committee, which recommended the increase, and then from the General Accounting Office. That report is still pending from GAO, though it does not appear that it will directly address the question of the increase in the cadet subsidy itself.

It is time to recognize the fact that this is a question of simple equity to the student in this situation and enact a permanent increase in the authorization for the cadet subsidy. By insuring that adequate financial support is available to these State students, the quality of the education and of the students able to attend State maritime institutions will be enhanced, with the long-term benefit of upgrading the quality of our merchant marine.

Mr. President, at this time I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1241

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6(a) of the Maritime Academy Act of 1958 (46 U.S.C. 1385(a)) is amended by striking out "\$600" and inserting in lieu thereof "\$1,200".

ADDITIONAL COSPONSORS

S. 11

At the request of Mr. McClellan, the Senator from Oregon (Mr. Hatfield) was added as a cosponsor of S. 11, to provide for the appointment of additional district court judges.

S. 87

At the request of Mr. Bumpers, the Senator from New York (Mr. Moynihan) was added as a cosponsor of S. 87, to amend title II of the Social Security Act.

S. 143

At the request of Mr. Talmadge, the Senator from Hawaii (Mr. Matsunaga) was added as a cosponsor of S. 143, to strengthen the capability of the Government to punish fraudulent activities under the medicare and medicaid programs.

5. 196

At the request of Mr. Burdick, the Senator from Kentucky (Mr. Huddleston) was added as a cosponsor of S. 196, to amend the Internal Revenue Code of 1954.

S. 242

At the request of Mr. Church, the Senator from Wyoming (Mr. Wallop) was added as a cosponsor of S. 242, relating to comparative productive potential of irrigable lands in determining nonexcess acreages under Federal reclamation law.

S. 247

At the request of Mr. Baker (for Mr. Goldwater), the Senator from Wisconsin (Mr. Nelson) was added as a cosponsor of S. 247, to provide recognition to the Women's Air Forces Service Pilots.

8. 274

At the request of Mr. Thurmond, the Senator from Kentucky (Mr. Ford) was added as a cosponsor of S. 274, to prohibit unionization of the military services.

S. 297

At his own request, the Senator from Indiana (Mr. Bayh) was added as a cosponsor of S. 297, a bill relating to imported meat and meat products.

S. 514

At the request of Mr. RIBICOFF, the Senator from North Dakota (Mr. Young) was added as a cosponsor of S. 514, to amend title XVIII of the Social Security Act.

S. 571

At the request of Mr. Mathias, the Senator from Minnesota (Mr. Humphrey) was added as a cosponsor of S. 571, to amend title VIII of the Civil Rights Act of 1968.

s. 777

At the request of Mr. Allen, the Senator from Alabama (Mr. Sparkman) was added as a cosponsor of S. 777, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968, as amended, so as to provide certain benefits to law enforcembent officers not employed by the United States.

8. 904

At the request of Mr. Kennedy, the Senator from Georgia (Mr. Nunn) was added as cosponsor of S. 904, a bill to provide for the efficient and regular distribution of current information on Federal domestic assistance programs.

S. 972

At the request of Mr. Nelson, the Senator from Alaska (Mr. Gravel) was added as a cosponsor of S. 972, a bill to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic and international market development.

S. 975

At the request of Mr. WILLIAMS, the Senator from New York (Mr. Moynihan) was added as a cosponsor of S. 975, to improve the administration of the National Park System.

S. 995

At the request of Mr. WILLIAMS, the Senator from Minnesota (Mr. Humphrey) was added as a cosponsor of S. 995, to amend title VII of the Civil Rights Act of 1964.

S. 1008

At the request of Mr. RIEGLE, the Senator from Louisiana (Mr. Johnston) was added as a cosponsor of S. 1008, a bill to amend section 107 of the Energy Reorganization Act of 1974 to delegate power to State legislatures to veto Energy Research and Development Administration site selection for radioactive waste storage.

S. 1011

At the request of Mr. Roth, the Senator from Arizona (Mr. Goldwater) and the Senator from Oregon (Mr. Hatfield) were added as cosponsors of S. 1011, to amend title 18, United States Code, to prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation.

S. 1015

At the request of Mr. Nelson, the Senator from Indiana (Mr. Bayh) and the Senator from Vermont (Mr. Leahy) were added as cosponsors of S. 1015, relating to regulation of detergents in the Great Lakes region.

S. 1021

At the request of Mr. Bayh, the Senator from Maryland (Mr. Mathias) was added as a cosponsor of S. 1021, to extend the Juvenile Justice and Delinquency Prevention Act of 1974.

S. 1040

At the request of Mr. Roth, the Senator from Arizona (Mr. Goldwater) and the Senator from Oregon (Mr. Hatfield) were added as cosponsors of S. 1040, to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation.

S. 1046

At the request of Mr. Schweiker the Senator from Missouri (Mr. Danforth) was added as a cosponsor of S. 1046, a bill to amend the Federal Food, Drug and Cosmetic Act to authorize an evaluation of the risks and benefits of certain food additives and to permit the marketing of saccharin until such an evaluation can be made of it.

S. 1120

At the request of Mr. Humphrey, the Senator from North Dakota (Mr. Burdick) was added as a cosponsor of S. 1120, to support spinal cord injury centers.

S. 1122

At the request of Mr. Thurmond, the Senator from Oklahoma (Mr. Bartlett) was added as a cosponsor of S. 1122, to amend the Occupational Safety and Health Act.

S. 1124

At the request of Mr. Kennedy, the Senator from Minnesota (Mr. Humphrey), the Senator from South Dakota (Mr. Abourezk), the Senator from Ohio (Mr. Metzenbaum), the Senator from Maryland (Mr. Sarbanes), the Senator from South Dakota (Mr. McGovern), and the Senator from Arizona (Mr. De-Concini) were added as cosponsors of S. 1124, a bill to amend the Foreign Assistance Act of 1961 to provide relief, rehabilitation, and reconstruction assistance to the people who have been victimized by the recent earthquake in Romania.

S. 1126

At the request of Mr. Roth, the Senator from Texas (Mr. Tower) was added as a cosponsor of S. 1126, a bill to amend and strengthen the Equal Educational Opportunity Act of 1974.

S. 1140

At the request of Mr. Hart, the Senator from Alaska (Mr. Gravel) was added as a cosponsor of S. 1140, the Federal Aid in Nongame Fish and Wildlife Conservation Act of 1977.

S. 1206

At the request of Mr. Nelson, the Senator from South Dakota (Mr. McGovern) was added as a cosponsor of S. 1206, a bill to provide temporary authority to the Administrator of the Small Business Administration to facilitate water conservation practices and emergency actions to mitigate the impacts of the 1976-77 drought.

AMENDMENT NO. 40

At the request of Mr. McClellan, the Senator from Oregon (Mr. Hatfield) was added as a cosponsor of amendment No. 40, intended to be proposed to S. 11, to provide for the appointment of additional district court judges.

SENATE RESOLUTION 49

At the request of Mr. Pell, the Senator from Pennsylvania (Mr. Heinz) and the Senator from Iowa (Mr. Clark) were added as cosponsors to Senate Resolution 49, a resolution expressing the sense of the Senate that the U.S. Government should seek the agreement of other governments to a proposed treaty requiring the preparation of an international en-

vironmental impact statement for any major project, action, or continuing activity which may be reasonably expected to have a significant adverse effect on the physical environment or environmental interests of another nation or a global commons area.

SENATE RESOLUTION 114

At the request of Mr. Anderson, the Senator from New Hampshire (Mr. McIntyre), the Senator from Massachusetts (Mr. Brooke), and the Senator from Delaware (Mr. Biden) were added as cosponsors of Senate Resolution 114, a resolution requesting the Committee on Commerce, Science and Transportation to make a full and complete investigation of the telecommunications policies of the Federal Government.

SENATE RESOLUTION 118

At the request of Mr. Pell, the Senator from Idaho, Mr. Church was added as a cosponsor to Senate Resolution 118, a resolution expressing the sense of the Senate that the President should review the foreign assistance program of the United States with a view toward providing such assistance through multilateral organizations and private international organizations.

SENATE CONCURRENT RESOLU-TION 18—SUBMISSION OF A CON-CURRENT RESOLUTION HONOR-ING SAINT ELIZABETH ANN SETON

(Referred to the Committee on Governmental Affairs.)

Mr. EAGLETON submitted the following concurrent resolution:

S. CON. RES. 18

Resolved by the Senate (the House of Representatives concurring), That, it is the sense of the Congress that the United States Postal Service should issue during calendar year 1977, a special commemorative postage stamp in honor of Saint Elizabeth Ann Seton in such denomination and design as the Postal Service shall determine.

Mr. EAGLETON. Mr. President, today I join Congressman John Murphy of New York in submitting a concurrent resolution calling for the issuance of a special commemorative postage stamp in honor of Saint Elizabeth Ant Seton.

Saint Efizabeth Ann Seton was a model educator and religious pioneer, as well as a symbol of ecumenical spirit and unity. Canonized by Pope Paul IV on September 4, 1975, Elizabeth Ann Seton become the first native-born American elevated to sainthood. Her deep involvement with problems of the poor and disadvantaged of all faiths has enshrined the name of Saint Elizabeth Ann Seton as one of America's great women.

Elizabeth Seton lived during the most critical periods of our country's history. Born 2 years before the American Revolution, Elizabeth experienced the 6-year occupation by British troops of New York City as a child, and attended George Washington's first inaugural. She was born into a socially prominent American family, but at an early age began social work in New York City,

sharing her wordly goods with the city's needy.

Elizabeth's own life was an example of perseverance over personal losses and struggles. Elizabeth's husband, William, lost both his business and health in the financial collapse of the shipping business. A widow with five children, she left her safe and familiar life to join the Catholic faith and open her first school in Baltimore. This act alienated old friends of the Protestant faiths, and Mrs. Seton began her new life as a totally independent woman in the world. She not only cared for her own family, but the needs of the community and churches, as well.

Elizabeth Seton died at the age of 46. During her lifetime she saw the fulfillment of many of her dreams. By 1817, she had sent students of her academy to New York and Philadelphia to staff orphanages, as well as establishing the foundations for the Sisters of Charity. She is perhaps best known as the mother of the Catholic school system in the United States. Sisters of Charity continues to serve communities throughout the Western Hemisphere in areas of education, health, and social services. Where human compassion is needed, the followers of Saint Seton are there, serving in hospitals, schools, and day-care centers.

It is only fitting, that we honor this American woman, whose life was dedicated to women's education and service to the poor throughout the world. Mother Seton overcame personal hardship to meet the human needs for education, health, and welfare. The example of Elizabeth Ann Seton speaks directly today to the American woman of courageous spirit seeking new roles and rights. Her dedication to the spiritual needs of this country deserves to be honored by the issuance of a special commemorative stamp.

AMENDMENTS SUBMITTED FOR PRINTING

FOOD AND AGRICULTURE ACT OF 1977—S. 275

AMENDMENT NO. 183

(Ordered to be printed and referred to the Committee on Agriculture, Nutrition, and Forestry)

tion, and Forestry.)

Mr. CULVER. Mr. President, the Committee on Agriculture, Nutrition and Forestry has been working for several months on a proposal to revise and extend much of our basic farm and food legislation. In January, as a starting point for discussion and hearings, Senator Talmadge introduced S. 275, the Food and Agriculture Act of 1977. For the past month the committee has been holding hearings on S. 275, receiving testimony from almost 200 witnesses representing nearly as many organizations and interests. The thought and effort that the committee has put into this legislation deserves commendation. and I am confident of the committee's continued dedication as the process goes forward.

One of the primary objectives of this process, and one of the chief responsibilities of the Congress in formulating a national agricultural policy, is to insure that the various elements of our policy and programs do not conflict with each other.

Toward this end Senator Clark and I are introducing today an amendment to the Food and Agriculture Act of 1977 aimed at minimizing a conflict in the goals of American farm policy that has persisted for over 40 years. This amendment eliminates from eligibility for Government payments under the basic wheat, feed grain, and upland cotton programs large corporations, trusts, and other economic bodies whose primary business lies outside of farming and which are controlled by nonfarm interests.

The Congress has repeatedly expressed its commitment to the preservation of the family farm as the basic unit of agricultural production in this country. The family farm, in turn, has lived up to this trust by remaining the most efficient, most productive unit of agricultural production in the world. The basic agricultural programs, which include deficiency payments in years when farm prices are low, nonrecourse loans to assist farmers in marketing their commodity in an orderly and profitable manner, and disaster payments in the event of natural disasters, are designed to temper what would otherwise be steep and sometimes devastating declines in farm income.

By enabling farmers to continue farming through the ups and downs of the supply and demand cycles, our commodity programs have helped insure ample supplies of food at reasonable prices through most of the past 4 decades. By helping farmers to stay on the land, these programs have also helped sustain our rural communities and ward off greater rural-to-urban migration. Even so, the rate of migration has often exceeded that which urban centers could absorb; and many farmers, children of farmers, and other farm workers have found themselves without land or a job. The social costs of these massive dislocations have never been pinpointed, but it is certain that we are still paying for them.

Some argue that banks and large corporations can produce food more cheaply than individual farmers. The fact is that banks and large corporations are not more efficient than family farms. On this the evidence is clear. What banks and large corporations can do is to sustain operating losses longer than a family farmer who is dependent upon farming for his livelihood. Banks and corporations offset those losses through higher prices for their nonfarm products, tax writeoffs that must be made up by other taxpayers, and eventually the sale of farm land at prices inflated at least in part by their own speculation. In addition, what were once family farms are consolidated, rural areas are depopulated, and social costs continue to mount.

Several States have recognized this threat and taken steps to bar corporate ownership of farms within their boundaries. Others are considering similar action at this time. Meanwhile the Federal Government continues to encourage corporate investment in agriculture by offering the same income support payments that are provided to individual farmers. Mr. President, this situation is totally incompatible with the aims and objectives of the basic commodity programs and with the objectives of many other State and Federal programs for both urban and rural dwellers, taxpayers, and consumers. The amendment that Senator CLARK and I are proposing today represents a major step toward eliminating that incompatibility and toward securing the place of the family farm in American agriculture.

For myself and Senator Clark, I ask unanimous consent that the amendment be printed in the Record following his

statement.

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. CLARK. Mr. President, Senator Culver and I are today submitting an amendment to the Food and Agriculture Act of 1977 to eliminate from eligibility for direct payments under the basic wheat, feed grain and upland cotton programs large corporations, trusts, and other firms which are controlled by nonfarm interests, or whose primary business lies outside of farming.

The purpose of this legislation is clear. It is to make farming less attractive for nonfarm corporations in an attempt to prevent nonfarm groups from being lured into purchase of farmland by the rapid increases in land prices we have seen

over the past several years.

The so-called "Ag Land Trust" proposal is an example of the threat we see and want to reduce by this amendment: Last fall, we began to hear of plans for an agricultural land investment trust. Continental Illinois National Bank & Trust Co. of Chicago and Merill, Lynch, Pierce, Fenner, and Smith subsequently announced plans to form a \$50 million trust to invest in working farms.

The farms were to be the best farmland in the Nation. They were to be purchased with employee pension funds and profit-sharing funds, at least some of which would have been exempt from income taxes.

In Iowa, there are a number of legal restrictions on corporate farming. But the Ag Land Trust employed a legal mechanism that is not technically a corporation, but is basically a trust-a mechanism commonly used for estates and, therefore, permitted under Iowa statutes. The Ag Land concept appears to be legal under Iowa law and it appears to qualify for tax exempt treatment under Federal tax law. There appears to be no effective legal restraint to prevent massive amounts of pension fund and profit-sharing fund capital, and other corporate capital, from competing di-rectly with family farmers for the land and agricultural markets they need. The purpose of this amendment is to reduce that threat.

The amendment would not eliminate the problem entirely, but it would make farmland purchases far less attractive to nonfarmers by denying them access to the basic Government programs. The basic right of individuals to sell their property to whomever they please would not be changed. But the amendment would recognize that the basic structure of American agriculture rests on the family farm—the individual and his family who choose to make farming a way of life and the small towns and communities they have built all across America to support this way of life.

Family farms are every bit as efficient as corporate farms when it comes to producing crops and livestock. But they cannot match the profitability of an organization that needs no income to live on because it can afford to wait and realize profits in land appreciation-especially if the organization is sufficiently large to bid up the prices of land through repeated, huge investments. There is a real and continuing threat that some of the nonfarm fund sources in the United States can do this. The Ag Land Trust proposal demonstrates that rapid increases in land prices have a real attraction for such investments.

The reason land is an attractive investment is easy to see. In January 1977, USDA announced that their surveys showed that average values for farmland in Ohio, Indiana, Illinois, and Missouri increased more over the past 12 months than for any other year since USDA began surveying land costs and keeping records in 1912. Iowa land values increased by 28 percent. For the five major corn belt States, land values went up 33 percent. In Illinois, land values went up by an astonishing 41 percent.

With land price increases like these year after year, it is no wonder that non-farm capital is interested in buying farm land. Having capital flow into farming is basically a good thing. But too much of even a good thing can be a problem, and

this is no exception.

Furthermore, such movements can be self-fueling and they can mushroom very rapidly. The entry of major pension and profit sharing funds into competition for farmland could force the land price spiral upward. These funds are huge, often involving many millions of dollars. Because they are so large, they have an impact of their own—an additional pressure on land prices that helps generate the price increase they seek. This large investment could lead to faster price increases which lead, in turn, to more nonfarm investment in farmland and thus to more price increases.

The small farmer could be caught in the middle. He needs the land for his own operation-perhaps to add to an already functioning but borderline farm. He lacks the tax advantages available to employee pension funds and must go to the local bank for the capital he needs. And, he must depend on his crops not only to pay off the land, but for a living for his family. It is difficult for such farmers, and for me, to see how investment trusts such as the Ag Land Trust can do other than harm small farmers. It is difficult to see how nonagricultural, speculative tax-sheltered capital can be a positive thing when it competes directly with local family farmers for land.

In addition, the impact of local communities could be very negative. Trusts have no children in local schools, nor any need for a local hospital or a local church. Trusts might be expected to support roads and airports so their access to land and markets would be good-but could they be counted on to support local bond issues for other community services? I think not. History is not reassur-

ing on this question.

According to press reports since the hearings held in the House Agriculture Committee last February, the corporations that proposed the Ag Land Trust have withdrawn that proposal. They had not anticipated the public outcry against it, and they are unwilling to face the storm of criticism they were receiving. But withdrawal of this proposal does not mean the end of such threats. It merely means that we have additional time in which to consider the most appropriate ways and means of developing protections we need to deal with the problem. As long as farmland is appreciating in value as rapidly as it has been, the threat will continue.

Our measure offers a logical approach to the problem. Corporate ownership of farmland would not be prohibited by this measure, nor would any other form of ownership now legal under existing statutes. But these forms of ownership would be less attractive to nonfarm groups. What this amendment would do is focus our farm programs somewhat more specifically on our family farms, and away from nonfarm operations. Farms controlled by nonfarmers could still produce, but they could not take advantage of key Government programs.

Nor would this amendment be designed to prevent large farms. A sole proprietor or even a farming corporation would be permitted access to Government programs as long as both are controlled by individuals engaged primarily in farming. It would, however, deny Government payment programs to farms operated by corporations which are controlled primarily by nonfarmers.

We do not consider this amendment to be a drastic step, but we do feel that it is important and that it represents the best interests of family farmers. The Ag Land Trust proposal impressed on us all the potential for nonfarm competition with family farmers. We expect that there will be a number of proposals concerning alternative ways to provide family farmers with the protection they need. We will want to consider all these proposals very carefully and choose that which is most effective and least disruptive. These ideas we present here are not set in stone, but provide a beginning point for further discussions on this very important issue.

AMENDMENT No. 183

On page 1, line 7, insert "(a)" after "Sec.

On page 1, after line 10, add the follow-

(b) Such section 101 is further amended by adding at the end thereof the following: "(5) No payment authorized to be made under the programs provided for in titles IV, V, and VI of this Act may be made to any person except-

(A) a sole proprietorship farming opera-

tion:

"(B) a corporation or other entity engaged in a farming operation if such corporation or other entity is controlled individuals engaged primarily in farming;

"(C) an electing small business corporation as defined in section 1371(b) of the Internal Revenue Code of 1954 engaged in a farming operation;

"(D) a trust or similar arrangement which involves the production of wheat, grains, or cotton and which was established on or after January 1, 1978, by one or more persons who would have been eligible for payments under the program provided for under title IV, V, or VI of this Act, as appropriate, had such persons been engaged a farming operation themselves on the land with which such trust or similar arrangement is concerned;

"(E) a trust or similar arrangement which involves the production of wheat, feed grains, or cotton and which was established by any person prior to January 1,

1978; and

"(F) an organization described in section 501(c)(3) of the Internal Revenue Code of 1954: and

"(G) a partnership in which each partner would, if engaged in a farming operation on his own, be eligible for payments under one of the subparagraphs (A) through (F)

of this paragraph.

"(6) No payment authorized to be made under titles IV, V, or VI of this Act may be made to any individual or other entity if the commodity with respect to which such payment is proposed to be made is produced on land owned or controlled by another person or entity which, if engaged in farming on its own, would not be eligible for such payment under paragraph (5) of this section.".

NOTICES OF HEARINGS

SUBCOMMITTEE ON LABOR

Mr. WILLIAMS. Mr. President, on behalf of the Subcommittee on Labor of the Committee on Human Resources, I wish to announce hearings on S. 995, a bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy. The hearings will commerce at 9:30 a.m. on Tuesday, April 26, 1977, and Wednesday, April 27, 1977, and will be held on both days in room 4232, Dirksen Office Build-

Persons wishing to testify should contact Maria Landolfo of the Labor Subcommittee staff at 224-3674.

SUBCOMMITTEE ON GOVERNMENT EFFICIENCY-CORRECTION

Mr. EAGLETON. Mr. President, in announcing hearings by the Subcommittee on Government Efficiency of the Government Affairs Committee in the April 1, 1977, Congressional Record, an error was inadvertently made. The hearings will be held April 11, 21, and 22 in room 6226, Dirksen Senate Office Building on the General Accounting Office report on weaknesses in the financial controls of the national flood insurance program.

ADDITIONAL STATEMENTS

SUPPLEMENTAL APPROPRIATIONS FOR HIGHER EDUCATION ASSIST-ANCE

Mr. BAYH. Mr. President, on April 1, the Senate approved a \$32 billion supplemental appropriations bill for fiscal year 1977. Most of this money is necessary to fund programs which were authorized too late in the last Congress for

inclusion in the regular fiscal year 1977 appropriations bills. A large group of programs which fall in this category are those which were authorized by the Higher Education Act Amendments of 1976. The supplemental appropriations bill, as approved by the Senate, includes \$3,212,518,000 for higher education during the 1977-78 academic year. This represents an increase of \$6 million over that approved by the House of Representatives.

The vast majority, \$2.9 billion, of the moneys for higher education are to extend the various programs for student assistance. The basic educational opportunity grants, BEOG, are funded at \$1,-903,900,000. Grants under this program will range from \$200 to \$1,400 and will be awarded to some 1.975,000 students.

For the supplemental educational opportunity grants, SEOG, the Senate has added \$20 million to the \$240,093,000 approved by the House for a total appropriation of \$260,093,000. The Senate increase in this program is expected to provide for an additional 38,000 grants.

The Senate has decreased the appropriations for the work-study program to \$390 million from the House figure of \$430 million. However, the Senate has added language stipulating that the \$30 million remaining in this program from

1976 be carried over to 1977.

The national direct student loans program, NDSL, was increased by the Senate to \$321.8 million, a \$21 million increase over the House. While there was no budget request for this money, the Senate Appropriations Committee felt that this program which provides loans at 3-percent interest to disadvantaged students, needed additional funding. The Senate figure would provide for 868,000 loans at an average of \$690 per student. The House increased the funds for the

State scholarship incentive grants, SSIG, by \$16 million over the budget request and the Senate maintained that increase. The total appropriation of \$60 million for SSIG will allow for the continuation of 147,800 students from previous years and provide for an additional

42,000 grants.

Both the Senate and the House provided for an increase of \$14.6 million over the budget request for the Trio programs, making the total appropriations of \$85 million. The additional \$14.6 million would provide increases above the budget of \$2 million for Talent Search, \$2.7 million for Upward Bound, \$4 million for special services for disadvantaged students and \$1 million for education opportunity centers.

In the area of institutional assistance the Senate increased funding for programs in cooperative education by \$3 million over the House figure. The bill also provides for the continuation of the veterans cost of instruction program at its current level. Assistance under this program is currently directed to 1,270 institutions and helps about 1 million

veterans.

During the consideration of the fiscal 1977 supplemental appropriations relating to higher education assistance, I have been contacted by colleges and universities in Indiana and by numerous students receiving assistance under the programs authorized by the Higher Education Act amendments. All of these communications have highlighted the increasing cost of a college education. Figures have been presented to me showing that the average total cost of attending a 4-year independent institution in 1976–77 is about \$4,500 per year. Inflationary pressures can be expected to push that cost even higher in the 1977–78 academic year.

The spiraling cost of a college education graphically demonstrates the necessity of continuing our student assistance programs. Students from low-income families have a continuing and increasing need for this assistance and as the costs of higher education rise, more and more middle-income families are finding it impossible to afford to send their children on to college without loans or other forms of student assistance.

The funding levels for these programs which are provided in the Senate bill continued many of these programs at least at their current level and provide for increases in several. I am hopeful that the Senate increases will be maintained in conference. Enactment of this supplemental appropriations bill will permit institutions of higher education to make plans for the best possible use of the limited resources available.

However, the Senate will have an opportunity to look at these programs again during the next few months in the context of the fiscal year 1978 budget, which will cover the 1978-79 academic year. During the course of that consideration, we will be able to reconsider the funding levels for all programs of student and institutional assistance. There will be consideration given to raising the maximum grant in BEOG from the current level of \$1,400 to \$1,600. Large increases for SEOG, SSIG, and work-study have been recommended by many educational groups and those proposals will be studied carefully by the Subcommittee on Labor/ HEW appropriations. I am hopeful that we can find a way to fund these vital assistance programs at a level which will provide the necessary assistance to the increasing numbers of students with a demonstrated need for financial assistance in order to continue their education.

A NEED TO REOPEN THE FEDERAL COURTHOUSE

Mr. MATHIAS. Mr. President, on January 10, 1977, Senator Brooke and I introduced S. 35, the Civil Rights Improvements Act of 1977. More recently Congressman Parren Mitchell introduced H.R. 4514, the House counterpart to S. 35.

The Civil Rights Improvements Act of 1977 is primarily designed to offset a series of recent Supreme Court decisions substantially curtailing access to the Federal courts, especially for those most in need of judicial relief.

In recent weeks the press has featured a number of articles and editorials high-lighting the need for legislation to reopen the Federal courthouse. In order to inform my colleagues of the growing support for such legislation, I ask unani-

mous consent that the following editorials from the Washington Post and the St. Louis Post Dispatch, as well as a recent article by Anthony Lewis in the New York Times, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Mar. 25, 1977]

ACCESS TO JUSTICE

After complaints from many sources, including prominent legal scholars, that the Supreme Court under Chief Justice Burger has been allowing the steady erosion of constitutional rights and systematically closing the federal courts to rights litigants, Senator Charles Mathias of Maryland has moved to provide a legislative remedy. In showing the need for his measure, Senator Mathias cited no less an authority than Justice Brennan of the Supreme Court, who wrote recently that under "the banner of vague, undefined notions of equity, comity and federalism the Court has condoned both isolated and systematic violations of civil liberties."

As Justice Brennan noted, those who are denied judicial protection of their rights under the court's new approach are most often "the poor, the underprivileged, the deprived minorities." To remedy the situation, Senator Mathias, along with another Republican, Senator Edward Brooke of Massachusetts, has introduced a bill to amend the Civil Rights Act of 1871. The measure would facilitate the vindication of rights in the federal courts by: (1) making states, municipalities and other political units liable for the acts of subordinates in violating rights, (2) providing for limited exception to prosecutorial immunity from suits for unconstitutional acts, (3) restricting the requirement that state judicial remedies be exhausted.

These are only some of the provisions by which Senator Mathias would offset court decisions which have narrowed the protection of the Bill of Rights. Other critics of the court have suggested additional remedies. The Mathias-Brooke bill, however, represents a start in restoring the rightful role of federal courts as guardians of rights.

[From the Washington Post, Apr. 4, 1977] "STRICT CONSTRUCTION" REVISITED

Not too many years ago, the Supreme Court was accused, often and loudly, of failing to follow the Constitution and writing into law the Justices' own notions of what the law should be. What was needed, the critics—such as former President Nixon—said, was a group of "strict constructionists" who would just follow the Constitution and the laws as they were written. Well, the strict constructionists are now a majority of the Court, and it seems clear to us that they are busy rewriting some law themselves.

We are referring to a series of decisions over the past few years in which the Court steadily limited the access of citizens to federal judges. Using their own views of what such concepts as "federalism" and "comity between courts" should mean, a five-man majority has told lower federal judges that they can no longer hear certain kinds of cases that they once heard and decided routinely. In the process, the Court has changed the Civil Rights Act of 1871 drastically. It has replaced what were once standard interpretations of that act with new ones that fit the philosophical views of a majority of its current members.

That act was passed by Congress to open the doors of federal courts to citizens who claimed their federal rights were being vio-

lated by state or local governments or officials. It was a major change in American law, brought about by a congressional belief that the federal rights of citizens needed more protection than state courts would give them. For years, the Supreme Court told federal judges to abstain-temporarily-from hearing these cases in order to give state courts a chance to decide them properly. Now, it is telling federal judges to abstainpermanently—as long as the state courts will consider them. The new rule has been applied so far to criminal and contempt cases, but the language in a recent decision suggests that an extension of it across the board is not far away.

This is not a battle between courts, as a majority of the Justices sometimes makes it sound. Nor is it just a continuation of what the Court is doing in other areas—steadily reducing the scope and influence of federal courts. It is a question of where individual citizens are to look for protection of the rights the federal government says are theirs. And it concerns the judicial rewriting of the law that provided the underpinning for many of the major civil cases of our time.

It is conceivable that the Court's majority is right, although we doubt it, in thinking the time has come to remove the double layer of protection—in both state and federal courts—that individual rights have had for a hundred years. But if so basic a change is to be made, it ought to be made by Congress, certainly not by a Court of "strict constructionists" who are basing the change on their own notions of what the law ought to be. Indeed, Congress ought to pass the legislation that has already been introduced to put the interpretation of that 1871 statute back where it was before the present Court's majority got its hands on it.

[From the New York Times, Mar. 31, 1977]
THE DOORS OF JUSTICE: II

(By Anthony Lewis)

Washington, March 30.—For more than 100 years a Federal statute has allowed anyone deprived of constitutional rights "under color of" state authority to sue in the Federal courts. The act was originally passed by Congress in 1871, and it remains one of our basic civil rights laws.

Or so it does in theory. As it reads in the United States Code, the statute gives the same strong promise it always has of Federal protection for Federal rights. But in fact, the present Supreme Court has gone a long way toward making the promise a mockery.

In case after case in recent years, the Burger Court has found reasons for denying injured Americans any rights in the Federal courts. The reasons have often sounded technical: that the complaining parties lacked legal standing, for example, or that the particular official defendant could not be sued. But the cumulative result is a fundamental change in the law—and in the rights of citizens.

The human impact of what the Court is doing can be seen in a case decided one year ago, Paul v. Davis. In December, 1972, the police in Louisville, Ky., distributed to local businesses a flier with "mug shots" of "active shoplifters." One of those pictured was Edward Charles Davis 3d. He had once been arrested on a shoplifting charge but not convicted. The charge was dismissed.

Mr. Davis brought a Federal suit under the 1871 act. He showed that the flier had hurt his reputation, and he claimed that it was unconstitutional to put such a label on him without some fair procedure first—and certainly wrong in the teeth of the fact that the charge against him had washed out. He won in the lower court.

The Supreme Court threw out Mr. Davis's suit. Justice William Rehnquist, writing for a majority of five, said there was no consti-

tutional right to fair procedure for protection of "reputation alone." A person could make such a claim under the 1871 statute, he said, only if state law had defined it as a right. Mr. Davis was left with no remedy at

The latest example of closing the doors to the Federal courts came just last week. Two adjudged debtors, were threatened men, with jail for civil contempt under a New York law for not appearing at a hearing on their debt. In a Federal suit, they said New York's procedure was unfair. A three-judge District Court agreed with them. But Justice Rehnquist again joined by four other Justices, said the Federal court should never have heard the case at all: It should have "abstained" because the law could have been challenged in the state debt proceedings.

That decision was based on a highly technical doctrine, "abstention." Yet it showed the broad effects of what the Court is actu-

ally doing.

The rule used to be that Federal courts abstained from decision only temporarily, in cases where state law had to be clarified first by state courts. Then the Burger Court said they should abstain permanently when the Federal issue was already before the state courts in a criminal case. Now, in the New York case. Federal courts have been told to keep hands off a Federal issue if it can be raised in a state civil contempt case-and, the Court may well say, in any civil proceed-

The result is to carve out a huge area in which Federal courts are barred from deciding Federal constitutional issues. In a dissent in the New York case. Justice William J. Brennan Jr., said persuasively that the majority's "ultimate goal" was to "strip all meaningful content" from the Civil Rights Act of 1871.

I think it is usually wrong to cry havoc over Supreme Court decisions. There are swings of the judicial pendulum, and they have to be accepted. But the course of decision in these cases has passed the point of quiet acceptance.

Justice Rehnquist, chief spokesman in the cases closing the Federal courts to constitutional claims, believes strongly that in the American system much should be left to state courts. That is a reasonably philosophical view but it happens to conflict with the specific action of Congress, in allowing constitutional suits in the Federal courts.

"It is abundantly clear," an 8-to-1 majority of the Supreme Court said in 1961, "that one reason the [1871] legislation was passed was to afford a Federal right in Federal courts because, by reason of prejudice, passion, neglect, intolerance or otherwise, state laws might not be enforced and the claims of citizens to the enjoyment of [constitutional] rights . . . might be denied."

The Supreme Court has usually refrained from changing its interpretation of statbecause Congress can change them if it wishes. To reinterpret a 100-year-old statute out of existence is underhanded, and especially so when done by Justices who say they want to pay more respect to legislatures. Fortunately, Congress has ample power to undo the harm. It can reopen the closed doors. A bill introduced by Republican Senators Charles McC. Mathias and Edward Brooke, S. 35, would correct the Burger Court's negative readings of the 1871 act and provide a Federal remedy once again for violations of the Constitution. It is time to tell the Court that the statute means what it

IT IS TIME OUR BUSINESS COM-MUNITY LOOKED AT THE FACTS

Mr. HUMPHREY. Mr. President, although 4 months have passed since the Presidential election, a sizable number

of the Nation's commercial and industrial leaders are still wringing their hands. watching the cobwebs mount on their checkbooks, and wondering what effect the administration of Jimmy Carter will have on the business climate.

It is reported that business leaders continue to show a lack of confidence in the Nation's near-term economic future. This, in turn, means that the commitment of financial resources necessary to create desperately needed new jobs through financing new plants and facilities is being made at a rate which is far from adequate. For example, capital formation efforts in terms of new stock issues and loans by commercial banks to establish new business, expand existing operations, and purchase new tools, is far less than it can be or should be.

My remarks today are intended to reassure our business friends that the new administration and the Congress are not to be feared, but to be relied upon, as hishas shown so often, to restore healthy economic growth with business doing very well.

I find the lack of confidence on the part of business incredible for a num-

ber of reasons.

First of all, there cannot be anyone in the Nation over the age of 10 who is unaware that President Carter himself is a successful, hard driving businessman in his own right. Furthermore, he has consistently assured the Nation's business community throughout his long campaign and during the following months, that it would be involved and its needs responded to in his administration's fiscal policies and programs. Nothing he has said or done can, in any way, be construed to contradict this stated position.

Further proof of his awareness of the contributions that can be made by American business are exemplified in his selection of W. Michael Blumenthal, former chairman of the Bendix Corp., to be Secretary of the Treasury, and Bert Lance, former Atlanta banker, to head the Office of Management and Budget. These are highly successful businessmen sensitive to the needs of the business community and representative of its basic economic philosophy.

But beyond this, our hand wringing, white knuckled businessmen ought to take a look back down the history of the past 17 years and refresh their memories as to how business fared under Democratic and Republican administrations. If they do, I assure you, Mr. President, that their confidence will return.

Let us take the prime rate as one example. During the years of the Kennedy and Johnson administrations, the prime rate ranged from 41/2 to 61/2 percent. But the prime rate skyrocketed to 12 percent during 1974 when it changed more than 35 times.

During the Kennedy and Johnson administrations, corporate profits climbed steadily, from \$49.7 billion in 1960 to \$87.6 billion in 1968. Thereafter they declined and did not return to the 1968 level until 4 years after Richard Nixon took office.

An even worse pattern exists for consumer prices. During the Kennedy and Johnson administrations, the Consumer Price Index never rose by more than 5 points from one year to the next, and during most of this time, the index did not raise more than 2 points year to year. However, during the Nixon-Ford years, the CPI rose by more than 5 points year to year and soared by 14.6 points in 1974 and 13.5 points the following year.

Unemployment declined throughout the Kennedy-Johnson years to a low of 3.6 percent in 1968. Needless to say, the unemployment level was nearly three times this rate in 1975.

Perhaps the most telling performance distinguishing Democratic and Republican administrations since 1949 can be found in a brief article in a recent issue of Parade magazine which is carried in many of the Nation's Sunday newspapers.

The article capsulized a story written by David Sargent of the United Business Service. It showed the Dow Jones industrial averages for each year following a presidential election, from 1949 to 1973

The data is astounding. In all, the Dow Jones industrial averages for 7 years are given. Three of those years occurred during Democratic administrations, and 4 occurred during Republican administrations. The comparison shows the market is down in each of the 4 Republican years, remarkably so in 1969 and 1973 when President Nixon was in office. On the other hand, the figures reveal a healthy market during the 3 Democratic years.

Mr. President, I ask unanimous consent that the Parade magazine article be printed in the RECORD. I hope it will persuade our hesitant business friends that they have nothing to fear from a Democratic President. In fact, their cooperation, they may find that, despite their instincts, Democrats are so good for business that they might just have to vote next time to keep them

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENJOY THE RIDE

What effect will President Jimmy Carter's economics have on the stock market? Many people would like to have the answer to that

Believing that history frequently repeats itself, David Sargent of the United Business Service went back to the records. He measured the Dow Jones industrial averages in the first full year following each Presidential election since the end of World War II.

Here's what Sargent came up with:

		Dow
Year	President and Party	Jones
1949	Truman, D	+12.9
1953	Eisenhower, R.	-3.8
1957	Eisenhower, R	-12.8
1961	Kennedy, D	+18.7
1965	Johnson, D	+10.9
1969	Nixon, R.	-15.2
1973	Nixon, R	-16.6

Concludes Sargent, "If history holds any lessons for us, just hold on to your hats and enjoy the ride in 1977."

PASSAGE OF THE HARP SEAL CONCURRENT RESOLUTION

Mr. PACKWOOD. Mr. President, I am pleased the Senate adopted the concurrent resolution last Thursday offered by

Senator Matsunaga, myself, and others, urging the Canadian Government to reassess its policy allowing the newborn harp seal hunt. Harp seals face slaughter on the icefield nurseries of the eastern Canadian shoreline, and to protect against their potential extinction we must make the effort to persuade Canada to reassess its present policy which allows the killing to continue.

In 1976, 169,000 baby harp seals were killed in 1 month. This was 42,000 more than allowed by the Canadian Govern-

ment's own kill limit.

This year the allowable kill limit has been increased to 170,000, contrary to a 1972 recommendation by a special Canadian Advisory Committee on Seals and Sealing that the commercial hunt be phased out over a 5-year period. Rather than heed this recommendation, the Canadian Department of Fisheries increased the quota, enabling sealers to eliminate up to 90 percent of the baby harp seal population.

At this rate of slaughter, it is no surprise that the harp seal population is only 1.2 million compared to an estimated population of 12 million at the

turn of the century.

The Department of Fisheries claims the annual hunt is necessary to protect the oceanic ecosystem and to decrease competition with man's fisheries. These claims are incorrect on two grounds. First, harp seals eat far more noncommercial than commercial fish and, therefore, do not pose a threat to the Atlantic fishery. Second, it is actually overfishing in the North Atlantic by large foreign fishing fleets which has caused depletion of the fish stocks and, not extensive predation by the seal herds.

In fact, seals help balance the oceanic ecosystem by returning the fish they eat to the ocean as excrement, which serves as food for marine plankton that then becomes food for fish. In this way, seals are an integral part of the marine fishery and should not be killed without knowledge of what the effect will be.

Unfortunately, the Canadian Department of Fisheries obtained no information in 1977 on the seal population and, therefore, the effects of this year's slaughter on the seal herds cannot be

determined.

The Canadian Government continues to condone the inhumane killing of the baby harp seals despite growing international concern and protest, and in contradiction to recommendations by its own special committee that the killing be curtailed.

The harp seal herds are being threatened by these kills. We must continue to express our objection to the Canadian Government on this policy. In light of these facts, I am glad the Senate took the initiative and quickly adopted the newborn seal resolution. Hopefully, the Canadian Government will heed our request.

HEW DEVELOPING PLAN TO IMMU-NIZE 20 MILLION YOUTHS

Mr. BAYH. Mr. President, I pleased to notice an article in this morning's Washington Post stating that the Department of Health, Education,

and Welfare is developing plans for a program to provide immunization against childhood diseases such as measles, rubella, polio, mumps, diphtheria, and pertussis for 20 million children age 14 and under.

The 20 million children who are currently unprotected from one or more of the childhood diseases include 13 million children at or slightly above the poverty level and another 7 million children in the higher-income levels. These 20 million children represent more than one-third of all children in this country

under the age of 15.

Information discussed at the conference on immunization being run by the Department of Health, Education, and Welfare indicate that the number of cases of measles this year may well be double the 40,000 cases reported in 1976. Already in my own State of Indiana, the State board of health has reported 1,356 cases of measles in the first 8 weeks of 1977 as compared with 241 cases during this same period in 1976. This is the worst measles epidemic in 10 years for the

Unfortunately the well-publicized problems with the swine flu immunization program may have discouraged parents from having their children immunized against such cripplers and killers as polio, diphtheria, and measles. We will need to undertake a massive educational program to insure that all children are immunized and thus spared the tragedy these diseases can bring.

During the last Congress, I and a number of my colleagues, including Senator BUMPERS and the chairman of the Subcommittee on Labor/HEW Appropriations, Senator Magnuson, worked to provide funding for the immunization program against childhood diseases. Although the House did not include any money for this purpose in the version of the fiscal year 1977 appropriations bill for HEW, the Senate conferees were successful in retaining \$13 million of the \$14 million approved in the Senate for this vital program.

In the fiscal year 1977 supplemental bill currently in conference, the House transferred an additional \$3 million from the swine flu account to the Center for Disease Control's childhood disease immunization program and I was successful in offering an amendment at the Senate subcommittee markup to transfer an additional \$1 million. This brings the total funding for this program in fiscal year 1977 to \$17 million-just \$500,000 short of the fully authorized level.

As is evident in this morning's article from the Post, there is a critical need to expand the program of immunization against childhood diseases, and it is especially gratifying to have the strong support of the administration for this purpose. I ask unanimous consent that the article from the Post be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEW DEVELOPING PLAN TO IMMUNIZE 20 MILLION YOUTHS (By Victor Cohn)

A new federal program to immunize 20 million children aged 14 and under against

seven serious infectious diseases will be announced Wednesday by Health, Education and Welfare Secretary Joseph A. Califano, Jr.

The aim will be to combat a rapid increase in cases of measles caused by a sharp lag in immunizations and prevent such an increase in cases of polio, diphtheria, rubella (German measles), whooping cough, tetanus and mumps.

Another goal, said an informed health official who declined to be named, will be jack up public interest in immunizations, which has suffered, fairly or unfairly, because of what happened in swine flu."

Speakers at a National Immunization Conference at the National Institutes of Health yesterday repeatedly stressed the need for a new national effort to vaccinate the unprotected and restore public credibility in vaccinations.

Attending the conference, which concludes Wednesday, are scientists, doctors, government health experts, insurance and drug firm officials and representatives of consumer. PTA and Catholic women's groups.

Four of five conference committees that have been working for several months on the subject called for a long-range national immunization policy to be developed by a new National Immunization Commission or immunization Policy Council that would report to the HEW Secretary and Congress.

HEW officials yesterday were still completing final details of their new vaccination program, Dr. James Dickson III, acting assistant secretary for health, told the con-

The object, other health officials said in interviews, will be to reach two primary groups—some 13 million children at or above the poverty level and 7 million in higher income groups. The needy children are those in families now eligible or that will be declared eligible for federal aid programs.

Together, the 20 million youngsters lack one or more essential shots and represent more than a third of the 52 million children

in this country under age 15.

Implementing a planned \$6 million program announced Feb. 21 as part of President Carter's fiscal 1978 budget request, HEW will first seek to immunize at least 3 million of the 13 million needy children by July 1, 1978. officials said. Congress is expected to add a possible \$4 million to increase this group.

These children will be immunized in large part by state and local health departments at public health clinics. Local citizens' groups will be asked to help get youngsters to the

clinics.

But there also will be a strong effort, officials added, to reach better-off families, partly by educating parents, children and doctors on the need for more vaccinations and partly by providing doctors free vaccine so they would charge their patients only for administering the shots.

These diseases-measles, German measles (unrelated despite the similar name) and diphtheria-are on the increase this year, "and all unnecessarily because we can vac-cinate for them," said Dr. Saul Krugman, noted vaccine developer and chairman of two

conference working groups.
"Children are dying," he told the NIH
conferees. "In New York City last month two unimmunized children died of diph-

He showed slides of brain-damaged, retarded, cerebral-palsied and blind children born to mothers never protected against rubella and said, "This is what we shall return to if we do not improve immunization."

The 1976 total of slightly fewer than 40,000 measles cases will "probably" double this year, he estimated. Doctors report that 1 child per 1,000 measles victims develops en-cephalitis or brain inflammation and 1 per 1,000 dies of encephalitis or pneumonia.

The vaccine conference working groups largely agreed that vaccine efforts have been hindered by lack of continued financial sup- Health and Physical Education which he report for vaccine research and development, lack of a federal policy to protect vaccine makers from damage suits in cases where vaccines do harm through no fault of the manufacturer and lack of public understanding that vaccines may sometimes do harm as well as good.

DR. EDWIN BANCROFT HENDERSON

Mr. BROOKE. Mr. President, just over a month ago one of the Washington area's most distinguished citizens, Dr. Edwin Bancroft Henderson, passed away. He was 93.

Dr. Henderson was a marvelously talented man. A writer, an educator, an activist, and an athlete, he was a man respected and admired by many. He was the first black physical education teacher in this city, rising later in life to become the director of the District's Department of Health and Physical Education. He was a tireless supporter of, and crusader for, equal rights, campaigning vigorously to break down the restrictions of the American Athletic Union-AAUwhich prevented interracial competition and serving for many years as president of the NAACP's Virginia branch. And in 1974 Dr. Henderson was inducted into the Black Sports Hall of Fame along with men like Willie Mays, Henry Aaron, and Muhammed Ali.

I was very privileged to know Dr. Henderson. He was a mentor and an inspiration. I will miss him, as I know countless other men and women will miss him. But while we mourn his passing, we can rejoice in the knowledge that his life was as full and as vigorous as a man could hope for.

To his sister, Mrs. Annie Briggs; his two sons, Dr. James H. M. Henderson and Dr. Edwin M. Henderson: his four grandchildren; and his two great grandchildren I extend deepest sympathies. That God be with them to comfort them in their loss is my constant prayer.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the very moving eulogy delivered at Dr. Henderson's funeral as well as an excellent article that appeared in the Washington Post of February 5.

There being no objection, the material was ordered to be printed in the RECORD. as follows:

PORTRAIT OF A "GRAND OLD MAN"-PIONEER EDUCATOR, CIVIL RIGHTS LEADER, AND PRO-

For 93 years, Edwin Bancroft Henderson was a man of distinction and character, of achievement and inspiration, of personal courage and skill.

A life-long advocate of equal rights for Negroes, he wrote over 2,000 letters to the editors of Washington, D.C. and Alabama newspapers, often receiving heated replies from those who did not agree with his views against segregation. Before the struggle for equality of colored people became popular, Dr. Henderson was its champion. He was president of the Virginia Branch of the NAACP for many years and program chair-man of the Fairfax County Council of Human Relations.

In 1904, he was the first Negro teacher of physical education in Washington, D.C. in the country. He introduced basketball to Washington Negro youths at the YMCA and later became Director of the Department of mained until his retirement in 1954. At this time he received the prized honor of being made Fellow of the American Association for Health, Physical Education and Recreation.

Realizing the power of sports in furthering interracial respect and understanding. Dr. Henderson campaigned to break down the restrictions of the American Athletic Union (AAU) which prevented interracial competition. In 1910, the restrictions were dropped.

In 1939 he wrote "The Negro in Sports," the first book to deal comprehensively with Negro athletes. In 1968, he collaborated with editors of Sports magazine on "The Black Athlete—Emergence and Arrival," a publication of the International Library of Negro Life in History. His latest contribution appeared in the Black American Reference Book sponsored by the Phelps-Stokes Fund entitled "The Black American in Sports.

Dr. Henderson was married in 1910 to Mary Ellen Meriwether. Their marriage of 65 years was happy and fruitful. When she passed on February 4th, just a year ago, he lost his zest for living. One year later on February 3rd, he joined her. Ned and Nell are again together.

Left to mourn Ned and Nell, but with loving memories of their beautiful lives, are his two sons, Dr. James H. M. Henderson and Dr. Edwin M. Henderson; four grandchildren, Edith Ellen Wimbish, Dena Rosalice Solomon, James F. Henderson and Edwin Bancroft Henderson II; and two great-grandchildren, James F. Henderson and Alice Laverne Wimbish. Also surviving is a sister, Mrs. Anne H. Briggs of Falls Church.

[From the Washington Post, Feb. 5, 1977] EDWIN HENDERSON, EDUCATOR, 93, DIES

(By Jean R. Hailey)

Dr. Edwin Bancroft Henderson, 93, a noted educator and civil rights leader in the Washa ington area for many years, died of cancer Thursday in Tuskegee, Ala.

The first black instructor of physical education in this country, he had been director of health and physical education for black schools in Washington from 1926 until he retired in 1954, the year that the Supreme Court ended school segregation.

Dr. Henderson, with his wife, the late Mary Ellen (Nellie) Henderson, also an educator and civic leader, had helped organize the NAACP chapter in Fairfax County. He went on to become president of the Virginia chapter of the NAACP.

They had lived in Falls Church from 1910 until 1965, when they moved to Tuskegee to live with a son, Dr. James H. M. Henderson, director of the Carver Research Foundation at Tuskegee Institute.

Mrs. Henderson died at the Wisconsin Avenue Nursing Home here on Feb. 4, 1976.

Dr. Henderson was never a star basketball, football or baseball player, but he was credited with doing as much for black athletes and athletics as many of the major black figures in the sports world.

In 1974, along with such notables as Willie Mays, Hank Aaron, Wilt Chamberlain, Muhammed Ali and others, he was inducted into the National Black Sports Hall of Fame.

At that time, he was reminded that Black Sports magazine had cited him in 1972 as one of the foremost black Americans of all time. Before the struggle for black equality became commonplace, Dr. Henderson was its champion."

"I never consciously did anything to be first. I just happened to be on the spot and lived in those days when few people were doing the things I was doing," he said then, adding:

"But sports was my vehicle. I always claimed sports ranked with music and the theater as a medium for recognition of the colored people, as we termed ourselves in my day. I think the most encouraging thing, liv-

ing down here in Alaahma, is to see how the black athlete has been integrated in the South."

Born in Southwest Washington, Dr. Henderson liked to recall that he had grown up with the late Al Jolson as a playmate. He graduated from Dunbar High School and was first in his class at Miner Teachers College.

He became the first black instructor of physical education in the country in 1904. At the time, there was no formal physical education in black schools. Instead, physical culture was taught one day a week by a white instructor.

For three summers, while school was not in session, Dr. Henderson studied physical education at Harvard University. He played a comparatively new sport—basketball—there.
When he got back to Washington, he or-

ganized the 12th Street YMCA team. They played teams here and in Baltimore. Philadelphia and New York, and claimed the national basketball championship in 1909 and 1910

Dr. Henderson also organized the first black high school and college track meets in the country.

In addition, he led a strong campaign to break the color line in the Amateur Athletic Union, which lowered the bar in 1910.

Besides teaching, serving as a track, foot-ball and baseball official, writing for sports publications and reporting as a "stringer" Washington newspapers on athletic events in the black community, Dr. Henderson earned a bachelor's degree from Howard University and a master's degree from Co-lumbia University.

As head of the department of health, physical education and safety for black schools here, he instituted a number of innovations.

One was a highly successful program to reduce chronic truancy in the elementary schools by setting up classroom teams in football and basketball.

The teams were formed in each fifth- and sixth-grade classroom, and every boy was ei-ther a player or a substitute. The teams represented their rooms and grade level rather than their schools.

The boys were able to participate in sports that had until then been limited to varsity competitions and many of them established a new feeling of belonging to their class and their school.

During his tenure with the District school system. Dr. Henderson received numerous

In 1943, he was appointed to the National Council on Physical Fitness and the subcommittee on colleges and schools of the National Committee on Physical Fitness.

He was the first black man to receive a National Honor Fellowship in the American Association for Health, Physical Education and Recreation. Just before his retirement, he was presented the annual Howard University Alumni Achievement Award.

In 1973, he was named honorary president the North American Society for Sports History. In 1939, he had published a book, The Negro in Sports."

Dr. Henderson's civil rights activities ran concurrently with his education work and continued after he retired from his school

He was a prolific writer of pamphlets and "letters to the editor" protesting all forms of bias.

In the 1950s, he twice served as president of the Virginia chapter of the NAACP. He also served for many years on the board of directors of the D.C. branch of the NAACP. The Fairfax County branch of the NAACP, of which he had been a charter member, and the D.C. branch both had paid him special honors.

In 1960, he and his wife received a testimonial from the Fairfax County Council on Human Relations. He had been program chairman of the council and also a director of the Virginia Council on Human Relations. For many years, Dr. Henderson and his wife had maintained a summer home at Highland Beach on Chesapeake Bay near Annapolis, where they were active in civic affairs.

In addition to Dr. James Henderson, he is survived by another son, Dr. Edwin M. Henderson, who is a dentist in Washington; a sister, Annie Briggs, of Falls Church; five grandchildren, and two great-grandchildren.

RURAL HOUSING ACT OF 1977

Mr. GRAVEL. Mr. President, I am pleased to join several of my colleagues as a cosponsor of S. 1150, the Rural Housing Act of 1977. Senator Humphrey has again demonstrated great leadership and initiative in authoring a comprehensive bill designed to extend and expand the authorities of the Farmers Home Administration.

Several weeks ago, I received a letter from Mr. Robert Loescher of Juneau, acting president of the Association of Alaska Housing Authorities, which outlined the Federal program assistance needs of the housing authorities. Four needs were identified in regard to the Farmers Home Administration:

First. Section 506 of the 1949 Housing Act, as amended, provides funds for research into rural housing. The present legislation contains authority for \$1,-000,000 annually, but no funds have ever been appropriated. The housing authorities suggest that \$10,000,000 be made available for rural housing research.

Second. The present recommendation for water and sewer grants under the Rural Development Act is for the maximum authorized in the law. If the massive need for water and sewer facilities is to be dealt with in a realistic manner, then the present \$300 million limit must be raised to \$1 billion. The housing authorities propose that the Rural Development Act be amended to do this over a 3-year period, that is \$500 million the first year, \$750 million in the second year and \$1 billion in the third year. In addition, the present restriction on the grant of 50 percent of development cost should be changed so that the grant is a flat 75 percent of cost as is the present EPA grant program.

Third. Section 525(a) technical assistance program was enacted as part of the 1974 Housing and Community Development Act and has not been implemented to date. This provision would fund public and private nonprofit technical assistance to aid in the production of housing for low income families in rural areas. This is especially critical for rural areas where the institutional framework for housing delivery is weak and nonprofit/ public activity takes on added importance. Additionally, section 525(b) establishes a predevelopment loan fund for housing related activities. As with the 525(a) program, these resources are needed to enable public agencies and nonprofits to operate effectively. In many cases public and nonprofit groups are the only possibilities for serving the housing needs of rural areas. The Alaskan housing authorities support funding and implementation of these sections.

Fourth. Alaska is one of only eight

States without a Farmers Home Administration State office. The housing authorities urged the creation of such an office for Alaska.

Mr. President, I am pleased to note that Senator Humphrey's bill is designed to meet the needs in the areas of housing research and water and sewer grants. On the issue of technical assistance, I would urge that Secretary Bergland take a close look at the potential of the section 525 programs. Finally, I have formally requested that Secretary Bergland consider a Farmers Home Administration State office in Alaska. I ask unanimous concent that my letter to the Secretary be printed in the Record.

I hope that the Banking, Housing and Urban Affairs Committee will act expeditiously on this important legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE, Washington, D.C., March 15, 1977. Hon. Bob Bergland, Secretary,

Department of Agriculture, Washington, D.C.

DEAR BOB: This letter is to request your consideration for a Farmers Home Administration State office located in Anchorage, Alaska.

The Farmers Home Administration has had a significant impact on housing in rural Alaska. The various programs such as the Section 515 Rural Rental Housing Program, the Section 502 Basic Homeownership Program and Section 504 Housing Rehabilitation Program work well in Alaska. However, programs are presently controlled in terms of funding, processing, level of staff available and public exposure to programs by an office in Portland, Oregon. Location of a State office in Anchorage would bring decision making, technical assistance, and program exposure closer to the citizens of Alaska.

The market for Farmers Home programs in Alaska is growing rapidly. The 1975 activity for Alaska was 139 loans/grants for a total commitment of \$5,553,000. In 1976, Farmers Home approved 268 loans/grants for a total commitment of \$16,503,600. Alaska's allocation for the 1977 fiscal year stands at \$19,950,000.

The housing needs of Alaska are truly unique. Rural Alaskans are caught in a curious paradox: they have, perhaps, the greatest need for safe and secure housing among any rural Americans, yet it is an almost impossible task to design a government program to deliver housing to the bush areas of Alaska. Recent programs designed by the Department of Housing and Urban Development and the Alaska State Housing Authority were implemented without a true understanding of the needs of rural residents and have resulted in litigation over the inadequacies of the homes.

The Department of Housing and Urban Development recently funded a study of the housing requirements for Alaskan Native people (HUD Contract H 2319) conducted by the consulting firm of Naramore, Bain, Brady and Johanson of Seattle, Washington. In a chapter concerning government programs, the following conclusions were reached with regard to the Farmers Home

Administration Programs:
FMHA Programs such as 515 and 502 are more suitable for rural areas in that FmHA makes direct loans so applicants need not rely on an undeveloped home mortgage market to receive aid. In addition, FmHA has dealt with land title problems by accepting leasehold interests in lieu of title In addi-

tion to maximum income limits for eligibility, FmHA requirements for loan payback results in an effective minimum income estimated to be \$12,000 per year (nearly twice the average rural Alaskan income). While this is a problem, it is more often a lack of knowledge about the program that has limited demand for it. For fiscal years 1969–1975, only 722,502 loans were made in Alaska, with 589 of those market rate loans and 36 units of 515 rental housing. While it is intended that FmHA take on a greater share of responsibility for non-metropolitan housing, its programs must be more widely understood, and Alaska must get more personal attention. (emphasis added).

In light of these conclusions, I urge you to give serious consideration to the establishment of a Farmers Home Administration State office in Anchorage.

With warm regards. Sincerely,

icerely,

MIKE GRAVEL.

COMMUNITY DROUGHT RELIEF ACT OF 1977

Mr. BURDICK. Mr. President, on March 23, the President unveiled his emergency drought relief package. The President has outlined in this package, entitled the Community Drought Relief Act of 1977, an \$800 million plan of action to be implemented by seven Federal agencies.

A substantial portion of the \$800 million has been directed to the Economic Development Administration in the Department of Commerce. It is this section of the proposal over which the Committee on Environmental and Public Works has primary legislative jurisdiction. Accordingly, the committee through its Subcommittee on Regional and Community Development held a hearing this morning to consider this part of the overall package.

Briefly, the EDA role in dealing with the drought, as proposed by the President, can be summarized as follows: providing grants and loans to communities with population over 10,000 which can demonstrate severe drought impact. The committee has not endorsed this proposal; however, we hope to consider it in the near future. Also, that other Senators might be able to study this bill, I am introducing it by request of the President. Accordingly, Mr. President, I ask unanimous consent that the bill, a section-bysection analysis prepared by the White House, and the March 23 White House press release concerning this proposal be printed in the RECORD. Also, I ask unanimous consent that the administration testimony delivered by Assistant Secretary of Commerce for Economic Development Robert Hall this morning for the Subcommittee on Regional and Community Development, which I chair, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the Record, as follows:

S. —
A bill to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976-77 drought and promote water conservation

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, that this Act be cited as the "Community Emergency Drought Relief Act of 1977".

SEC. 101. (a) Upon the application of any State, political subdivision of a State, Indian tribe, or public or private non-profit organization, the Secretary of Commerce is authorized to make grants and loans to applicants in drought impacted areas for projects that implement short term actions to augment community water supplies where there are severe problems due to water shortages. Such assistance may be for the improvement, expansion or construction of water supplies, and purchase and transportation of which in the opinion of the Secretary of Commerce will make a substantial contribution to the relief of an existing or threatened drought condition in a designated area.

- (b) The Secretary of Commerce may designate any area in the United States as an emergency drought impact area if he or she finds that a major and continuing adverse drought condition exists and is expected to continue, and such condition is causing significant hardships on the affected areas.
- (c) Eligible applicants shall be those states or political subdivisions of states with a population of 10,000 or more, Indian tribes, or public or private non-profit organizations within areas designated pursuant to subsection (b) of this section.
- (d) Projects assisted under this Act shall only those with respect to which assurances can be given to the satisfaction of the Secretary of Commerce that the work can be completed by November 30, 1977 or within such extended time as the Secretary may approve in exceptional circumstances

Sec. 102 Grants hereunder shall be in an amount not to exceed 50 per centum of allowable project costs. Loans shall be for a term not to exceed 40 years at a per annum interest rate of 5 per centum and shall be on such terms and conditions as the Secretary of Commerce shall determine. In determining the amount of a grant assistance for any project, the Secretary of Commerce may take into consideration such factors as are established by regulation and are consistent with the purposes of this Act.

SEC. 103. In extending assistance under this Act the Secretary shall take into con-sideration the relative needs of applicant areas for the projects for which assistance is requested, and the appropriateness of the project for relieving the conditions intended to be alleviated by this Act.

SEC. 104. The Secretary of Commerce shall have such powers and authorities under this Act as are vested in the Secretary by Sections 701 and 708 of the Public Works and Economic Development Act of 1965, amended, with respect to that Act.

Sec. 105. The National Environmental Protection Act of 1969, as amended, shall be implemented to the fullest extent consistent with but subject to the time constraints imposed by this Act, and the Secretary of Commerce when making the final determination regarding an application for assistance hereunder shall give consideration to the environmental consequences determined within that period.

Sec. 106. There is hereby authorized to be appropriated for the fiscal year ending September 30, 1977, \$225,000,000 of which sum \$150,000,000 is to be for the loan program including administration and \$75,000,000 of which is to be used for the grant program herein, including administration thereof, and such additional amounts for the fiscal year ending September 30, 1978, as may be reasonably needed for administrative expenses in monitoring and closing out the program authorized by the Act.

SECTION-BY-SECTION ANALYSIS OF DOC PRO-POSED DROUGHT RELIEF BILL

To be cited as "Community Emergency Drought Relief Act of 1977"

SEC. 101. (a) Secretary of Commerce may make grants and loans to States, political subdivisions of States, Indian tribes, or public or private non-profit organizations for projects, in designated areas, which augment community water supplies and-where there are severe problems due to water shortages.

SEC. 101. (b) The Secretary may designate drought impact areas after a finding of major and continuing adverse drought condi-tions which conditions cause significant hardships.

SEC. 101. (c) Eligible applicants shall be those States or political subdivisions of States with a population in excess of 10,000 Indian tribes, or public or private non-profit organizations within areas designated under Section 101(b) above.

Sec. 101. (d) Applicants are to provide assurances that projects can be completed by November 30, 1977 or within the time extended by the Secretary because of exceptional circumstances.

SEC. 102. Grant assistance is to be for a maximum of 50 percent of project costs, with loan assistance at 5 percent per annum for not more than 40 years. Such assistance shall be on factors established by regulations.

SEC. 103. In providing assistance the Secretary shall consider the relative needs of projects, and the appropriateness of the project.

SEC. 104. Provides the Secretary with the authorities provided in Sections 701 and 708 of the Public Works and Economic Development Act, as amended, which in general deal with post-approved grant and loan administration

SEC. 105. Requires that the National Environmental Protection Act be fully implemented consistent with the time constraints

SEC. 106. Provides authorization of appropriation for \$225,000,000 for the fiscal year ending September 30, 1977, of which sum \$150,000,000 is for the loan program, and \$75,000,000 for the grant program, both inclusive of administrative costs.

THE WHITE HOUSE PRESS RELEASE To the Congress of the United States:

Over the past two years, many of the Western and Plains states of our nation have been victims of a prolonged, severe drought. The effects of the drought have built up over many months, and they will take a long time to correct. Even long periods of rain would not wholly relieve the problem now.

The human and economic costs of the drought have been high. It has jeopardized municipal water supplies, damaged crops and pastureland and depleted livestock numbers. The drought has inflicted financial hardship on countless farmers, ranchers, businessmen and others, and it continues to pose a serious threat to their livelihood.

The Federal government has already made available almost a billion dollars in drought assistance through loan's and cost-sharing programs. Although we do not have enough money to meet every requirement or indemnify every loss, we can provide additional help in certain areas. I am recommending a variety of assistance programs which will be applied in each area depending on how severely the drought has affected the people of that region.

In addition, we can encourage water conservation through several existing govern-ment programs. In many cases, water conservation is our only hope for immediate relief. As a nation, we must begin to conserve our water supplies, and government-at all levels-must lead the way.

The measures I propose will allocate benefits fairly, will mitigate some of the worst effects of the drought, and will support individuals and communities in their efforts to conserve water. Some of these proposals will require modification of existing programs or additional funding. Others will require totally new legislation. All of these will be temporary authorities; they are designed to with short-term problems, and they will expire on September 30, 1977.

Specifically, I propose the following legislative actions:

New temporary authority to allow the Economic Development Administration and the Farmers Home Administration to provide \$150 million in grants and \$300 million in low interest (5%) loans to communities for emergency water system improvements which can be completed quickly and which are essential to protect public health and safety.

Establishment of a new Small Business Administration drought assistance loan program to provide \$50 million in low interest (5%) loans to small businesses in major drought designated areas.

Establishment of a new Farmers Home Administration drought assistance loan program in which prospective losses can be included. This program will provide \$100 million in 5% loans to farmers and ranchers in major drought designated areas.

New legislation to authorize the Secretary of the Interior to provide \$100 million in low interest (5%) loans to purchasers of water. (Endorsement of the water bank objectives of 8-925)

Supplemental funds totalling \$14 million for the Southwestern Power Administration to ensure adequate energy supplies.

Supplemental funds in the amount of \$30 million to the Bureau of Reclamation to provide assistance to irrigators on Federal Reclamation projects.

Transfer to the Department of Agriculture from the Federal Disaster Assistance Administration authority to administer and fund the Emergency Livestock Feed Program.

Supplemental funds to the Agricultural Stabilization and Conservation Service in the amount of \$100 million to provide for costsharing of emergency soil conservation prac-

In addition, I have directed the following administrative measures:

The Secretaries of Agriculture and Interior will make available additional Federal lands for grazing and issue emergency permits as appropriate.

The Secretary of Agriculture will take administrative steps to ensure that trained firefighters and essential equipment are available to meet the increased danger of forest and

When added to the supplemental appropriation of \$200 million for disaster assistance, these new legislative proposals will provide almost \$1 billion in additional drought assistance and bring to almost \$2 billion the assistance provided by the Federal govern-

I believe the legislative proposals and administrative actions outlined above offer the best possibility of providing immediate assistance to meet the needs of some of our fellow Americans in this period of crisis. I urge immediate consideration of the legislative proposals and their timely adoption. If we are to be of real help to the people afflicted, time is of the essence.

JIMMY CARTER.

THE WHITE House, March 23, 1977.

TOTAL FEDERAL DROUGHT ASSISTANCE, FISCAL YEAR 1977

1 Federal agencies are also taking actions—no cost estimate available.
2 A supplemental appropriation of \$200,000,000 for disaster relief has been approved by Congress, as requested by the President. A portion of this will be used for drought assistance.

Proposal has a fiscal year 1977 impact of about \$270,000,000, and a total cost to the Government including the subsidy cost over the life of the loans of about \$550,000,000.
 Estimated, no actual limit.

DEPARTMENT OF COMMERCE STATEMENT BY ROBERT T. HALL, ASSISTANT SECRETARY FOR ECONOMIC DEVELOPMENT

Mr. Chairman and Members of the Subcommittee.

I appreciate the opportunity you afford me to testify on a proposed bill, Community Emergency Drought Relief Act of 1977, submitted to the President of the Senate by the Secretary of Commerce, Juanita M. Kreps. This bill would provide temporary authority to the Department to mitigate the impacts of the 1976-77 drought and to promote water conservation.

The proposed bill was submitted in accord with the President's message of March 23, 1977, which contained emergency proposals for dealing with the drought situa-tion. The proposals are for a total of over \$800 million to be implemented by seven Federal agencies. This, when added to the \$1.2 billion being provided under existing programs for disaster assistance, would bring Federal drought assistance to over \$2 billion. Under the proposed bill the Department of Commerce would be authorized to receive \$225,000,000, of which sum \$150,000,000 applies to a loan program and \$75,000,000 for a grant program, both being for this fiscal year. Immediate consideration of the various Presidential proposals is urged, given the need to quickly respond to the pressing needs of many communities and affected individuals.

The President's funding requests take into consideration the overall budgetary require-ments and the need to address the differing problems of drought areas. Mr. Chairman, the earnest efforts of this subcommittee to alleviate the drought problem are reflected in your convening this hearing on short notice. Your prompt action on this measure is to be commended.

The President noted in his message that "over the past two years, many of the west-ern and plains states of our nation have been victims of a prolonged, severe drought. The effects of the drought have built up over many months, and they will take a long time to correct. Even long periods of rain would not wholly relieve the problem now." How-ever, some immediate actions are possible and required.

The Department's proposed bill was developed recognizing that several Federal agencies and Departments have complementary roles in the effort to mitigate the probwhich have arisen. We submit that EDA's role should be in providing grants and loans to communities with a population of over 10,000 that demonstrate severe prob-lems, such as a threat to the health and safety of its inhabitants or significant economic dislocation.

These projects would implement shortterm actions to augment community water supplies where there are severe problems due to water shortages. Typically these projects would be for improvement, expansion or construction of water supplies, or purchase and transportation of water, or for water conservation.

Given the need for quick action, projects would be those which applicants can certify to the Department that work would be com-pleted by November 30, 1977. In exceptional circumstances this deadline could be extended

In view of the drought urgency, the shortterm implementation of the projects, and the proposed requirement that funds must be obligated before September 30, 1977, this Department is committed to speedy processing of properly prepared applications for assistance. To this end we will utilize our Regional Offices and other field staff to promptly process the applications. Determinations to approve or disapprove a proposed project will be made within approximately two weeks after receipt of a completed application.

In the case of grants, the Federal share would not exceed 50 percent of the allowable costs. The amount of grant assistance will be determined on a project by project basis, taking into consideration the potential revenue producing ability of each project and the availability of net revenues from the project for debt amortization. Loans would be for a maximum of 40 years at a per annum interest rate of 5 percent.

An essential feature of this program is that it will provide for communities with a population over 10,000, assistance comparable to that being provided by the Farmers Home Administration for drought impact projects in smaller communities.

Applicants eligible under this program will be in areas designated by the Secretary found to have a major and continuing adverse drought condition and which is expected to continue, and when such condition is also found to cause significant hardships on the affected area. Such designations will take into consideration the designations by other Federal agencies administering other programs of drought assistance.

EDA recognizes the urgency and the need for assistance to communities severely impacted by the drought, and therefore strongly recommends early consideration of the pro-

Gentlemen, this ends my prepared state-ment. I would be pleased to answer any questions the Members of this Subcommittee wish to pose.

TRIBUTE TO DR. MARTIN LUTHER KING, JR.

Mr. BAYH. Mr. President, yesterday marked the ninth anniversary of the assassination of a truly great American. It was on April 4, 1968, in Memphis, Tenn., that Dr. Martin Luther King, Jr. was assassinated, and America lost a man who fought for equality for all its people in his native country, America.

It is only fitting and proper that the Congress, the Nation, and the world pay tribute to this messenger of God. His message was a very basic and simple one. But somehow many of our fellow citizens failed to comprehend the substantive value of his preachings. The hatemongers and the racist try to denigrate his name and make a mockery of his cause. But try as they may, they shall never succeed. For all freedom loving Americans recognize the magnitude of his cause as well as the profound impact that his accomplishments had in changing the course of American history.

As one travels throughout the south, one cannot help but to be impressed by the high degree of integration that has taken place there. Indeed Dr. King's dream of white child and black child walking arm and arm across the red clays of Georgia, is no longer a dream, but a reality. When one observes the high percentage of blacks who turned out to vote in the last election and when one mingles with elected officials and black staff members in the halls of Congress one begins to realize the greatness of this man's accomplishment.

Contrary to the false rhetoric of his critics, King taught us that we can use the avenue of peaceful arbitration by which to work out our differences. He made us confront our weaknesses, and thusly, by confronting them, helped us all to "overcome".

The murderer of Dr. King removed the man from our presence, but he can never be removed from our memories. For the works of Dr. King are much greater than the impact of one sick assassin's bullet. His accomplishments are forever enshrined in the hearts and minds of all Americans. And for years, decades, and centuries, Dr. Martin Luther King, Jr. will be remembered as a man who struggled to make his innermost dreams a reality, and in doing so, made our country a great democracy and truly a place of equal opportunity for her citizens.

INTERSTATE HORSERACING ACT OF 1977

Mr. HUDDLESTON. Mr. President, I am very pleased to join the distinguished chairman of the Committee on Commerce, Senator Magnuson, as a cosponsor of S. 1185, the Interstate Horseracing Act of 1977. I have done so because of my firm conviction that unless we prevent, by enacting S. 1185, the spread of interstate off-track betting we will soon see the death of the horse racing and breeding industries as we know them today.

The Commonwealth of Kentucky, as you well know, is synonymous around the world with horses and the horse industry. Kentucky is not just noted for thoroughbreds either, although those lovely and spirited animals represent an industry with a valuation of more than \$1 billion in my State alone. We also have a multimillion dollar standardbred industry in the State and a rapidly growing quarter horse industry, in addition to which we have always had a large number of people who are just pleasure riders.

In addition to the direct contribution of the horse industry to the economy of

our State:

Through direct pari-mutuel taxes which amounted to more than \$10 million last year;

Through track and occupational licenses, which amounted to another halfmillion dollars last year;

Through admissions taxes, et cetera, which contributed well over \$400,000;

Through sales taxes on some \$75 million worth of horses which were auctioned in the State last year;

Through property taxes on approximately \$40 million worth of land devoted to raising horses; and

Through payroll taxes on the thousands of people who work on these farms and at these racetracks.

In addition to all these direct contributions to the economy of the Commonwealth of Kentucky, the horse industry is of inestimable value to the State as the principal attraction of our large and thriving tourist industry. All the taxes derived from these vital industries go toward education, toward health programs, toward the delivery of all the services associated with the operation of Kentucky's State Government.

I should point out that this vast investment, this vast economic contribution is only a portion of the economic impact of the racing and breeding industries of the United States. Kentucky's total direct parimutuel revenue, some \$11 million last year, represents only 2 percent of the nearly \$582 million which the 30 racing States received in similar revenue during the same period. Kentucky's 15,500 people who are licensed to make their living in the racing indusrepresent only a fraction of the 200,000 people who are in the National Association of State Racing Commissioners' file of persons licensed to make their living in the pari-mutuel racing industry. This employment figure is for the racing portion of the industry only, and does not include the people employed in the breeding and other associated industries.

There is virtual unanimity among experts in the horse industry on the subject of what will happen if interstate off-track betting is allowed to develop to its logical conclusion.

Teletheaters and OTB parlors will replace racetracks. As a result, racetracks will close, so the number of horses and people necessary to put on the show will plummet. When the need for horses declines, the need for breeding farms declines, as does the need for people to man the farms. As the number of tracks and farms declines, the need for people to make saddles declines, as does the need for people to grow oats, the need for people to transport horses, et cetera.

There is also agreement among the experts of the horse industry that, if interstate off-track betting is allowed to reach its logical extreme, there could be racing at two, or maybe three, tracks in the country, with a 99½ percent reduction in the number of horses and people necessary to conduct racing at those tracks, and a concomitant reduction in the number of horses and people in the breeding industry.

Can we afford to permit a 99½ percent reduction of a \$14 billion industry? Can we afford to jeopardize the ability of 186,000 people who are licensed to make their living through the racing industry—most of them unskilled—to make that living?

Finally, can we afford to jeopardize more than \$580 million a year which the 30 racing States receive in parimutuel revenue each year? I think not and I therefore urge my colleagues to join me in supporting this most important legislation.

THE GREAT SOCIETY WAS NOT A BIG FAILURE

Mr. BAYH. Mr. President, for the past 7 to 8 years it has become quite fashionable for critics of the Great Society to attack the programs that were born out of the efforts of the Johnson adminis-tration and the Congress. These critics were quick to point out the shortcomings and weaknesses in these programs. The truth in the matter is that the Great Society was not an overwhelming failure. To the contrary many good programs aided a substantial number of American citizens in their quest for economic and social equity. I think it is only appropriate that we stop for a moment and reassess some of the positive gains of the Great Society. For that reason I am asking to have an article written by Sar A. Levitan and Robert Taggart entered in the RECORD. The title of the article is "The Great Society Was Not a Great Big Failure." It appeared in the Sunday Sun on March 13, 1977. The article is based on their recent book "The Promise of Greatness.'

I submit this article with the firm belief that our social programs of the 1960's grew out of a commitment on the part of sincere and dedicated Americans to help the destitute and the poor share in the American dream. It is my hope that such commitments are about to be recognized by the 95th Congress. And hopefully this article will serve as a stimulus for all to begin to recognize the need for the same commitment and spirit in the years to come.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sunday Sun, Mar. 13, 1977]

THE GREAT SOCIETY WAS NOT A GREAT BIG FAILURE

(By Sar A. Levitan and Robert Taggart)

The Great Society dramatically accelerated governmental efforts to improve the well-being of all citizens, to equalize opportunity for minorities and the disadvantaged, and to reform the social, economic, and legal foundations of inequality and deprivation. Today, the belief is widely held that these efforts falled.

The conventional wisdom is that the Great Society exaggerated the capacity of government to change conditions and "threw money at problems" recklessly, overextending the heavy hand of government, pushing the nation too far, too fast, leaving a legacy of inflation, alienation, racial tension and other lingering ills. These criticisms, believed to be based on careful analysis of the evidence, are founded on ideology and are contrary to fact.

The expansion of income support has been one of the main targets of the critics. The tripling of caseloads under Aid to Families with Dependent Children between 1965 and 1972 alarmed many concerned citizens who became apprehensive that the welfare state would drive us all to the poor house. In retrospect, however, the process was neither incomprehensible nor inimical.

AFDC benefits were raised substantially to provide most recipients a standard of living approaching the poverty threshold. With liberalized eligibility rules and more attractive benefits, most low-income, female-headed families were brought in under the welfare umbrella by the early 1970's. Once the universe of need had been saturated, the momentum of growth slowed despite the massive recession.

The welfare explosion did have side effects. No doubt, some recipients chose welfare over work as benefits rose above potential earnings. But welfare also freed mothers from low-paid drudgery to take better care of their children. Moreover, the difficulties of placing even the most employable and motivated recipients in jobs paying wages that would permit them to escape poverty is indicative of the limited options available to the majority of clients. As benefits stabilized in the 1970's, the increase in real wages promised to reduce the attractiveness of welfare to unskilled workers.

The income support system, including Social Security, veterans' programs, unemployment insurance, workers' compensation, public assistance for the aged, blind and disabled, AFDC and cash programs such as food stamps, is incredibly complex. Yet "messiness" is inevitable where multiple needs prevail and where goals clash.

Concentrating aid on families headed by females makes the most efficient use of welfare dollars, since these families have the most severe needs and fewest options. Reducing welfare payments as earnings increase may discourage work, but it also tends to keep down costs. Cash and in-kind benefits may be too high in some areas and too

low in others, but on the average they are close to poverty levels and geographic difare declining. Most families re ceiving benefits from a large number of programs have severe or special needs.

The Great Society did more than provide cash. One of its main accomplishments was to alleviate a primary concern of the aged and the poor—health care. Medicare and Medicaid have generally fulfilled President Johnson's promise of assuring the "availability of and accessibility to the best health care for all Americans regardless of age,

geography or economic status."

Medicare experienced early difficulties in striving for a balance between assuring adequate services and avoiding over-utilization. with perhaps too much emphasis on the first goal. But measures have since been enacted to control costs and hospital stays. Medicaid's rapid and unexpected growth blamed on over-utilization and inefficiency. In fact, the major factor was the medical care deficit among the poor. By the early 1970's the momentum had already subsided as the eligible population was reached and measures were taken to discourage overutilization and waste. Medicare and Medicaid contributed to the rapid inflation of health care prices in the late 1960's but also led to an expansion of services including a reallocation to those most in need.

The Great Society also took significant steps to better shelter the poor. Participants in low income housing programs benefit from higher quality housing at a lower cost than they could hope to secure in the marketplace. Publicly-assisted units have helped to suburbanize low income minority families and have increased the stability and long-term economic status of some families. Building specifically for the needy has reduced market prices by boosting the supply of low-rent and low-cost housing, providing immediate benefits rather than waiting for the trickle down of increase production for unsubsidized

The Great Society put a high priority on education, ranging from Head Start for disadvantage pre-school children, to remedial manpower training programs for adults. The limited and very early evaluations of Head Start indicated that statistically significant improvements in achievement were washed out later when students returned to an "unenriched" environment. But evaluations of continued aid during early schooling suggested that the gains could be sustained, and even more optimistically, that early education efforts improved with experience.

Studies of elementary and secondary education programs were not encouraging but more recent findings suggest notable successes. Again, this may reflect the fact that the programs have improved. Federal aid for higher education can stand on its demonstrated merits. Persons from low income and minority families are attending and graduating from college in increasing numbers as a result of federal aid. The sheepskin is still the best guaranteed for exit from poverty.

Evidence suggests that participants in remedial manpower programs improved their earnings. Further, the value of projected future earnings exceeded the average cost of the programs. Society's investment in human resources has been a profitable venture.

One of the primary aims of the Great Society was finally to reform the socioeconomic system to assure equality of op-portunity for minorities and the poor. There were notable advances on the civil rights front. Black registration and voting increased, with a visible payoff in office holding. Equal employment opportunity efforts had little direct effect in the 1960's, but the screws were tightened considerably in the 1970's. De jure school segregation was largely eliminated. Fair housing machinery provided legal backing for some victims of discrimina-

tion, though little leverage to overcome longstanding patterns of de facto housing segregation.

While attention focused on racial issues, there were other areas of advancement. At the beginning of the 1960's, persons dependent governmental aid were subject whim and caprice of government bureaucracies. Anti-poverty legal efforts established the principles of due process and equal protection under social welfare programs. Commonly based organizations gave the poor and minorities a greater voice. Anti-poverty community action agencies stepped on firmly entrenched toes, generating antagonism but also providing competition to established institutions spurring them to improve services to the poor.

It is ironic that in the economically troubled 1970's the successes of the 1960's were quickly forgotten and even condemned. The Johnson administration placed highest priority on achieving rapid growth and low unemployment. It succeeded, and prices rose slowly (at least by more recent standards). The Nixon and Ford administrations acted on the premise that added joblessness was necessary to combat inflation and to provide a foundation for balanced growth. Unemployment rose precipitously and growth declined, but

prices continued to rise rapidly.

Common sense would suggest that something was being done right in the 1960's which was not being done in the 1970's, and prudence would caution against accepting the claims of recent policy-makers anxious to pass the buck for their own dismal record. Common sense would also question the effectiveness of the strategy of combatting inflation by increasing unemployment. The Great Society demonstrated that a tight labor market could be achieved and maintained for many years. The nation has paid dearly for continuing to ignore this lesson.

The social welfare efforts begun in the 1960's were based on the belief that the future can be molded by our energies and resources, that our nation is not condemned to passive acceptance of inequality, poverty, hunger, urban blight, high unemployment and other ills. This faith has been challenged and blunted by the criticism of the 1970's.

Clearly not all the social programs of the past decade were successful. Any social transformation has its costs and the social efforts of the past decade were no exception. There is little evidence that the infusion of additional funds has improved much the quality of education in ghetto areas, and housing segregation was worsened. The economic and social progress for blacks was accompanied by increased dependency and family instability

On the whole, however, a sober re-evaluation of the record suggests that the Great Society initiatives achieved their fundamental aims and improved our nation. Too frequently we forget how far we have come from the days of legally sanctioned racism, laissezfaire acceptance of poverty, and highly unequal educational opportunities. Likewise, we have come to accept high unemployment as a fact of life, frequently forgetting the seven fat years that preceded the current lean ones. As we enter our third century, there is a need for the positivism, commitment and compassion that were, and still remain, indispensable in the quest for a better society.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Thomas E. Lydon, Jr., of South Carolina, to be U.S. attorney for the district

of South Carolina for the term of 4 years. vice Mark W. Buyck, Jr., resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, April 12, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

THE CYSTIC FIBROSIS FOUNDA-TION: MRS. DORIS TULCIN

Mr. RIBICOFF. Mr. President, this week various groups will be presenting comments on the health proposals in the administration's budget for fiscal year 1978. One of these statements will come from the Cystic Fibrosis Foundation.

Cystic fibrosis is a disease unknown to most of us. It might have been unknown to me but for a close family friend. I have known Doris Tulcin since she was a child. In 1953, her daughter was born with cystic fibrosis. Doris has been fighting the

disease ever since.

Cystic fibrosis is a mysterious disease. It attacks the lungs and the digestive system. It is incurable, and it is the largest hereditary killer of children in this country. An estimated 10 million Americans carry this gene without knowing it. The disease's cause is unknown, and its result terrible.

A child with cystic fibrosis takes approximately 60 pills a day. He spends at least 1 hour a day in painful therapy. He eats a special diet and sleeps with a special vaporizer. And he does all this not to get better-but just to stay alive.

The burden on the family is immense. The average annual direct health care costs exceed \$5,000 per child. And the psychological cost is even greater. The disease scars the entire family.

The Cystic Fibrosis Foundation was founded in 1955 by a group of parents. Today Doris Tulcin is its president. For 20 years she spent 1 day a week in a clinic working with patients. Today the foundation runs 121 of these clinics. Now Doris Tulcin's time is spent raising funds with which the foundation supports research on childhood lung diseases and educating people.

This year the Cystic Fibrosis Foundation has begun-under contract with the National Institutes of Health-a stateof-the-art study of cystic fibrosis. This congressionally mandated study will tell us where we are and where we should go. It will help direct future research, treatment, and education efforts.

This kind of study is important, because cystic fibrosis does not fall neatly under the purview of any one Institute. Research efforts are spread over five Institutes. And the Institute of Maternal and Child Health sponsors services to the children and their families.

There has been some progress. When the foundation was started a cystic fibrosis child rarely lived beyond age 3. Today Doris Tulcin's daughter is 23, happily married, and working. More than one-half of the 2,000 children who will be born with cystic fibrosis in 1977

will live past 18. But there is still a long way to go. There is no cure and no controlling drug. Until these are found, Doris Tulcin will keep fighting.

NATIONAL COMMISSION ON NEIGHBORHOODS

Mr. PERCY. Mr. President, I am very pleased that the Senate on Monday, passed the Supplemental Housing Authorization Act containing title II, the National Neighborhood Policy Act. The act provides for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs on the Federal level that affect neighborhoods and to make recommendations at the end of a year for encouraging the preservation of our urban neighborhoods.

Such an assessment is urgently needed. The alarming decline of our great urban centers, underlined so emphatically by the New York City crisis, has pointed up the value of an examination of Federal activities that have aggravated and compounded the problems of the cities. We have finally awakened to the fact that our neighborhoods are important national resources, the heartbeat of our cities and the unique depositories of the varied cultural and economic traditions our urban centers have inherited. Certainly my own city of Chicago is one of the outstanding examples of a city rich with neighborhood culture and identity, and home to a number of active neighborhood groups that have contributed so much to its life. I spent my entire childhood in Rogers Park and have a deep attachment to it as I do for Woodlawn where I lived during my years at the University of Chicago.

Mr. President, for 2 years in a row I have cosponsored the National Neighborhood Policy Act and I am delighted that that it is finally on its way to meeting the serious responsibility with which it is charged. I look forward to helping the Commission in any way I can and anticipate that its report to the Congress will set the tone for urban-related legislation in the remainder of the dec-

ade of the 1970's.

RESOLUTIONS ADOPTED BY STATE OF GEORGIA LEGISLATURE

Mr. TALMADGE. Mr. President, the Georgia General Assembly and the State senate, while in session in Atlanta, adopted two resolutions which, for myself and my colleague, Senator Nunn, I bring to the attention of the Senate, and ask unanimous consent that they be printed in the Record.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 192

Whereas, the Congress of the United States in its wisdom has enacted legislation, cited as the Rail Passenger Act of 1970, to provide intercity rail passenger service as a vital part of a balanced transportation system, and to require improvement in rail passenger service, so as to help to end congestion on our highways and to provide the traveler in America, to the maximum extent possible,

with the freedom to choose the mode of travel best suited to his needs; and

Whereas, the growth and progress of this State has always been and is profoundly influenced by transportation; and

Whereas, the establishment of rail passenger service between major cities of the coasal area of Georgia and Macon, Atlanta, Chattanooga, Nashville, Chicago, and the principal intermediate cities would reinstate the service of the Savannah-Atlanta "Nancy Hanks", would serve the public need, safety and convenience and, in light of the present unfavorable energy situation, would readily be welcomed by the citizens of this State; and

Whereas, the proposed intercity route corridor through the State of Georgia from Atlanta to Macon and thence turning eastward toward the Georgia-South Carolina boundary into Savannah and the developing coastal area of Georgia would provide certain specific advantages over other routes through Georgia from a revenue producing potential,

viz:

. Population;

2. Increasing tourist industry;

- Commerce and industry on or near the route corridor;
- Permanent military bases on or near the route corridor; and

5. Supporting South Carolina counties including Hilton Head Island.

Now, therefore, be it resolved by the Senate That this Body hereby endorses the above described rail passenger service to improve our transportation system; be it further

Resolved That the Secretary of the Senate is hereby authorized and directed to transmit an appropriate copy of this Resolution to the Honorable United States Senators and Congressmen of involved Congressional districts, the Governor of Georgia, the Georgia Department of Transportation, the recently appointed United States Secretary of Transportation, the Coastal Area Planning and Development Commission, the Board of Directors of the AMTRAK Corporation and the President of AMTRAK.

SENATE RESOLUTION 20

Relative to the Apalachicola-Chattahoochee-Flint waterway; and for other purposes.

Whereas, a 100 foot wide by a 9 foot deep shipping channel was authorized by Congress for the Apalachicola-Chattahoochee-Flint waterway by the Rivers and Harbor Act of 1945; and

Whereas, said channel was proposed to extend from Bainbridge and Columbus, Georgia, to the Gulf of Mexico; and

Whereas, pursuant to said authorization, the U.S. Corps of Engineers has spent approximately \$310 million on permanent navigational improvements on the waterway; and

Whereas, at the present time, a minimal amount of dredging is required to maintain the authorized channel depth and width from Columbus and Bainbridge, Georgia, to the Florida line; and

the Florida line; and
Whereas, despite extensive dredging from
the Florida line to the intercoastal waterway
the Corps of Engineers has been able to
maintain the authorized channel depth only
67 percent of the time over the past 10
years; and

Whereas, the State of Georgia, relying upon the utilization of the deep channel, has invested more than \$5 million in port facilities in the Columbus and Bainbridge areas; and

Whereas, a number of industries have evidenced a keen interest in locating future plant sites on the waterway if the full potential of the shipping channel may be realized; and

Whereas, some of these interested industries have abandoned plans to locate upon the waterway due to the adverse shipping conditions which presently exist in the Apalachicola River; and

Whereas, the Corps of Engineers, after giving due consideration to ecological interests, recommends the construction of a dam upon the Apalachicola River which would maintain the required shipping channel depth; and

Whereas, opposition has been voiced to the construction of said dam because of potential adverse effects upon the seafood industry in Apalachicola Bay; and

Whereas, expert analysis and study of the proposed dam reveals that no measurable adverse effects will be felt upon Apalachi-

cola Bay; and

Whereas, experts have conservatively estimated that full-time maintenance of the authorized channel depths would add approximately \$7 million to the annual income of farmers in the Alabama-Georgia-Florida area; and

Whereas, it is the belief of this body that the erection of the proposed dam on the Apalachicola River would immeasurably enhance the economic and industrial growth of southwest Georgia, southeast Alabama and northern Florida; now, therefore, be it

Resolved, by the General Assembly of Georgia that this body does hereby urgently request that the U.S. Corps of Engineers proceed to implement their plans to erect on the Apalachicola River the much needed dam which will greatly improve the commercial utilization of the Apalachicola-Chattahoochee-Flint rivers; be it further

Resolved That the Secretary of the Senate is hereby authorized and directed to transmit an appropriate copy of this Resolution to the Southeastern District Office of the U.S. Corps of Engineers and to each and every member of the Georgia Congressional

Delegation.

THE ABORTION ISSUE

Mr. BARTLETT. Mr. President, I believe my colleagues would be interested in the attached article from the March 18 Tulsa Tribune, written by Mr. Jenkin Lloyd Jones. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the Record,

as follows:

THE ABORTION ISSUE (By Jenkin Lloyd Jones)

Abortion, a word rarely printed in family newspapers a quarter century ago, has now

become a national campaign issue.

The Democratic platform calls "undesirable" any attempt to overrule the Supreme Court decision declaring a non-person any fetus in gestation under 90 days. The Republican platform supports "efforts of those who seek enactment of a constitutional amendment to restore protection of the right to life of unborn children."

This being an emotional issue there is considerable mutual name-calling. Pro-abortionists are described as advocates of legalized murder, while the antis are damned for being mossback mentalities who would deny a woman the right to control her body.

This gets us nowhere.

Nevertheless, there is a fundamental issue here and it involves the way we look at human beings. Is genus homo merely an animal of a special sort, or is there a mystique concerning man which, in his own mind, at least, he need not share with other animals? This is an honest question, and there are honest people on atther state.

there are honest people on either side.

If you embrace the man-is-just-another-animal position, abortion takes on all kinds

of logic

The world's population is now rising by about a million every five days. If this increase is not slowed involuntarily by pestilence and famine it can be slowed voluntarily by wars, abortion or birth control.

No one likes pestilence or famine.

Wars, although they have had much holy sanction in the past, are a messy and wasteful method of population control.

They put at greatest hazard the most competent (the feeble-minded and congenitally-deformed are rarely enlisted) and therefore form a sort of reverse system of natural selection. They involve human agony and much destruction of the fruits of human genius and labor.

Birth control is both inexpensive and unrelated to the taking of life. Its opponents have offered no alternatives to runaway birthrates except abstinence from sex—an impractical solution since healthy human beings tend to crawl over bundling boards.

There remains abortion, a solution of last resort if birth control has been ignored or has failed.

The dangers to the mother, built into the furtive old "abortion mills", are almost entirely averted under hospital conditions. And there are two other interesting arguments.

One is that young, unmarried pregnant girls are too immature to make good mothers, Even with adoption in mind, there is cruelty and, perhaps, long-term mental trauma in forcing them to go full-term with shame and scandal.

Another is that adult women who are most likely to suffer unwanted pregnancies are generally irresponsible or of a low order of mentality, since, wherever abortion is legal, birth control is also legal.

Thus, abortion is seen as a means of reducing the number of children who are genetically deprived, and also of saving such children, if they are allowed to be born, from the neglect or even abuse of reluctant mothers.

The unwanted child begins life under a very dark cloud. Recent psychological studies indicate that he is most likely, himself, to become an abusive parent.

Having said all this, there remains the mystique of man.

Here we move away from pragmatics, which are mostly on the abortion-advocate's side, and on to more ephemeral grounds. Should we look at the human fetus as we look at unborn sheep, out of the skins of which we make caracul coats?

Medical testimony claims that within the time limits set by the U.S. Supreme Court no real human consciousness would have yet developed. But is the human fetus, in any stage of its development, a fit object to be lightheartedly consigned to the medical garbage can?

I once visited old Dr. Albert Schweitzer at his dilapidated hospital on the banks of the Oogoowee River in Gabon, and his whole philosophy centered around what he called "respect for life."

It is disrespect for life that has brought us murder, rising like a tidal bore, and mindless terrorism in which the innocent are gunned down in pursuit of some fuzzy ideal.

When we stop the heart-beat of a defenseless and unoffending human organism that was begun for no other purpose than the satisfaction of lust do we do something to ourselves?

Perhaps to the woman who can walk away from the abortion clinic without a backward look the answer is no. But what of the woman who wonders in the dark quiet of the midnight what he or she would have been like?

Such are the scary dynamics of the world's population problem that the pro-abortionists will undoubtedly win. But if this is part of the Brave New World some of us are going to have to be dragged into it.

FISHERIES VIOLATIONS BY SOVIET VESSELS

Mr. PELL. Mr. President, over the past several days the Coast Guard has issued reports of violations to three Soviet fishing vessels operating in our 200-mile fishing zone. One of these vessels was fishing outside of the permitted windows established for foreign fishing; another was fishing for a prohibited stock; and the third, a patrol vessel, was carrying out unauthorized fishery support operations.

In each case, the Department of State acted to prevent the seizure of the vessels. Apparently, several considerations were involved in the Department's decision, including—it seems to me—the currently delicate state of our bilateral relations with the Soviet Union as a result of what happened during Secretary of State Vance's recent trip to Moscow.

I understand, however, that failure to seize the vessel does not necessarily mean that they will get off scot free. Fines ranging from \$25,000 to several hundreds of thousands of dollars could be imposed under the law. The Soviet violations, all of which occurred off our Atlantic coast, are of serious concern to American fishermen, as the Soviet's actions call into question whether the protection which American fishermen expected under the law will, in fact, be provided.

Decisive action must be taken now to deter further violations by the Soviet fishing fleet. I urge the administration to impose stiff fines on the three recent Soviet violators in order to demonstrate that the United State is determined to carry out the purposes of the Fisheries Management and Conservation Act. Furthermore, a warning should be issued that further flagrant violations will result in seizures of Soviet vessels.

THE NEED FOR AN ENERGY POLICY COUNCIL

Mr. PERCY. Mr. President, the Committee on Governmental Affairs heard testimony on March 29 from Mr. Arnold A. Saltzman. Mr. Saltzman is the chairman of the Advisory Committee on National Growth Policy Processes, and the chairman of the Seagrave Corp. He testified on S. 826, the President's energy reorganization proposal and on S. 591, my own bill on the same subject.

Mr. Saltzman's cogent and farsighted testimony strongly supported the concept of an Energy Policy Council to coordinate our many national objectives and to make vital long-range policy recommendations. I ask unanimous consent that an extract from his excellent testimony be printed in the Record.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

EXTRACT FROM THE TESTIMONY OF MR. ARNOLD A. SALTZMAN

Congress must restructure its own house—rearrange its committee assignments, decide on the proper pathways to receive the President's periodic messages that require action, and how it should respond. In short, Congress needs to restructure and coordinate its

activities reflecting changes in the Executive branch. If reports reach Congress when they reach the President, time will be afforded the Congress to assign responsibilities and study its own response.

The people, also, need to know the Department's plans, goals, objectives and problems that impinge on various areas of their lives, so there can be an early airing of the issues and a public debate before Congress or the President need to act. It would be useful to the President and the Congress to have available an early reading of the public temperature. I believe that public policy cannot rise above the level that the public understands and will tolerate—even demand. They should receive information, plans and objectives as soon as reports are available and they should be consulted as plans and goals are being formulated.

Likewise, in my view, no head of a Department, no matter how wise and capable, should be given the job of trying to see that we have an adequate supply of energy and also be required to judge whether that objective does not inappropriately diminish the social, environmental, cultural, economic, and international needs of the nation.

This impels me to support solutions contained in S-591, namely, the creation of an Energy Policy Council in addition to the Department of Energy, This Energy Policy Council, as outlined in the proposed bill, has a vital role and looks toward intermediate and long-range objectives, not only in regard to energy, but also how they relate to all the other aspects of our nation's existence and the lives of its people. It also has a major role in trying to coordinate policy, with specific procedures for doing so.

It has a better likelihood of coordinating information—much of which already exists—but which is dispersed in various branches of the government. The information needs to be so gathered and stored that it reflects geographic and sectoral factors. It is not sufficient to look at the country as a whole. We need to know how actions taken or policies projected affect states, regions and particular industries. This will probably require an information "model". It is not only a matter of gathering information but of interpreting the information and giving proper recognition to various aspects of our economic and social lives as matters relating to energy encroach upon them.

In our report to the Congress and the President delivered at year-end 1976, I had recommended the creation of a National Growth and Development Commission. This Commission, which would have neither legislative nor executive authority, would a small non-political government agency of "wise men" to look ahead, isolate major problems, lay out alternative solutions for each problem, such as energy, and the cost of each possible solution in economic and social terms. It would inform the President. the Congress, and the public simultaneprovoking ously-thus national ness of issues, act as an early warning system and counteract the "fire-fighter" syndrome-and would require response some form from the President and the Con-It would also be responsive to the President and the Congress, thereby averting some of the problems of President Roosevelt's ill-fated (although effective) NRPB. Such a body, if brought into being, would be looking at any and all of the major problems that could complicate the future of our nation, and therefore, would not be limited only to energy.

If I did not have, or could not have, a National Growth and Development Commission (which was unanimously recommended by the twenty outstanding Americans who comprised my Committee), I

would happily accept Senator Percy's Energy Policy Council. However, I would do so including suggestions referred to above.

In looking at the concept of the Energy Council-or for that matter the pro posed Bill S-826-we are looking not merely at energy per se or even at energy and the conservation of it. When we talk of national goals, objectives, priorities and the future, we are talking about planning. Our nation has lost opportunities because of concern and aversion to that concept-or even the word.

The word planning connotes for some a small group of technocrats, insulated from criticism, who will achieve centralized power and impose a rigid program on an unwilling electorate, while destroying all private-sec tor freedom and market mechanisms in the process. Obviously, no one who cares about American liberties could possibly relish such an outcome. Fortunately, there is nothing in the nature of planning that requires such an undemocratic process.

I propose that we plan "American style". must be a "planning nation" but not a

"planned nation".

Dangers may be kept to a minimum, if the process is open from start to finish, . . . if there is adequate provision for public debate, . . . if all recommendations receive orderly consideration by democratically accountable institutions of government, . if there is adequate provision for monitoring and response by the public. This need not be a complicated process. Americans can resolve that any process we create will be compatible with freedom, and will preserve, to the greatest extent possible, the widely dispersed initiative and creativity we value so

But we would do well to proceed with a certain humility. There are still gaps in technical capacity. To mention only one problem, an analysis will be gravely deficient if it neglects significant variables that will affect the anticipated outcome; yet that is precisely what will happen until our capacity to deal analytically with the social and psychological factors that loom so large in the movements of events is advanced.

All of this strongly suggests that an "Energy Policy Council" or a National Growth and Development Commission be enacted together with S-826. If created, such a body should be led by "generalists", not merely experts in producing or conserving energy.

I would like to close with one last thought. For six years I have been working with members of the Congress aiming at institutional changes to provide clearer foresight and improved coordination to the Federal Government's policy-making. Since February of 1974, on a path cleared by Senators Mansfield and Scottand susbequently endorsed by virtually all the other members of the Senate-I studied the economic policy-making structure and capability of our Government. I found that our lack of appropriate institutional mechanisms in both branches government provides a history of opportunities missed for our nation to become much healthier than it is today.

Because we face and have recently experienced a small taste of crisis, our elected officials and most of the American people realize difficult decisions can no longer be postponed. This means sacrificing some portion of our present comfort, our present luxury to be wasteful, our preference to be unrestricted, in order to insure that we and our children can live in reasonable freedom from fear in the future and with restored prosperity. It is this type of hard choice that democracies shun. Only those with the courage to make those choices will survive in their present form. If we fail to act now, the next time we are called upon to make a choice, our nation will be in worse shape and the choices will be more onerous.

The American people still have in their consciousness the legend of a land of infinite size and riches where "every man could be This has been the American Dream. Today's reality demands that we conserve. husband our resources, define more sharply our objectives at home, use our strength more selectively abroad with heightened reliance on economic solutions. Crossing the psychological divide between the dream and the reality is our nation's most difficult obstacle. The President and the Congress must lead the way across this psychological barrier. The American people are ready to fol-

THE GENOCIDE CONVENTION AND HUMAN RIGHTS

Mr. PROXMIRE. Mr. President, well over a quarter century has passed since the Genocide Convention has been in force among signatory nations. And still the United States, a nation ostensibly committeed to human rights, has failed to ratify the treaty.

This Nation was founded upon the principle that every individual has the right to life, liberty, and the pursuit of happiness. In ratifying the Genocide Convention, we simply recognize that this is an international right.

Indeed, the treaty must be the foundation upon which further standards of international morality are built. It is unquestionable that future additions to a code of conduct will be needed. On a planet that every day becomes more crowded and complex, man's behavior towards his fellows must be guided by ever higher standards. The treaty on genocide is a small but necessary step to establishing those standards.

Mr. President, once again I would urge that we ratify the United Nations Convention on the Prevention and Punishment of the Crime of Genocide. A nation founded on the highest principles of human rights cannot waiver any longer in its support of the most basic of such rights—the right to life itself.

PROBLEM BANKS OR PROBLEM NEWS MEDIA?

Mr. HANSEN. Mr. President, David Rockefeller, chairman of the Chase Manhattan Bank, recently spoke out on the news media reporting of alleged "problem banks" that left the impression that the banking system was in a shaky condition.

David Rockefeller answered these charges and warned his business associates that businessmen were going to have to speak out more forcefully in defense of the free enterprise system.

He said in a speech to the Economic Club of New York, that the mass media had not presented fully and fairly the condition and performance of American business.

Mr. President, as a member of the minority party, I am well aware of the problems of bringing our "loyal opposition" views to the attention of the

I am also well aware of the limited readership of the Congressional Record but I hope that some of my colleagues might benefit from the remarks of David Rockefeller and ask unanimous consent

that his speech be printed in the RECORD. There being no objection, the speech was ordered to be printed in the RECORD. as follows:

PROBLEMS, PERSPECTIVES AND RESPONSIBILITIES

It is a personal pleasure for me to be here this evening and to have the privilege of addressing this distinguished group. For years, the Economic Club of New York has erved as a barometer of national business thought and a catalyst to spirited economic discussion.

I might say that my last appearance before this redoubtable gathering was in 1961. reported to the club at that time on what I thought the future held for "Gold, the dollar, and the free world." Evidently, I was so far off in my predictions—it's taken the club 16 years to get up the nerve to invite me back! But no matter what your motive, I'm delighted to be here tonight.

This evening, I'd like to discuss with you a deep concern that I have: First, as a banker: second, as a member of the business community; and more broadly, as a private citizen who firmly believes that, in spite of intermittent difficulties, our competitive enterprise system is healthy and serving our

citizenry well.

The essence of my concern is a feeling that our mass media, in particular, have not presented fully-and fairly-the condition and performance of American business. I fear that this could lead to a serious misconception of our free enterprise system by the pubwith the system's credibility and public's confidence hanging in the balance.

As Tom Murphy of General Motors recently put it, "The clock is running on free enterprise . . . and it is later than we think." At least part of the blame for this, as Tom said and I agree, "lies in our own business community and perhaps our own organizations." "Speaking out" for what we, as business people, believe in is no longer an alter-. . but an obligation of each of us. Our critics are active already in the "marketplace for ideas," and if we fail to join them in debate-their beliefs will prevail.

That is not to say that "speaking out" is a simple task. Most of us are far more skillful in selling products than in marketing ideas. Then too, we are frequently constrained in what we can say-for competitive, legal or customer confidence reasons. Indeed, are some issues on which prudent business policy dictates that we say nothing at all. Yet I am convinced that our abstinence

from comment too often deprives the public of the perspective it needs to accurately as sess complex business-oriented issues. And I believe the time is now for each of us, as concerned business people, to begin to "speak out" for our system and the institutions which compose it. This evening, I'd like to do just that by examining two banking-related issues with which you are all probably familiar.

One is the subject of the so-called "prob-You will recall that last year at lem banks." about this time, America's newspaper headlines and nightly T.V. news shows were dominated by a spate of dramatic stories about banks allegedly in trouble—all over the country. Understandably, these stories shook the confidence of the American public.

More recently, the subject of banking problems has reappeared in the press in the form of bank lending to foreign borrowers. And as before-if not yet as dramatically-this story too has made its way to the front page, in an

increasingly foreboding tone.

To gain some perspective on these issues, let's look back briefly to the "problem bank" story of January 1976. It began with an article emblazoned across the front page of the Sunday Washington Post, which centered on the Chase and Citibank. Basically, the story concerned a then 18-month-old report of the Comptroller of the Currency-obtained

through unnamed sources-which allegedly labeled both institutions as "problem banks' due primarily to classified loans. Reaction from the banks, the Comptroller and the chairman of the Federal Reserve Board was immediate and unified in its denunciation of the newspaper article. Nonetheless, the damage was done, and the media across the country joined in on what appeared to be a blockbuster story.

In the ensuing days and weeks, rare was the American newspaper which didn't report its very own "problem list." Two days after the Post's revelations, The New York Times rushed to print with a one-year-old Federal Reserve Board list of 35 "problem" bank holding companies. Some days later, an FDIC list of 300 "problem banks" was revealed

Television anchormen warned of the quote-"impending erosion of confidence in the banking system." Newspaper editorials screamed for bankers to—quote—"start telling the truth about their operations." And on Wall Street, where the gallows humor always runs high, local bars introduced a new recession cocktail—banking on the rocks!

For several months, this "open season" on

the banking system continued unabated. To the casual newspaper reader and TV viewerand I should add the foreign financial markets-these stories could not help but indicate that the banking system was clearly in a shaky condition. To many, in fact, it probably appeared that the press had uncovered a scandal in financial terms which was the equivalent of Watergate in political terms.

In the next several minutes, I'd like to "revisit" this issue to put it into the kind of perspective which I feel was largely overlooked in the original reports.

I asked our staff to analyze a number of the largest banks reported to be on various problem lists-19 in all-including the original two reported to be on the Comptroller's list and the remainder from the reported Federal Reserve Board list. All were analyzed on the basis of their annual reports for 1975-the same year each was reported to be on a "problem list." And here, in summary form, is what we found about these 19 so-called "problem banks:"

Their assets totaled approximately \$180 totaled approximately \$800 million. During the year, they paid out in dividends approximately \$320 million to literally hundreds of thousands of shareholders across this country and abroad. These shareholders had invested more than \$7 billion in equity in the institutions. The banks' municipal securities totaled another \$7 billion. And they gainfully employed approximately 150,000 women-who earned salaries totaling approximately \$2 billion.

These figures, I think you would agree, are

not unimpressive.

And what of loan losses-the primary concern of media doom-sayers? Loan losses for these 19 banks in 1975 totaled almost \$1 billion. A huge number indeed. But again to in perspective—there are two things other even larger numbers, which must be taken into account, if we are to truly understand the loan loss figure. One is the reserve for possible loan losses, which totaled \$1.05 billion for the 19 banks in 1975. Moreover, total loans for these banks aggregated approximately \$105 billion-more than 100 times their loan losses. Put another way-in this admittedly difficult year for bankingtotal losses of these so-called "problem banks" were less than 1% of the aggregate of "problem their loan portfolios.

In all fairness, I should note that one bank on the list did slide moderately into the red. another broke even for the year, and yet another did not post a dividend. Indeed, the problems of the recession had an adverse impact on my own bank's earnings as well. However, far from revealing a group of "Problem Banks"-these numbers, if properly understood, point to a group of vital and dynamic institutions-and to a buoyant banking and economic system. And the real news-at least to me-is the ability of that system to absorb such a high level of loan losses while still recording solid earnings and building a strong capital base.

Shortly after the "problem stories, Washington Post publisher Katharine Graham addressed the Conference Board and called on the business community to demand coverage that—as she put it—"is accurate, fair, and grounded in real under-standing of events. Business credibility," she "adds up to focusing on honesty, perspective, and performance."

I agree completely with Mrs. Graham. It is precisely this need for fairness and perspective which came up so wanting in the media's treatment of the "problem bank" stories. For example:

I question the fairness of headlining yearold data-taken out of context-across the front page of leading newspapers-as though it presented an accurate and current picture of the condition of the banking system.

As to perspective, I think the "problem banks" episode is an example of the media's failure to provide the public with all the information it needs to intelligently assess an issue. For example:

When banks chose to stay with their borrowers during the recession rather than set off a long chain of foreclosures and bankruptcies-not to mention job losses-that would have plunged the country into a major depression-few journalists offered this perspective. When banks were caught between the Scylla of congressional demands for credit allocation to socially-responsible borrowers . . . and the Charybdis of political cries for conservative lending policies-the media offered scant perspective. Even today, with the banking system well on the road to full recovery from as severe and deep a recession as we have had in 40 years—there is little, if any, perspective from the Cassandra commentators who told us about the "problem banks.'

Let me make clear here that I am not downplaying the problems that the banking experienced during the recession. Banks did, indeed, have problems. In some areas, in all candor, we are still digging out of those problems. But suffering a bad case of flu is a lot different than having an incurable disease. The essential point is that risktaking is the very essence of our free enterprise system. Those of you in this audience who invest in products that may never reach market or search for natural resources that may never be found-know what risk-taking is all about. A bank that takes no risks is of little value to society. But a bank that is willing to take legitimate risks in lending to individuals, small businesses, and giant corporations alike-ensures the growth and development of our free market economy which—by definition—creates aditional jobs for the American people.

Lest I be misunderstood-let me state unequivocally that I am a strong advocate of the right of freedom of the press in a democracy. But I also advocate a philosophical position that any freedom carries with it an inseparable sense of responsibility. The media, it seems to me, if they are to serve the citizenry responsibly, must therefore seek to: Sharpen the comprehensiveness of their treatment; strengthen their capacity to follow up events; and enhance their abilito help the public understand what one event means in relation to another. This challenge-to a higher standard of journalistic performance—leads me directly to the latest wave of "problem banking" stories concerning the foreign lending of banks.

Three years ago, you will recall, the media raised the specter of imminent disaster for the international banking system due to the huge surpluses of the oil-exporting countries. The more extreme voices in the Fourth Estate predicted the system's collapse under the enormous recycling burden.

There were a number of us at that time lone voices in the crowd I'm afraid-who argued that the private market could bridge the financing gap for some time, but that over the longer-run, greater assistance would be needed from public sources—as well as strenuous efforts by deficit countries to reduce the need for financing. When the predicted petrodollar catastrophe failed to materialize, the media literally dropped the subject. In other words, as far as the press was concerned, "good news" in this case was 'no news"

Recently however, the issue of recycling the surpluses of the oil producers has reemerged. A number of journalists and congressmen have voiced concern over the extent to which the private international banking system was committed to loans to less-developed countries.

A careful reading of these reports sug-gests two separate lines of concern. The first is the claim that the large volume of foreign lending by U.S. banks has resulted in the denial of credit to borrowers in the U.S. and thus delayed the U.S. economic recovery. The second is the allegation that banks have made large numbers of unsound foreign loans with the expectation that the Federal Government will bail them out when foreign debtors run into payment difficulties.

On the first concern, the lending officers of the Chase and the other major New York banks will, I'm sure, find a certain ironic amusement in the charge that they have denied credit to would-be U.S. borrowers. The fact is, with a 15% decline over two years in loans from major U.S. banks to commerce and industry, bank competition for business in recent months has been particularly fierce. Indeed, the search for mestic borrowers has become so thorough that your once-friendly banker has become downright compassionate! So the suggestion that foreign lending has led to the denial of credit to domestic borrowers and thereby held back our economic recovery-is flatly untrue. I believe all of you in this room, our customers, will attest to that fact.

The second concern—that banks have dangerously overextended themselves in making foreign loans to chronic debtor countries, particularly the lesser-developed countries-requires a more extended response. For the reality of the role of the private banking system in helping to finance LDC deficits is far more complex than the alarming headlines or glib statements would have us believe.

Let me begin by stating unequivocally that the Chase, and I suspect, other major international banks expect to be actively engaged in the business of prudent foreign lending for the foreseeable future. By and large, Chase's major lending emphasis is on shortterm commercial loans to finance trade and private business, as well as project loans that are self-liquidating through the generation of exports. New loans to governments for straight balance of payments purposes will still be taken up by banks, but I believe lenders will be increasingly selective and cautious in adding such credits to their portfolios. Certainly that is our posture at Chase. If there is any serious question as to the ability of a loan to be adequately serviced, whether for balance of payments or other reasons, that loan is simply not extended.

In this regard, it often is forgotten that the great bulk of overseas loans by American banks-about 70% of our total at Chase-is to industrial countries. Moreover, among LDCs, the greatest volume of credit has been the World Bank calls extended to what "high- or medium-income" nations—countries like Mexico and Brazil. Comparatively

little bank lending has flowed into so-called low-income countries—India, Pakistan and many African nations. For example:

There is no denying the fact that bank loans to LDCs as a group have expanded significantly since the oil price increase in the winter of 1973-74. All told, the exposure of U.S. and other foreign banks to these countries has risen from \$39 billion to \$77 billion in little more than three years. But the capacity to service debt also has been increasing, albeit at a slower rate. Over the past three years the exports of the LDCs have advanced by nearly 65%—not a bad performance, considering the state of the world economy.

It is this need to increase exports and gain foreign exchange that lies at the heart of the LDCs' ability to meet debt obligations—rather than in their inability to generate funds in local currency for debt repayment. Again, this distinction is important. The normal remedy for LDCs in trouble is not default. Nor does it generally mean even debt moratorium. More usually, it involves a refunding or rescheduling of debt. Obviously, banks prefer not to reschedule, but even when they must, such action neither impairs bank capital nor decreases bank earnings. Again, this critical point seems largely to have been overlooked in the current dialogue.

Clearly, some LDCs have performed better than others, and each has to be judged on its own merits. Bank debt to a number of these countries has been expanding at a rate that should not—and cannot—be sustained.

that should not—and cannot—be sustained. This does not mean that loans to these countries at present are excessive; nor that banks need bailing out. It does mean, however, that bank lending will need to slow down, and that public policies must be directed at correcting the problems that give rise to such lending—most particularly, the persistent deficits in the balance of payments of many nations, both industrial and lesser-developed. It is on these public policies, in my judgment, that the attention of the press and the Congress should be focused.

and the Congress should be focused.

Unfortunately, the world has not yet undertaken the tough adjustments that are required to bring its structure of international payments into better balance. As I mentioned, the deficit countries—particularly the LDCs—need to expand their exports. They can only do this as the economies of the industrial nations grow and prosper.

Meanwhile, many of the LDCs cannot escape difficult action to reduce their own deficits, even though this involves the painful process of slowing economic growth. Inflation must be brought under better control, over-valued exchange rates eliminated, and a more positive policy adopted toward foreign private investment. Internally agricultural sections need to be given greater encouragement, even at the expense of higher costs for urban areas. Because it takes time for the effects of policy changes to be felt, an LDC that boldly undertakes reforms is likely to need international financial support.

So an adequate supply of public international credit—credit that could be conditioned on the adoption of government policies promoting efficient adjustment—becomes a key prerequisite. This is particularly true now that bank lending will likely slow down.

While action for this could take many forms, one appropriate solution to the present deficiency in public credit might have the following four characteristics:

First, enlargement of existing public credit lines or guarantees.

Second, increase public credit flows to each of the major classes of borrowing nations.

Third, extension of these credits subject to rigorous conditions that assure domestic policies which promote efficient adjustment.

And fourth, a substantial part of the funding should be obtained from the OPEC nations themselves.

Time does not permit me to thoroughly ex-

amine these proposals, and I present them here in their broadest outline.

Suffice it to say that we cannot hope to solve these problems if our attention as diverted to spare stories and apocalyptic warnings. I assure you that banks like mine have a clear understanding of their role with respect to foreign lending. And we also understand our obligation to clearly interpret this role to the public.

By the same token, your responsibility—as concerned businessmen and businesswomen—is to "speak out" loudly and lucidly for your own companies and industries; and to challenge the media to report on your activities in a fairminded, accurate, and comprehensive manner. It is this kind of reporting—of which I believe our free press is uniquely capable—that will most genuinely serve the public interest.

ADMINISTRATIVE LAW JUDGE'S OPINION ON ALASKA NATURAL GAS TRANSPORTATION SYSTEM

Mr. STEVENSON. Mr. President, last year the Congress made the decision to remove the certification process for an Alaska natural gas transportation system from the traditional forum before the Federal Power Commission. Under the Alaska Natural Gas Transportation Act, the FPC still has an important role, but does not make the final choice of systems to move Alaskan gas. After the FPC makes an initial decision, the President addresses the issue, receiving advice from Federal agencies, State and local officials, and the Council on Environmental Quality. By September 1, 1977, his choice will be sent to the Congress for approval.

As the principal sponsor of this law, I am following its implemenation with great interest. Because we are given a relatively brief time under the act to review the President's choice, I would urge my colleagues to follow the decisionmaking process at each step in order to be prepared and informed when the Senate is called upon to ratify or disapprove the President's choice.

The FPC administrative law judge issued his opinion, finding for the Arctic Gas project on all points—environment, efficiency, cost, geotechnical feasibility, deliverability, and other relevant issues. Currently, the FPC is reviewing that opinion and other material. The President will receive the FPC's decision by May 1.

Naturally, Arctic Gas' competitors, El Paso and Alcan, are attacking the decision. The losers also argue that congressional enactment of the Alaska Natural Gas Transportation Act makes the administrative law judge's opinion irrelevant. As author of the legislation in the Senate, I must disagree with that argument. By passage of the act, the Congress clearly provided that the FPC and the administrative law judge alone would not make the decision on transportation of Alaskan gas. Congress insisted that other affected agencies, as well as the President and the legislative branch, have a role in the decisionmaking process. But, we did not by passage of the act intend for no weight or no consideration to be given to the findings of the administrative law judge who heard all the evidence on the competing gas transportation systems.

Proper decisionmaking can be carried out only after thorough examination of facts and evidence. It would be a tragic misallocation of resources and effort if each decisionmaking level involved in the act did not at least begin its deliberation by reviewing and carefully weighing the FPC administrative law judge's opinion.

Consider how the opinion was derived. This 430 page opinion culminates 20 months of hearings on the record and conducted under oath. Environmentalists, the States, the competing applicants. and others presented their cases with expert testimony and evidence at these hearings. Witnesses were subject to cross-examination. My colleagues should note, the evidence produced from these hearings is the only evidence they will receive which was developed under oath and with the benefit of challenging crossexamination. Two hundred and fiftythree volumes of transcript were produced, along with approximately 1,000 exhibits-many of which run into the thousands of pages themselves. The judge also took an "official view" trip to examine first hand each applicant's route and existing facilities.

Given this type of factual development, I would urge my colleagues, and others who will be involved in the decision on an Alaskan gas transportation system to consider carefully the administrative law judge's opinion.

The opinion is, of course, not the end of this question, but it should not be ignored. That opinion and the evidence it is based upon provide a unique and rich source of information, since it is the independently informed conclusion of the experienced judge who heard all the evidence and saw all the witnesses.

JUSTICE DEPARTMENT REASON-ING SUPPORTS RIEGLE-GRIFFIN AMENDMENTS TO ASSURE COM-PETITION IN THE AUTOMOBILE AFTERMARKET

Mr. RIEGLE. Mr. President, the Mobile Source Emission Control Amendments of 1977 (S. 919), which I have introduced with my colleague, Senator Griffin, amends the Clean Air Act to establish a sound schedule for automobile pollution reduction. While this bill seeks to provide auto emission standards which are workable yet environmentally sound, it also addresses other aspects of the Clean Air Act which affect different segments of the automotive industry; namely, the aftermarket parts industry.

Under the Clean Air Act of 1970, vehicle manufacturers are mandated to warrant for 5 years or 50,000 miles, under both a production warranty and a performance warranty, that the emission control system installed by that manufacturer will remain effective for that length of time.

The production warrant is already effective. The performance warranty, which is conditioned upon the proper maintenance and operation of the vehicle by the owner, is mandated to become effective only when the Administrator of

the Environmental Protection Agency determines that adequate testing facilities are available. It is this performance warranty that poses a very serious threat to the existence of the independent automotive aftermarket as well as to the consumer.

Since the owner of a new automobile is not going to jeopardize his position with respect to the performance warranty, he will go to the franchised dealer of the vehicle manufacturer for warranty work as well as for routine service and repair. This reaction to the auto warranty will thus effectively shut out the independent aftermarket service and parts industry presently serving the automobile owner. The consumer no longer will have the freedom of choice to use the parts and services he wishes. The law will create a monopoly for the vehicle manufacturers and their franchised dealers.

At this point, I ask unanimous consent to have printed in the RECORD the news release which was issued by the Department of Justice upon issuing their report on the anticompetitive effects of expanded automobile warranties.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF JUSTICE NEWS RELEASE

The Department of Justice today urged the Environmental Protection Agency (EPA) to consider carefully the possible economic costs of proposed regulations to implement the vehicle emission control production warranty.

The Department's views were contained in comments filed with EPA today on that agency's proposed rulemaking procedure for

the warranty program.

Under the Clean Air Act, motor vehicle manufacturers must give purchasers a warranty guaranteeing that the vehicle has been designed and built to satisfy federal air pollutant emission standards for its useful life. The useful life of a motor vehicle has been defined as five years or 50,000 miles, whichever comes first.

Despite the presence of these warranties since the 1972 model year, EPA has determined that they are not an effective device to combat pollution. As a result, EPA intends to develop more detailed regulations to make

the warranty effective.

Deputy Assistant Attorney General Jonathan C. Rose of the Antitrust Division ex-pressed concern that increased regulation, unless properly focused, could lead to increased consumer costs and other anticompetitive results beyond those necessary to attain the desired environmental goals.

He noted that the Department comments

made the following points:

The EPA warranty program could not be made an effective pollution control device unless it were greatly expanded.

obtain an effective warranty, EPA might find it necessary to broaden its scope to cover virtually any mechanical defect in the automobile related to emissions.

The costs of such an expanded warranty to consumers would be enormous.

The warranty would become, in effect, a full service contract, and the price of a new vehicle would increase dramatically.

Mr. Rose pointed out that an expanded comprehensive service warranty would significantly impede the ability of independent service stations and garages to compete with the service departments of dealers franchised

by the national automobile manufacturers. Thus, he said, concentration in the automobile aftermarket-auto repair, service and parts dealers-could increase substantially, and the advantage of free competition could be lost.

As a solution, the Department recommends in its comments that EPA list the emission control devices that would be covered by the warranty and that only those devices that would not have been included in the vehicle if the Clean Air Act had not been passed would be on the list.

The Department also urged EPA to continue its efforts to develop an effective method of testing emissions so that a mandatory emission inspection program could be

implemented.

According to the Department, a narrow production warranty and a mandatory inspection program could achieve the national goals set out in the Clean Air Act, while minimizing the program's social costs, including its anticompetitive impact.

Mr. RIEGLE. Mr. President, in order to give Members more complete information on the position taken by the Department of Justice, I am including excerpts from the full statement that the Department made to the Environmental Protection Agency opposing the expansion of the automobile warranty program as an efficient method for the reduction of automobile pollution:

COMMENTS OF THE U.S. DEPARTMENT OF JUSTICE

On November 16, 1976, the Environmental Protection Agency (EPA) in an Advance Notice of Proposed Rulemaking announced its intention to consider regulations to implement more effectively the coverage of Section 207(a) of the Clean Air Act. This rulemaking proceeding will attempt to clarify coverage of the emission control production warranty. The Department of Justice submits these comments to assist the Agency in its consideration of the potential social and economic costs that such regulation could have, including the impact on competition in the automotive aftermarket.

THE INTEREST AND POSITION OF THE DEPART-MENT OF JUSTICE

A. The Interest of the Department of Jus--The Department of Justice appears before federal agencies to advocate regulatory policies that will advance competition, efficiency, and consumer welfare. Our role, however, is not to advocate that these national objectives are paramount, but to ensure that they are given appropriate weight by agencies in carrying out their differing statutory missions. This we try to do by assisting the agency in evaluating the impact of its proaction on competition and in finding the least or less anticompetitive alternatives to achieve regulatory goals as defined by Congress.

"Congress has clearly determined that cleaner, healthier air is desirable. As with many national policies, however, the particular method chosen to reach this goal may have side effects that are unnecessarily harmful to competition. Our desire to avoid such results was plainly enunciated during Congressional hearings in 1974 by Bruce B. Wilthen-Deputy Assistant Attorney General, Antitrust Division: "We seek to encourage procedures which would limit-or if possible eliminate—potential anticompetitive fallout from the drive toward cleaner air."

B. The Position of the Department of

Justice-

The following discussion will analyze why the present production warranty has not been an effective antipollution device subsequent to vehicle purchase, and why there will be serious cost-efficiency problems if the EPA attempts to expand the production warranty to compensate for the inability of the Agency to implement the performance warranty. We will show that the present emission control production warranty cannot effectively achieve the environmental objectives of the entire warranty program for two reasons: First, the current production warranty focuses on only one contributing factor in emission control, namely the pollution control devices.

Second, there do not seem to be sufficient incentives present to encourage consumers to use the warranty. We will also show that substantially broadening the scope of the production warranty via the adoption of comprehensive coverage under Options 2 or 3 is not a viable solution to the current problems. Rather, such action would, in effect, transform the 207(a) warranty into a performance warranty. By doing so, the economic costs of the warranty program would be sub-stantially increased, including possibly the social cost of an adverse impact on competition

THE COST-EFFECTIVENESS OF A WARRANTY PROGRAM

While we share the EPA's concern that the emission control production warranty has not effectively achieved the ends originally intended of it we are not convinced that expanding the warranty-in effect, transforming it into a performance guarantee will lead to an improvement in its cost effectiveness. The potential costs of extending the present production warranty to control emissions subsequent to vehicle purchase will, in all probability, far outweigh the potential benefits.

The report goes on to say:

As a means to effect emission control beond the initial construction of a vehicle, the warranty is unsatisfactory. The mere presence of the production warranty does not by itself encourage proper maintenance if the vehicle continues to operate despite the functional soundness of the emission con-

In sum, the current emission control production warranty fails to effectively achieve environmental objectives insofar as it concentrates on only one contributing factor in emission performance, pollution control devices. In addition, as appears to be the case by virtue of these hearings, it may not even succeed in this respect if incentives are lacking to use the warranty and/or if failures in pollution control devices are not detectable.

Mr. President, it should be clear that the consumer should not be forced to pay the additional costs and business should not have to suffer the anticompetitive effects of a warranty program which will not be effective in cleaning up the air.

The Justice Department report concludes by saying:

In addition to the direct costs to the consumer of such a performance guarantee, the social costs associated with the competitive disadvantage that potentially could be imposed on a sizable class of vehicle service businesses is a particular concern of the Department of Justice. This would come about if the warranty is honored only by manufacturer-affiliated dealers. Then. vehicle owners can be expected to take their vehicles exclusively to dealers for all emission related repairs and service. Independent garages and service stations that may be equally skilled in making such repairs would be placed at a disadvantage relative to dealers. Without a comprehensive warranty nondealers would succeed or fail depending upon their ability to compete in the marketplace next to dealers; however, the presence of the warranty would make it next to impossible for non-dealers to attract customers emission related repairs, regardless of their price and their quality of work. If an environmentally effective production warranty must cover essentially all engine repairs and service, then the warranty would have vere implications for the long run viability of independent garages and service stations Indeed, it could effect a significant increase in concentration in the service industry to the point where a substantial adverse impact on the price of service and repair could be expected. In any event, the impact on concentration would be directly related to the comprehensiveness of the warranty.

A warranty program is clearly mandated by the Clean Air Act, and the EPA must implement that program. It is not possible to eliminate all the costs, including all the anticompetitive effects, of such a program. It is possible, however, to minimize those costs and still attain the environmental goals of the Clean Air Act.

This is precisely what the Riegle-Griffin amendment would accomplish should it be enacted. It will allow this Nation to attain our clean air goals without excessive economic impact. Our legislation will provide a workable and balanced program for cleaning up our environment by setting a stringent schedule for pollution reduction and by implementing a rational and effective warranty program to back up our clean air goals.

The Riegle-Griffin amendment would guarantee consumers the right of choice over automotive parts and service for their motor vehicles and prevent a monopoly in the sale of aftermarket parts and service. This would be accomplished by amending the Clean Air Act of 1970 to provide that the manufacturers' performance warranty for the motor vehicle emission system be reduced to 18 months or 18,000 miles, whichever occurs first.

Extensive hearings on this subject were held by the House Select Committee on Small Business in 1974. After carefully reviewing provisions of the Clean Air Act, the committee found the performance warranty to be unnecessary, anticompetitive, and anticonsumer. All 19 members of the Small Business Committee unanimously recommended in the committee report of December 18, 1974, that the performance warranty be reduced from the statutory 5 years or 50,000 miles.

This is a complex issue which merits some explanation lest it be misinterpreted as a reduction in requirements placed on vehicle manufacturers to produce nonpolluting vehicles, or be considered as not in the best interest of the car owning public. Warranty provisions in S. 919 will in no way reduce clean air standards.

Under the Clean Air Act of 1970, vehicle manufacturers are mandated to warrant for 5 years or 50,000 miles, under both a production warranty and a performance warranty, that the emission control system installed by that manu-

facturer will remain effective for at least that length of time.

The production warranty is already in effect. The performance warranty, which is conditioned upon the proper maintenance and operation of the vehicle by the owner, is mandated to become effective once the Administrator of the Environmental Protection Agency determines that adequate testing facilities are available. It is this performance warranty that poses a very serious threat to the existency of the independent automotive aftermarket, and strong anticonsumer problems.

It is important to note that the Clean Air Act contains sufficient protection under its design requirements and production warranties to maintain air quality, as the manufacturer would still be required to test and certify his engine in accordance with EPA test standards on emissions and durability prior to sale.

The production warranty requirements force the vehicle manufacturer to warrant that the emission control system is designed, built, and equipped in a manner that will enable it to comply with emission regulations which exist at the time the vehicle was first sold, and that it is free from defects in materials and workmanship that would cause the system to fail to conform with applicable regulations for its useful life, which is defined in the act as 5 years or 50,000 miles, whichever occurs first.

The performance warranty will only go into effect when EPA develops a quick, reliable test for precisely measuring emissions. This is likely to be somewhat in the future. Under this performance warranty, the vehicle manufacturer is then liable for the repair, at his cost, of every vehicle on the road that fails an emission inspection, so long as the vehicle owner has complied with the maintenance and operation instructions mandated by the vehicle manufacturer. These maintenance and operation instructions are the critical points insofar as the independent automotive aftermarket and the consumer are concerned.

The owner is not going to jeopardize his position with respect to that warranty, and will go to the franchised dealer of the vehicle manufacturer not only for warranty work, but also for nonwarranty work performed at the same time. This effectively will shut off the independent aftermarket from their customers. The consumer no longer will have the freedom of choice to use the parts and services he wishes, and the law will create a monopoly for the vehicle manufacturers and their franchised dealers.

The Small Business Subcommittee found that since the cost of the performance warranty has been built into the price of the vehicle:

It is also questionable that the consumer will ever truly benefit from the performance warranty as it now stands, because the vehicle manufacturer can reap windfall profits from this warranty, for every voided warranty results in an unearned profit of approximately \$300. Thus, the vehicle manufacturer has a strong financial incentive to void these warranties, which might in part

account for the present burdensome and restrictive care and maintenance instructions which contain innumerable opportunities for avoiding liability. These same escape clauses will exist in a warranty of any length, the longer the warranty, the greater the cost, which thereby provides a stronger incentive to escape liability. Every time a warranty is voided, it is the consumer, and only the consumer who loses. The consumer not only forfeits the money paid to the manufacturer at the time of purchase, he also pays again to have the work performed.

Thus the subcommittee found the performance warranty to be anticompetitive, anticonsumer and unnecessary to the protection of clean air. It should be noted that neither of the legislative committees that developed the Clean Air Act of 1970 had the opportunity to hold hearings on the warranty provisions of the act which might have highlighted the monopolistic and anticonsumer aspects of the law.

The vehicle manufacturers maintenance instructions, which will be required to be followed to prevent voiding the warranty, will have a major impact on the car-owning public. The vehicle owner is obligated under these circumstances to have stipulated parts replaced or serviced at the vehicle manufacturers' designated intervals, at his or her own expense. Should the vehicle fail to comply with an applicable emission standard under the performance warranty, it is not the obligation of the vehicle manufacturer to repair the emission control system until the vehicle owner has proven that the described maintenance in his owners' manual has been performed at the established time, and that the work was done with acceptable parts to the manufacturer, and by a qualified service outlet.

Of course, the antitrust laws prevent vehicle manufacturers from requiring that only their parts be used to replace those they know will wear out prior to the expiration of the 5-year, 50,000-mile warranty, or that the servicing of these parts be performed only by a franchised dealer. Consequently, because of the potential liability the vehicle manufacturer would face when the quick "tailpipe" test of EPA is approved, they must protect themselves by conditioning the validity of warranties on "recommended use of original equipment manufactur--OEM-parts or their equivalent" and the use of franchised dealers or a 'qualified service outlet." The manufacturers' owners manual instructions create a strong psychological restraint on the consumer to force him to return his vehicle to the franchised dealer for all work for 5 years or 50,000 miles, through fear of voiding his warranty.

This forcing of the consuming public to return their vehicles to a franchised dealer for all parts and service for 5 years or 50,000 miles to insure that the warranty is not invalidated will occur when the performance warranty is triggered by EPA. According to the subcommittee report—

The Subcommittee is of the opinion that there are serious anti-consumer aspects to both the proposed certification program (by

EPA) and the 5 year, 50,000 mile warranty requirements of the Clean Air Act.

The restrictive maintenance instructions will cause many cautious car owners to have all servicing-whether related to the warranty or not-performed by their franchised dealer, which is a serious inconvenience as well as a serious threat to the independent automotive aftermarket. Those who continue to use their neighborhood service or garage outlets will undoubtedly void their warranties, which they have already paid for when the car was originally purchased, thereby being forced to pay again to have that system repaired at additional expense should the system ever fail an emissions inspection in the future.

The consumer cannot afford to risk a dispute with the vehicle manufacturer over the use of parts and services which might later be claimed to be improper. Therefore, the consumer is forced to go to dealers for all his work during the life

of the warranty, regardless.

The warranty provisions of our amendment will have no adverse effects on air quality. This legislation, if enacted, will relieve the automotive aftermarket industry from the possibility of a monopolistic takeover by the vehicle manufacturers and will retain the rights of the auto owner to have a choice over the parts and services used to maintain his vehicle.

The Small Business Committee received testimony from representatives of vehicle manufacturers, repair garages, service stations, EPA, the Federal Trade Commission, and the Antitrust Division of the Department of Justice. All their testimony and the documentation compiled convinced the House Small Business Committee that the performance warranty of the Clean Air Act serves little meaningful purpose.

At this point I ask unanimous consent to have printed in the RECORD the recommendations of the House Small Business Committee which may be found on page 33 of the House Report 93-1628.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CHAPTER IV. RECOMMENDATIONS

On the basis of the testimony, evidence and findings, the subcommittee recommends that:

A. The Environmental Protection Agency

Pursue all administrative remedies minimize the anticompetitive effects of the warranty provisions of the Clean Air Act Amendments of 1970;

2. Require the vehicle manufacturers to insert clear and conspicuous affirmative statements in their care and maintenance instructions and their emission control system warranties which would advise the vehicle owner that he or she may use nonoriginal equipment manufacturers' parts for the repair and maintenance of the car; and that nonfranchised service outlets may service that vehicle:

3. Work with appropriate governmental agencies in developing affirmative language for inclusion in these care and maintenance instructions, which clearly advise the carowner that he or she may use nonoriginal equipment manufacturers' parts and nonfranchised service outlets without necessarily jeopardizing the validity of the emission performance warranty.

4. Determine, by testing on an individual basis, that a specific part actually increases emissions, before it decertifies or refuses to certify the part under its proposed voluntary certification program and develop due process procedures for appeal from an agency determination:

5. Expedite the development of a quick and reliable test for measuring emissions, which would thereby enable the agency to insure that in use vehicles were conforming to the applicable standards through periodic motor vehicle inspections which would insure the maintenance of existing emission level stand-

ards;
6. Issue an economic impact statement prior to the implementation of all new regulations, including the certification program, purpose of demonstrating that no competitive disadvantages are placed upon small businesses; and

7. Review all existing and proposed policies and regulations to determine if they are consistent with this Nation's antitrust poli-

B. The Federal Trade Commission and the Department of Justice-

1. Examine the vehicle manufacturers care and maintenance instructions and emission control system warranties to determine if

they are consistent with this Nation's antitrust policies.

C. The above agencies and department advise the committee by June 1, 1975, of the actions they have taken to implement these recommendations.

D. The appropriate legislative committees of Congress consider amending the Clean Air Act by reducing the length of the 5year/50,000-mile performance warranty to a period comparable to that presently established by the competitive forces operative in the open marketplace, such as for 12 months or 12,000 miles, whichever occurs first.

ACCURACY IN MEDIA CORRECTS NEW YORK TIMES ON PANAMA CANAL

Mr. HELMS. Mr. President, there is a great deal of misinformation going around about the role of the United States in creating and developing the Panama Canal. There appears to be an organized effort to convince the American people that there was something shameful and dishonorable about our actions, which we have to remedy today by surrendering our rights, property, and sovereignty in the Canal Zone.

Typical of such deliberate misinformation is the recent statement in a New York Times editorial which said, in reference to the canal:

We stole it and removed the incriminating evidence from the history books.

Nothing could be further from the truth, as the unbiased work of many distinguished historians can attest. The New York Times has no right to make such a demagogic assertion if it wishes to maintain itself as a respectable purvevor of journalism.

Mr. Reed Irvine, chairman of Accuracy in Media, Inc., has taken the Times to task in a letter published on its editorial page today. Mr. Irvine patiently recounts the basic international structure that supported our role in creating the canal, and effectively rebuts the absurd contention of the Times. Mr. Irvine is to be congratulated for once again forcing the media to correct its inaccuracies, particularly when such inaccuracies can have a pernicious effect on public opinion and public policy.

Mr. President, I ask unanimous consent that Mr. Irvine's letter from the New York Times of April 5, 1977, be printed in the RECORD at the conclusion

of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PANAMA HAS REAPED HUGE BENEFITS FROM THE CANAL

TO THE EDITOR:

In discussing the Panama Canal, a recent Times editorial said: "We stole it and removed the incriminating evidence from the history books."

The Panama Canal was built by the U.S. at a cost of \$375 million. It obviously was not stolen. Perhaps your editorial writer meant to say that the 10-mile-wide strip of territory through which the canal was built was stolen. But that too is false.

From whom was it stolen? Panama? Colombia? Individual landowners?

The U.S. paid Panama \$10 million for the rights to the zone. We paid nearly \$5 million to individual landowners for title to their property in the zone. We paid \$25 million to Colombia in satisfaction of its claims. In addition, we paid \$40 million to the French canal company for its concession and equipment. Some theft!

The U.S. has been charged with having helped Panama gain its independence from Coiombia. If true, would that be theft? Panama had legitimate claims to independence. Panama had revolted and won its complete independence as early as 1840. It was induced to join the Confederation of New Granada subsequently. The constitution provided that Panama would retain its sovereignty and right to secede. This right was taken away when a new constitution was proclaimed in 1885. Panama contended that was still a sovereign state temporarily under another government under duress.

Panama's declaration of independence in 1903 charged that Colombia had treated the isthmus as a colony, milking it of revenue and not building a single bridge, a single road, a single college or any public build-

If it is alleged that the U.S. imposed the Hay-Bunau-Varilla treaty on against the will of the people, you have to believe that the people of Panama were not eager to have the canal built through their territory. Without the canal, the isthmus would have been relegated to the status of permanent backwater. There was a real possibility that the canal would go to Nicaragua. bill passed both houses of Congress in 1902 providing for the construction of the canal through Nicaragua if the necessary right could not be obtained for the isthmian canal. Was it robbery to insist on terms that provided for the security of the huge investment the U.S. proposed to make? alternative was to carry out the requirements of the Spooner Act and arrange to build the canal through Nicaragua. would have cost the Panamanians dearly, and they knew it.

Panama has reaped huge benefits from the canal. Payments by the Canal Company to Panamanian citizens are around \$100 million a year. Panama has also received about \$300 million in aid from the U.S. in the past 22 years. All this has helped to give it one of 54.5% of the voting age population particithe highest per capita incomes in Latin America.

REED INVINE. Chairman, Accuracy in Media, Inc. WASHINGTON, March 29, 1977.

SECRETARY OF STATE PAUL GUZZI OF MASSACHUSETTS ENDORSES PRESIDENT CARTER'S ELECTION REFORM PROPOSALS

Mr. KENNEDY. Mr. President, at the end of last week I received a most welcome letter from the secretary of state of the Commonwealth of Massachusetts, the Honorable Paul Guzzi, strongly endorsing the recent election reform proposals made by President Carter and Vice President MONDALE

In his letter, Secretary Guzzi gives his strong support to the Carter administration's proposals for election day registration, public financing of congressional elections, and direct popular election of the President.

In his comments, Secretary Guzzi deals at length with the cornerstone of the Carter administration's reform package, the proposal for election day registration. Under this proposal, voters would be entitled to register at the polls on election day and then vote. Mr. Guzzi calls this proposal one of the most effective ways to encourage voter participation. He also argues persuasively that two of the problems sometimes mentioned in connection with election day registration—the possibility of fraud and the question of long lines at the pollscan be effectively avoided by State and local jurisdictions.

In addition, Secretary Guzzi notes that the voter registration proposal contains important provisions for Federal financial assistance to State and local governments to help defray the cost of election day registration and to upgrade their procedures for voter registration and election administration. Under the bill, for example, Massachusetts would qualify for a total of \$1.5 million in Federal funds for such activities.

Mr. President, I believe that Secretary Guzzi's thoughtful letter will be of interest to all of us concerned with election and reform and improving voter participation in the Nation, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS. Boston, Mass., March 28, 1977.

Hon. EDWARD M. KENNEDY, Russell Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: As State Secretary and Chief Elections Officer of the Commonwealth, I am pleased to endorse President Carter's proposals for election reform.

In Massachusetts and throughout the nation, voter participation has been too low for too long. In this state alone, some 1.3 million eligible citizens are not registered to vote. And throughout the country, only pated in the 1976 Presidential election. These are discouraging figures.

I believe that our present system of voter registration contributes heavily to this problem. In order to register, citizens must often fulfill confusing residency requirements and must be familiar with local laws which differ from place to place. These laws were designed to eliminate fraud; to protect the electoral process from those who would take advantage of loosely designed requirements. Unfortunately, in our mobile society, that kind of closed voter registration can also function as a deterrent to participatory democracy; it can discourage citizens from taking the time to register. The President has addressed that problem in his proposal.

The main thrust of President Carter's proposal is election day registration. I have supported election day registration for several years because I believe it is one of the most effective ways to encourage participation.

Critics have argued that this reform will lead to election fraud. I think they are wrong. Under the President's plan, perpetrators of fraud would face heavy fines and jail sentences. Moreover, in Minnesota, Wisconsin and other states which have already adapted similar systems, there have been no reports of increased voter fraud. Critics have also argued that election day registration will lead to long lines at the polls. But if we increase pre-election day registration through registration drives and provide good administrative procedures at the polls, these long not occur. The President understands this and his proposal speaks to these needs.

Under the Carter plan, states would receive a financial incentive to use innovative techniques for pre-election registration. Under this plan, Massachusetts could receive 1.5 million dollars in federal assistance. The specifics are as follows:

The first \$500,000 would be automatically awarded when the federal legislation becomes

The second \$500,000 would be awarded on the basis of voter outreach proposals. Fortunately, we already possess the basic administrative system for such innovative outreach. Every city and town in Massachusetts conducts an annual street by street canvass which serves, among other functions, to update the current list of voters. This system could be adapted for the purposes of voter outreach. It could be used to identify and then register those citizens who are not on voting lists but would like to be. If this is done, it is possible that the Federal Government would pay for some of these costs; this would save thousands of dollars for the Commonwealth.

Finally, we would receive a third \$500,000 if election day registration were extended to state and local elections.

The President's proposal suggests two other changes that I have long supported. The President is proposing that public financing of political campaigns be extended to congressional campaigns. I applaud the President and the leaders of Congress for their support of this concept. I have long been an advocate of public financing on both a national and state level. I am proud to say that Massachusetts has long been a leader in this field. Our own public financing laws check off one or two dollars on their state income tax forms to be used to finance statewide elections in 1978. I believe it's time to extend this same concept to members of Congress.

And finally, the President has asked for a constitutional amendment that would abolish the electoral college. The electoral college has long flaunted the tenets of democracy. This country must have the opportunity to vote directly for their president; the people's voice must be heard and counted and it must be a direct voice.

I am encouraged and excited by the President's proposal, and I am hopeful that Congress will see fit to quickly adopt these reforms. If it does, then we in Massachusetts will have a long awaited chance to take a giant step towards a full participatory process

Sincerely.

PAUL GUZZI, Secretary of the Commonwealth.

CONSUMERS' MARK OF EXCEL-LENCE: ESTHER PETERSON

Mr. PERCY. Mr. President, from the standpoint of American consumers, we have recently witnessed a series of excellent appointments by President Carter. It is especialy exhilarating to see such highly qualified talent—as represented by Michael Pertschuk, Carol Foreman, Joan Claybrook, and others-being brought into the executive branch.

The caliber of these nominations is particularly remarkable. I am delighted to see that so much previous experience is being applied in the best possible way. In nominating Esther Peterson to be his Consumer Advisor, President Carter has called upon one of the most qualified consumer voices in this country.

Through her personal conviction, integrity and good judgment, Esther Peterson has become a consumer advocate respected by manufacturers and retailers alike. When she has an idea. people listen. She has pioneered many of the innovations, now common on the grocery shelves, that help shoppers discriminate among supermarket goods. Such consumer aids as unit-pricing, open-dating of perishables, and nutrition and ingredient labeling of brand foods are products of Mrs. Peterson's firm belief that, "If you don't explain things and let consumers know, you can't complain when consumers yell about profit pictures they don't understand."

Esther Peterson began working for the Consumers League for Fair Labor Standards when she first finished with her formal education. Since then, she has served as Assistant Labor Secretary under Presidents Kennedy and Johnson, and as White House Consumer Advisor for President Johnson. Recently, she chaired the National Consumers League, the country's oldest consumer organization, and became renown in the Washington metropolitan area as consumer advisor to Giant Food's president Joseph Danzansky. In this latter capacity, her picture and signature have become synonymous with Giant Food's commitment to serve the consumer.

It is a privilege to have Mrs. Peterson's 70 years of experience about to become active again in the Federal Government-working to create a better understanding between business and the consumer. I wish to congratulate her upon this appointment. It is a position at which she has already, once, served us well. And, assuredly, the new assignment will permit her to responsibly help lead the dialog and debate toward creation,

finally, of an effective, independent Agency for Consumer Advocacy, for which we in the Congress have struggled, and to which President Carter has pledged his personal commitment and active support.

DEATH OF COLORADO SUGAR BEET CROP

Mr. HART. Mr. President, there was a very interesting article printed in the Washington Post this week. It gave an in-depth look at the impact of low sugar prices on farmers and their community in western Colorado.

A number of key issues that I have been speaking about for some time are touched on in the article. Low sugar prices which reflect the virtually unrestricted importation of foreign sugar into this country, are hurting our domestic sugar industry. Such low prices result in the loss of employment opportunities in a rural area with the concomitant decrease in economic activity and ultimately force farmers to sell their land for nonagricultural purposes.

Mr. President, I ask unanimous consent that the text of the article entitled, "Death of a Colorado Sugar Beet Crop," be printed in the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH OF A COLORADO SUGAR BEET CROP (By William Nye Curry)

Delta, Colo.—This is Jim Shea—business-like and a farmer, recipient of the Colorado sugar beet grower award for 1976. Each acre of one 33-acre beet tract on his farm produced an astounding 10,065 pounds of sugar. But last week, when he would normally have been planting his beets for this year, he was, instead, tending his dairy cows and worrying with his son Kelly over which cows in which lot were pregnant.

For despite his achievement of last year, Jim Shea will plant no sugar beets this year. Nor will the 153 other sugar beet farmers in this fertile western Colorado valley, because the Holly sugar beet processing plant here has been closed. The plant shut down in February, a victim of low sugar prices that could not offset the rising costs of energy and environmental protection and of the inefficiencies of small-scale technology.

It was one of four beet processing plants in Colorado closed this year, and people seeking to restrict low-priced sugar imports say it is a hint of things to come unless import quotas are imposed.

Caught in a net of uncertainty over the future are the sugar beet farmers who have lost a traditional, dependable and valuable cash crop; the 250 permanent and seasonal Holly employees who shared a \$1 million payroll, and the small and beginning farmers here who worked seasonal jobs at Holly to keep their farms going.

No one seems to know how these losses will be made up.

"We're in a helluva mess," said Keith M. Bond, president of the Western Colorado Beet Growers Association. The beets once accounted for only 6 per cent of farm cropland here but for 18 per cent of crop sales. "Nothing can compare, nothing can come close. Oh, it's going to hurt. It's really going to hurt," he said.

One-third of the 450 acres that Bond farms with his father was in beets, and last year accounted for \$100,000—"half the income on this farm."

The closest other beet processing plant is 250 miles away, too far for the beets to be shipped economically.

"If we can't get the [Holly] beet factory back," said farmer Chris Van Riper, "I'm just going to look at the whole thing and decide if I want to stay with it [farming]." His 299-acre farm turned a \$16,000 profit last year, and Van Riper said that without sugar beets he will probably just break even this year.

Even with currently depressed sugar prices, many of the farmers here, blessed with good soil, a variety of crops and three rivers to irrigate their land, managed to break even last year on sugar. In addition, millions of dollars in specialized beet farming equipment now stands useless, some of it, like Van Riper's beet topper, not yet paid for.

Thus the beet growers made a study of taking over the 57-year-old Holly plant and running it as a cooperative so they could still plant sugar beets. A lack of time and an abundance of unknowns prevented that, however, and last week while Keith Bond mourned the loss, his father leveled a 60-acre beet site for corn.

The stony mesas that break up this valley on the western slope of the Rocky Mountains gleamed behind the older Bond to the north, and the clear afternoon sky was painted randomly with smoke plumes as distant farmers burned the past year's growth from their irrigation ditches.

The county extension office estimates that most of the 10,500 former beet acres in Mesa, Delta and Montrose counties will go into corn because local cattlemen need more corn or feed than the area has been producing, and that helps prices. But the new corn acreage is expected to produce a million-bushel excess that will drive corn prices down, spreading the impact of Holly's closing to nonbeet farmers.

"Until we operate for a year, it's hard to tell what the impact will be," said Shea, who will probably put his usual 200 acres of sugar beets in corn, barley and other small grains. He does know, however, what the beet crop has meant in the past: "It's been the one that paid our bills."

Like in 1975, when beet prices were still high despite a slip from 1974's record prices. That year, Shea said, he took in \$680 an acre on his 200 acres of beets—a total of \$136,-000—and the profits offset heavy losses in his cattle feeding. Last year the receipts dropped to a little over \$500 an acre, he said, and the \$102.500 total "didn't start to pay the bills."

Shea said his two-year-old, 250-head dairy cow operation is not yet offsetting the beet loss. But, he said, "fortunately we have another way to go. Whether we make any money. . . ."

Less fortunate, said the 45-year-old Shea, are the young and small farmers who, like himself 15 years ago, worked seasonally at Holly to make needed money their farms do not yet provide. Men like Walter Distel, up on Ash Mesa in adjoining Montrose County.

He farms 200 acres, 20 of it his own and the rest rented. Corn, beans, barley for Coors beer—these are his crops. No beets. Yet he finds himself whirling at double speed around the vortex of the sunken Holly plant. He's lost his \$5.40-an-hour, October-to-February laboratory job at Holly and faces reduced farm income because of the new acreage going to corn.

"When we started farming 11 years ago, we started completely on our own with Farmers Home Administration. We borrowed just enough to get through the summer and we lived off that [his Holly job] in the winter," Distel said.

Everything that the farm earned went back into it, into repairs, new equipment, machinery.

This past year, the farm cleared almost \$1,800; the job at Holly returned \$5,200. "We

are going to pay some income tax this year, but most of it will be on the money I made at the factory," said Distel, "and that money will be hard to replace in any other operation or job."

There were 200 seasonal employees at Holly, many of them farmers like Distel. The jobs fit them well: the October plant opening followed their harvests, and the February closing preceded their planting. For the 50 year-round employees, some will be transferred to jobs at other Holly plants, others will take their chances on the local Delta job market, and others say they do not know what will happen.

what will happen.
Charles A. Marshall, 61, is one of those.
He has worked for Holly Sugar for 28 years,
the past three in Delta. He is staying on to
phase out the Delta plant for now, but after
that "I don't know what Holly will offer
me"

But for now, behind his desk in the glassdoored office labeled Agricultural Manager, Marshall delivers the official autopsy on the Delta plant's demise.

The biggest reason, he says, is low sugar prices, prices reflecting the virtually unrestricted imports of foreign sugar into the United States. Then there's the natural gas used at the plant, with expensive fuel oil as a substitute when gas is not available. And a conversion to coal would be expensive since environmental regulations would restrict the discharge of pollutants.

Then there was the size of the plant—1,700 tons of beets a day. The plant where Marshall worked before processed 4,000 tons a day with virtually the same number of workers. "But this [Delta plant] would pay its way if the price of sugar were justifiably so," Marnhall said. A year ago, finished sugar sold for 18 cents a pound, now it is 15.7 cents and Marshall estimated it would have to go back up to 18 cents just to cover costs.

It is these gaps between production costs and selling prices that have led the U.S. international Trade Commission to declare imported cane sugar a threat to the U.S. sugar industry and to recommend a reduction in imports from 4.5 million tons a year to something less than 4.4 million tons. The Carter administration is now formulating a sugar policy.

Imported sugar now sells for about 12 cents a pound raw, and refining costs from 3½ to 5 cents a pound, according to the U.S. Agriculture Department.

That means a finished product of 15 to 17 cents a pound—far below the peak of about 45 cents a pound, wholesale, reached in late 1974. The windfall profits that found their way to the sugar beet farmers here (they got two-thirds of Holly's wholesale price) went mostly to new equipment, repairs and farming improvements.

The true impact of the Holly closing will come this fall, when the seasonal workers look for replacement jobs or go on unemployment and when the beet growers miss their traditional initial payment from Holly and tote up instead the results of a season with different crops.

Closely watched will be the farmers raising 1,500 acres of sunflower seeds for processing into oil, which may prove to be the most promising replacement for beets, according to Gerry R. Marby, the extension agent for marketing who worked on a study of alternate crops.

He said it will take four to five years for the market to work itself out. Yet there is an optimism, a sense that these valley people can pull themselves through. "It's going to be felt," said Walter Distel, "but I think it'll come out all right."

With a nearby coal mining boom and an influx of escaping urbanites creating pressures for new housing, many farmers may find that after the beets and the corn, the barley and the sunflower seeds they will have one other cash crop—their land.

SENATOR THURMOND AND THE SENATE CODE OF ETHICS—A JOB WELL DONE

Mr. HELMS. Mr. President, I do not know whether the people of South Carolina are fully aware of the splendid work done by their distinguished senior Senator (Mr. Thurmond) in connection with the Senate Code of Ethics, adopted by this body last week.

I watched Senator Thurmond with admiration throughout the 2 weeks as he worked on the Senate floor to assure approval of this legislation. Prior to that, he had spent countless hours in committee sessions, preparing the legislation. It was a thankless job, but one that needed doing—and Strom Thurmond, as always, was willing to tackle the difficult, time-consuming task.

For my part, Mr. President, I had felt that full disclosure by all Senators probably would have been sufficient to begin the task of rebuilding public confidence and respect insofar as the Senate is concerned. Before adoption of the Senate Code of Ethics, the automatic pay raise question was, and probably still is, very much on the minds of the people.

Senator Thurmond voted against that pay raise, in the only test vote permitted in the Senate. So did I. But it was allowed to go into effect nonetheless, because the Senate voted to table, by a four-vote margin, a resolution disapproving the pay raise. Senator Thurmond and I were cosponsors of that resolution.

As for the Senate Code of Ethics, its real test will come in the conduct of Senators. It will be useful and constructive, if Senators live up to its standards. The activities of all Senators and their staffs will be monitored carefully as a result of this Code of Ethics.

In my judgment, the Senate has passed a fair and reasonable ethics code. Much of the credit for its passage is due to the distinguished Senator from South Carolina (Mr. Thurmond), who worked long and hard to see that the Senate got an ethics code that the people of this country can have confidence in.

The minority on the ad hoc committee which drew up Senate Resolution 110 knew what kind of man they wanted to lead them when they elected Senator Thurmond their ranking member. This man of unimpeachable character was fighting to restore the integrity and good name of the Senate. The Code of Ethics can do much to enhance the image that the Senate presents to the American people—to the extent that Senators adhere to its standards.

I commend Senator Thurmond for his efforts, and thank him for his diligent leadership in securing approval of the Senate's new ethics code.

MEAT AND DAIRY IMPORT INSPEC-TION ACT OF 1977

Mr. BAYH. Mr. President, today I asked our distinguished colleague from Oregon (Senator Packwood) to add my name as a cosponsor of S. 297, the Meat and Dairy Import Inspection and Labeling Act of 1977. This legislation will benefit both the American farmer and

the American consumer. I praise Senator Packwood for his leadership in this effort.

Over the past 15 years, meat imports have more than doubled. In 1974, the United States imported 1.3 billion dollars worth of meat and dairy products. While this is not a large percentage of our total consumption, we must not ignore any portion of our food in assuring its wholesomeness.

Imported products should be subject to the same testing as domestic meat and dairy foods. The Meat and Dairy Inspection Act is necessary to raise the health standards of imports to the level now applied to our own products. Currently, only about 10 percent of imported dairy products are U.S. Government inspected. The result has been horrible instances of contamination and dangerously low levels of quality in the uninspected food Americans may be eating. During hearings on this measure, Caroll Tucker Foreman, now Assistant Secretary of Agriculture for Food and Consumer Service, testified to instances of imported cheese that was rotten, moldy, and contained insect fragments and dangerous bacteria. Some imported powdered milk contained "dead rodents and rodent filth." These were discovered in the small portion of dairy products which is inspected.

The quality of American farm products is assured by the U.S. Government. American farmers go to considerable expense to keep their animals healthy and make sure that our meat and dairy products are of the highest quality. They should not be forced to compete in the marketplace with foreign products which enjoy an unfair advantage, as they do under current laws. It is only fair to American consumers and farmers alike that imported meat and dairy products meet standards of wholesomeness similar to those of domestic products. We must not penalize American farmers for producing superior products.

This bill would require the Secretaries of Agriculture and Health, Education, and Welfare to certify that imports meet minimum standards and would provide checks to insure that they are being met. These provisions will assure that American consumers are not buying impure products without their knowledge.

Since no inspection system can be perfect, the labeling provisions are most important. All foreign meat and dairy items would have to be labeled as imported. This will give the consumer aclear choice between domestic and imported products. It will benefit the farmer and consumer because I am convinced that, given the choice, American consumers will favor domestic products. We often hear the suggestion, "Buy American." Now the consumer will have the information to make that choice.

I hasten to point out, as its chief sponsor Senator Packwood has, that this bill should not be interpreted as a "backdoor" method of restricting trade. This bill would not be a proper method for cutting imports. Rather, it will deny foreign products a present unfair advantage over domestic products.

I urge the Senate to act speedily in passing the Meat and Dairy Import Inspection and Labeling Act of 1977. This bill will enhance the American consumers' faith in the food they buy and will begin to restore fairness of competition between American and foreign agricultural products.

PROPOSAL FOR DISPOSITION OF ALASKA'S NATIONAL INTEREST LANDS

Mr. STEVENS. Mr. President, for the past 5 months, I have been involved in a series of meetings and discussions with other Members of the Alaska congressional delegation and the Governor of Alaska regarding an issue of great importance to our State, the consideration of National Interest Lands in Alaska. Under section 17(d)(2) of the Alaska Native Claims Settlement Act, the Secretary of the Interior was authorized to withdraw no more than 80 million acres of vacant, unreserved, unappropriated public lands in Alaska for study as potential additions to the National Parks, Wildlife Refuge, Forest, and Wild and Scenic Rivers Systems. This acreage has been under review by the Department of the Interior for the past 5 years and will continue to be studied by appropriate agencies, such as the Bureau of Mines and U.S. Geological Survey, to inventory resource values prior to the final congressional decision.

The final disposition of these lands is of great importance to all Alaskans. Consequently, the Alaska delegation and Governor Hammond have been involved in a number of meetings with Alaskans and Alaskan interest groups on this important issue. The statements of the interest groups which we met with in February have previously been published in the Congressional Record. These statements reflected the general consensus of Alaskans that there is a need to protect significant National Interest Lands which are under true pressure, but that the majority of lands withdrawn for consideration should be made available for diversified uses.

Following our meeting with these interest groups, Governor Hammond, Congressman Young, and I reached a consensus which we feel reflects the opinion of a broad majority of Alaskans. This consensus, which we are presently reducing to legislative form for introduction in Congress by myself, is expressed in a summary proposal which we announced on March 26 and March 27 in Anchorage and Fairbanks on public television. While this proposal is subject to revision, the basic concepts will be reflected in the draft bill to be introduced later this month. Consequently, I would like to submit the text of the proposal for the consideration of my colleagues.

Mr. President, I ask unanimous consent that this be printed in the RECORD.

There being no objection, the proposal was ordered to be printed in the RECORD, as follows:

SUMMARY OF TENTATIVE d-2 POSITION (Presented by Governor Jay Hammond, Senator Ted Stevens, and Congressman Don

ANCHORAGE, MARCH 26, 1977. FAIRBANKS, MARCH 27, 1977.

This briefing paper outlines the details of the tentative d-2 position as presented by Governor Hammond, Senator Stevens, and Congressman Young at press conferences held in Anchorage on March 26, 1977 and in Fairbanks on March 27, 1977. This position represents the consensus the three principals arrived at following a series of meetings held over the past three months. Major components of the proposed position are:

Core areas-"Core areas" would be established by the proposal, to be designated "National Parks for the Future," National Wildlife Refuges for the Future," "National Forests for the Future," and "National Wildlife Refuges for the Future." The core areas will become units of the National Park, Refuge, Forest and Wild and Scenic Rivers Systems, in the year 2000. During the interim period, these units will be managed by the National Park Service, U.S. Fish and Wildlife Service, and U.S. Forest Service as designated by Congress, Basically, the core areas are the areas recommended as additions to the national systems in Alaska by former Secretary of Interior Stewart Udall to former President Johnson in the late 1960's.

Management of these units until the year 2000 will follow the laws generally applica-ble to parks, refuges, forest, and wild rivers, as appropriate, but specific diversified uses which might not be allowed under traditional management could be permitted upon a recommendation by the Alaska Land Classification Commission (see below) and approval of the Secretary of Interior or Secretary of Agriculture, in the case of forests the future. These uses could include mineral development, agricultural development, hunting, and recreation, but are not limited to these four.

2. Buffer zones-The proposal provides for the establishment of approximately 55 million acres of other d-2 lands to be designed. nated as the Alaska National Lands System. These lands will generally conform to the d-2 recommendations submitted by former Secretary of Interior Rogers Morton 1973.

The Alaska National Lands will be open

to diversified uses under the direction of the Alaska Land Commission. Management of specific units will be carried by existing line agencies (such as the National Park Service, Forest Service, Fish and Wildlife Service, Forest Service, Fish and Whithle Service) as designated by Congress. The Alaska Land Commission will have the power to close an area within a unit of the Alaska National Lands to a particular use if it finds that such use is incompatible with a management plan it develops for that unit. However, it should be emphasized that the intent of the establishment of the Alaska National Land System is to allow diversified uses on d-2 buffer lands.

3. Cooperative Management-Under the proposal the State of Alaska and private landowners may participate in cooperative management of their lands with federal d-2 lands by voluntarily dedicating their acreage to cooperative management. The United States would match such lands on acre by acre basis from the lands designated as Alaska National Lands.

The management of these lands will be under the direction of the Alaska Land Classification Commission, but actual management of the lands will be carried out by the actual landowner. Although the land-owner must comply with use classifications directed by the Commission, nothing would prevent the landowner from withdrawing dedicated lands from the cooperative man-

agement system. In effect, the Classification Commission will function similarly to an Alaskan planning and zoning commission for lands under its jurisdiction.

There is incentive for the State of Alaska and private landowners to dedicate lands to cooperative management. The matching of acreage by the federal government will give the State of Alaska a greater say in overall management of Alaska land and provide it with influence concerning management that it would not otherwise have. Private landowners will be granted an exemption from state and local real property taxation and assessments so long as such lands dedicated to cooperative management are not developed or leased to third parties. Under this system, state and private landowners retain the ultimate decision on the use of their lands through voluntary dedication, but are encouraged to submit appropriate lands to cooperative management through the incentives described below.

4. The Alaska Land Classification Commission-An eight member commission will be established to direct management of lands designated under this proposal. Four of the commissioners shall be appointed by the President and four by the Governor Each commissioner shall serve on a full time basis. Commission shall be directed by a federal co-chairman and state co-chairman to be designated by the President and Gov-

ernor, respectively.

The Commission's major duty shall be to oversee and direct specific management on the core areas, buffer zones, and lands dedicated to cooperative management by the State of Alaska and private landowners. As stated previously, the Commission shall serve as a policymaking body with specific management to be carried out by existing line agencies of the federal government, the State of Alaska or by the private landowners. The Governor and the Secretaries of Interior and Agriculture, in the case of forests, shall retain an ultimate veto over Commission decisions made concerning state and federal lands, respectively.

5. Lower 48 Trust Fund-to make the establishment of a cooperative system upon which diversified uses are allowed more attractive to other members of Congress, a trust fund is proposed for the purchase of private lands in the Lower '48 which have or will be designated as units of the national parks, national wildlife refuge or wild and scenic river systems. All proceeds derived from federal leases, contracts, rights-of-way, easements and other federal interests on d-2 lands, along with 50% of the State of Alaska's share of revenue derived from the Mineral Leasing Act of 1920 shall be paid into this trust fund.

From these funds, Congress may authorize the purchase of such private lands in the Lower '48 which otherwise would not be purchased. There is a tremendous backlog of private land dedicated as parks, refuges, and scenic rivers but money is not likely to be appropriated by Congress for purchase in the near future. This trust fund, then, provides a means to purchase these lands and gives other members of Congress a reason to establish a system that would allow diversified uses on federal d-2 lands in Alaska

6. Specific Uses—The following treatments of specific uses are included in the proposal: A. Wildlife Management—Taking of fish and game will be regulated by the State of

Alaska in accordance with applicable state laws.

B. Agricultural development shall be permitted in buffer areas, and agricultural rights shall be allocated under a long-term leasing system to be established by the Alaska Land Commission.

C. Public access across d-2 lands shall be guaranteed by law. Location and mode of such access shall be determined by the Commission which is authorized to use the power

of eminent domain to acquire land needed for access in accordance with their planning process. The guarantee of public access is an important legal distinction and differs from the discretionary authority which is normally vested in the Secretary of Interior or Agriculture under traditional management sys-

D. State Selections-Existing state selections, selected lands under tentative approval, and lands patented to the state, shall not be affected by this proposal. The state may make selections within units of the Alaska National Lands (buffer areas) subject to a conditional conveyance which requires the State of Alaska to manage these lands under the direction of the Alaska Land Commission

E. Wilderness Review-The Commission shall by the year 2000 make recommendations to Congress on lands within the core area that it feels are suitable for inclusion in the National Wilderness Preservation System. Criteria and procedure for study of areas and recommendations shall conform to guidelines established in the Wilderness Act of 1964. The Commission is also authorized, but not required, to make recommendations for wilderness designation respecting federal lands contained within the Alaska National Lands Systems.

7. Reaffirmation of State Selection Rightsthe d-2 proposal requires the Secretary of Interior to make all federal lands in Alaska not designated as d-2 lands under this Act or reserved for a particular federal purpose available to the State of Alaska for selection within 30 days following enactment of d-2 legislation. This provision guarantees that the State will be allowed to complete the selection of its entitlement under the Alaska Statement Act by 1984. Approximately 35 million acres remain to be selected by the State

It should be emphasized that the details outlined in this paper are only tentative. Governor Hammond, Senator Stevens, and Congressman Young seek continued suggestions and comments from the people of the State of Alaska. The congressional decision d-2 lands must be made by December, 1978. Prior to that time changes in this proposal can be made, and it is presented as a proposal which the three elected officials hope that all Alaskans can support.

NEWS RELEASE

Anchorage, Alaska.—Alaska Governor Jay Hammond, Senator Ted Stevens (R-Alaska). and Congressman Don Young (R-Alaska) today unveiled a proposal that encourages joint federal-state management of lands and would establish an Alaska Land Commission of federal and state representatives to set management policy for some 80 million acres of land currently withdrawn under Section 17 (d) (2) of the Alaska Native Claims Settlement Act.

"Our purpose today is to show Alaskans the proposal drafted from the ideas they have given us over the last four months, and to get any additional comments before we finish drafting this for consideration by Congress, Senator Stevens said.

The proposal would establish what Senator Stevens called "core areas and buffer zones," with 25 million acres withdrawn as core areas and 55 million acres surrounding those withdrawn as buffer zones.

"In the core areas, lands would be manged as National Parks for the Future, Wildlife Refuges for the Future, National Forests for the Future, and Wild Rivers for the Future," Senator Stevens said. "In addition, appropriate federal agencies would also manage the buffer zones.'

Congressman Young pointed out that the proposal would establish an Alaska Land Classification Commission composed of four members appointed by the President and four members appointed by the Governor. Under the proposal, one federal appointee must be an Alaskan native.

This proposal promotes cooperation in federal and state management," Congressman Young said. "Within core areas, the Commission could allow diversified uses with approval of the Secretary of the Interior or Secretary of Agriculture, and in buffer zones the Commission could classify lands for diversified uses if necessary.

Governor Hammond said the proposal encourages federal-state cooperative management of federal and state lands, and would provide incentive for private landowners to participate also.

"Under this proposal, the State of Alaska or private owners could voluntarily dedicate lands for cooperative management, and the federal government would match them acre for acre. Private owners of undeveloped lands dedicated in this fashion would receive an exemption from state and local property taxes as long as their lands were managed under the Commission's guidelines," Gover-nor Hammond said. "All landowners would have an incentive to commit lands to cooperative management, for without such commitment, neighboring landowners could go their own way to the possible detriment of adjoining lands or the possible exclusion of uses beneficial to the area as a whole."

The proposal is the product of a concensus, and its drafters say it is a means of getting a unified Alaskan stance on the d-2 lands which can be presented to Congress as Alaska's proposal. Comments on the proposal should be sent directly to Senator Stevens or Congressman Young in Washington, or Governor Hammond in Juneau.

SECRETARY OF AGRICULTURE BOB BERGLAND

Mr. ANDERSON. Mr. President, during the past 2 weeks I have argued strenuously that the Carter administration's recommended support prices on corn and wheat are inadequate. My opposition to the administration's proposals on these commodities will continue.

But it would be unfair and shortsighted if those of us who disagree with parts of the administration's program were to overlook the important accomplishments to date of Secretary Bob Bergland.

Bob Bergland is a rarity among recent Secretaries of Agriculture. He offers farmers a sensitive and a powerful voice.

It is Bob Bergland who speaks force-fully in the farmer's behalf when deci-sions are made at the White House. When we or our constituent family farmers disagree with an administration decision we know that the farmers had an eloquent and tireless advocate speaking on their behalf.

I believe that all of my colleagues will benefit by reading a recent article by Mr. Goody Solomon which appeared in the April 4, 1977 Washington Star. Here is an assessment of Secretary Bergland's first months. It speaks of a new spirit in USDA and it depicts a leader who combines a sophisticated understanding of complex problems with a willingness to pursue commonsense solutions.

Mr. President, I ask unanimous consent that this article be printed in the

There being no objection, the article was ordered to be printed in the RECORD. as follows:

HOW BOB BERGLAND IS CHANGING USDA (By Goody Solomon)

When Earl Butz resided in Room 200A of the U.S. Department of Agriculture, some farmers' representatives, consumers and the press claimed they often found the secre-tary's door closed. Bob Bergland seems to have flung them open. He's met more than once with almost every special interest the department touches.

They usually come away feeling optimistic. Bergland charms them. He's also been open to their causes—too open perhaps in the eyes of some observers.

Bergland is showing himself to be a com-promiser. In presenting his recommendations on farm legislation to the Senate Agriculture Committee, he said, "This program represents a middle ground in the administration (and) I will fight for it . . . (although) I wouldn't recommend it as a private citizen (with a farm in Minnesota.)"

In many ways—his personal style, his rhetoric, his sub-Cabinet selections and the programs slated to get attention by his administration—Bergland appears to have turned USDA in a new direction. To see the difference, look back at the Butz posture:

Butz dogmatically insisted that government keep hands off food supplies and prices.

While he kept price supports "ridiculously low," to use the word of a farm organization representative, Butz also dismantled the county and district farmer committee through which price support funds were distributed, thus weakening the whole system.

Laissez-faire to Butz meant no formal reserve system and no regulation of exports. Nor would he undertake international cooperation on grain reserves.

Richard L. Feltner, assistant secretary for marketing and consumer services under Butz, summed up the philosophy of that administration. "I firmly believe," he said, "that what's good for General Motors is good for the country."

What resulted from that approach was

Butz ended most crop quotas and acreage allotments, and agriculture moved to fullscale production, something the experts generally applaud. Meanwhile, though, he set loan rates so low on grains that many farmers didn't enter the program and are now left holding excess supplies. Not only does this add to farmers' rising operating costs but also there is no mechanism for handling the

For, if farmers take out commodity loans, they do so in order to withhold grain from the market in hopes that prices will rise. They get a government-fixed price per bushel, which is below the market price. The grain serves as collateral and the farmer obtains cash for current operating purposes. If market prices don't rise as anticipated, the farmer repays his loan with the stored grain,

CXXIII-663-Part 9

which the government can save for times of adverse weather and short supplies or can use for export through the Food for Peace

program.

Inasmuch as farmers didn't enter the loan program while they had bumper crops in wheat and rice during 1975 and 1976, they are holding the largest surplus of wheat in 13 years and the biggest of rice in history.

Enter Bergland, who often talks in favor of free market competition but would interfere in order to balance inequities and prevent wide swings in farm and consumer prices. "To worship at the alter of the free marketplace," he has said, "is nonsense."

On March 23 Bergland gave the Senate Agriculture Committee his proposals for renewing the farm legislation which is expiring this fall. Although the secretary angered wheat farmers who had hoped for higher price supports than Bergland offered, his package did contain redeeming features for them and other agricultural interests.

As for Bergland's specifics:

Congress should increase target prices for basic commodities and establish a formula whereby target prices increase as costs of production rise. The main purpose of target prices is to get a floor to farm income. If market prices fall below target prices, the government pays the difference to the farmer.

Congress should continue the secretary's discretionary power on loan rates but grant it for more than one year. Bergland would then up the loan rates on corn (now at \$1.50 per bushel) to \$2, while keeping wheat at \$2.25 per bushel, so that more surplus wheat might be used for animal feed.

Tie loan rates to target prices.

Set up a mechanism for handling grain reserves as follows: Instead of the current one-year authority for commodity loans, the secretary would have the power to extend loans for three years with extensions when necessary. As an incentive for farmers to keep wheat and rice off the market when prices were between 140 percent and 175 percent of the loan rate, Uncle Sam would foot the farmers' storage fees. With prices below 140 percent of the loan rate, a farmer could not sell his grain and repay the loan without penalty. When prices reached 175 percent of the loan level, the point at which the grains should be released for sale, all loans would be called.

Eliminate acrease allotments which no longer reflect existing production patterns. The effect, said Bergland, would be to give farmers flexibilty in planting barley one year,

wheat the next and so on.

Finally, Bergland thinks the U.S. cannot possibly feed the world's hungry people but does have a responsibility to help out. "We will continue in negotiations with other nations to establish some sort of an international food security system," he said. Meanwhile, he requested an extension of the Food for Peace Program, with some modifications that would increase the money and the quantity of food available for emergency aid to poor countries.

Other major points of difference between Butz and Bergland:

Bergland views agriculture policies as closely tied to those on energy, housing, transportation, labor as well as diplomacy, therefore has already attended several meetings of the Domestic Policy Council from which Butz often absented himself.

The current secretary has started revamping the advisory committees serving the department. Among other things, he has named two consumer representatives to the Expert Panel on Nitrites and Nitrosamines and has abolished 11 advisory committees not required by law.

"They amounted to representatives of agribusiness recommending policies that quite often were accepted by Butz and Hardin," said a staffer in Bergland's office. He also said

"the committees were chosen for that purpose . . . Continental Grain was represented on a lot of them . . or a housewife on a committee would be the wife of a Republican leader." Instead of advisory committees, Bergland prefers public hearings on proposed regulations.

Cabinet officers traditionally and necessarily choose like-minded assistants and Bergland is no exception. But he's getting high marks from a wide range of observers for the caliber of his selections, including his choice of Carol Foreman, the former executive director of Consumer Federation of America who was sworn in March 25 as assistant secretary for food and nutrition.

Who are these people and what issues are absorbing their immediate attention?

John White, deputy secretary, was Texas commissioner of agriculture for 26 years. He's been called the "best of the state agriculture commissioners" and his administrative abilities are expected to compensate for Bergland's weakness there.

The economic brains at USDA belong to Howard Hjort. During the Johnson era, Hjort was first staff economist of USDA, then special assistant to the undersecretary and finally head of the department of planning analysis. In 1972 Hjort joined the consulting firm of the undersecretary for whom he had worked, John Schnittker.

Some credit Hjort with masterminding Bergland's recommendations on pending farm legislation set.

In characterizing the difference between himself and his predecessor Don Paarlberg, Hjort said, 'Don is more oriented to a free-market framework. I decided a long time ago that the preconditions for a free market don't exist anywhere in the world and that belief has been strengthened in time. We have to compete in a world market where countries have administered prices."

As director of agriculture economics, Hjort's top priority is to "make a careful assessment of what would happen both to the demand for and supply of commodities if the U.S. price were to be plus or minus 20

percent of what it actually is."

Dale Hathaway, slater to become assistant secretary for international affairs, will come to USDA directly from the International Food Policy Research Institute, of which he was director since its founding in 1975. That group looked into the wide ranging food problems of developing countries. At USDA, Hathaway will continue in that quest.

Alex Mercuri, an assistant secretary for rural development, will set his sights first on devising regulations that would permit the department to implement rural development legislation of 1972 that the Republicans neglected. USDA will be examining ways of putting local and community resources to better use and of bringing in commercial capital.

Mercuri's background suits his job. He was vice president for regional and community affairs at the University of New Mexico and before that was president of a technical and vocational school in the rural mountains of New Mexico.

Similarly, Rupert Cutler, assistant secretary for conservation, research and education, has a solid background in natural resources management and environmental action, most recently as professor of resource development and extension specialist at Michigan State University. Before that he was assistant executive director of the Wilderness Society here and earlier had worked for the Virginia Wildlife Federation.

Carol Foreman has one of the pressure jobs in the department. She is in charge of the highly criticized food stamp and other feeding programs, which together absorb \$9 billion of the \$14 billion USDA budget.

Bergland's proposals for strengthening the food stamp program and cleaning up its

abuse will be given to the House Tuesday and the Senate Thursday. While details have not yet been worked up, the most favored option reportedly includes these provisions:

Eliminate the purchase requirement. (A bill to that effect has been introduced by Sens. Robert Dole, R-Kan., and George Mc-

Govern, D-S.D.)

Establish income eligibility by using a standard deduction covering family expenses instead of the current itemized deductions which require that applicants submit lengthy and complicated documentation. As a consequence, recipients at the highest income level would have been reduced and that in turn would help keep the total food stamp budget in tow.

A big question regarding Foreman's position is to what extent she could or should act as the consumer advocate in the department. Although she admits that her presence will help keep a focus on public needs, she doesn't think that consumer advocacy

should be her job.

A proposal getting serious consideration at the department would create an office of citizen participation. Apparently Bergland is intrigued with the notion that individual farmers, who have a hard time getting their two cents into department policies, would be helped as much as other citizens.

In any event, Robert Meyer, a California farmer who will be assistant secretary for marketing, plans to work directly with farmers. "Instead of mandating solutions from Washington," he said, "when something comes up that requires a solution from the department I will go first to the producers. The most common sense comes from farmers. . . Then everything is a compromise. After (a decision is made) I will explain it to the farmers."

TESTIMONY ON ENERGY CONSER-VATION BY GOV. JAY ROCKE-FELLER OF WEST VIRGINIA

Mr. PERCY. Mr. President, on Tuesday, March 22 the Senate Governmental Affairs Committee heard valuable testimony from three Governors: Julian Carroll of Kentucky, Richard Lamm of Colorado, and Jay Rockefeller of West Virginia. During the course of that hearing these three fine public servants emphasized the need for conservation in our energy policy. Governor Rockefeller demonstrated an insight into our need for conservation, and I would like to share that insight with my Senate colleagues today.

During this past winter's natural gas crisis, the State of West Virginia experienced severe shortages and was forced to close down large parts of its school system for periods of time. In response to a question, it was revealed that the Governor's office did some computer programing, and discovered that if each residence in the State of West Virginia had turned down its thermostat by just 1 degree, there would have been sufficient supplies of natural gas to keep every school, residence, and factory in West Virginia open even if the cold temperatures had continued.

Mr. President, I think Governor Rockefeller's unique and striking observation clearly shows the potential for conservation in this Nation. The people of West Virginia could have kept their children in school by lowering their thermostats just 1 degree. Instead, because of that 1 degree, many schools were closed. And this situation was not unique to West Virginia.

I believe the necessary path has been laid out before us. We must work hard to develop new sources of energy, but we must also begin to make substantive efforts to conserve energy. That is why Senator HUMPHREY and I have founded the Alliance to Save Energy with the help of many of our colleagues and the administration.

Ultimately, though, responsibility for conservation lies with individual Americans. That was really the crux of Governor Rockefeller's testimony. So that his thoughts may receive the attention they deserve, I ask unanimous consent that Governor Rockefeller's testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF GOV. JAY ROCKEFELLER

Mr. Chairman, Honorable Committee members, I am appearing today, with my fellow colleagues as the Governor of one of our nation's major coal producing States to present to this Committee our recommendations with regard to the organization of federal energy conservation programs within the Department of Energy.

As has been stated by the President, energy conservation must play a prominent role a national energy policy. The nation's Governors have long recognized the importance of energy conservation and through the NGC have adopted strong policy recommendations calling for the development of specific energy conservation program initiatives. (I am submitting for the record the

relevant policy positions.)

As our policy position states, energy con-servation is the primary short-range solution to meeting our national energy needs, An effective national conservation program will provide us with the time necessary to plan more responsibly for the use of our nation's coal and other energy resources. It will lessen the degree of adverse impacts on those States, like West Virginia, Kentucky and Colorado, which will in the coming years be called upon to increase the development of their resources.

The manner in which conservation programs are structured within the Department of Energy will determine how successful our national effort will be.

The President wisely recognized this fact, and the proposed Department of Energy Act stipulates that one of the assistant secretaries be designated an Assistant Secretary for Energy Conservation. The Governors applaud and endorse this proposal. We recommend further that this proposed conservation division of the Department of Energy be comprehensive and include research, development and demonstration functions, and that such a division be provided with sufficient resources to maintain effective coordination with the States.

The bill and accompanying fact sheets are vague on how the conservation division will be organized. The allocation of functions to specific divisions is left to the discretion of the Secretary. In large part, therefore, whether the Department of Energy will have a comprehensive and integrated conservation unit depends on the administrative de-

sires of the Secretary.

In so far as the Governors are concerned, the primary requirement for a satisfactory energy conservation division is that it integrate research, development and demonstration programs related to energy conserva-tion and energy efficiency at the end use level. The Administration's fact sheet on the bill notes that "Conservation R & D for

too long was an afterthought, with FEA-ERDA fragmentation impeding progress. The organization of a new Department of Energy must end this fragmentation by bringing all conservation R & D together in a strong and responsive conservation division. Without this integration, the department's conservation efforts will be weakened and the conservation division will be reduced to a public information function dealing only with "curtailment"-type options for saving energy.

Another important consideration is that the conservation division must have direct and effective communication with the policy formulation functions within the Department of Energy, so that energy conservation options, programs, and technology are fully considered along with supply-related factors

in formulating major policy directions.

As I am sure members of this Committee have noted, several existing energy conserva tion programs will not be fully consolidated within the Department of Energy under the Administration's proposal. Though we have no major quarrel with these decisions, we wish to stress the importance of insuring strong coordination between the conservation division of the Department of Energy and the other agencies involved in the conservation area, such as CSA and HUD.

The second point I mentioned is also crucial. However satisfactory the internal organization of the Department of Energy and its conservation functions, there will not be an effective nationwide energy conservation program without effective coordination with, and participation by, the States. Given the differences existing among the States in terms of geographical, economic, institutional, and climatic conditions, only the States have the experience, outreach capacity and necessary data to implement many critical elements of an effective energy con-servation program. The States are also in a better position to coordinate the various federal, state, and local energy conservation programs going on within their jurisdiction.

Congress recognized the need to provide authority and resources to the States to implement a national energy conservation effort when it passed the Energy Policy and Conservation Act in December 1975 and the Energy Conservation and Production Act in August 1976. These two acts authorized a variety of programs, dividing the responsibility for implementation between the fedand state governments according to which was more suited, and capable, to carry out each specific measure.

The problems that have been identified with respect to the implementation of these programs can largely be attributed to inadequate state participation in formulating

the overall program goals and objectives. Mandatory program elements were specified that were inappropriate to some States, or which in any case save little energy. The limitations on state control over localities were not sufficient recognized. Deadlines were in some cases unrealistic. Guidelines were often vague or unduly restrictive. Technical assistance has not been made sufficiently available. Funding has been too little, too late, and subject to too many administrative controls. Dividing EPCA funding by the energy savings goal indicates that the act seeks to "buy conservation energy at a price of ten cents per barrel of oil equivalent. Clearly this is not realistic.

The solution to many of these problems is to involve the States much earlier and more actively in the process of designing new enconservation programs. They can best identify the technical and institutional problems of various approaches as applied to their areas, and they are in the best position sure that localized problems and needs are addressed. In addition, the States can provide a valuable communication link to the public. The alternative is to risk that a program may not be operable or suitable for many States, thereby weakening its effectiveness and wasting resources

To insure this needed state participation in energy conservation program development and to improve implementation, the conservation division of the Department of Energy should include a Federal-State Programs Office with the ability and resources to insure the necessary liaison. If the Department of Energy is to have regional offices the Federal State Programs Office should staff them with people who have the skills, resources, and direct line authorities needed to effectvely facilitate efficient implementation of ongoing federal-state programs as well as to channel proposals for new programs and major modifications to specialized staff in Washington, Without the strength to truly assist the States and provide them with quicker, more accessible responses and de-cisions than they could otherwise get, re-gional offices become one more layer of bureaucracy which must be fought through or gone around to accomplish program obiectives.

In summary, what NGC supports is a strong, comprehensive conservation division within the Department of Energy with an effective mechanism for insuring state participation at each stage of the development and implementation of energy conservation policy and programs. In recognition of diversity of the States and of their jurisdiction over key elements of an effective energy conservation program, Congress should insure that the organization, staffing, and funding of the Department of Energy be such as to maximize the capacity of the States to assume a vital role in the long-term implementation of programs to save energy.

THE MERAMEC DAM

Mr. DANFORTH. Mr. President, the following editorial appeared in the Southeast Missourian, Cape Girardeau, Mo. The Missourian is the largest newspaper in southeast Missouri, and I think their editorial is indicative of the increasing public controversy over the wisdom of the construction of the Meramec Dam.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR DANFORTH'S ARGUMENTS

It depends on who you talk to whether proponents or opponents of the Meramec Dam near Sullivan came out ahead at a hearing held on Saturday.

than 2,000 people, according to The Associated Press, were present for the public meeting, called by the Corps of Engineers.

Sullivan, it should be observed, was a most convenient place to hold the session, since it is the heart of the area where the dam would be located and where proponents, principally for economic reasons, favor the damming of the Meramec.

But the Meramec River is an attraction that extends beyond the borders of a narrow region. It is a free-flowing stream that belongs to all Missourians and not just those nearby. It is a statewide resource, and that why the controversy has assumed statewide proportions.

It is for this very reason that we consider Rep. Bill D. Burlison's postal poll on the issue completely invalid. He ignored that his constituency in all 19 counties of the 10th Missouri District has a stake in the Meramec. His poll disregarded their feelings and was taken only in Iron, St. Francois and Jefferson

Counties. It was an invalid sampling of opinion.

Nevertheless, although he left out most of the people in his district in arriving at his decision, Rep. Burlison says he will argue in Congress in favor of the Meramec Dam.

He offers no support other than this threecounty opinion to back his position.

We prefer the documented, reasoned stand of Sen. John C. Danforth, who has assembled highly persuasive evidence in support of his steadfast opposition to the dam. These reasons, some just made available, are contained in his current newsletter and were

presented Saturday.
Sen. Danforth said he has very serious questions about the case being made for con-

struction of the dam.

"In order to save 11,800 acres below the dam, 12,600 acres must be flooded above it." That seems to us a pretty cogent argument in itself against construction.

But that is not all. "In its 1977 budget justification," he continued, "the Corps of Engineers assigned 45 per cent, or \$51.8 million, of the \$124 million project cost to flood control. This amount amounts to a federally subsidized primary flood control bonanza of \$4,390 per acre for those property owners near the dam." (See why those in and near Sullivan like the idea?)

Second, Sen. Danforth said, is the fact that the corps has assigned 11 per cent, or \$12.7 million, of the total project cost to water supply. "Water from a reservoir is simply not needed in the upper Meramec Basin, by the corps' own admission in its environmen-

tal statement."

So there we have a definite contradiction in amount proposed for water supply expenditure and justification of need. Yet Rep. Burlison, in justifying the dam set forth the "assurance of an abundant water supply for Jefferson County" as one of his reasons. It simply—no pun intended—doesn't hold water.

Sen. Danforth pointed out that the Ozarks and Ozark streams are assets in limited supply. "They enhance the quality of life."

ply. "They enhance the quality of life."

If the dam is not built, 50 miles of beautiful canoeing and fishing streams near St.

Louis will be saved, dozens of caves and six natural springs, will remain unharmed, and 12,600 acres of productive wildlife habitat and agricultural and recreational land will be preserved. In addition, 86 archeological sites will be protected from inundation and almost \$100 million in taxpayers' money will be saved.

We think the arguments are persuasive. The dam should not be built.

NANCY HANKS

Mr. PERCY. Mr. President, the National Endowment for the Arts has played a major role in molding this Nation's cultural character. It has provided encouragement and support for the arts, in all of its expressions, throughout America. The mentor of the Endowment has been its chairman, Nancy Hanks.

One of my first experiences with Ms. Hanks occurred in the late 1950's. At that time, she was serving as staff coordinator with Henry Kissinger for the Rockefeller Brothers Fund working on a panel report. The project resulted in an outstanding contribution to American political thought entitled: "Prospects for America."

Later, while serving as the ranking minority member on the Subcommittee on Interior Appropriations, I again had an opportunity to work with Ms. Hanks in her new position as the Chairman of the Arts Endowment. She demonstrated her total dedication to enriching the quality of life in America by strengthening the foundation of support for the arts and the humanities.

Recently, the Christian Science Monitor carried an excellent article written by William Marlin on Chairman Hanks' role of seeking and successfully receiving increased annual levels of Federal funding for the Endowment. Mr. Marlin's introductory paragraph says a great deal about Chairman Hanks' endeavors and the encouragement that she has received not only from the executive branch of Government, but also from Congress. Through the years the members who have worked with her on appropriations for the Endowment recognize her achievements in making this stunning record possible. I have always felt that a society could be judged not so much by its material wealth but more aptly by its cultural life:

"We're really in the encouraging business, the human business," says chairman Nancy Hanks of the National Endowment for the Arts, the agency some observers consider one of the brightest uses of federal money to be found

With relatively small appropriations and a lot of persuasion, this agency has been able to attract on average at least three nonfederal dollars for every tax dollar it gives out in grants. (Christian Science Monitor)

Mr. President, I ask unanimous consent that Mr. Marlin's article appearing in the March 24, 1977, edition of the Christian Science Monitor on funds for the arts be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW NANCY HANKS WINS FEDERAL MONEY FOR THE ARTS

(By William Marlin)

"'We're really in the encouraging business, the human business,' says chairman Nancy Hanks of the National Endowment for the Arts, the agency some observers consider one of the brightest uses of federal money to be found.

"With relatively small appropriations and a lot of persuasion, this agency has been able to attract on average at least three nonfederal dollars for every tax dollar it gives out in grants."

Washington.—Someone was saying the other day on Capitol Hill that it's a good thing every federal agency doesn't have a Nancy Hanks. Why? Nancy Hanks, chairman of the National Endowment for the Arts (NEA) since 1969 (her second four-year term ends in October), has a way with presidents, senators, and congressmen; they keep increasing her budget.

She also has a way with people across the country. She has helped nurture a growing grass-roots constituency for culture, which keeps calling for those budget increases.

NEA is considered by some observers to be one of the best-run brightest uses of federal money to be found. The grants-making agency was set up in 1965 with a \$2.5 million approriation. When Miss Hanks became its head, it was operating on a slender \$8 million. (Its sister agency, the National Endowment for the Humanities, set up at the same time, was in the same boat.)

Yet by the time of Miss Hanks' reappointment, in 1973, the NEA appropriation had increased to more than \$60 million. For the

current fiscal year, it's at \$85 million, and, since recent hearings on the Hill went smoothly, the 95th Congress is expected this summer to come through with something close to the agency's \$114.5 million request for fiscal 1978.

SUCCESSFUL STAYING POWER

There aren't many other agency chiefs who have been around Washington for eight years, or who have been able to justify jumps in funding proportionate to NEA's. Miss Hanks' success is heightened by the fact that many politicians who used to think of the arts as a frill no longer do.

One congressman comments, "I'm no expert on the arts, but I've learned something from that woman. I guess we all have. Maybe the biggest thing I've learned is that the arts are a big thing. It's not just museums and theaters. The arts take in all of the many things that occur because of people getting together, whether to attend a play or to develop an idea for sprucing up a street.

"You take that urban conservation program, which the NEA got going last year. I think they awarded around \$490,000 in matching grants, with over three dozen cities and towns involved, to fix up older commercial and residential properties for new uses. Why, the people back in my district were hopping to get the help, and hopping locally to get the help to match the grant.

"The last thing the NEA needs now—and remember, it was meant to be an agency—is a partisan political paperweight flattening the fervor and sparkle of such innovative programs, or, as bad, some platitudinous lightweight who would turn it into a tea party for museum trustees."

DEMAND OUTSTRIPS FUNDING

Helpful as the growth in NEA appropriations has been, however, it hasn't kept pace with the growth in popular demand for the kinds of seed-money assistance this Johnny Appleseed agency sows. Public commitment to the arts appears to be growing, too.

A Harris poll shows that 64 percent of adults would be willing to give \$5 a year in support of the arts, that 47 percent would give \$25 a year, and 36 percent would give \$50.

In recent years such cultural institutions as museums and theaters have experienced increased attendance, but this hasn't even begun to buck inflationary costs. In fiscal 1976, the NEA reviewed almost 19,000 grant applications requesting over \$240 million—more than twice its current appropriation request. It was able to award only 4,400 grants.

Though the agency's full-time staff has grown from a couple of dozen eight years ago to 130 today, at least a couple dozen more are needed if careful scrutiny of applications and congenial consultation with applicants are to continue. The staff-level has been at 130 for three years, while its workload has increased by 50 percent.

load has increased by 50 percent.

Of course, the NEA doesn't subsidize just anyone who wants to recite, write, compose, paint, or draw. It gives fellowships to talented individuals, whose projects can be expected to develop their own insights and skills, while leavening the communities they touch. It also gives matching grants to local government agencies and nonprofit organizations for projects to improve neighborhoods.

NEA programs include architecture and environmental arts, dance, education, folk arts, visual arts, literature, museums, public media, and theater. Each is headed by people who are generally considered excellent in their fields.

One important role of the NEA, through its matching grants, has been proving that federal funds, however limited, can inspire the private sector to pitch in, and can help local groups pry loose support from their governors, legislatures, mayors, and councilmen.

BUSINESS OF ENCOURAGEMENT

The NEA is also in the revenue sharing business. Ten years ago, only a dozen states had official arts agencies. Now all of them, plus the District of Columbia and the four U.S. territories, have such agencies. At least 20 percent of the NEA program budget now is being shared with those local agencies. Last year, the states got block grants of \$205,000; next year, if full funding passes Congress, they will get \$237,000.

"With comparatively little cash, and a whole lot of persuasion, we've been able to respond to the creative, expressive impulses of everyday Americans," says Miss Hanks. "If you take an average, we've also been able to attract three to five nonfederal dollars for every dollar that we've put into projects. You know, what we're really in is the encouraging business, the human business."

The namesake and distant relative of Abraham Lincoln's mother once futilely tried ballet, clarinet, and piano herself. "I just ballet, clarinet, and piano herself. "I just couldn't learn," she says, "but mother kept hoping." Now Miss Hanks has opened up opportunities for others, and the NEA has increased public awareness of the importance of the arts.

'The arts can be described in many ways, she says, "but I think we have gone beyond the old idea of them as being rare gems in a rough of reality. They really involve making the rough richer-learning to do ordinary things creatively, and not just creative things occasionally."

The Florida-born, Texas-raised Miss Hanks, the only Republican incumbent on President Carter's inaugural committee, says she has been too busy to think about what she will do at the end of the current term. It is rumored, however, that many Washington Democrats wouldn't mind keeping her for a third term.

Whoever heads NEA after October, certain standards beyond personality will have to be kept if the agency is to remain approachable, efficiently managed, and effective.

Increased visibility can make any agency vulnerable to the three cardinal rules of bureaucracy: when in doubt mumble; when in charge ponder; when in trouble delegate, as Charles Boren, president of NATAPROBU (National Association of Professional Bureaucrats), has described them. But so far the NEA has not succumbed. Right now it is about the only place in Washington that you can still phone without getting a recorded message, or somebody who sounds like one. A major challenge ahead will be who sounds to keep it that way.

ASSESSING, PUBLICIZING

Another challenge will be to step up assessment of grants already given and to publicize the enhancing effect they are having on community life.

"Cultural and economic activities ricochet off of each other all the time," Miss Hanks emphasizes: "It's like a ballet dancer having to be a very good athlete. Grace and strength become each other. You put one of the touring dance companies that we sponsor on a downtown square, and, I'll tell you, the shopkeepers won't be tapping their feet to just the music."

Still another challenge ahead is to broaden the NEA's so-called challenege grant program, in which a grant is given only if recipient can raise the lion's share of the money somewhere else. This program would receive a \$12 million supplemental appropriation for this year. \$18 million in fiscal 1978. and another \$20 million in 1979. It would build on the agency's ongoing treasury fund method, which has been setting aside \$7.5 million of the annual program budget to match contributions to cultural organiza-tion and institutions from such private sources as corporations, foundations, and individual donors. The challenge grants would

range from \$10,000 to \$500,000 and require a nonfederal match of at least 3-to-1. They would be given on a one-time basis and could be used for up to three years.

GENERATING CAPITAL

"If we assume full funding, says Miss Hanks, "we expect to generate at least \$150 million in new nonfederal funds at the end of three years, and another \$207 million in repeated contributions. Our experience from carefully crafting and testing this program over the last $2\frac{1}{2}$ years indicates that there is an average repeat rate on contributions of 75 percent.

That may be called building financial momentum, but it is also building com-munity confidence. Closing down or curtailing cultural institutions when people need them most is demoralizing. These aren't frills, because in every city I know of where employment is down, public participation in cultural activities is up. Very up. Another important side benefit of the challenge grant program-and we're excited about this-is that it requires potential recipients to take a hard look at their financing, programs, and methods of management, instead of engaging in piecemeal planning on a day-to-day

Late this summer, there will be a messenger waiting outside of Chairman Hanks' office, which overlooks Kennedy Center and the Potomac River, to take the budget request for fiscal 1979 over to the Office of Management and Budget, where the whole funding process will begin again. Looking back at the NEA record for generating nongovernment funds for the arts, even congressional pennypinchers might concede it would be a good thing if every federal agency did have a Nancy Hanks.

EDUCATION AND SCHOLARSHIP PROGRAM

Mr. STEVENS. Mr. President, every year the education and scholarship program of the Americanism and Children and Youth Division of the American Legion publishes an excellent booklet entitled "Need a Lift?" The portion of the booklet which I think is of particular value to our Nation's graduating high school seniors deals with sources of career information. It is my belief that students are more likely to continue their education if they are informed about the various careers available to them.

This helpful publication is available for 50 cents from the American Legion, National Emblem Sales, P.O. Box 1055, Indianapolis, Ind. 46206.

Mr. President, I ask unanimous consent to have printed in the RECORD the list of sources of career information from the American Legion pamphlet entitled "Need a Lift?"

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Sources of Career Information

The National Association of Trade and Technical Schools, 2021 L Street, N.W., Washington, DC 20036, has available free upon request, an updated Directory of over 400 accredited trade and technical school members and the courses being offered. Schools listed geographically with a subject cross-reference.

The National Home Study Council, 1601-18th Street, N.W., Washington, DC 20009, will mail, upon request, a directory of accredited proprietary correspondence schools and the subjects offered by the schools. The Association of Independent Colleges

and Schools has many member schools who offer general work or service, and funded scholarships to eligible students-subject to the controls of the Association. Some member schools also offer work-study programs. For a list of the approximately 500 AICS schools and for further information, please write to the Guidance Department, Associa-tion of Independent Colleges and Schools, 1730 M Street, N.W., Washington, DC 20036. State private school associations have been

established in most states to provide information concerning schools, details of course offerings, schedules, tuition and fee payments. For further information and address of your state association, contact your school counselor.

THE JOURNEY OF THE ETHICS TRAIN

Mr. DOLE. Mr. President, the Senate adopted a new ethics resolution last week with the eager expectation that our action would be greeted by a mighty wave of public adulation. Indeed, assome of us said during the debate, the anticipation of public acclaim was the primary if not the sole motivation for the imposition of a set of ethical rules that will surely come back to haunt this great body many times in the future. But, already, some thoughtful observers are examining our product with a critical eye. The applause that supporters of this resolution so anxiously courted is slow to come. I ask unanimous consent that the first portion of David Broder's Sunday column in the Washington Post of April 3, entitled "The Ethics Train Went a Little Too Far," and Alice Widener's column in the Indianapolis Star of April 2, entitled "Limiting the Income of a Senator," be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 3, 1977] THE ETHICS TRAIN WENT A LITTLE TOO FAR (By David S. Broder)

That halo floating over the Capitol this morning is no optical illusion. It is visible

evidence of the improvement in the moral climate of Congress that was achieved when the Senate joined the House in passing a

tough new code of ethics.

There's a lot that's useful in the twin codes, including much stronger disclosure requirements on the personal and official finances of our lawmakers and their top aides. Commendably, the incumbents limited their use of some of the perquisites of office—like free mailings to their constituents—that have given them such an advantage over their challengers.

But it seems almost an iron law that when Congress gets on The Streetcar Named Reform, it gets so giddy that it forgets to get off at its original destination and then is shocked to find itself in a strange neighbor-

hood.

We saw that a couple years ago, when the lawmakers boarded the Campaign Finance Reform Train, determined to stop the extortion of political money that surfaced in Watergate. By the time they woke up on that trip, they found themselves with a law that made it impossible for a congressional candidate to put the name of his party's presidential nominee on his own campaign buttons.

That same wretched excess mars the new ethics codes, as witness the following mind-

boggling debate:

Sen. Henry Bellmon (R-Okla.): "We do not allow a member of the Senate to be a physician under this bill. He cannot practice medicine."

Sen. Strom Thurmond (R-S.C.): "That

is correct."

Bellmon: "Could a member be a nurse?"
Thurmond: "I think probably, if he wanted to go out and do a lower type work, that is—"
Bellmon: "What is so evil about being a

physician and so nice about being a nurse?

I cannot understand this."

Thurmond: "Because a physician has a higher degree of skill; there is a doctorpatient relationship there that you do not have with a nurse. You are in a different world when you are a doctor than when you are a nurse, so to speak, although they work together."

Somehow unconvinced by this ingenious explanation, Bellmon offered an amendment that would have removed the ban on any senator's providing "professional services" as an engineer, real estate or insurance agent, attorney, physician, architect, consultant or functionary "of a similar character."

But he lost on a 53-23 vote. And so, having

But he lost on a 53-23 vote. And so, having started out to safeguard its purity, the Senate somehow concluded by making it impossible for an obstetrician in its ranks to

deliver a baby for pay.

You have to ask yourself how supposedly sensible people can wander so far from their original objective. The Good Lord has had a heck of a time enforcing the few "thou shalt nots," He found necessary. And Sen. Gaylord Nelson (D-Wis.), the principal sponsor of the Senate ethics code, is the last man who would ever be accused of suffering from a messianic complex.

What overwhelmed Nelson's good judgment—as it overwhelmed the judgment of his House counterpart, Rep. David Obey (D-Wis.), another admirable man—was the panic in the ranks of congressional members at the public outcry over their allowing themselves a well-justified pay increase.

Whenever things got tight in the House and Senate debates, there was always someone waving a poll and arguing that, whether a particular prohibition made sense or not, the public demanded it. The ethics debate was the worst example of the abandonment of good judgment to the appeasement of public opinion I've witnessed since—well, since the same moral fervor mixed with fear seized Congress after Watergate and pro-

duced the campaign finance "reforms" of 1974.

As has been said before, Lord protect us from protectors. And, Lord, protect them from themselves.

[From the Indianapolis Star, Apr. 2, 1977] Limiting the Income of a Senator

(By Alice Widener)

New York.—If United States senators permit an artificial limit to be put on their private earnings—that is, on income not derived from government pay—then they will have agreed to the socialization of the U.S. Senate. If this be approved, can full socialization of the American people and the demise of free enterprise be far behind?

In an emotional tizzy over alleged corruption in Congress, the senators are putting government-earned income and privately earned income into the same package in a

kind of apples-oranges affair.

On March 22, the Senate voted 62-to-35 to keep a section of the new "ethics" package allegedly reducing the possibility of conflict of interest by putting an \$8,625 limit on any senator's outside earned income. This section implies that all senators are equal with none more equal than others and none to be rewarded more than any other for superiority in brains, courage, integrity, articulateness, experience and judgment.

Let us say Senator A is a relative newcomer to Capitol Hill, well known in his home state but in the "who?" department on the nationwide circuit. The top fee he can command is \$500 per lecture and he has time to give five speeches per year. He can earn \$2,500 from lecture fees and—says the new ethics proposal—that is perfectly just, proper, hon-

est, clean and pure.

On the other hand, let us say Senator B is a longtime, highly experienced, eloquent and delightful individual of strong convictions with which people may agree or disagree. Senator B also has time only for five lectures but on the nationwide circuit the demand for his appearances is so great that he can command a lecture fee of \$3,000 and can earn \$15,000 a year. At an arbitrarily imposed ethical limit of \$8,625 annual outside earnings, Senator B would be guilty of \$6,375 unethical, obscene and unjust income.

What nonsense! What radic-chic, egali-Socialistic and even Communistic bunk! Worse still, the nonsensical, arbitrary limit set on a senator's private earnings is degrading to our entire concept of freedom. On this absurd theory of what is ethical-a theory based mainly on envy and the kind of evangelical morality springing mostly from the desire of mediocre people to level the gifted downward-it would be unethical for Joe Namath to add to his football income by praising panty hose, and unethical for the incomparably great Pearl Bailey to add to her singing-acting income by patting roasters and fryers on various plump parts of their anatomies.

"I will vote for the bill (New Ethics Code Limiting Senators' Outside Income) because the majority leader (Democrat Tip O'Neill) asked me to," says newcomer Senator Daniel Patrick Moynihan of New York, one of the most brilliant speakers in our nation who earned \$150,000 last year through lectures, that is, who earned \$141,375 of filthy, immoral lucre informing Americans about the hypocritical shenanigans at the United Nations, the cheating in welfare, the degradation of crime-syndicated pornography, etc.

I've never had any sympathy with the envious complainers who object to a baseball player's signing a million dollar contract or who protest that a gifted poet makes a pittance while a porno peddler makes a huge fortune. Some people get ulcers brooding about "injustice" of all this. Me, I don't expect justice, I just love my work whatever

it does or doesn't pay. But then, of course, I belong to a lucky happy breed.

Meantime, dear readers, if the United States senators permit themselves to be socialized and equalized, you soon will be too.

(This concludes additional statements submitted today.)

ORDER FOR RECESS UNTIL 12.30 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12:30 p.m. tomorrow.

The PRESIDING OFFICER. Without

objection, it is so ordered.

ORDER FOR RECOGNITION OF SEN-ATOR JAVITS AND SENATOR BARTLETT TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after Mr. Biden is recognized under the order previously entered, Mr. Javirs and then Mr. Barlett be recognized each for not to exceed 15 minutes prior to proceeding with the consideration of H.R. 1828, the sick pay exclusion bill.

The PRESIDING OFFICER. Without

objection, it is so ordered.

AUTHORIZATION FOR ALL COMMITTEES TO MEET TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene tomorrow at 12:30 p.m.

After the two leaders or their designees have been recognized under the standing order, Mr. Biden, Mr. Javirs, and Mr. Bartlett will be recognized each for not to exceed 15 minutes, after which, under the order previously entered, the Senate will proceed to the consideration of H.R. 1828, the sick pay exclusion bill. Whether or not there will be any rollcall votes in connection therewith I am unable to state at this point. There may be other matters cleared for action by tomorrow. It is conceivable that one or more conference reports could be called up, they being privileged matters, and votes could occur

EXTENSIONS OF REMARKS

RECESS UNTIL 12:30 P.M. TOMORROW

Mr. ROBERT C. BYRD. If there be no further business to come before the Senate at this time, Mr. President, I move, in accordance with the previous order, that the Senate stand in recess until 12:30 p.m. tomorrow.

The motion was agreed to; and at 6:30 p.m. the Senate recessed until tomorrow, Wednesday, April 6, 1977, at 12:30 p.m.

NOMINATIONS

Executive nominations received by the Senate April 5, 1977:

THE JUDICIARY

William M. Hoeveler, of Florida, to be U.S. district judge for the southern district of Florida vice Peter T. Fay, elevated.

CIVIL SERVICE COMMISSION

Alan K. Campbell, of Texas, to be a Civil Service Commissioner for the remainder of the term expiring March 1, 1979, vice Robert E. Hampton, resigned.

IN THE AIR FORCE

The following officer to be placed on the Retired List in the grade indicated under the provisions of section 8962, title 10 of the United States Code:

To be general

Gen. Russell E. Dougherty, xx-xx-xxxx FR (major general, Regular Air Force), U.S. Air Force.

The following officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

To be general

Lt. Gen. Lew Allen, Jr. XXX-XXXXX FR (major general, Regular Air Force), U.S. Air Force.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 5, 1977:

DEPARTMENT OF JUSTICE

Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General.

FEDERAL HIGHWAY ADMINISTRATION

William Meredith Cox, of Kentucky, to be Administrator of the Federal Highway Administration.

DEPARTMENT OF DEFENSE

John C. Stetson, of Illinois, to be Secretary of the Air Force.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

IN THE AIR FORCE

The following officers for appointment in the Reserve of the Air Force to the grade indicated, under the provisions of chapter 837, title 10, United States Code:

To be major general

Brig. Gen. James D. Isaacks, Jr., xxx-xx-xx... FV, Air Force Reserve.

Brig. Gen. Stephen T. Keefe, Jr., xxx-xx-xx... xxx-...FV, Air Force Reserve.

Brig. Gen. Roy M. Marshall, xxx-xx-xxxx
FV, Air Force Reserve.
Brig. Gen. Sidney S. Novaresi, xxx-xx-xxxx

FV, Air Force Reserve.

Brig. Gen. Ted W. Sorensen, xxx-xx-xxxx

Brig. Gen. Ted W. Sorensen, xxx-xx-xxx FV, Air Force Reserve.

To be brigadier general

Col. Richard D. Anderegg, xxx-xx-xxxx FV, Air Force Reserve.

Col. Donald H. Balch, xxx-xx-xxxx FV, Air Force Reserve.

Col. Milton J. Eberle, xxx-xx-xxxx FV, Air Force Reserve.

Col. Sloan R. Gill, xxx-xx-xxxx FV, Air Force Reserve.

Col. Thomas J. Gregory, xxx-xxxx FV, Air Force Reserve.

Col. Frank E. Humpert, xxx-xx-xxx FV, Air Force Reserve.

Col. Lewis E. Jones, xxx-xx-xxxx FV, Air Force Reserve.

Col. Samuel K. Lessey, Jr., xxx-xxxx FV, Air Force Reserve.

Col. Martin M. Ostrow, xxx-xx-xxxx FV, Air Force Reserve.

Col. Albin H. Schweers, xxx-xx-xxxx FV, Air

Force Reserve.

Col. Joseph L. Shosid, xxx-xx-xxxx FV, Air

Force Reserve.

Col. Robert E. Van Housen, xx-x-xxx

FV, Air Force Reserve.

IN THE AIR FORCE

Air Force nominations beginning Robert J. Aldrich, Jr., to be lieutenant colonel, and ending John J. O'Malley, to lieutenant colonel, which nominations were received by the Senate and appeared in the Congressional Record on March 18, 1977.

IN THE ARMY

Army nominations beginning Gary W. Milner, to be second lieutenant, and ending Donald S. Zona, to be second lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on March 18, 1977.

IN THE NAVY

Navy nominations beginning Rex T. Aaron, to be lieutenant, and ending Susan B. Zysk, to be lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on March 18, 1977.

IN THE MARINE CORPS

Marine Corps nominations beginning Burleigh H. Bagnall, to be second lieutenant, and ending Adrian C. McElwee, to be second lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on March 18, 1977.

EXTENSIONS OF REMARKS

WHY BREIRA? PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. McDONALD. Mr. Speaker, I wish to call to your attention an article on one of the support groups operating in the U.S. on behalf of the terrorist Palestine Liberation Organization. The article has been published in Commentary, a magazine with whose conclusions I have often found disagreement, but which has a high reputation for accuracy and fairness.

"Why Breira," by Joseph Shattan, confirms many of the points I previously made in documenting Breira as a support group for the PLO terrorists, developed and coordinated from the Institute for Policy Studies.

Mr. Shattan has made the very significant point that Breira's leaders liken the organization to the "antiwar" activists who worked so hard for the Communist victories in Vietnam, Cambodia and Laos. For Breira, the Vietcong are the PLO. Part I appears today, part II will appear tomorrow.

The article follows:

WHY BREIRA?
(By Joseph Shattan)

(Note.—Joseph Shattan, who has recently received his doctorate at the Fletcher School of Law and Diplomacy, has written in Commentary and elsewhere on Middle Eastern affairs and modern European history.)

Ever since the end of the Yom Kippur War in October 1973, pressure has mounted around the world for a final settlement of the Middle East conflict; scenarios and counter-scenarios have been proposed, the merits of step-by-step diplomacy have been weighed against the merits of an overall settlement achieved at once and among each of the parties, and in this country an agonizing debate has gone on over the proper role of the United States with regard to the contending sides, and especially with regard to Israel. In the midst of all this, as might be expected, much talk has taken place inside the American Jewish community about relations between that community and the Israeli government and people—what they have been, what they might be, what they ought to be.

Of late, much of this talk has focused on a new and controversial Jewish group called Breira, which advertises itself as offering "a 'choice' for shared responsibility between Israel and the Diaspora." On the one hand, the emergence of Breira (the word in Hebrew means "alternative") has been hailed by the New York *Times* and the Washington

Post as a major political development, augering a new willingness on the part of American Jews to criticize the state of Israel. On the other hand, some American Jewish or ganizations have reacted to Breira with suspicion and hostility, and one group, Americans for A Safe 'srael, has published a well-documented pamphlet, written by Rael Jean Isaac, which challenges Breira's legitimacy and charges that "the majority who join [it] are unaware of the purposes of the minority who shape the path of the organization."* Mrs. Isaac's arguments merit serious consideration, but first it is necessary to know something of Breira's history.

Breira was founded in the immediate aftermath of the Yom Kippur War. It offered to serve as the vehicle, within the Jewish community, for an open and critical discussion of all matters of concern to American Jews, especially their relation to Israel. Its initial statement of purpose, issued in December 1973, declared: "Nothing is more important for the continued vitality of Jewish life than extensive discussion within the Jewish community about the State [of Israel], its problems, its policies, its relationship to us and our hopes for it." At the time of its founding Breira was made up of young veterans of the 60's Jewish counter-culture (grouped mainly around Response magazine) and a number of Reform and Conservative rabbis concerned

^{*&}quot;Breira: Counsel for Judaism," by Rael Jean Isaac, Americans For a Safe Israel, 30 pp., \$1.00.

with asserting the spiritual and cultural parity of Jewish life in the Diaspora with that in Israel.

Breira first came to the wider attention of American Jewry on November 4, 1974, when it issued a flyer opposing the mass "Rally Against Terror" held to protest Yasir Arafat's appearance before the United Nations. This demonstration, in Breira's view, was counterproductive, and "only reinforced Jewish anxiety and Israeli isolation." Since the Arab League had designated the PLO as the sole representative of the Palestinian people, "coming to terms with the future role of the PLO in negotiations with Israel" had become a "necessity," and Breira called on the Israeli government to declare its willingness to negotiate with "the full range of Palestinian leadership." (Interestingly, most of the members of Breira's Advisory Committee refused to endorse this statement.)

Until the middle of 1975, Breira voiced its criticism of Israeli policy within the confines of the Jewish community, where it had to build a base of support in order to become a viable organization. While the results of Breira's "membership drive" were not spectacular, neither were they insignificant. its initial core of members Breira was able to add a considerable number of rabbis who had been active in the civil-rights and antiwar movements of the 1960's, among them Eugene Borowitz, Balfour Brickner, Joachim Prinz, Arnold Jacob Wolf (who is now Breira's chairman), and quite a few campus Hillel rabbis. Although all were "Zionists," some of these rabbis were not altogether out of sympathy with Al Fatah, even as they had not been totally unsympathetic to the Viet-

Although Breira's statement of purpose had placed a considerable range of issues on the organization's agenda, and had cited the need for "extensive discussion and debate within the Jewish community" about these issues, it soon became evident, first, that the one subject that held Breira's interest was in the fate of the Palestinians in the Middle East and, second, that little prior discussion was taking place even on what Breira's own position was to be on that subject. In July 1975, Robert Loeb, Breira's executive director, testified before Senator McGovern's Subcommittee on Near Eastern Affairs and called upon Israel to negotiate directly with the PLO "on all future relationships between their two states [sic]." Statement after statement was issued by Loeb, in Breira's name, criticizing Israeli policy, especially on the West Bank, Mark Bruzonsky, a columnist for inter-Change, Breira's monthly review, wrote in Newsday (August 27, 1976) that the United States ought to "impose its leverage" on Israel and even "coerce" it, if necessary, into negotiating with PLO and establishing a Palestinian state on the West Bank and in

Gaza. Arthur Waskow, of the Institute for Policy Studies in Washington and a member of Breira's executive committee, held seminars under Breira's auspices for members of Congress "to open," as he put it, "new perspectives they hadn't considered" with regard to a resolution of the Palestinian question.

In the spring of 1976 Breira circulated a statement expressing solidarity with the "peace forces" in Israel actively opposed to Gush Emunim, an Israeli political-religious group which calls for the annexation of occupied West Bank territories. The statement was endorsed by many Jewish intellectuals not associated with Breira, and it was the understanding of some of them, at least, that the Statement would in no way be linked to Breira. When the statement, entitled "It is Time to Say No to Gush Emunim," appeared in the Jerusalem Post, it did indeed make no mention of Breira. Loeb, however, simultaneously issued a press release in which Breira openly took responsibility for the statement, and on the strength of this the New York Times published an editorial lauding Breira and noting that it was "picking up wide suppointelllectuals. wide support among influential Jewish . . overcoming as well the misapprehension of many Jewish Americans that criticism of Israeli policies would be seen as a rejection of Israel."

With an editorial endorsement from the Times, Breira suddenly became an organization of national prominence. To the roster of names on its various committees were added those of Village Voice radicals like Paul Cowan and Vivian Gornick and, more significantly, those of distinguished American Jewish intellectuals like Irving Howe, Arthur A. Cohen, and Nathan Glazer. When a series of private meetings was held last November between PLO representatives and number of American Jews among them Breira's Arthur Waskow, it was Waskow who published a piece on the New York Times Op-Ed page about it. So well established had Breira become that at the end of February of this year it was able to hold its first national conference, featuring as speakers a number of well-known political

analysts and religious figures.

If Breira has attracted the attention and support of many rabbis, liberal intellectuals, and Jewish students and professors, it has also become the object of a good deal of concern within the organized Jewish com-munity. Much of that concern, articulated in detail in Rael Jean Isaac's study of Breira,2 is grounded in the prehistory of the group and of those running it. Robert Loeb, for example, the executive director, came to Breira from a group called CONAME (Committee on New Alternatives in the Middle East), where he had been in charge of field activities; and John Ruskay, who along with Loeb has worked on a full-time basis for Breira from the beginning (he is now its secretary), had served on CONAME's steering committee. At least one other prominent member of Breira had been affiliated with something called MERIP (Middle East Research and Information Project), and both CONAME and MERIP appear to have had close links with the Institute for Policy Studies in Washington, a radical think-tank and organizing center founded in 1963 by Marcus Raskin and Richard Barnet. All of these organizations, Mrs. Isaac goes on to

show, have had a history of hostility to Israel.

Lavishly funded by grants from various foundations, the Institute for Policy Studies supports a number of staff members all of whom are engaged in specific "projects." For some time, Arthur Waskow, a senior fellow at the Institute and now (as noted) a member of Breira's executive committee, once headed a project on "The Crisis of American Jewry" (which resulted in the publication of a book, The Bush is Burning!, containing organizational guidelines and descriptions of the various radical Jewish groups with which Waskow was then involved) and he currently runs an IPS project investigating the triangular relationship among the U.S. government, the Israeli government, and the organized Jewish community inside the United States." Waskow's own views regarding this "interaction" are hardly positive. In an article for Response magazine in 1971, he argued that the "Zionism" of established Jewish organizations "is no devotion to the dream of Zion, but a snivelly admiration for Dayan, for jet-planes, for the Johnson or Nixon or Agnew who will deliver them." In Jewish community to shift 'its moral, political, and financial support" to dissident Israeli groups such as Siach (the Israeli New Left). Berira's "project of concern" bears a striking similarity to Waskow's current proj-

According to Mrs. Isaac, the Institute for Policy Studies has a number of anti-Israel activists on its paid staff. Joe Stork, a member of the "collective" that produces MERIP Reports, is one such staff member. MERIP, which was founded in 1971, identifies openly with the PLO, and distributes its literature, its posters, and even its flags. When terrorists gunned down Israeli athletes at the 1972 Munich Olympics, MERIP issued a flyer reading, "Munich and similar actions cannot create or substitute for a mass revolutionary movement, but we should comprehend the achievement of the Munich action. It has provided a boost in morale among Palestinians in the camps. . . . It is regret-table when people are killed, Israeli or Palestinian or Lebanese or Syrian, but at the very least we should know where to put the blame." (On Israel.)

In 1974, MERIP Reports printed "Zionism and American Jews," a speech given by MERIP's Sharon Rose to the 1973 convention of Arab-American University Graduates, a group described by the Anti-Defamation League of B'nai B'rith as "the key PLO 'connection' in the United States." Sharon Rose addressed herself to the question, "How did Zionism move from a tiny force to being accepted by most Americans as the equivalent of Judaism and what are the perceptible cracks in the political hegemony of the Zionist movement and what forces are likely to widen them?" An earlier essay by Miss Rose, included in Waskow's book, The Bush Is Burning!, called for a "bi-national, democratic secular state, encompassing the entire area of the original Mandate"—which of course is exactly the PLO euphemism for the dissolution of the state of Israel-to carry out the necessary "revolution" in the Middle

In 1971, at the Institute for Policy Studies, Mrs. Isaac reports, MERIP conducted a discussion on 'How American Radicals See the Resistance Dilemma"; its proceedings were subsequently published in 1972 in the PLO's Journal of Palestine Studies. At the conclusion of the discussion, Barry Rubin, a member of the MERIP, "collective," called for a specifically Jewish anti-Zionist organization. "I think it would be good to have Jews campaigning actively for Palestinian needs," he said. "It immediately breaks up the myth combining Judaism and Zionism. In that case it's something that probably Jews can be much more effective in doing."

¹ In an article for Sh'ma magazine, Rabbi Balfour Brickner described the "intense personal conflict" he had felt during the Jordanian civil war in 1970, when a Jewish friend" phoned from Washington and asked him to take the lead in collecting Jewish names to protest possible United States intervention. "The issue might have been simple for the ordinary American Jew, Rabbi Brickner wrote, "but not for those who, despite their love of Israel, had long and loudly protested their country's intervention into the Vietnamese civil war. Was the Jordanian situation any different?" After prolonged soul-searching, Rabbi Brickner decided that it was different. "When I called my friend back he seemed to understand but, in talking, he threw me into a turmoil a second time, asking how I would feel if Hussein overwhelmed the guerrillas. Ouch." sein overwhelmed the guerrillas. Rabbi Brickner did not explain why the prospect of the PLO's defeat threw him into such a turmoil.

²Mrs. Isaac's own sympathies, to judge from other of her published writings, would appear to tend toward the position of the Land of Israel movement, but her pamphlet on Breira is free of any overt bias and is scrupulous in its respect for evidence and in its use of documenation. Mrs. Isaac is also the author of a useful and well-argued book, Israel Divided: Ideological Politics in the Jewish State; see my review in the September 1976 COMMENTARY.

After August 1974, Rubin's name no longer appeared in *MERIP Reports*, but in September 1975, when the first issue of the Breira newsletter *interChange* came out, Barry Rubin was listed as associate editor for international affairs. *InterChange* identified him as a doctoral candidate at Georgetown University but neglected to cite either his association with MERIP or with the violently anti-Israel Maoist *Guardian*.

Coname, the other organization in the background of Breira, was established in 1970. Its sponsors included such recent supporters and activists of the New Left as Marcus Raskin, Richard Barnet, Barbara Bick, and Arthur Waskow, all from the Institute for Policy Studies, as well as I. F. Stone, William Kunstler, Staughton Lynd, and Howard Zinn. Peter Weiss, chairman of the Institute's Board of Trustees (and vice president of the Samuel Rubin Foundation, one of the Institute's-and now Breira's-main financial supporters), was a member of CONAME's steering committee along with other New Left notables like Paul Jacobs, Noam Chomand Irene Gendzier (among others). Unlike MERIP, CONAME did not call for the destruction of Israel—though it sponsored speaking tours for such Israelis as Arie Bober and Israel Shahak, who did. Rather, CONAME, argued that a Palestinian state must be established alongside Israel and that the PLO must be recognized by the United States and brought to Geneva.

On October 25, 1973 nineteen Arab-American or pro-Arab groups, among them CO-NAME, sent a telegram to members of the House and Senate urging "absolutely no arms and advisers to Israel." In December 1973, "in response to various requests from those wishing to become more active in the struggle against Zionism," the Middle East Coordinating Committee, a well-known pro-Arab group, issued a "partial list of groups and organizations in the New York area who are actively working on behalf of justice in the Middle East." CONAME was on the list. Time magazine (June 23, 1975) listed CONAME among the "some 20 organizations" that were "carrying the Arabs' message."

Breira, Mrs. Isaac proceeds to show, is lineally descended from CONAME. Loeb and Ruskay came directly out of CONAME into Breira; indeed, they seem to have helped set up Breira while they were still working for CONAME. (When, in April 1976, CONAME merged with the Fellowship of Reconciliation. Alan Solomonow, CONAME's executive director, cited Briera as an organization continuing CONAME's work.) Presumably, they felt, like Barry Rubin, that a specifically Jewish organization actively campaigning on behalf of "Palestinian needs" would be more effective than a non-Jewish one. CONAME and Breira shared an identical position on the PLO and the need for a Palestinian state, but Breira was carefully designed to make its appeal to the Jewish community rather than to the "peace community."

Loeb and Ruskay did not build Breira by themselves; Arthur Waskow, in a 1976 Response symposium, revealed that he had "helped to build" Breira—and Mrs. Isaac demonstrates that "the old Waskow circle" consisting of veterans of many of his organizations, "provided a wealth of recruits" to Breira. Waskow was also discreetly involved with MERIP, sharing a Washington postoffice box with that organization. In all his complex involvements with MERIP, CO-NAME, and Breira, Waskow has of course continued to be funded by the Institute for Policy Studies which, in addition to its indirect sponsorship of MERIP and CONAME, has undertaken to introduce PLO representatives into the mainstream of American life.

If individuals such as Loeb, Ruskay, and Waskow were marginal elements in Breira, it could be argued that their views and past activities are not a matter of serious concern. Unfortunately, Mrs. Isaac maintains, they are

among its central figures, and it is they, rather than any of the rabbis and intellectuals listed on the organization's masthead, who make its policy. A certain deception is thus being practiced, Mrs. Isaac concludes. Loeb, Ruskay, Waskow, and Rubin claim to be "Zionists" and sail under the colors of an organization that professes love for Israel, vet all of them have been identified with markedly anti-Israel organizations in the past, and none has repudiated that connection. In October 1973, while Israel's survival literally hung in the balance, their "concern" for Israel was such that they opposed emergency military aid. Since then, Mrs. Isaac asserts, they have built Breira into a front group, enlisting the good names and reputations of well-meaning rabbis and liberal Jewish intellectuals, but all the while working to advance the interests of the Palestine Liberation Organization.

A TIME TO REVIEW FOOD LAWS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. DERWINSKI. Mr. Speaker, if my mail has been any indication of public opinion, the FDA ban on saccharin generated more critical mail than any other subject in recent years.

An editorial commentary, appearing in the Chicago Daily News of March 18, is equally critical of this decision. I wish to insert it at this time for the Members' attention:

A TIME TO REVIEW FOOD LAWS

Public outrage over the probable ban on saccharin may finally force Congress into a long-needed review of the federal Food and Drug Administration and the laws under which it operates. Something is plainly wrong when an agency set up to protect the public overprotects to the point of creating a new hazard to health.

Saccharin, the only noncaloric, artificial sweetener on the market, has served a significant purpose for about 80 years. It helps diabetics who cannot tolerate sugar, and it helps dieters in a land afflicted by obesity. If it vanishes and there is no substitute for sugar, where are these people—and they number in the millions—to turn?

Proof that saccharin was a danger to health would of course justify a ban. But there is no proof that any human being has developed cancer by using saccharin. The test on which the ban rests involved feeding rats huge doses of saccharin—far more than a human dieter could possibly consume. Sure enough, a few rats developed tumors. Under the so-called Delaney Amendment to the Food and Drug Act, saccharin had to go.

The Delaney Amendment, passed in 1958, allows no leeway. It provides that "no food additive shall be deemed to be safe . . . if it is found . . to induce cancer in man or animal." But the problem is that many useful substances, if taken in sufficient quantity, may induce cancer, and almost any food or drink, consumed in massive amounts, may cause death. In recent days, two cases have come to light of death caused by drinking too much water. If the Delaney Amendment applied to harmful effects other than cancer, there would be nothing left to eat or drink, not even water.

The bizarre tests conducted by the FDA have led to other bans, such as the one still in force against cyclamates, another artificial sweetener regarded by most experts as harmless. And who now remembers the

great "cranberry scare" of 1959? The finding of minute traces of weedkiller in a few cranberries destroyed a whole crop.

Congress should take a fresh look at the Delaney Amendment, and consider modifying its absolute language. If the FDA determines that a food product or additive is risky, that should of course be made known. But when the risk is as small as it is with saccharin, the consumer should at least be left with some freedom of choice. On the evidence so far, substituting saccharin for sugar is no riskler than getting out of bed in the morning. Or should that, too, be banned?

LEGISLATION TO PROTECT VICTIMS OF RAILROAD VANDALISM

HON. HAROLD S. SAWYER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. SAWYER. Mr. Speaker, following recent hearings by a House Judiciary Subcommittee on the subject of railroad vandalism, I have become alarmed over the number of ruthless attacks on railroad employees. Reports detail literally thousands of incidents in which bullets are shot and rocks are thrown at trains each year causing death and injury to railroad employees.

Past history indicates there is very little that can be done through establishment of new criminal offenses. In the great majority of the cases of vandalism, juveniles are involved. This type of "criminal" is often not subject to prosecution under the present criminal system. Furthermore, this type of crime is difficult to document with sufficient evidence.

In order to provide protection for rail-road employees against this vicious type of vandalism, I feel a strong need for minimum protection measures. Bullet proof glass in the locomotive and rear car of all trains will help to reduce the seriousness of attacks. Yet, it is important that bullet-proof glass be coupled with installation of air conditioning, to insure that windows remain closed and employees out of danger.

The tragedies that document the need for new legislation are numerous. A 27-year-old fireman was killed in Chicago during 1976 when someone threw a half empty beer bottle at the window of the locomotive cab where he was riding. The impact of the bottle shattered the window causing glass to strike him in the head and neck, severing his carotid artery. He died 3 hours after entering the hospital. In another incident, an employee is now paralyzed from the neck down following a sniper shot in which he was hit.

The total number of incidents reported during 1976 was 23,722 acts of vandalism, including 9,954 stonings of trains and 737 shootings of trains. Many other incidents undoubtedly went unreported.

No act of Congress or any law enforcement official could have prevented these incidents from happening. The railroad employees could have been protected with bulletproof glass in the locomotive and caboose, but without air conditioning, the windows will be open for cooling and the benefit of the protection will have been lost.

This subject has been thoroughly investigated and studied including a 1972 study by the Federal Railroad Administration. The results are always the same. They show this type of vandalism to be unmotivated and difficult to prevent. But unless we start to offer minimum protection for the victims of these senseless attacks, the problem will continue to grow out of control.

I am introducing legislation to amend the Federal Railroad Safety Act of 1970 to require the Secretary of Transportation to issue regulations requiring that the locomotive and rear car of all passenger, freight, and commuter trains have bulletproof glass and equipment capable of providing controlled temperatures.

I feel this is a commonsense solution to a very serious problem, and I welcome the support of my colleagues.

IMPACT AID COMPENSATES REAL NEEDS

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. STEERS. Mr. Speaker, I was pleased to note in this morning's "Letters to the Editor" in the Washington Post that the associate superintendent of schools, Dr. Paul A. Henry, in my district of Montgomery County, Md., demonstrated a serious fault in logic made by the U.S. Office of Education in its attempts to get rid of impact aid.

The letter speaks eloquently and suc-

cintly for itself:

"A NATIONAL INEQUITY" ON SCHOOL COMPENSATION

As the Carter administration and the Congress come to grips with the fiscal year 1978 budget provisions for federal aid to education, I hope they do not fall prey to the illogical reasoning publicly set forth by the U.S. Office of Education acting deputy commissioner before the HEW Subcommittee of the House Appropriations Committee at a hearing on March 22. In commenting upon provisions for the impact aid program, the spokesperson stated "... we do not propose to compensate school districts under Section 3(b) in 1978. Most of these children live on private property in the community and their parents pay local property taxes which support the school system. . . ." (emphasis supplied.).

The basic fault in this logic is the fact that residential property constitutes only about 50 per cent of total assessed valuation for real estate tax purposes. The remainder is made up of commercial property. The testimony above, if followed to its logical conclusion, would exempt all such commercial and industrial property from real estate taxes, as is the case with federal property.

taxes, as is the case with federal property. In making a \$300 million payment "in lieu of taxes" to the District of Columbia, I believe the precedent is established for similar payments to other local jurisdictions which "house" federal commercial installations serving all of the citizens of this country. To illustrate, the exemption of over \$312 million for such federal property in Montgomery County means that taxpayers must pay a higher local tax burden.

It is high time that an age of reason prevails through the enactment of legislation that would wipe out this national inequity. The time for congressional action is now!

PAUL A. HENRY,
Associate Superintendent for Business and Financial Services, Montgomery County Public Schools.

DANGERS OF HATCH ACT REVISIONS

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. LOTT. Mr. Speaker, please permit me to call to the attention of my colleagues an editorial which recently appeared in the Daily Herald, a newspaper serving the Mississippi Gulf Coast. I think that the comments contained therein on the Hatch Act are well worth considering and are very timely, in view of developments now occurring in the House Post Office and Civil Service Committee, on which I serve.

The article follows:

DANGERS OF HATCH ACT REVISIONS

The Carter Administration's proposal to liberalize the Hatch Act, unveiled last week by Vice President Walter F. Mondale in a package of proposals to Congress, probably means that the revisions have a better-than-average chance of being enacted into law. We hope not.

Last year, you will recall, the Congress voted to repeal the Hatch Act altogether, freeing 2.8 million or more federal workers to engage in any political activity of their choosing. They would have been permitted to run for any office or manage any political campaign.

Then-President Gerald R. Ford had the courage—and it took an extra measure of that in an election year—to veto the re-

pealing legislation.

In his veto message, Mr. Ford commented that "The fundamental objection to this bill is that politicizing the civil service is intolerable." We couldn't agree more whole-heartedly. We think the same reasoning that so soundly supported Mr. Ford's veto then is still sound now.

Under the Hatch Act, federal employes may participate in politics by voting, attending rallies and conventions and contributing to candidates. It is an assurance to citizens that their affairs are conducted with an eye to the public interest instead of to partisan interests. It is also a protection to the federal employes.

Liberalizing the Hatch Act would be opening the door for a return to the spoils system. The Act was passed in 1939 to prevent the party in power—it was the Democrats then—from using hundreds of thousands of government employes to run its political structure and campaigns at public

Where the Hatch Act restrictions removed or substantially eased, we believe the prediction of one of its supporters would come to pass and "Whatever political activity is permitted to federal employes will quickly become that which is required of them."

That turn of events might be considered fortunate by the political party in power, drooling over the added muscle represented by that army of votes, but it can hardly be considered in the best interest of the country.

Think for a moment what the Committee to Reelect the President could have done were the whole of the federal bureaucracy at its disposal. That thought should send shivers down your spine.

We hope this Congress takes a different attitude than its predecessor and doesn't tamper with the Hatch Act. It has served this country well for nearly four decades and tampering with it is more likely to provide a grave disservice than it is to effect any improvements.

COMMEMORATIVE STAMP HONOR-ING ST. ELIZABETH SETON

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. MURPHY of New York. Mr. Speaker, today I am introducing a resolution requiring the U.S. Postal Service to issue a special commemorative stamp in honor of St. Elizabeth Ann Seton, the first native-born American to be canonized and proclaimed a saint by Pope Paul VI.

On September 14, 1975, Elizabeth Seton was canonized in St. Peter's Basilica, Rome, a great religious and historic occasion in which every American can take pride. In honor of the canonization, Congress overwhelmingly passed a joint resolution declaring September 14, 1975, as "National St. Elizabeth Seton Day."

It is appropriate that we recognize this historic event of Mother Seton's canonzation by issuing a postage stamp in her honor. I am happy to report that my friend and colleague, the Honorable Thomas Eagleton, today is introducing an identical resolution in the Senate to do this.

Born on Staten Island, N.Y., in 1774, Elizabeth Seton was married and widowed at a young age and by 1803, she settled with her five young children in Emmitsburg, Md., where she founded the Sisters of Charity of St. Joseph, the first religious order for women in the United Sisters of Charity of St. Joseph, the first American Catholic parish school. She was responsible for the establishment of many of the first orphanages in America as well as many badly needed hospital facilities. During her lifetime she was deeply involved in the problems of the poor and disadvantaged of all faiths. Her schools, hospitals, and welfare institutions were open to everyone in need, regardless of race, nationality, or creed. Her name will be remembered as the founder of over 20 community-based Sisters of Charity orders in America. Today, over 10,000 women trace the origins of their respective religious foundations to the Sisters of Charity of St. Joseph. The courage and spirit by which she

The courage and spirit by which she lived served as an inspiration to many in her lifetime. She was a symbol of hope for the future and this hope is still reflected in the lives and works of her followers. Elizabeth Seton has done much to strengthen the religious and moral fiber of this country and her contributions in religion and education place her among the most outstanding women in American history.

Let us once again pay our tribute to

the achievements of this remarkable woman.

EMERGENCY FOOD AND AGRICUL-TURE ACT OF 1977

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. NOLAN. Mr. Speaker, America's farmers are in deep economic trouble. Net farm income has dropped substantially over the last 3 years and declining market prices have resulted in an increased debt load for farmers during a period when they are being confronted by spiraling production costs. Anyone willing to take an honest look at the farmer's cost of production will realize that current target prices and loan rates. as well as those recently proposed by the Carter administration, are at spectacularly low levels.

In the Midwest, Plains States and the West, unprecedented drought and low farm prices have severely reduced farm income. As Minnesota Gov. Rudy Perpich has pointed out.

The truth is thousands of Minnesota and Upper Midwest farmers and ranchers are in serious trouble. The truth is if we do not provide some meaningful help and credit, thousands of these farmers will be declaring financial bankruptcy in 1977.

In recent testimony before the House Agriculture Committee, farmers and ranchers have confirmed the Governor's dire assessment.

The situation is reminiscent of the 1929-33 Depression years when President Herbert Hoover insisted on conducting Government as usual while the crisis mounted. Just a farm depression preceded the economic collapse of the 1930's, a similar prospect appears to be in the making today.

Because of the drought and low farm prices, normal sources of credit have begun to dry up for hard-pressed farmers and rural businesses. Some farmers will not be able to get the operating loans to finance their spring planting. If economic conditions do not improve during the summer, the income flow in rural America could come to an abrupt halt

by harvest.

These are crisis times for agriculture. The Carter administration nevertheless has told farmers that they will be the shock absorbers for an inflationary economy. Farmers find that they are expected to toe the line while other sectors of the economy receive cost-of-living wage and price hikes. Without an increase in price supports, farmers will have no way to pay for their rapidly rising input costs. The Carter administration's farm proposal may very well bankrupt rural America.

During the 1976 campaign, Mr. Carter promised America's farmers that he would raise support levels to meet cost of production. President Carter has yet to fill that pledge.

If the administration does not assure farmers simple justice by raising price supports to equitable levels, and if current market conditions and the drought continue, then I believe rural America will be on the verge of an economic collapse. Worsening economic conditions and an unresponsive Carter administration may cost the Democrats 60 to 70 seats in rural districts in the 1978 elec-

It is time for President Carter to shake loose from his Hoover-like lethargy and to pursue a better farm policy with the vigor of Franklin D. Roosevelt.

Congress must wake up as well. The agriculture committees of the House and Senate are now drafting a new farm bill which will not become effective until the 1978 crop year. Our farmers cannot wait that long. They need a price for their 1977 crops.

Neither agricultural producers nor consumers can afford another year of depressed farm income because it may spawn an economic depression.

Current farm prices illustrate the problem. The overall parity average on February 15 of this year was 69 percent. Wheat prices were at 49 percent of parity; rice at 50 percent, corn at 68 percent, grain sorghum at 62 percent, and milk at 72 percent. Only soybeans and cotton at 93 percent and 78 percent, respectively, were doing any better.

The bill which I am introducing today. the Emergency Food and Agriculture Act of 1977, will provide economically strapped farmers with some hope of a reasonable price for this year's produc-

This bill establishes the target price for wheat, feed grains and cotton at 100 percent of parity. The loan rate is calculated at 90 percent of the established price. The bill also provides that soybeans and dry edible beans be included in the price support, prevented planting and disaster payment provisions.

Under the provisions of this emergency bill the 1977 loan rates would be: wheat, \$4.48 per bushel; corn, \$3.08 per bushel; soybeans, \$6.79 per bushel; cotton, 74.56 cents per pound; rice, \$12.24 per hundredweight; and dry edible beans, \$23.76 per hundredweight.

Critics of higher prices for agriculture will oppose parity prices and 90-percent loans on the grounds that such levels of support will price U.S. commodities out of the export market. This criticism overlooks an obvious question. Are we going to further impoverish domestic agriculture in order to maintain an uncertain export market?

The current domestic support level for U.S. wheat is lower than that of all other major wheat exporting countries-and still the export market for our wheat has not materialized. Clearly, there are other factors to consider than price alone. At whatever level the United States supports its export commodities, other countries always have the option of subsidizing their exports in order to gain a competitive edge.

Instead of trying to dominate world

markets by seeking short-term price advantages which gouge American farmers and lead to economic instability injurious to consumers, and which disrupt normal patterns of trade as well, the United States should work for a more integrated trade policy, for international commodity agreements, and for supply and price stability in agricultural commodities.

I would like to stress the fact that the support price levels in my emergency bill are based on the parity price formula. Utilizing a percentage of parity to base support levels provides for a more realistic and accurate cost of production than the so-called cost-of-production formulas which are contained in other proposals before Congress. The reason for this greater accuracy is that the parity formula adjusts monthly and is more inclusive than any cost-of-production formulas presented thus far.

I remind you that the first cost of production study took the Department of Agriculture 2 years to complete, and more importantly, according to many producers is not an accurate reflection of their actual costs.

Other provisions in the emergency bill include raising the minimum price support of milk to 90 percent of parity, with mandatory quarterly adjustments; extending the Wool Act for 1977 and establishing the support price for wool and mohair at not less than 100 percent of

The disaster payment provisions have been amended to make producers eligible for payments for losses sustained on any amount of their production. Currently, producers must lose at least one-third of their crop before they are eligible. A loss of 15 percent, 20 percent, or 30 percent is devastating with today's high production

Also included in the bill are provisions which would restrict payments to \$30,-000 per farm, and even that amount appears to be an insufficient return as production costs continue to rise.

The bill I am introducing today does not address all of the problems that must be considered in a comprehensive and coordinated national food and farm policy. I hope that Congress will adopt such a policy this year in order to provide stability for farmers, consumers and our international customers.

The proposal which I have introduced is an emergency measure. It will buy time for both Congress and the producers. It will not solve our problems but it will help many producers continue operating for another year while Congress debates a new long-range farm bill.

Mr. Speaker, I cannot overemphasize the critical nature of the situation in rural America. Farmers, particularly young farmers, are being forced out of business. Main street economies are suffering because the farmers and ranchers who purchase the goods and help create jobs do not have an income to spend.

In conclusion, I would like to suggest that the time is long overdue for this country to reorder its spending priorities. The budget outlays for 1978 call for multi-billion-dollar appropriations for the military, and comparatively little for agricultural commodity programs.

While we spend billions for the construction and maintenance of weapons systems that never seem to be sufficient and which quickly become obsolete, we do not see fit to capitalize a decent commodity loan program which will not be a loss to the Government.

If we do not begin to provide more support for our productive resources instead of lavishly bankrolling military waste, we will further impoverish rural America and the Nation as a whole.

SPECIAL DISCHARGE REVIEW PROGRAM

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. HILLIS. Mr. Speaker, I am joining today with Congressman Hammer-SCHMIDT in cosponsoring a measure which would deny veterans' benefits to those veterans whose discharges will be upgraded solely on the basis of the administration's special discharge review program for Vietnam-era veterans which was implemented today. I understand President Carter's motives to bind the divisions which were caused by the Vietnam war. I also understand why President Carter may wish to help clear the record of Vietnam-era veterans in order to help them gain employment. However, I take strong objection to the giving of veterans' benefits to those veterans who were originally discharged from the military under less than honorable conditions.

It is a mockery to all of our veterans who served honorably, to give veterans with less than honorable discharges the full range of veterans' benefits. The administration's action of compassion does not seem to apply to the veteran who served his country in one of the most difficult times during our history. If we are to show compassion, why not place emphasis on those who came to the aid of the United States, instead of those who fled it?

I strongly urge all Members of Congress to closely review the administration's proposal to upgrade the discharges of Vietnam-era veterans, keeping in mind the thousands of Americans who never returned home alive, and the thousands more who were permanently scarred by combat. We all know that every major veterans' organization has denounced President Carter's earlier pardon of those who broke the Selective Service laws. It is my sincere hope that these organizations will say that enough is enough, and bring political pressure on Congress, in order that the bill introduced today by Congressman HAMMER-SCHMIDT be passed and sent to the President.

President Carter must understand that this time he has gone too far—that this time, the American people are going to say "No."

REMARKS BY MR. ROSS MILLER OF NORTHROP CORP. AT THE 31ST DISTRICT BUSINESS OPPORTU-NITIES CONFERENCE

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker it is my pleasure to place in the RECORD today the remarks given at the 31st Congressional District Business Opportunities Conference. I have cosponsored this conference with local chambers of commerce for the past 5 years.

Mr. Ross Miller, vice president for the communications and electronics group at Northrop Corp., told 750 small businessmen and women from my district and surrounding districts the best ways they can improve their markets with the Federal Government. Mr. Miller's background and experience with the Northrop Corp. enabled him to give new insight into the complicated process of selling to the Federal Government and defense contractors.

This conference which, according to Mr. Melvin B. Harris, Federal civilian agency coordinator for the U.S. Department of Commerce, is the largest of the 28 conferences held nationwide, is a valuable tool to both small business and the Government. Small businessmen and women save countless hours by cutting through bureaucratic redtape and the Government is able to get the quality products they need at the best possible prices

Mr. Miller understands the importance of this mutual exchange and how the defense industry, Northrop in particular, insists on commitments to price, schedule, and quality.

He also showed a film of the finished F-5 aircraft and the prototype of the F-18 aircraft being built by Northrop explaining that—

One of the difficulties of being a subcontractor or supplier is that you rarely have an opportunity to see the end product, to get a firsthand view of what has become of the parts and services you have provided.

Mr. Ross Miller most definitely contributed to the overall success of this conference and I am pleased to share his remarks with my colleagues in the Congress:

REMARKS BY MR. ROSS MILLER

Thank you, Congressman Wilson.

I commend you for your efforts to bring together in a meeting such as this the representatives of government, of large industry, the small business community and minority businesses. We have in this country remarkable opportunities and many formidable challenges. No one sector can handle them

It is not a question of the public sector or the private sector. It is the responsibility of both sectors, and everyone within them, working together. And that is what you have done here today in this conference.

I think you have done even more than that, however, in a way that is perhaps not readily apparent on the surface. But I think it is fundamental and I would like to discuss

it with you here today.

As representatives of small businesses you ladies and gentlemen bring to the process of government procurement, and especially defense procurement, a characteristic that often seems to be sorely lacking—that is the characteristic of private enterprise, competing through the exercise of independent management, imagination, initiative and the willingness to take prudent risks as business men and women to allow the quality and reliability of your goods and services to be measured in the marketplace.

That way of doing business is particularly American and it's the way that the American economy which, with all its flaws has produced more things for more people than any other economic system in history—it is the way in which that system was built and has

thrived.

We need more of it in the defense industry. We need more competition among private companies in defense procurement. The opportunities for creative, well managed companies are certainly available and those companies should be willing to take the proper business risks that go with those opportunities, and not leave the risks to the government and the taxpayers.

National security has come to be recognized everywhere—in this country and abroad—as an essential part of a country's well being and something that must be maintained into the foreseeable future.

Therefore, it must be planned for a long term basis, in concert with a country's long term objectives for social progress and economic stability. They are three equally essential elements to the long term goals of any country.

They cannot be achieved at the expense of one another. They must be in harmony with each other. An efficiently run defense program contributes to the social and economic objectives of a country. Only inefficiency detracts from these efforts.

There is considerable public discussion about the various weapons systems and force mixes that our own armed forces should employ within the constraints of the defense budget. But there is no great difference of opinion—about 5 percent from one extreme to the other—about the level of the overall defense budget.

In other words, there is a prevailing awareness among Republicans and Democrats, Hawks and Doves, of the long term need for defense, and there is an acknowledged consensus about the approximate size of the defense budget. This means that the overall defense budget is reasonably predictable.

As a result, an analysis of the defense industry as a whole today should show it to be one of the most stable sectors of our economy. Unfortunately, however, the significance of this fundamental change and the accompanying responsibilities to improve efficiency have been overlooked.

The bad procurement habits and the industry's tradition of crisis management have persisted. And they still exist today. They need not, and should not, be allowed to continue. What is needed now is for the defense industry to meet the responsibility that goes with that stability. In this environment, defense production can be made more efficient.

With this stability of the defense environ-

ment today, the defense industry must be held accountable. Individual companies must be held to their commitments. There is no longer any excuse for failing to invest in modern plant and equipment, just as any other industry does. With stability and predictable budgets, there is the opportunity for long range planning by both the users and the manufacturers—the kind of plan-ning that avoids overruns, schedule delays, and eliminates the kind of technical surprises that have become so costly and so common. That same free competitive environment that has worked so well to achieve the social and economic standards that we enjoy today can contribute to meeting our defense requirements. This requires strong leadership in government and in industry. It can, and must, be done.

And you can help us do that.

We in the defense industry appreciate the entrepreneurial nature of small business and the initiative that drives new businesses try-

ing to get started.

Most of the aerospace industry, these \$1 billion plus corporations, started that way. Most of them, in fact, still bear the names of their founders: Boeing, McDonnell Dou-glas, Lockheed, Grumman, Fairchild—and, of course, our own company-Northrop. When this company was founded by Jack Northrop in 1939 it had six employees. Jack was president and head of engineering and research. That certainly would have qualified us as a small business, if anyone at that time was paying any attention to the needs of small

We have been successful. Last year our sales passed the \$1 billion mark. We have a business backlog of \$2½ billion and there are more than 24,000 men and women now working for Northrop, most of them in Southern

California.

We could not have succeeded, however, without the help and the individual efforts and achievements of our subcontractors and suppliers all over the country. Among them are 8,000 small and minority businesses, such as yours.

A great majority of those are here in the Southern California area and, in fact, our sales provide over 65,000 jobs in the Southern California area alone.

Our commitment to small businesses and minority businesses is very real. Shortly after the first of the year, we began cutting metal on the first major piece of flying hardware for the Navy's new F-18 strike fighter, which we are building together with McDonnell Douglas. The first metal cutting on any new fighter project is a major event for any aircraft company.

That first piece of hardware, a center fuselage bulkhead, was cut by a small business contractor, the Purkey Company, Inc., of North Hollywood.

The Purkey Company is just one of thousands of subcontractors that will be working on this large scale program that will be in production here perhaps into the next century.

Our people that you will be talking to here today are able to provide some technical assistance or management guidance to help you to understand the needs of the defense industry to become a supplier to Northrop or any other defense contractor in the country.

They will also insist on commitments to price, schedule and quality.

Northrop's business has been built on meeting our commitments and we feel that that is an essential element for our subcontractors as well. That is one of the basic strengths that the private sector, large companies as well as small, can bring to defense

procurement—the discipline gained by competition in the marketplace.

I would like to give you an example of how it can work. About 20 years ago we thought that we could bring a better idea to our customers, and particularly our customers for tactical aircraft. We thought we could use technology in a different way, to simplify, to give better performance, with the lower cost and higher reliability.

We invested our own funds in this idea, did our own research, our own engineering, long before there was even a published requirement or set of specifications laid down for an aircraft like the one we envisioned.

That was in the mid-1950's. In December last year at our Aircraft Division in Hawthorne, just a few minutes from here, we delivered the 3000th aircraft in that series, known as the F-5 fighter and T-38 super-sonic trainers. Congressman Wilson was there, and perhaps some of you, our suppliers, were there, too.

That aircraft, the F-5, that began before there was ever a widely perceived need for it, is now in service or on order for 25 countries. It is providing far better performance than the aircraft it replaced, it is setting reliability standards beyond those demanded by the U.S. Air Force, and even today, with improvements in avionics and weaponry, that increase its performance even more, it is one-half to one-third the price of any other contemporary U.S. fighter.
Equally important, every aircraft in that

series of 3000 airplanes built by Northrup and our team of 4000 F-5 suppliers in 45 states was delivered on time, within the contract price, and met or exceeded all per-

formance guarantees.

The Navy's new F-18, which I mentioned a moment ago, was designed the same way.

We worked for nearly eight years and invested our own funds to do the analysis, the engineering, wind tunnel testing, that allowed the Navy to select the F-18 with confidence, and program it to replace two different types of aircraft now in service.

The F-18 will have greater performance than both those two aircraft and greater

reliability than either of them.

We are proud of those airplanes, and those of you who are working with us on them can be proud, too.

Thank you very much.

ELIMINATION OF THE SICK PAY EXCLUSION CHANGES MADE BY THE TAX REFORM ACT OF 1976

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. APPLEGATE. Mr. Speaker, yesterday the House passed legislation which I feel was one of the most equitable measures before the Congress this year. The legislation dealt with the sick pay exclusion, which was drastically modified by the Tax Reform Act of 1976. As we all know, due to the retroactive nature of the modification, hundreds of thousands of taxpayers are left unprepared for higher tax bills. If the Senate acts expeditiously, this tax burden will be removed from the shoulders of many of these taxpayers.

However, I feel we need to go farther than the scope of yesterday's legislation. In this respect, I have introduced a bill to repeal the changes for sick pay exclusion made by the Tax Reform Act of 1976 and revert to the prior law.

The need for the reversion should be apparent to all. When one is disabled by sickness or injury, he needs all the assistance he can get. The sick pay exclusion is designed to achieve this effect. Furthermore, during a time when we are considering additional tax breaks and benefits, I find it totally inconsistent to limit the application of the sick pay exclusion in the manner of the Tax Reform Act of 1976.

I encourage my colleagues to review and reconsider the changes, keeping in mind the reliance placed upon the sick pay exclusion provisions by many taxpayers. With this in mind, I hope we can work toward genuine tax relief for those in need.

> OUR CONSTITUENTS ARE WATCHING US

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. CARNEY. Mr. Speaker, recently I received some "feedback" from my constituents in the form of a letter from Mrs. Donna D. Cooper of Youngstown, Ohio.

Mrs. Cooper wrote following her visit to the House of Representatives on February 21, 1977. During the session, she saw something that offended her deeply. I think she has a good point.

I am inserting her letter in the RECORD at this time for the information and consideration of my colleagues. The letter

> Youngstown, Ohio, March 25, 1977.

Representative CHARLES J. CARNEY,

Longworth Building, Washington, D.C.

follows:

DEAR MR. CARNEY: My husband and I received passes to the House Gallery on Feb. 21, from your secretary. We were pleased by the warm welcome we received in your office.

As we listened to the reading of Washton's Farewell Address, we were careful to be respectful and follow all the rules written on our passes. But I was quite offended by the sight of two Representatives with their feet up on their chairs in front of them! And this in full view of a very disapproving public gallery. There was a troop of Boy Scouts there also.

I tried to find out who they were so I could write to them personally. All I could discover is that they were Democrats. So I complain to you. This may seem of little importance relation to all our country's problems,

and I hesitated to write.

But I thought again that I would write and register my displeasure of such an un-dignified posture in my House of Representatives. It certainly gives the impression that Congressmen do not give a damn what the real people of this country feel or think.

Sincerely but indignantly,

Mrs. DONNA D. COOPER.

HANOI HAS FOOLED US AGAIN ON PARIS REUNION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. DERWINSKI. Mr. Speaker, John P. Roche, who is a distinguished scholar. former Kennedy administration officer. in addition to being a highly respected columnist, devotes his column of April 1, appearing in the Washington Star, to the subject of the negotiations with the Communist government in Hanoi.

This article is an especially penetrating critique on this phase of the Carter administration's foreign policy. I direct the attention of the Members to the article which follows:

HANOI HAS FOOLED US AGAIN ON PARIS REUNION

(By John P. Roche)

The Carter claque is busy denouncing "hardened cynics" who lack adequate spiritual insight to appreciate their leader. The seems, has been born again, and issues which could not be solved by sinful Machiavellians can now be mastered by Good Will.

I'll admit that the cult of sincerity unnerves me a bit, and for some 40 years at poker I have always cut the deck; but one does not have to be a "hardened cynic" to reject the notion that all conflicts are soluble in sincerity. All that is required is a reasonable knowledge of history.

As a case in point, let us examine the

missionary expedition to Hanoi by Leonard

Woodcock and others.

Now Woodcock is an able man with a long background of labor negotiations. He did not make it to the top of the United Auto Workers by blissfully assuming that Ford, General Motors and Chrysler were dedicated to the Sermon on the Mount.

If an industry negotiator had said to him, "Len, you know our dedication to Good Faith." President Woodcock would have collapsed in laughter. Over the years the UAW has made book on the industry-they

know its track record.

However, the behavior of the Woodcock mission to Hanoi resembled a visitation by the Salvation Army to the Mafia. Somebody oohed and ashed at how nice the children were, the implication in general was that Pham Van Dong & Co. were most generous and forgiving even to admit the group, and as a good-will offering a new installment of caskets was produced.

Woodcock came back beaming, met a beaming President, and a communique announced that we would shortly meet the Vietnamese in Paris to work out "normal-

ization" of relations.

All hands rejoiced at the atmosphere of Good Faith: Hanoi's Communists had been

born again.

Woodcock ever had sponsored a farce like this in his trade union role, he would have been out on his duff in 10 seconds flat. Of course, he did have a bit of a problemthe President had pretty clearly indicated before the delegation's departure what it should recommend.

But even then Woodcock didn't have to

lay it on with a shovel.

To put it differently, I have no objection to the normalization of state-to-state relations with Cuba, Vietnam, Uganda or the Chinese People's Republic. However, I see

no reason to kiss their feet to obtain this dubious honor.

Specifically, the Hanoi regime is run by as brilliant a crew of cynical, ideological thugs as the modern world has seen.

In 1961 Pham Van Dong told the late Bernard Fall that the Americans were going to be defeated in Indochina because the American people would not stand for a long twilight war, that in fact the war would be lost in the United States. Hanoi launched a spectacular political warfare offensive featuring a dummy outfit called the National Liberation Front, later transformed into the dummy government-in-exile of dummy country, a separate Communist South Vietnam.

Speaking as a clinician, I am prepared to say the operation was superbly mounted, worthy of the great German Communist agitprop artist of the 1930s, Willi Munzenberg. Pham never got mad at the United States; a worldly sophisticate as was Chou En-lai, Pham looked on the exercise as a chess game.

Indeed, once he genially told one of President Johnson's peripatetic peace emissaries that if the Americans departed, the Communists would strew their path with roses and let them choose the music for retreat.

Hanoi's employment of negotiations as a weapons system was equally professional.

have triumphantly announced As they from the housetops, the Paris "peace" agreement of 1973 was considered a ruse. It provided time for them to reload for the final assault-and for the Americans to psychologically disengage.

By the way, this was hardly novel. They used the 1962 Geneva accord on Laos in

the same fashion.

These are the characters who are now going to be understanding enough to let negotiate with them in good faith! And in Paris, of all places.

Maybe Amy Carter, or whoever is running our foreign policy this month, has no sense of symbolism, but accepting negotiations in Paris with Pham and his merry men is comparable historically to inviting Japanese Prime Minister Fukuda to a conciliatory session aboard the battleship Missouri.

Paris is where Hanoi cleaned us out! Pham and his "hardened cynics" must be chuckling tonight-I want to weep.

CONGRESSIONAL RECORD REFORM

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. STEIGER. Mr. Speaker. I am today reintroducing my legislation to make the Congressional Record an accurate reflection of what takes place on the floor of the House of Representatives. The addition of today's cosponsors brings the number of Members actively supporting the measure to 145, exactly a third of the House.

I am especially pleased that there has been such broad-based support for my resolution-70 Democrats and 75 Republicans have joined as cosponsors. All eight members of the Minnesota delegation are cosponsors.

The resolution specifically requires that a distinguishable symbol, such as bullets, brackets, or stars, precede and succeed any statement not actually delivered on the House floor. Senator Bos PACKWOOD has identical legislation in his body.

Insertion of extraneous materials and any unspoken remarks, into the body of the RECORD without distinguishing them as such is a deliberate distortion of our proceedings. With an estimated 70 percent of what appears in the RECORD daily simply inserted into it, it is little wonder the public is skeptical of Congress.

With the advent of broadcast sessions. there is a compelling need to make the CONGRESSIONAL RECORD reflect our proceedings accurately. When our constituents can see what was truly said in the course of debate, they will know the statement they see in the RECORD was merely placed there and had no role in

The increasing cost of the RECORD and its importance as a source in establishing legislative history are two more reasons why we should undertake this reform of the RECORD and bring it back to its legal definition as "a substantially verbatim report of proceedings." I hope more of my colleagues will join in supporting this proposal.

"CHRISTOPHER COLUMBUS MARCH" BY PROF. CHARLES T. GABRIELE

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

SPELLMAN. Mr. Mrs. Speaker, Charles T. Gabriele, a resident of my district, a noted composer, and a professor of business management at the University of Maryland, has received many honors for his musical composition, "Christopher Columbus March."

Professor Gabriele composed march as a tribute to the Italian explorer who discovered America. It was premiered on July 3, 1976, in the national "Happy Birthday U.S.A." Bicentennial Parade and was named the official Columbus Day march by both the U.S. Bicentennial Commission and the Italian Cultural Society of Washington.

At my request, Secretary of the Navy William Middendorf included the march in the official Bicentennial celebration of Columbus Day. I was privileged to attend the celebration that day at Christopher Columbus Circle here in Washington when Secretary Middendorf conducted the Navy Marching Band in a stirring rendition of Professor Gabriele's composition.

On January 14, 1977, "Christopher Columbus March" was played as the nuclear submarine U.S.S. Baltimore was christened.

Professor Gabriele has enjoyed many ovations and awards, including a bronze plaque from the Paca Italian American Club, a beautiful engraved silver dish from Secretary Middendorf, and a personal message from President Ford. The house of delegates of the State of Maryland, Prince Georges County, and the city of Bowie also joined in with expressions of recognition and commendation. I am sure my colleagues in the Congress join me in extending congratulations to Professor Gabriele on his musical and patriotic achievement.

RESTORATION OF CIVIL SERVICE RETIREMENT ANNUITIES FOR CERTAIN WIDOWS AND WIDOW-

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. LEHMAN. Mr. Speaker, on January 6 I introduced H.R. 486, which will reinstate civil service retirement survivor annuities for certain widows and widowers whose remarriages occurred before July 18, 1966.

Prior to the enactment of Public Law 89-504, approved July 18, 1966, the annuity of a surviving spouse automatically terminated upon remarriage regardless of the spouse's age at the time of remarriage. Public Law 89-504, as amended by Public Law 91-93-October 20, 1969modified the survivor annuity provisions to permit continued payments of annuities to survivors who remarried after attaining age 60 before July 18, 1966. This law also provided that in the event of a remarriage by a surviving spouse prior to reaching age 60, the annuity would terminate, but would be restored upon dissolution of the remarriage. Again, this applied only to those persons who had remarried before the law's enactment

It is unfair that the widows or widowers affected by this bill, approximately 3,500, should be denied the payment of annuities because of the effective date of Public Law 91-93. The number of beneficiaries is continually decreasing, inasmuch as most of these widows and widowers are quite elderly. In addition, because of their advanced age, they find it extremely difficult to obtain gainful employment to offset the loss of income as a result of the termination of an annuity. The new spouse of a surviving annuitant over 60 will very likely be retired or approaching retirement with reduced income. He or she would be equally unable to provide for a new dependent.

Time is of the essence as death claims more and more individuals who would benefit from the enactment of this legislation. We must adopt this bill before it is too late to help the still surviving widows and widowers who cannot receive their annuities because of an arbitrary date.

The text of my bill is as follows: H.R. 486

A bill to provide for the reinstatement of civil service retirement survivor annuities for certain widows and widowers whose remarriages occurred before July 18, 1966. and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That (a) upon application to the Civil Service Commission, the annuity of-

(1) a surviving spouse of an employee which was terminated under the provisions of section 8341 (b) or (d) of title 5, United States Code, or of any prior applicable law, because of the remarriage of such spouse before July 18, 1966, and

(2) a surviving spouse of a Member who died before January 8, 1971, which was ter-minated under any such provision, because of the remarriage of such spouse.

shall be restored in accordance with the provisions of subsection (b) of this section.

(b) (1) In the case of a remarriage occurring after the surviving spouse became sixty years of age, the annuity shall be restored to such spouse under subsection (a) of this section only if any lump sum paid on termination of the annuity is returned to the Civil Service Retirement and Disability Fund. If such amount is paid, the annuity shall be so restored commencing on the effective date of this section at the rate which would have been in effect if the annuity had not been terminated.

(2) In the case of a remarriage occurring before the surviving spouse became sixty years of age, the annuity shall be restored to such spouse under subsection (a) of this section only if-

(A) such spouse elects to receive this annuity instead of a survivor benefit to which the spouse may be entitled under subchapter III of chapter 83 of such title 5 or under another retirement system for Government employees by reason of the marriage; and

(B) any lump sum paid on termination of the annuity is returned to such fund. If the requirements of the preceding sentence are satisfied, such annuity shall be so restored commencing on the effective date of

this section or on the first day of the month following the date the remarriage is dissolved by death, annulment, or divorce, whichever date is later, at the rate which was in effect when the annuity was terminated.

SEC. 2. Section 8341(g) of title 5, United States Code, is amended by striking out "after July 18, 1966,".

Sec. 3. The foregoing provisions of this Act shall take effect on-

(1) the first day of the month following the date of the enactment of this Act, or (2) October 1, 1977,

whichever date is later.

WOMEN IN DEVELOPMENT

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. WINN. Mr. Speaker, we in Congress have long recognized the importance to U.S. foreign assistance as a conduit for the export of fundamental American values. By aiding other nations to develop, we intend to encourage them toward a greater acceptance of democwider distribution of and racv a resources.

Our American perception of the desirable does not always mesh with the most immediate needs of recipient nations which may have very different cultural backgrounds from ours. At times our eagerness to help other countries blinds us to the traditional patterns that exist

in developing societies. We do not see that our aid may at times disrupt and inhibit the good aspects of a developing nation's cultural structure as well as its more negative factors.

We have not fully understood, for example, how our aid programs have affected women in developing societies. In Africa, where 60 to 80 percent of the field work in agriculture is performed by women, our agricultural assistance programs have focused almost entirely on men. We have been indifferent to the social fabric of that continent in failing to recognize that it is often the women who sustain the family. By mehcanizing field labor and training only men in the uses of machinery, we not only deprive women of work but, in some cases, we may deprive their families of food.

Naturally, I am not advocating the export of American feminism. However, I am concerned that our assistance programs do not take into full consideration the vital economic and social role that women very frequently play in developing countries. I would like to see a fuller integration of women into U.S. foreign assistance projects.

For that reason, I have contacted MICHAEL HARRINGTON, chairman of the Subcommittee on International Development, of which I am ranking minority member, of the Committee on Internation Relations regarding the possible need for hearings on women in development.

PHILADELPHIA'S BUDGET FOR FIS-CAL YEAR 1977-78: NO DEFICIT, NO TAX INCREASE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. EILBERG. Mr. Speaker, this is a time when all Americans are concerned about the economic viability of local units of government, and particularly so about the fiscal plight of the Nation's major cities. So it is welcome news when any city, large or small, can come up with a balanced budget-and that is precisely the kind of news that Mayor Frank L. Rizzo has given to the people of Phila-

In his annual message to the city council, the mayor has presented a budget for fiscal year 1977-78 that not only will contain no deficit, but which Mayor Rizzo has assured Philadelphians can be accomplished without any request for a tax increase.

Because of the continuing concern about the affairs of our cities, Mr. Speaker, I am pleased to place in the RECORD the full text of Mayor Rizzo's budget message:

MAYOR RIZZO'S BUDGET MESSAGE

Mr. President, Members of City Council. I am pleased to present to you today the Operating Budget of the City of Philadelphia for the next fiscal year.

I am especially pleased to offer this good

news: the budget is balanced, in fact and

figures.

There will be no deficit in 1978, and, more importantly, there is no request for a tax increase. I am especially happy to bring you this message because some of our critics said it could not be done.

These are the prophets of doom who make their way through life with a dark cloud over their heads, predicting dire consequences for Philadelphia and its citizens.

These are the second-guessers, the Monday-morning-quarterbacks, who accent the negative and continually draw false comparisons between us and New York City.

Perhaps we have put them to rest for another year. Despair is the order of the day in many of our major urban areas, but Philadelphia's message today is one of hope.

First, I want to point out that at the end of the current fiscal year on June 30, we will have a deficit of \$26.4 million.

I assure you that although \$26.4 million is a substantial sum of money, we have addressed this problem in the '77-'78 budget.

I am happy to report that the 1977-78 total General Fund Operating Budget will be \$932,547,000. Estimated revenues are \$959,-000,000. You will note that the difference between these figures is the approximate amount of the current deficit.

The amount of the '78 overall Operating Budget containing all funds is \$1,338,700,000 with estimated revenues of \$1,359,400,000.

Generally, this proposed budget will continue program and staffing levels at those in effect at the end of January, 1977.

effect at the end of January, 1977.

Monies also are provided to fund non-uniformed personnel contracts calling for a 7-percent increase this July 1, as well as a cost of living adjustment.

This budget will also provide for the hiring of 250 policemen to positions which were previously authorized but unfunded. I am confident that adjustments will be made to accomplish this need.

I say this because of the recent fine record of the Philadelphia Police Department which shows that violent crimes decreased by 19.7 percent in our city last year. This was the largest decrease in the nation.

In addition, our Police Department in 1976 had a clearance-by-arrest rate of 31 percent—the highest in the nation.

And our Fire Department continues to lead the nation in fire prevention. I am proud of both of our uniformed services for the protection they give to all the citizens of Philadelphia.

This proposed budget contains provisions to make Philadelphia's Pension Fund—already one of the soundest in the nation—financially stronger. In short, we will recognize today's liabilities today. We will not pass them on to future generations.

This proposed budget provides an increase of \$11.6 million over last year for day care facilities, foster home care and child care in local agencies and state sponsored institutions. This represents an increase of 30 percent over 1977.

Beginning this July, there also will be an additional \$2.5 million over normal 1977 funding for street repairs.

The full cost of services to youth has been provided in fiscal 1978, despite the fact that federal funds previously available for the program have been discontinued.

Full funding has been provided for the initiation of family medical care services at three District Health Centers in South Philadelphia and West Philadelphia. This program will ensure the availability of necessary public services previously provided at

PGH.

Health care facilities for prisoners will be expanded from an infirmary operation to a comprehensive program providing treatment of addictive diseases, as well as regular medical care.

The City of Philadelphia Nursing Home,

formerly Landis Hospital, will become operative in fiscal 1978. This facility will meet a critical community need by providing more than 500 beds for skilled nursing home care.

This new budget also calls for increased enrollment equivalent to 250 full-time students at Community College.

In addition, some \$500,000 has been added to the Library appropriation. This will permit the purchase of about 66,000 new books.

Although this is a basic budget, it is not without innovation. One of the unique programs I will submit to Council for your approval will be aimed at reducing our need to make short-term loans.

Under this program, property owners would be able to pay their taxes a year in advance as a loan. We would then pay tax-free interest to these participants.

Although the interest rate has not yet been determined, such a pre-payment of taxes would allow a property owner in the 30 percent tax bracket to receive interest equal to the amount he would get from a taxable investment paying 8½ percent interest.

The principal priority of this administration is to ensure jobs for all who seek work, Jobs are the life-blood of our economy.

While it is no secret that we have been losing jobs in Philadelphia, I would like to explain a little-known fact about this prob-

Since 1969, we have suffered the loss of 30,000 federal jobs in our city. These losses have triggered the phasing-out of an additional 66,000 jobs in industries related to the federal installations. Thus, 82 percent of our total job losses since 1969 are linked to federal labor cutbacks in our city.

Meanwhile, we are continuing to work diligently with the Carter Administration to create new job opportunities here.

The 1978 Capital Budget alone will generate some 5,000 jobs in the construction field, and 1,300 jobs in the design field.

Our Planning Commission technicians estimate that these will generate an additional 16,000 jobs.

Some of these proposed projects are Passyunk Avenue Bridge, our housing program, Gas Works improvements, commuter-operating facilities, the Northeast and Southwest Sewage Treatment Plants, reconstruction of old sewers, and the Commuter Connection.

Permit me once again to set the record straight on the Commuter Connection.

We have signed a contract with the Federal Government to implement the tunnel

Despite what some critics say, these federal monies are budgeted for the tunnel. If the opponents of the tunnel report otherwise, they are misleading the public, either through design or ignorance.

The Commuter-Connection project will stimulate our economy and provide critically-needed employment for our citizens.

We have haggled enough over this issue: it's about time we put the first shovel into the ground.

In conclusion, let me thank the people of our city who were extremely cooperative during the recent gas crisis. Without their indulgence, we could not have weathered the emergency.

I would also like to thank Council President Schwartz and all the members of City Council for their sympathetic response to the needs of our citizens.

I would like to commend the members of my Administration and all City employees, in general, for their dedication, devotion and service to Philadelphia.

Together, we shall make Philadelphia a better place for all our people.

Thank you.

THE REAL ESTATE TAX BURDEN ON THE ELDERLY

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. PEPPER. Mr. Speaker, the problems of the elderly in America are vast and so many times unrecognized by the people who are dedicated to helping them.

The 75 percent of our elderly who own their own homes, are generally a forgotten people. Because they have their own homes in which to live, too many of us think their problems are minimal. The facts are quite to the contrary.

Those who are on fixed incomes, and those persons are the majority, are bearing the heaviest burden of the inflation which is an economic hardship on all of

Even though there have been modest increases in social security benefits, the costs of maintaining a home have soared many times more.

Fuel costs have increased by 25 percent. Utility costs have likewise increased, but the heaviest burden these elderly homeowners must bear is skyrocketing real estate taxes.

Mr. Speaker, I would like to commend to my colleagues the reading of Bill Gold's "The District Line", which appeared in the Washington Post on March 28. Mr. Gold cites a poignant case of a married couple in their seventies, on a fixed income, who are having difficulty paying the real estate taxes on their home because its value jumped from the family's \$12,000 purchasing price to today's inflated value of \$80,000:

THE DISTRICT LINE (By Bill Gold)

REAL ESTATE TAX BURDEN HITS ELDERLY

Last week, a letter from a Washington woman started some wheels turning in my head. The wheels have been turning ever since, but without result.

"With governmental changes bringing floods of new people into Washington to look for housing at frequent intervals," she wrote, "the real estate market here is horribly inflated and gets steadily worse. Our assessment has just been increased 38 per cent.

"The burden of these ghastly increases falls hardest on people who are old and are living on fixed incomes. Usually on small fixed incomes. People like us. We just barely get by when the status quo is maintained. When one of our fixed costs goes up, we are in trouble.

"Our real estate taxes in D.C. are based on what other houses have sold for recently, not on what we paid, or could afford to pay. We are being taxed on the basis of somebody else's income, somebody else's lifestyle, somebody else's ability to pay.

"When we bought our house, we paid \$12,000 for it. We will now be taxed on an \$80,000 valuation.

"We will have to pay a tax based upon the assumption that we can afford to live in an \$80,000 house, or could afford to go out and buy an \$80,000 house in today's market. The truth is that we are 70 years old, no longer

employed or capable of earning a living, and forced to live on a very small income.

"When our taxes are increased, we have no choice except to reduce or eliminate some other expenditure, whether it is for food, clothing, heat or something else.

"When our tax assessment goes up, we must also pay more for our homeowner's insurance. They won't sell us homeowner's insurance unless we insure for the assessed value.

"I was told by the D.C. government that if we were 20 years old and had an income of less than \$7,000, we could get tax relief, but they can't do anything for people who are 70 years old but have an income of \$7,200 a year. There is something very wrong in this situation '

When the wheels first began to turn, I told myself that the situation was probably not quite as bad as my correspondent had painted it. After all, her Social Security checks had risen as her taxes had risen, hadn't they?

It didn't take me long to realize that this was a specious argument. Inflated food costs eat up Social Security increases. There is usually precious little left to take care of life's necessities. It's just not in the cards for a 6 per cent rise in Social Security payments to cover a 38 per cent rise in "rent" paid in the form of real estate taxes.

So the wheels turned a little more, and I said to myself: "If her house is really worth \$80,000, she can sell it, invest the \$80,000 in something safe, and move into an apartment.'

But again the wheels stopped abruptly. I realized that if she sells the house she'll have to pay a commission of about \$5,000. If she doesn't buy another house, she'll have to pay a huge income tax. She'll have to uproot herself and move to a new neighborhood, which will probably make it necessary to find a new doctor, new pharmacist, new church, new friends, new everything. She'll have to get rid of some of her furniture and part of her lifetime collection of possessions because they won't fit into an apartment.

What 70-year-old person would view such an upheaval with enthusiasm? Why can't elderly people be permitted to live out their lives in peace? Why can't an affluent society shield them against the impact of economic forces with which they can't cope?

I am glad to note from a story in yesterday's Metro section that public officials are aware of the need for answers to these questions. But they are nowhere near a consensus on how much the tax burden on the elderly should be eased, the formulas under which this might be achieved, or how to replace the tax revenue that would be lost by giving the elderly some relief on their real estate taxes. We have a long way to go on a problem that should have been solved yesterday.

ANNUAL FINANCIAL REPORT ON TAXES PAID OF FORMER CON-GRESSMAN PETER PEYSER

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. FISH. Mr. Speaker, at the request of our former colleague and friend from New York, Mr. Peter Peyser, I am enclosing a statement on his 1976 taxes.

As in the past for the years I served in the Congress, I filed my total earnings which in 1976 totaled \$53,874, approximately \$7,000 less than in 1975.

Due to a substantial unreimbursed loss by theft, my taxes were reduced. However, I did pay Federal, State, and local taxes totalling \$16,260 in 1976. The bulk of my earnings over my congressional pay, comes from my life insurance renewals on the business I sold prior to my becoming a Member of Congress.

ONE HUNDRED AND TWELVE GRAD-UATE FIREFIGHTER TRAINING PROGRAM IN PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. EILBERG. Mr. Speaker, I am proud of the fact that 112 new firefighters are being graduated by the Philadelphia Fire Department and are scheduled to take up their public service duties in fire stations throughout the city of Philadelphia.

I am particularly proud of the fact that, when Fire Commissioner Joseph R. Rizzo presents diplomas to this fine graduating class, 39 of the recipients will be men from northeast Philadelphia. which I am privileged to serve in the **U.S.** Congress

Also participating in the ceremonywhich marks the completion of training in the 148th fire class to be held in the city-will be Deputy Fire Commissioners Harry T. Kite and Joseph B. Mc-Kenna

Mr. Speaker, because these men have dedicated themselves to serving the people of Philadelphia in an important area of public safety, I am honored to place on the RECORD the names of the 112 new firefighters:

LIST OF FIREFIGHTER GRADUATES

Thirty-nine from Northeast Philadelphia, including James F. Antonio, 10032 Ferndale; James H. Bonner, 528 Benner; Edward T. Brennan, 8739 Marsden; Charles D. Buzine, 8524 Torresdale; Philip A. Cameron, III, 2921 Glenview; John J. Comitale, Jr., 4743 Meridian; Charles J. Crowther, 2931 Hale; Francis J. Cusack, 13451 Philmont; Peter Demtshuk, 4215 Benner; David M. Derr, 7715 Cottage; Michael C. Flanagan, 2146 Friendship; David K. Fleming, 9961 Lackland; Robert F. Fromhold, Jr., 8034 Leon; Francis J. Gallagher, Jr., 6339 Bingham, and John Grillone, 3855 Fairdale.

Also, John J. Haughney, 6126 Newtown; Paul D. Horton, 12752 Hollins; James E. Huckel, 6421 Edmund; Robert G. Johnston, 8210 Elberon Ave.; Kenneth Jordan, 4427 Unruh; John C. Keenan, 9263 Angus; Frederic W. Kozachyn, 7625 Leonard; Thomas G. Leonard, 6100 Bustleton; Allen R. Lyerla, 3517 Sheffield; Frank E. McGuigan, 4427 Aberdale Rd., John P. Melniczek, 1634 "B" Robbins; Robert L. Nathan, Jr., 11904 Millbrook; Gerald L. Peters, 5807 Charles; George M. Petrakis, 12122 Barbary; and Stanley J. Raszewski, 4362 Deerpath.

Other Northeast Philadelphians are Carl M. Schmied, 7918 Craig; Kenneth J. Schnitzer, 4716 Sheffield; David C. Scott, 6355 Marsden; Gary M. Simoes, 4755 Ashville; Robert J. Smith, 8030 Ditman St.; Robert W. Snyder, 11769 Dimarco; Dennis M. Vockeroth, 508 Bennard; Martin A. Walsh, 6020 Tabor; and Lawrence P. Wrenn, 6631 Walker.

Thirteen from Southwest Philadelphia, in-

cluding Howard R. Arnold, 5225 Cedar; Joseph W. Crisanti, 7345 Buist; Harvey N Davis, 5131 Hazel; Anthony O. Harris, 4945 Larchwood; Richard F. Harty, 7020 Saybrook; William E. Henderson, 5654 Beaumont; Harold R. Lacy, III, 1126 S. 60th; Francis G. Nolan, 2605 Daggett, Dennis M. O'Neill, 6633 Woodland; Joseph M. Ruggieri, 6111 Grays; Thomas B. Rush, 5543 Addison; Eric Tingle, 5836 Ellsworth; and David T. Witulski, 7321 Boreal.

Ten from Frankford-Kensington-Richmond, including Thomas J. Crouse, 2334 E. Firth; William F. Curran, 3169 Tulip; Stephen T. D'Angelo, 887 Marcella; Michael F. Dolbow, Jr., 3174 Memphis; William V. Emery, 2345 E. Somerset: John P. Fox. 2928 Cedar: Thomas Somerset; John P. Fox, 2928 Cedar; J. Helverson, 2133 Shallcross; Dennis S. Leibert, 4149 Markland; Michael P. McCusker, Bennington; and Charles M. West 3412 "E".

Ten from Mt. Airy-Oak Lane, including Michael W. Board, 810 E. Sharpnack; Henry Dolberry, 7858 Provident; Quentin Fuller, Jr., 129 E. Upsal; Gregory W. Holmes, 811 E. Upsal; Robert F. Jackson, 6719 N. Gratz; Ronald King, 7234 Pittville; Gerald V. Poole, 1428 67th; Lemuel H. Quinton, 6508 Gratz; William C. Smalls, 7817 Woolston, and Ronald J. Sprouls, 6411 N. Fairhill.

Nine from South Philadelphia including Calvert S. Briddell, 1132 S. 23rd; Anthony R. Drames, 2019 S. Dorrance; Michael A. Erace, 641 Mountain; John A. Giacchino, 1731 S. 16th; Joseph D. McCue, 354 Roseberry; Michael S. McGuire, 2014 S. 21st; Theodore J. McNulty, 2011 S. 24th; John J. Redmond, 359 Dufor; and Eugene R. Vecere, 2436 Ritner.

Eight from Germantown including Frederick R. Fields, Jr., 7207 Briar: John G. Firn, 844 E. Stafford: Donald C. Johnakin, 42 E. Pastorius: Alfred L. Milbourne, 6201 Crittenden; James H. Nero, Jr., 6317 Carnation; Harry M. Salmond, 259 E. Penn; Preston S. White, 7136 Limekiln; and Harry R. Woodards, Jr., 7243 N. 21st.
Seven from West Philadelphia including

Samuel M. Armstead, 5700 Race; William C. Edmonds, 438 N. Holly; John H. Pelzer, Jr., 300 N. Busti; William M. Scruggs, 3854 Cambridge; Wendell B. Miles, 4627 Spruce; Kevin Fann, 543 N. Wanamaker; and Hiawatha Williams, 4807 Walnut.

Six from North Philadelphia including Jerome C. Ball, 1605 W. Thompson; Fred J. Duncan, Jr., 1112 W. Wyoming; John E. Ling, 405 W. Wingohocking; Joseph J. Quinn, 4009 N. Reese; Robert Schell, 3220 W. Huntingdon and John Scott, 2554 N. 12th.

Five from Logan-Olney including James J. Kerrigan, 4921 "B"; William J. Knight, Jr., 5150 "D"; Edward A. Mahoney, Jr., 5239 Marwood; Berle J. Taylor, 6257 N. 15th, and Thomas E. Wiley, Jr., 1727 Rosyln.

Three from Overbrook including Robert C. Bianchi, 926 Marlyn; John T. Hawthorne, Jr., 1351 Pennington and Stanley T. Ratay, 1300 Kimberly.

Two from East Falls are Martin F. Corcoran, 3313 Cresson and Norman E. Harrell, 3211 N. Sprangler.

JEFF TECH

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. APPLEGATE. Mr. Speaker, I am proud to present an outstanding group of people who are true champions.

The 1976-77 Jeff Tech Basketball Team won the Ohio Technical College Athletic Association State Championship—OTCAA—this past season and had an overall record of 18-6. The team also had the best regular session record of all schools in the association.

In the past 3 years, Jeff Tech's record has been 18-0, 1974-75; 19-3, 1975-76; and 18-6, 1976-77. The team has lost only four games to tech schools in the past 3 years.

Their outstanding Coach, Dennis Vince, has been coaching basketball for the past 6 years at Jeff Tech. This year, Coach Vince was assisted by Greg Antinone, a former player at Jeff Tech.

This year's roster consisted of: John Paulowski, Paul Mayhew, Keith Murtland, Jeff Hilt, Craig Anderson, Terry Paboucek, Robert Beresford, Tom Zimmerman, Ken Green, and Don Kozdras.

These fine young men brought to their games the desire and strong will to win every game they played. This is the key ingredient to success in sports and in later life. Mr. Speaker, I am confident each of them will carry over the lessons they learned on the court to their career pursuits.

I offer my sincerest congratulations to them and their Coach, Dennis Vince on an outstanding season.

COAL OR URANIUM

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. TEAGUE. Mr. Speaker, I would like to bring to the attention of my colleagues an editorial from the Washington Post which outlines the necessity and the hazards involved in the development of both the fossil and the nuclear supply options for electrical power generation. It also points out the kinds of questions that must be asked as the President and the Congress construct an energy policy.

The issue of national energy policy which includes energy research and development and energy supply and demand, make it clear that there will be no simple solutions. Tradeoffs must be made and a balance must be struck among the many options open to us. America is blessed with plentiful, although not endless, energy resources, among them, coal and uranium. Certainly, these two will be the mainstay for energy production over the next 25 years, but here, too, there are choices and balances that must be made.

The editorial follows:

COAL OR URANIUM

To generate increased amounts of electricity, this country now has only two choices. It can either burn more coal or build more uranium-fueled nuclear reactors. Sometime in the next century other technologies will emerge-perhaps solar or geothermal generators. But for the next 30 years or so, this country must expect to depend on the sources that we already have. As Americans work their way toward a coherent national energy policy, it's necessary to weigh these two fuels, coal and uranium, against each other. What are the respective risks to health, safety and the natural environment-

Coal, on present evidence, is more dangerous than the present generation of nu-

clear reactors running on enriched uranium. Coal is also likely to be a bit more expensive than nuclear power in most parts of the country. The evidence is admirably summarized in the report published last week by a distinguished committee brought together by the Mitre Corporation with a grant from the Ford Foundation. The Mitre report argues that there is no reason for the United States to proceed in this century to build the plutonium breeder reactor. But uranium and the present commercial reactors are an altogether different story from plutonium and the breeder-and far less hazardous. Fuel policy is, above all, a weighing of hazards.

Coal smoke contains poisons that, inhaled over the years, can kill people. That truth is widely known, yet there seems to be a tento discount it because people have been living with it for a long time. How many lives would it cost to carry out a massive increase in coal-fired power generation? Estimates vary, just as estimates of nuclear dangers vary. But they do not vary so much that a comparison is impossible. The Mitre committee concludes that "new coal-fueled power plants meeting new source standards will probably exact a considerably higher cost in life and health than new nuclear plants."

Large increases in coal consumption throughout the country would also probably affect the weather. Burning coal (or anything else) produces carbon dioxide, and there are already indications that humanity is burning fossil fuel fast enough to tip the natural balances in the atmosphere. The impact on the climate cannot be predicted accuratelyand that's another reason for caution.

But certainly the list of imponderables also includes the chances of serious nuclear accidents. Mankind's experience with reactors has been very brief, and any calculation of danger has to be based on extrapolation rather than experience. Precisely because the uncertainties are very great, in coal as well as in nuclear generation, the Mitre committee wisely counsels using both. Nuclear energy will not be indispensable to this country for many decades, it argues. But a cautious and steady expansion of the reactor system would offer a valuable kind of insurance against unexpectedly severe consequences of greatly increased coal use.

There is one crucial point that the Mitre report does not directly address: How much electric power will the country need? Most of the power companies currently expect demand to rise about 5.5 per cent a year. That would mean more than trebling the country's generating capacity by the end of the century-requiring a truly awesome expansion of both coal and nuclear power. The conventional view is that any great reduction below that rate would jeopardize the nation's economic growth. But that's not necessarily true, if conservation is carried out with careful thought and preparation. The public issue is not just how to balance coal against nuclear power. First of all, it's deciding how much of either the country wants-with all of the risks and penalties that will inevitably accompany either. That's a question for President Carter and Congress, to be answered in the energy policy that they must hammer out this year.

IOWANS REJECT BIG GOVERNMENT

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. GRASSLEY. Mr. Speaker, the residents of the Third District of Iowa have sent a clear message to Congress. that the Federal Government should reduce its interference in their lives, and reduce its expenditures. That message comes through in the results of my latest public opinion poll. I would like to share those results with my colleagues and hope that they will consider the views of these wise Americans in casting votes this session.

RESULTS OF 1977 GRASSLEY QUESTIONNAIRE

(Answers in percent)

1. Do you support the "Public Service Jobs Bill," under which the Federal government would provide a taxpayer-financed job for anyone who can't find work in private business? Yes, 27; No. 73.

2. Should Federal tax dollars be used to finance Congressional campaigns? Yes, 15;

No. 85.

3. Do you believe rules and regulations of Federal departments and regulatory agencies should be submitted to Congress for review and/or revision before taking effect? Yes, 93; No. 7.

4. Should the United States reduce the number of its troops stationed overseas?

Yes, 37; No, 63.

5. Should tighter controls be placed upon

foreign trips by Congressmen? Yes, 96; No. 4. 6. Should the United States expand diplomatic and commercial relations with Cuba and Communist China? Yes, 59; No. 41.

7. Should food stamps be limited to people at or below the poverty level? (Currently \$5,500 for a non-farm family of four.) Yes, 90: No. 10.

CANAL ZONE AND PANAMA CANAL: STRATEGIC ANALYSIS BY HANSON W. BALDWIN

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. MURPHY of New York. Mr. Speaker, as one who has studied interoceanic canal policies and problems for many years, I have found the public response to forthright and objective discussions of this highly complicated subject most gratifying. Of special interest to Members of the Congres working in this field has been the high quality of certain writers now making their contributions toward bringing about a more realistic understanding of the questions involved.

Among such authors is Hanson W. Baldwin, a brilliant military historian, distinguished strategist, and former military elitor of the New York Times. whose extensive writings are in the libraries of the Nation and have won wide respect.

A recent contribution by him is a series of two articles in a New England newspaper. In the first, he stresses the Panama Canal as vital to U.S. interests in the strategic Caribbean-Gulf of Mexico, with full U.S. sovereignty over the Canal Zone and Canal as fundamental. In the second, after outlining some of the points in the current treaty negotitions and threats of violence, he makes this very pertinent point:

... if we refuse to defend highly important or vital interests merely to avoid the blackmail threat of violence, we are finished before the crisis erupts.

Mr. Speaker, to make the two informative articles by Mr. Baldwin readily available to the Congress and more widely known throughout the Nation, I quote them as parts of my remarks:

[From the Waterbury Sunday Republican, Feb. 6, 1977]

Panama Canal Vital to U.S. Interests

(By Hanson W. Baldwin)

Hanson W. Baldwin, a resident of Roxbury, is the retired military editor of The New York Times. He has prepared a two-part series for The Sunday Republican on the need for the United States to retain control of the Panama Canal.

The future of what should be America's "Mare Nostrum"—the Caribbean Sea-Gulf of Mexico—will be profoundly affected by one of the first crucial foreign policy decisions of the Carter Administration.

That issue is the Panama Canal—its security and control, and its sovereignty.

Not since Fidel Castro took over Cuba and established a Russian-supported and Russian-armed Communist bastion within 60 miles of our shores has there been any foreign policy issue so close to home and so important to basic American political and strategic positions as the current and long-continuing negotiations with the Republic of Panama about a new Canal treaty.

The terms of such a treaty will have significance that will extend far beyond the operation of the canal, the status of the narrow strip of land around it—the Canal Zone (until now considered U.S. sovereign territory), or its effects upon Panama itself or other Latin-American nations. The ultimate stakes could well be control of a vital sea area—all of that vast, island-dotted watery space to our south across which most of the main north-south, east-west air and sea trade routes of the Western Hemisphere flow

Not since the Monroe Doctrine was first enunciated 150 years ago has there been such a major threat to its validity as there is today. Ever since Castro came to power, the Doctrine has been more honored in the breach than in the observance. Soviet MIGs flying from Cuban fields, Soviet submarines calling at Russian-built Cuban bases, Cuban troops armed with Russian weapons transported by Russian planes to African Angola, and Russian-trained Cuban guerrillas, infiltrators, agents provocateurs, and "training" and "aid" missions in various Latin-American countries, including Panama, Guyana, Jamaica and Puerto Rico are all signs of a spreading infection.

The area that Alfred Thayer Mahan and all succeeding generations of strategists have considered in the vital interest of the United States to control is now often laced by the vapor trails of Russian jets or the unseen passage of Soviet submarines.

IMPORTANT FOR TRADE

There is no doubt about it; the Monroe Doctrine today is in considerable peril.

The Caribbean Sea-Gulf of Mexico is an area of tremendous geographical and economic, and hence of strategic, importance to the United States. Across its waters, or through its skies flows a very sizable portion of the lifeblood of U.S. industry and commerce—coffee and manganese from Brazil, bananas and tropical fruits from Central America and the islands; copper from Peru and Chile; bauxite from Jamaica and Surinam; oil from Venezuela.

Some 13 major global trade routes funnel through the Canal. About 16.8 per cent of U.S. trade passes through the Canal and it has been estimated that of all cargoes tran-

siting Panama in ships of all flags, some 70 per cent is bound to or from U.S. ports.

The Canal-Caribbean-Gulf area provides access by sea and air to our vital Gulf Coast ports and the increasingly important off-shore oil and gas fields in the Gulf, to the mighty Mississippi, jugular vein of the nation, and to the "soft underbelly"—the very soft underbelly—of the United States.

The present-day military importance of the Canal is too often dismissed. Two principal criticisms of its alleged lack of utility are made: It could, it is said, be instantly destroyed in a nuclear war, and its locks are not wide enough to accommodate "modern" vessels.

Both statements are false, irrelevant or over-simplified. In a nuclear war, the Canal and for that matter, many other areas in the United States and overseas would simply have no relevance, either as targets or as positive military assets. But the Canal does have major and continued importance in non-nuclear conflicts or confrontations, which are, by far, the most likely contingencies of tomorrow.

During the Cuban missile crisis, Marines and supplies from the West Coast were ferried through the Canal to the Caribbean; if they had had to pass around Cape Horn they would never have arrived in time to influence the outcome. During the Vietnam War, one-third of all sea-borne cargoes bound for Vietnam transited the Canal, after loading at Gulf or Atlantic ports.

ADEQUATE FOR NAVY

Today, with our Navy greatly reduced in numbers, we face the same situation we did before World War II—a one-ocean fleet with two-ocean responsibilities.

Contrary to impression, every vessel of the United States Navy except our 13 first-line aircraft carriers, can transit the Canal, including all our missile-firing and attack submrines, all our anti-submarine and escort forces, our amphibious vessels and our support and supply craft—a factor of great importance when a crisis is brewing.

There has long been, moreover a oncestarted, but still dormant plan to build, within the present zone a third set of locks (or a sea-level Canal), wider than the 110-foot width of the present locks and possibly of greater depth, which would accommodate, at some future time, when and if traffic needs demand it, not only the world's largest naval vessels, but some of the huge ore carriers and supertankers.

Contrary, therefore, to popular impression, the Canal does have continuing and far-reaching importance to the United States. And the new Panama Canal Treaty, at least in the terms in which it is being discussed, would be bound to have major political, strategic and psychological effects upon the entire Caribbean Sea-Gulf of Mexico area and upon our relations with Latin America.

This is because, for the first time since the Panama Canal was built in the early part of this century by U.S. engineers and with U.S. money and the Canal Zone was bought outright with taxes provided by U.S. citizens, we proposed to transfer sovereignity over the Canal and the Zone to Panama in the biggest "give-away" in our histroy.

The basic treaty—the Isthmian Canal Convention of 1903—explicitly ceded a 10 mile strip of territory across the isthmus from the new Republic of Panama to the United States, "in perpetuity." The treaty provided that in the Zone, the United States would exercise "all the rights, power and authority . . . which it would possess and exercise it it were the sovereign of the territory . . . to the entire exclusion of the exercise by

the Republic of Panama of any such sovereign rights, power or authority." This fundamental provision, which ceded

full sovereignty over the Canal and the Canal Zone to the United States (an interpretation which has been twice supported by the U.S. Supreme Court and was, initially fully accepted by Panama) still stands, although other provisions of the original treaty have been revised or modified many times, always at the expense of the American taxpayer and for the benefit, not of the United States—but of Panama.

[From the Waterbury Sunday Republican, Feb. 20, 1977]

DECISION ON CANAL'S FUTURE AT HAND (By Hanson W. Baldwin)

We have now reached, because of the "waffing" of past administrations and long continued concessions, a point-of-no-return, when we must put up or shut up.

In 1974 Henry Kissinger unwisely signed a "statement of principles" to govern negotiations for a new Panama Canal zone treaty. Kissinger agreed that the concept of perpetuity should be eliminated and, in effect, that the new treaty should end—after a fixed but undecided period of time (the year 2000 is generally mentioned)—U.S. sovereignty and control over the Canal and the Zone.

Ever since, negotiations with Panama have been conducted—despite strong and strengthening protests in Congress and among many sections of U.S. public opinion—within the framework of these limitations.

After a virtual hiatus most of last year because of the presidential campaign and the interjection of the Canal issue into it, the negotiations are to resume momentarily under the auspices of a new administration. Our protagonist, however, is still the same radical demagogic dictator, who has ruled Panama's 1.5 million people for the past eight years.

Omar Torrijos seized power in a coup and has retained it by armed force (the support of the Panamanian National Guard, the only military-police power in the country) by the bland promises of pie-in-the-skyultimate sovereignty over the Canal and the Zone. He has not hesitated to rule roughshod; he has exiled some dissident business men, completely controls a fully press and he has outlawed all political opposition. His government has become a kind of neo-Marxist dictatorship, not only in its do-mestic policies, but in its close and cordial relationships with Castro and Moscow. Only one party-Torrijos' "Peoples Party"-is permitted; there are numerous known communists among its leaders.

Torrijos has staked his political future on taking over the Canal and he may well have unleased forces he cannot control. His bargaining style continues in the Latin political tradition of making Uncle Sam a whipping boy; it is a mixture of open threat and nationalistic bluster. But what he considers his aces in the hole are the prediction—indeed the promise—that unless a treaty ceding ultimate sovereignty to Panama is concluded this year, the United States will face armed confrontation (i.e. rioting mobs, terrorist and sabotage activity, guerrilla war, even a kind of low-key Panamanian "Vietnam"); and we shall also face the united condemnation of all the Latin American nations.

Both threats are, in my view, overdrawn—particularly the latter. But the question still remains:

Is it more important to avoid confrontation and condemnation than it is to retain control of the Canal, a security asset of tremendous importance in its own right but of even greater significance to the future of that vital area—the Caribbean Sea-Gulf of Mexico? DISASTROUS CONSEQUENCES

The psychological and political consequences of the abandonment of sovereignty by the United States in the Zone-in the face of repeated threats by a minor dictator openly backed by Castro and Russian communism-to our naval base at Guantanamo Bay, Cuba, to other U.S. base rights overseas to our strategic position in the Caribbean could be disastrous. The questions that would inevitably be asked are:

Is the United States a paper tiger?

Where, after Vietnam and Angola and now, Panama, would we draw the line, if

not at our own back door?

It is certainly true that rioting mobs tomorrow, as in the past, are an ever present possibility in Panama; Latin volatility and Communist provocateurs, aided by trained Cuban infiltrators, insure that. Sabotage and terrorism, if supported by Cuba and/or Russia, could become serious; some bombing incidents involving the automobiles of Zone residents who oppose the transfer of sovereignty have already occurred. But serious sabotage of the Canal itself, even if it could be accomplished, would be an irrational act. For Panama, it would kill the goose that laid the golden egg.

A large-scale guerrila war, another Viet-nam, is highly unlikely. We want no more Vietnams, but surely Panama does not want a Central American Vietnam either, and the great majority of Panamanians are not the dedicated and disciplined fanatics that we faced in the jungles of Southeast Asia.

In any case, if we are to avoid confronta-tion all over the world by concession and retreat, if we refuse to defend highly important or vital interests merely to avoid the blackmail threat of violence we are finished before the crisis erupts.

RISK IS NECESSARY

As to Latin-America, we must risk its wrath. But it will be far from unanimousmatter what some Latin American spokesmen say, pro forma, for public consumption. Fundamentally the nations of Latin-America and the Southern Hemisphere have always respected strength. Many of them are highly dependent on the water-way, and some of them, quite satisfied with the low rates and efficiency of American operation of the Canal, mistrust the probable instability and uncertainty of Panamanian rule.

There is, too, very considerable uneasiness about Communist influence in Panama and the close ties Torrijos has established with Castro. The memories of Angola and the fears of Russian imperialism within the

Western Hemisphere are vivid.

During last Fall's political campaign, both President Ford and Jimmy Carter avoided the real issue in the Panama negotiations which is the question of U.S. sovereignty and the security of our "soft underbelly." Neither of them referred to the major problem of the Canal issue-the strategic importance of the Caribbean, and both of them said they would maintain "control" of the Canal.

The exact words of now President Carter,

which are today most germane, were:
"I would never give up complete control or practical control of the Panama Canal Zone. But I would continue to negotiate with the Panamanians.'

In other words have your cake and eat too. Give up sovereignty, perhaps, but maintain security and control. It's a nice

trick, if you can do it.

We lost our great airfield in Libya and our entire military investment there after a change of regime. We were denied over-flight or refueling bases during the last Mid-East war, even by our allies. After the Cyprus crisis both Turkey and Greece either limited U.S. operations at our bases in those countries or closed them down.

Sovereignty means control. Control without sovereignty is double-speak.

HUMAN RIGHTS ON CAPITOL HILL

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mrs. SCHROEDER. Mr. Speaker, the April 9 issue of the New Republic has an excellent essay twitting the Justice Department for its opposition to human rights on Capitol Hill. The article fol-

HUMAN RIGHTS ON CAPITOL HILL

The Carter administration is willing to risk the wrath of Moscow to protest human rights violations 10,000 miles away, but it shows signs of losing its moral sensitivity, its guts, or both, when wrongs are perpetrated within an Inauguration Day's walk of the White House. No foreign country can claim that mistreatment of its citizens is solely its own business, the President told the United Nations. But the same rule apparently does not apply to the U.S. Congress. In a case, now before the Federal Circuit Court of Appeals, in fact, the administration is helpnig Congress preserve its right to mistreat its own employees.

Things obviously aren't as bad on Capitol Hill as they are in Russia or Brazil: by American standards they are merely disgraceful. Congress has passed civil rights laws for the rest of the country to live by, but has specifically exempted itself. Other employers, public and private, are forbidden to discriminate on the basis of race, creed, sex or national origin, but members of Congress are free to be as bigoted or sexist, arbitrary or abusive as they please. Many of them please very much. They demand that employees walk their dogs fetch their groceries, drive their wives to California, babysit their kids and sleep with them, and the employees have no recourse except to quit their jobs. It is more of an option than Dred Scott had, but not much.

Women bear much of the worst of it. They are regularly relegated to positions beneath their skills, paid less than men doing the same work and denied opportunities for advancement. The 1976 survey of the Capitol Hill Womens Political Caucus indicated that of 644 highest-paid congressional staff jobs, only 6.2 percent were held by women, down from 7.4 three years before. In addition to professional discrimination, women on the Hill seem to suffer sexual pressures and indignities beyond the norms of American society There is probably something tribal in this. Constituents may think of congressmen as village elders, but the congressmen see themselves, puffy and paunchy though they may be, as hunter-warriors, entitled to whatever they want when they want it. John Young and Wayne Hays got caught using public money and positions of power to buy and extort their sexual satisfaction. Plenty of others keep up the tradition.

The abuses occur because congressmen and senators view themselves, inside the sovereignty of Congress, as a co-equal branch of government, as individually sovereign and co-equal, too—answerable only to their constituents at election time and not to each other, the public at large, other branches of government or, least of all, the people who work for them. Each member is 1/535th King of the Hill, Royal Highness of his own little office and staff. It is a small domain within which to wield absolute power, but it is enough to corrupt some people absolutely.

The system changes only under pressure, and slowly, and with little enthusiasm from within. After the Hays-Elizabeth Ray affair, equal rights proponents in the House created a voluntary fair employment practices procedure to give recourse to employees who felt they had been mistreated. In a year, however, only 104 of the House's 435 members have signed themselves up to participate in the program. The House leadership has given it no support whatever, and it was ignored by the Obey commission which recommended changes to improve the House's ethical climate. Not even a voluntary plan exists in the

With Congress lacking any effective grievance procedure, it was inevitable that some wronged soul would sue, and someone did: Mrs. Shirley Davis, former deputy administrative assistant to Rep. Otto Passman, Davis had received a letter from Passman relieving her of her duties because (said the Congress man), "I concluded that it was essential that the understudy to my administrative assistant be a man." Even though Passman had thereby provided Mrs. Davis with the proverbial smoking gun, a US District Court dismissed her suit. She appealed, however, and won a ringing decision on January 3 from the Fifth Circuit Court of Appeals in New Orleans, defending her right to bring action against a congressman for violation of her constitutional right to equal protection, whatever special arrangements for itself Congress may have written into its own statutes. Now the case has been remanded to the District Court. Passman has petitioned for a rehearing.

If the decision stands, congressional employee activists believe it may provide the basis for legal assaults on many forms of Capitol Hill personnel abuse, not merely racial or sexual discrimination. Congress the other hand, sees it as a major infringement on its constitutional prerogatives. On the day after President Carter's inauguration. House Speaker Thomas P. O'Neill and Republican leader John Rhodes wrote a letter to Attorney General Griffin Bell urgently requesting that he intervene in the Rhodes subsequently disassociated himself from the letter, but Rep. John Stack of West Virginia weighed in with another letter in his capacity as chairman of the subcommittee that passes on the Justice Department's budget.

Instead of lining up with Davis on the side of human rights, or letting Congress stew in its own, self-spiced legal juices, the Justice Department entered as a friend of the court, arguing Tip O'Neill's and Passman's case that the Constitution allows members of Congress to violate the constitutional rights of its employees. The Fifth Amendment accords all citizens equal protection under the law, but the Justice Department brief says, in effect, that it's unenforceable on Capitol Hill. According to Justice, the Constitution's "Speech or Debate" clause not only protects a legislator from being "questioned in any other place" about his lawmaking activities, but also means "a Congressman should not have to answer in court for his reasons to hire or fire an aide." upshot of the brief is that congressional employees have no rights that members of Congress are bound to respect. It's a familiar enough argument: a modern version of the Dred Scott decision upholding slavery. Jimmy Carter may be sending letters to Andrei Sakharov off in Russia, but closer to home his attorney general is lighting candles to Simon Legree.—MORTON KONDRACKE.

AFFIRMATIVE ACTION

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. CRANE. Mr. Speaker, since its inception, the so-called affirmative action program has been a source of tremendous controversy from not one but two points of view. On the one hand, we have those who contend that "affirmative action"-which, in fact, is a quota system-discriminates on the basis of race no less certainly than did legally mandated segregation a decade or more ago. But no less significantly, there are, on the other hand, those who have argued that "affirmative action" does not produce the intended results and may in the long run be counterproductive.

A few years ago, the Defunis case in the State of Washington focused attention on the arguments of the legalists. Marco Defunis Jr., a white student with excellent grades, had applied to the University of Washington School of Law but was rejected even though 39 black students with lower grades were accepted. But before the Supreme Court could decide the issue once and for all. Defunis had gotten into law school on the strength of a lower court ruling and had graduated, permitting the Court to evade the basic issue of reverse discriminating on the grounds that the point was moot. Now, however, it appears the Court will have to face it. The California State Supreme Court has ruled that the University of California of Davis was guilty of reverse discrimination when it denied a white student, Allen Bakke, admission to medical school at the same time it accepted minority group members who allegedly were less qualified.

But the legalist position is not the only one being proven through the passage of time. The realists, those who have been saying that affirmative action is not only ineffective but counterproductive, have long argued that it is no easier to legislate merit than morality. To lower standards or inflate grades, they have said, does not make a person any more capable in terms of performance, just better qualified on paper and that at the expense of someone who had shown better aptitude in the first place. Moreover, improving paper qualifications is not only illusory in the long run but is ultimately patronizing. To the minority group member it says-you are being given what society does not think you can earn.

The fact that this argument has not been frequently articulated by members of minority groups should not be taken as an indication that it lacks support but rather as a reflection upon our historical experience. Not surprisingly, the most appropriate struggle for equality of opportunity can be, and often is, confused with a politically inspired "egalitarianism" of a different sort, making it difficult for blacks who feel affirmative action is patronizing to come out and condemn it. Therefore, it is not just com-

mendable but significant when a columnist, who is himself black, tells his readers that, not only is there another side of the story but that there are black intellectuals telling it and backing it up with statistics.

In case my colleagues have not had the opportunity to see William Rasp-berry's column that appeared in the March 25 issue of the Washington Post, I ask unanimous consent that it be inserted in the RECORD at this time. Also, I would hope that my colleagues would pay particular attention to the last five paragraphs where Mr. Raspberry reports on what one of those black scholars has recommended as an alternative to affirmative action—the stripping away of legislation which appears on the surface to be of general benefit, but in actuality benefits only one special interest group at the expense of blacks and other minorities. As with "affirmative action" itself, such legislation is not what it seems.

A Negative View on Affirmative Action (By William Raspberry)

Walter Williams was different. You'll have to give him that. The other speakers at Howard University's affirmative-action forum were, with varying degrees of eloquence, espousing the predictable. But Walter Williams was saying he wasn't sure affirmative action was such a good idea after all.

While he was at it, this young black economics professor from Temple University proceeded to knock a whole host of government programs dear to minorities and liberals: the Davis-Bacon Act, the Wagner Act, the minimum-wage laws. But most emphatically, he knocked affirmative action.

Speaking of special-admissions programs, for instance, he noted that few people of any race or class are able to succeed at such schools as UCLA (where he earned his master's and doctoral degrees), MIT, Harvard or Swarthmore, which take only the top 10 or 15 per cent of high school graduates.

"Failure to take this into account, and considering only the relative absence of blacks on a given college campus, can produce disastrous consequences if blacks are shoved into the situation," he said. The bad consequences he cited include high attrition rates, reinforcement of feelings of inferiority, deterioration of academic standards and the introduction of differential standards and courses for blacks and whites.

Like UCLA's Thomas Sowell, another black conservative of whom Williams is a disciple, he also says that special-admissions and other affirmative-action programs serve to lower the market value of the achievements of competent blacks. That's because of the assumption that any major gains on the part of blacks would have resulted not from competence and drive but from special breaks.

He freely acknowledges that racial discrimination, both present and historic, has given a competitive edge to whites. But he doesn't think that arbitrary awards of "merit" are an effective means of redress.

"The hard fact of life is that it takes many years for any individual to develop the set of skills and aptitudes that will make him a successful college student or professional school candidate. There is no known way to bring a student who is already college age, with an SAT score of 300, up to the level of a student with an SAT score of 500 in the space of a year or two." He would focus on pre-college education, although the results would not be particularly dramatic for several years.

But the results of affirmative-action pro-

grams haven't been very dramatic, either, said Williams.

Again drawing on Sowell's work, he cited an American Council on Education survey of 50,000 academics that showed blacks constituted 2.1 per cent of college faculties in 1968-69, women 19.1 per cent. Then came the affirmative-action push

Then came the affirmative-action push that had blacks and Jews calling each other names, that sent university deans scurrying back and forth between campus and HEW's Office for Civil Rights, that produced all manner of predictions of disaster.

And, says Williams, it produced little else. By 1972-73, the percentage of blacks on college faculties was up from 2.1 to 2.9 per cent; women from 19.1 to 20 per cent. Nor, he said, could much more have been expected, since "if colleges and universities hired every black Ph.D. in the United States, active or retired, living or dead, there would be less than three black faculty members per college."

Williams suggested that minority and liberal lawyers (the conference was sponsored by Howard's law school) undertake a different focus: an examination of the legal structure—"rules of the game"—that frequently works to the disadvantage of minorities.

For example, he demanded, should minority advocates support Davis-Bacon (the 1931 law requiring that workers on federal construction projects be paid the prevailing union wage), when the result is to discourage non-union contractors from bidding on federal jobs—to the obvious disadvantage of minorities and younger workers who are excluded from unions?

Should liberals favor union-security or closed shop arrangements, when the result is either to exclude minorities (who often are excluded from unions) or to prevent them from selling their labor at lower-than-union rates?

Should they favor minimum-wage laws when the predictable result is unemployment for marginal workers—notably black youths? "While the federal government specifies that minimum price at which a labor transaction can be made, it does not require that the transaction itself be made," Williams pointed out.

A member of his generally hostile audience suggested that Williams might with equal validity advocate the return of slavery as a total cure for black unemployment.

Nearly all the other speakers at the twoday conference would take philosophical exception to Williams' views. But, interestingly enough, most of them wound up hardly less gloomy in terms of what they realistically expect affirmative-action programs to produce.

THOUSANDS OF CUBANS LEAD ANGOLA ATTACK ON ANTI-MARXISTS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. McDONALD. Mr. Speaker, while the United Nations and others wring their hands over whether or not every black Rhodesian is voting or not, thousands of blacks continue to be slaughtered in Angola by Cuban Communist mercenaries without any of the so-called liberal establishment raising an eyebrow. Stranger still, how some of these same liberals are so concerned over normalizing relations with Castro's Cuba are so unconcerned with his aggressions against Africans. Whatever their motives, the

Cuban-sponsored slaughter goes on as recently reported in the Daily Telegraph of London of March 31, 1977. The article follows:

THOUSANDS OF CUBANS LEAD ANGOLA ATTACK ON ANTI-MARXISTS

(By Ray Kennedy)

JOHANNESBURG. Thousands of Cuban troops in southern Angola have launched an offensive against forces of the pro-Western and pro-South African UNITA movement operating from the country's thick bush.

The Cubans are spearheading a drive to smash UNITA once and for all after their Marxist MPLA allies failed to do the job and because they fear South African forces are poised to launch an offensive into Angola mainly to retake the site of the important Calueque dam.

For the past two weeks South African troops on their own side of the border in the South West African Bantustan of Ovamboland have heard nightly artillery fire as the Communist forces in southern Angola have shelled positions and villages occupied by UNITA and its sympathizers.

Hundreds of black Angolans, many wounded, are now streaming across the border into Ovamboland. They risk their lives in no-go area on the South West African side of the border in which South African troops have orders to shoot anything that moves.

The MPLA (Popular Movement for the Liberation of Angola) and their Cuban allies strongly believe that South Africa is preparing to advance into Angola again to retake the Calueque dam which is an integral part of the multi-million pound Cunene hydroelectric scheme.

The Ruacana works is completely at the mercy of whoever controls Calueque. Work there has been at a standstill since South African troops pulled out of Angola last March.

HIT AND RUN

Cuban MPLA dominance of the area is being severely hindered by the hit-and-run tactics of Jonas Savimbi's UNITA movement fighting from the bush. UNITA has almost total sympathy from the local Kwanyama tribe.

Late last year MPLA units, aided by units of the South West African People's Organisation (SWAPO) launched an offensive against UNITA and thousands of Kwanyama refugees fied into Ovamboland.

SWAPO claims that UNITA troops are being trained in Ovamboland itself but this was denied yesterday by Mr. Jannie de Wet, Commissioner General for the Indigenous Peoples' of South West Africa.

He said in Windhoek: "Any suggestion now or in the past that UNITA has been operating from Ovambo is untrue. UNITA is interested in Angola only and operate from the Angolan bush"

Rumours persist tha UNITA units are being trained in the western area of the Ovambo homeland, where guerrilla activity is known to be intense.

PLEA FOR AID

In Oshakati, capital of the Ovambo Bantusta, the Chief Minister, Pastor Cornelius Ndjoba, appealed yesterday for international aid for the refugees. He said his homeland had already absorbed more than 10,000 of them since civil war in Angola erupted two years ago.

He said that according to refugee reports more than 1,000 men, women and children had been killed in southern Angola in the last two days. The refugees claimed whole villages had been razed by artillery, rocket and mortar fire.

Mr. de Wet said: "Independence, such as that in Angola, means nothing. The irony is that these people are fleeing to South-West Africa which has in the past been branded as a threat to world peace."

COLUMNIST JOE YOUNG PREDICTS DISASTER FOR FEDERAL EM-PLOYEES IF BILL TO REVISE HATCH ACT IS ENACTED INTO LAW

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. DERWINSKI. Mr. Speaker, Joe Young, the highly respected and veteran columnist of the Washington Star, reaffirmed his strong opposition to the bill to revise the Hatch Act which would permit Federal employees to freely engage in partisan politics.

He feels that-

This bill if enacted into law would be a disaster for Federal career employees and the merit system . . . Revision of the Hatch Act would politicize the Federal career service, regardless of the provisions in the bill that would protect employees from coercion who did not want to engage in politics.

I think Mr. Young's observations are right on target as to what would happen if the Hatch Act is revised as proposed, and I commend his article for the Members careful reading:

[From the Washington Star, Apr. 3, 1977]

FEDERAL COLUMN

(By Joseph Young)

Undoubtedly the most important bill involving federal employes this year is the one that would revise the Hatch Act to permit government workers to engage actively in partisan politics.

We felt very strongly last year that this bill if enacted into law would be a disaster for federal career employees and the merit system. We still feel this way.

system. We still feel this way.

Last year the Democratic Congress approved the bill but it was vetoed by President Ford.

This year the situation has changed. President Carter has endorsed the legislation, asking that some "sensitive" jobs be excluded.

There is some hope that growing public sentiment against such legislation could cause Congress to water it down considerably or even junk it.

Do government employes favor getting the right to participate actively in partisan politics?

Nearby area congressmen say their poll of federal employe constituents shows a large majority of them opposed to changing the Hatch Act.

However, the Federal and postal employe unions contend otherwise.

For example, Patrick J. Nilan, legislative director of the American Postal Workers Union, says a poll of his members shows that 95 percent of them want the Hatch Act liberalized so that they can get involved in politics.

We do not question the figures cited by Nilan, who is one of the ablest legislative lobbyists in town and a man of integrity. But postal workers operate in a different milieu than federal employes and have less to fear and more to gain than federal careeer employes under a political activist system.

The Postal Service is a quasi-independent

government corporation that bargains directly with the powerful postal unions on a pattern similar to that in the private sector. The federal career service is almost entirely different.

Revision of the Hatch Act would politicize the federal career service, regardless of the provisions in the bill that would protect from coercion from their bosses those employes who did not want to engage in politics.

Promotions and even job retention would depend on an employe's political activities, particularly in the middle and upper grade jobs. Conversely, when new political administrations took over, such employes almost invariably would get the ax. What kind of career system is this?

If one is still unconvinced, he has only to read the story the other day by The Star's White House reporter, Fred Barnes, in which he interviewed Jim King, the White House's personnel director.

King, who seems to be a human weighing machine, said he knew something was fishy when he picked up a copy of the "plum book" containing political patronage jobs, and recalled that it felt much lighter than previous plum books. He remembered from his days as a Democratic campaign worker in 1960 that the plum book then was much heavier.

King suspects that many of the political patronage jobs—about 1,200 of them—were converted into civil service jobs during the Nixon and Ford administrations.

King implied that the Carter administration would like to return these jobs to polit-

ical patronage status.

The point is that whatever went on in the Nixon and Ford administrations and what the Carter administration wants to do about it now would be child's play compared to the system that would be established if the Hatch Act is overhauled.

There would be massive manipulations of federal career jobs in promotions, appointments, assignments, transfers and reductions-in-force. And few really good jobs would be safe when a new political administration came in to power. If new administrations now are suspicious of the career employes they are inheriting, think of how it would be if the career service becomes politicized.

APARTHEID AND THE CHURCH

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. RANGEL. Mr. Speaker, the social and political repression being exercised by the apartheid government of South Africa is now reaching into the sovereign domain of the church. To our own Nation, which holds its religious freedom in cherished reverence, this new act of oppression is indicative of the precarious hold the South African regime has on the reins of power.

The Catholic Church has long defied the officially sanctioned system of racial segregation. Children in Catholic schools are educated together. They have moved to desegregate hospitals, orphanages, and similar institutions. Their program of equality and brotherhood among men has now placed serious political problems on the Dutch Reformed Church, whose leader is the brother of Prime Minister John Vorster.

I feel my colleagues will find an excellent and informative article following by Roy Wilkins executive secretary of the NAACP, describing this very problem. It follows:

THE CATHOLIC STAND

(By Roy Wilkins)

The Catholic Church in its relationship to its communicants should cause the South African government to pause, momentarily, in carrying out the edict (issued by the government) that Catholics should attend schools separately, by race.

Both sides appear to have gone too far to turn back gracefully. The South African government has issued an order to the Catholic Church to cease its defiance of apartheid by educating Catholic children together, regardless of race. The church has issued a statement denouncing the nation's "social and political system of oppression." It coupled this denunciation by saying that it would assign black priests to officiate at white services. The church's membership is 80 per cent black and 80 per cent of the clergy is white.

The Roman Catholic bishops' statement also demanded an investigation of "seemingly beatings and unjustifiable shootings (of blacks) during disturbances and coldblooded torture of detained persons.'

"No temporary suppression by violence, only a sharing of citizenship, can give hope of any safety for children, black or white, now growing up in the republic and prevent the horrors of civil war in the future," the statement said

Eighteen young men have been shot while "escaping" from jail. A Johannesburg lawyer "The police have lost all their credibility in their escape-and-suicide stories.'

"Declaration of Commitment" the church pledged to continue and intensify its campaign against racial separation. statement was preceded by a single paragraph which declared, "the Catholic Church in South Africa was lagging behind in witness to the Gospel in matters of social justice."

The move to desegregate would affect 40 orphanages, 65 hospitals, 150 dispensaries, 170 hostels and more than 70 similar institutions. The Catholic Church will offer equal pay for equal work and in other areas make 'strenuous efforts" to bring about social justice.

Prime Minister Vorster in a television in-terview said that "in certain senses" the racial situation was worsening. Also on the political angle, the latest move of Catholics is viewed as putting the Dutch Reformed Church, the leader, in an awkward position, since a brother of Prime Minister John Vorster heads up the church.

In the light of the hardening of both positions no one can predict what the outcome will be. It is difficult to imagine the Catholic Church, in this day, forcing a war upon a country. They believe that they have been remiss in bringing about brotherhood. They hold to that faith. Mark you the words, "lagging behind," to be a witness for my Lord in a nation where there is much to be done. We don't know what the church saw. There

is only so much to be explained in multisyllable words. What one feels deep in his heart are his true feelings. Perhaps Roman Catholic leadership has had all it can take, whether the victims be black or white.

On the other hand, one has a political state composed of people who have come up from nothing to be somebody among the nations of the world. They like the sunshine, too, even if they trampled the human right of black people to get where they are.

Physically, for a whole people it will take much to get out from under what the Afri-kaaners have put the black South Africans through. Psychologically, it will take much more time. We shall see what we shall see. STRICTLY SATIRE

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. JACOBS. Mr. Speaker, as is plain from the following, David Rohn is a writer of renown:

[From the Indianapolis News, Mar. 28, 1977] I WILL PAY! TELL ME WHERE THE STUFF IS (By David Rohn)

After failing to find any saccharin on the shelves of his local supermarket, Wilbur O'Beese went up to the store manager and inquired, "Say, Sid, do you have any artificial sweetener?"

Sid turned white, cast his eyes about nervously, coughed twice and started talk-ing about the weather. As he discussed the evening forecast he scribbled on a slip of paper, which he nervously handed to O'Beese.

Puzzled, O'Beese waited until he left the store and then opened up the note, which read, "Re sweet stuff. Come to back door at midnight, Code word 'rats.' Destroy this note.

At midnight O'Beese went to the back door of the supermarket and knocked. He heard a voice on the other side of the door say, "Code

"Rats," O'Beese replied. The door opened and Sid quickly ushered him inside.

"Did you notice anyone following you?" Sid asked.

"No," replied O'Beese, "I didn't see a soul." "Well, you can't be too careful," Sid said. "I saw a guy snooping around here the other day who I'm sure was a U.S. Food and Drug Administration agent. Those guys stand out like sore thumbs—they always fasten their shoulder harness when they get in their car. I've also got this feeling that the phone is

Sid ushered O'Beese into a plush office and said in hushed tones, "About the saccharin, I've made a hit. I don't want to go into details about it, but it's good stuff from south of the border. I tested it myself and don't see any signs that it has been adulterated." He walked over to a wall safe and extracted

a plain brown envelope. Inside the envelope were small, individually wrapped plastic bags containing a white substance.

Sid cut one of the bags open with a pocket knife, put a few grains of the substance on the end of the knife and carefully passed it to O'Beese. He tasted it, nodded his head affirmatively and asked, "How much?"

You understand," Sid said, "that I'm only selling this stuff to a few of my favorite customers, and only as a favor at that. I'm asking \$100 an ounce. Now that may sound like a lot, but I've heard it's going as high as \$500 an ounce on the street, and most of what you find is diluted or comes from the

Orient where the quality is suspect.
"In fact, I've heard of some unscrupulous dealers passing bags of flour off as saccharin."

"That's awfully steep," said O'Beese, "but let's face it, I don't have much choice. It took me months of agony to get over the cycla-mate ban, and I just can't go through it

"Listen," remarked Sid in a whisper, "I've also got about a dozen cases of diet cola." "Jeepers," exclaimed O'Beese, "where did you get that?"

"According to my connection," said Sid, "some guys in the backwoods of West Virginia are brewing it. I'll admit it's not as good as the commercial stuff used to be, but I haven't gone blind drinking it."

"You don't happen to have any Red Dye Number 2, do you?" asked O'Beese. "Listen," said Sid, "there are a few things

I will fool around with, but not that stuff. I know a guy that got put in the slammer for 25 years for getting involved with Number 2. I understand even the mob is steering clear of that."

"What about black gold?' asked O'Beese. "Well," replied Sid, "I had some last week, but it was decafe and I have a feeling it was used grounds. One of my connections told me it is rumored there is going to be a shipment of the real stuff arriving in New York from Marseilles next week and he's trying to get his hands on some."

NATURE'S WONDERS ABOUND IN BIG THICKET AREA OF TEXAS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. PICKLE. Mr. Speaker, I know that the Members of this body have heard CHARLIE WILSON, BOB ECKHARDT, and me speak about the glories of the Big Thicket Area of Texas many times.

To those of you who may have not heard us and other Members of the Texas delegation, I am enclosing an informative article which appeared in the New York Times, April 4, 1977, about the Big Thicket:

THE BIG THICKET OF TEXAS IS A CRITICAL YEAR AWAY FROM PRESERVATION

(By John M. Crewdson)

Kountze, Tex., March 27.—There is a place not far from here where the ecology of the Southwest meets and mingles with that of the Southeast, where cactus and yucca plants native to the arid sands of New Mexico and western Texas flourish practically side by side with ferns and orchids more at home in the Florida Everglades.

It is a place where roadrunners and woodthrushes pass each other by, where a thou-sand species of plants and trees proclaim a splendid diversity of color and where, some say, panthers scream at night and an extremely rare bird, the ivory-billed woodpecker, has cached his nest.

The place is called the Big Thicket, and it is rich not only in biology but also in history and legend, oil and timber. It is these last two resources that, until recently, seemed to threaten the others with extinc-

For nearly 13 years, local conservationists intent on protecting what they call the "biological crossroads" of America have battled to save this territory from the lumber and petroleum interests, and they are now tantalizingly nearer to achieving their

FUNDS ALLOTTED FOR PRESERVE

Last month the House appropriated the final \$37 million increment of the authorized total of \$63.8 million in Federal funds needed to complete the purchase of the land that will eventually become the Big Thicket National Preserve.

But only about \$12 million of the \$37 million was earmarked for expenditure in the current fiscal year. Last week a Senate committee reduced the total appropriation to the lower figure, on the ground that the National Park Service could spend no more than that before next October.

Unless the full Senate restores the remaining \$25 million before its expected vote on the appropriation within the next few days, the conflict will have to be resolved by a time-consuming House-Senate conference, and the potential delay causes some of the Big Thicket's supporters to be uneasy. "If they do get it through, and if the Na-

tional Park Service is able to acquire all of this land within the next year, then maybe we're home free," said Maxine Johnson, a university librarian who is a leader of the Big Thicket Advisory Committee, one of the groups that have lobbied hardest for the creation of the preserve.

But I think within the next year, we still have a critical period," she added. The reason for her concern, and the concern of those allied with her, is that the Federal Government now owns only about 19,000 of the 84 550 acres that it is authorized to purchase altogether.

The rest is in private hands, and, although the Park Service can force a sale, there is no way to prevent landowners from selling off the timber rights before the Federal acquisition is completed in 1980.

LUMBER COMPANY APOLOGIZED

Clearcutting on the tracts designated for purchase has been discouraged so far, according to one Congressional aide, through "public pressure and outrage."

The pressure is so intense that one lumber company recently apologized after it unwittingly purchased and cut down some trees on private land destined to become part of preserve.

Asked whether any such lumbering had continued since then, Edward C. Fritz, a Dallas lawyer who has been active in the effort to save the Big Thicket, replied, "I think we got it stopped. We got our fingers crossed."

Mr. Fritz seems to know each tree and shrub in the thicket on a first name basis. One recent morning he led an expedition into an area of the preserve known as the Jack Gore Baygall, a name derived, in part, from the varieties of sweet bay and gallberry holly found there.

On the road from Kountze it was possible see many of the things that the Big Thicket Association, sponsor of the trip, has

been struggling to preserve.

There was a so-called "pine plantation" of the sort that make up a third of the 12 million acres of forest land in east Texas, a vast tract of tall, straight trees of great commercial value.

"If anybody says there are no jungles in North America, you could offer this as a pretty good case," remarked Peter Gunter, one of the expeditioneers, as he looked around at the rattan, witch hazel, holly, orchids, magnolia and pepper bushes interspersed with stands of pine, maple, oak, palm and alder.

The Big Thicket is a treatherous place. It is dotted with pools of oozing slime and guarded by swarms of angry black bees, by alligators, ferocious wild pigs and all four species of poisonous snakes found in this country, not to mention a nude hermit who, legend has it, carries a loaded pistol in each

The Park Service, nevertheless, plans to open the area to campers later this year.

Although the conservationists are pleased

with the Federal plan to acquire many areas of the Thicket, there is still concern over the effect that oil drilling and clearcutting outside the preserve's perimeter may have on the ecology inside.

To the extent that such practices will contribute to erosion and a lowering of the water table, they say, the various life forms that rely on high moisture levels will be threatened. There are also fears of commercial development, designed to cater to the halfmillion tourists that the Park Service expects to visit Big Thicket each year.

AREA BELIEVED TOO SMALL

Richard Evans, a former head of the Sierra Club chapter here, and other conservationists

believe the area is one-tenth the size necessary to prevent ecological damage. But any substantial enlargement does not seem politically possible in Hardin County, where, it is estimated, two-thirds of the jobs are linked to the forest products industry.

Ironically, the best case for any expansion may rest on the frail wings of a male ivorybilled woodpecker that was reported to have been seen near the preserve a few weeks ago.

According to the National Audubon Society, the last definitive sighting of the ivorybilled woodpecker was many years ago.

Mr. Gunter, who was on the expedition, said that an effort was under way to photograph the bird and follow it to its nesting place. If the effort is successful, he said, an appeal might be made to Congress for funds to include the nesting area within the preserve.

E. F. SCHUMACHER URGES "THINK SMALT!

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. PATTISON of New York. Mr. Speaker, several weeks ago Dr. E. F. Schumacher, British economist and author of "Small Is Beautiful: Economics as if People Mattered," spoke to Members of Congress. His presentation was the third in a series of "Dialogues on America's Future," and I am pleased to insert a transcript of his presentation into the RECORD today. I hope that all of my colleagues will read his words and explore his ideas

The full text of his remarks follows: DR. E. F. SCHUMACHER SPEAKS TO CONGRESS

Good afternoon and thank you for inviting me to come and talk with you. I am particularly pleased to have an opportunity to speak with Members of Congress because I have had a most interesting visit in this country during the last six weeks, and I bring news about what some of your constituents are doing.

For many years now, I have been thinking about technology. In the 50's, the Prime Minister of India asked me to go there and tell him what was happening in rural India. At one point, I wondered what technology would be proper for rural India. The technology that is appropriate for Pittsburgh presupposes a complex infrastructure, and it is not an appropriate technology for India.

So I wondered, What would be appropriate for India? They needed something better than the low level technology which they had, but easier to maintain than the technologies in the modern, wealthy West. They needed an intermediate technology. But there was not much offered. Intermediate technology was still undeveloped.

We did studies, subject by subject, asking questions. Before this time, we had never questioned technology because it was such a formative agent in our lives. To say about a technology that it may have overshot the mark was an obscene remark to make, and many people thought we were crazy to be talking about an intermediate technology.

Since that time, I have come to believe that small countries must use intermediate technology if they are to have a chance at self-help. Otherwise, they will be kept in a position of medieval serfdom to the wealthy,

technology exporting nations. Third world countries depend on rich countries for their technology. If the rich try to solve their problems with nuclear energy, small countries figure they have to

solve their energy problems the same way. But the costs are great; the technology is dangerous.

Yet there remains a power problem. We need a source of power. Why not use miniturbines? They have been neglected, forgotten. We need some electricity, but we don't need as much as we think we do. Therefore, we need to think on a different scale. As soon as you think on a different scale, you find lots of possibilities.

In the United States today, people are corried about water. We know how to build desalination process plants. But the expense is great. Why not solve the problem with little things, in small ways. Use small pipes to transfer water, collect rain water. use less water

If you burn cow dung and get methane gas from it, you get a power source from something that was otherwise harmful. The technology we choose depends on the scale we begin with.

My work was originally designed for the third world, and people in the western, de-veloped countries often dismissed our findings as inappropriate for them. But finally the criticism has stopped, and now I hear, "What about the overdeveloped countries? Help us." There is increasing interest in technological reorganization especially Switzerland, Sweden, Holland, and North America.

POLITICAL INTEREST GROWS

On my trip this year, governors and political leaders have come to talk with me. They realize that patterns of settlements must now be changed. The problem of poverty cannot be solved without reorganization.
There are second generation welfare people now, and welfare will not solve the problem of poverty.

The Canadians are worried, too, Everything and everybody is concentrated in a small population belt between Montreal and Toronto. All of the rest of the country is dying. Flourishing towns are dying because there are no jobs. The average age of a farmer there is 56 years. And there are fewer of them with more and more land. For every fifteen young people who stay in the farming areas, 85 go to the cities for work

So Canada is becoming interested in alternative technologies. There can be fullness of life when there is fullness in productivity. A Canadian baker needs wheat, but today when a few farmers control the wheat belt hundreds of miles away, the local, small bakery cannot stay in business.

How did technology get away from the farmers? The manufacturers of farm machinery are now talking about a 200 hp tractor with air conditioned cab which will cost \$80,000 in 1980. Who needs it? Not the small farmer, But the manufacturers don't care about the small farmer. They say the small farmer is dying anyway. And so technology continues to move away from the people, and that is what makes all the problems so difficult to solve. Farming is available only to the rich today.

Appropriate technology is good for the poor and the rich. Development is international, and a network of information is coming into being. The National Center for Appropriate Technology (NCAT) has recently been es-tablished in Butte, Montana, and it will seek to get these ideas circulated.

Two and a half years ago when I came to the United States, people were interested in my ideas, but there wasn't much activity. During this trip, I have been overwhelmed Local organizations have been overwhelmed, too. People are doing things and all strata of our society are involved—not just the counterculture. People believe that we must do something different from the past. They don't know what, but they are trying new things all over the place.

QUESTONS AND ANSWERS

Q. Do you advocate decentralization growth policies and is there an optimum size for a city?

A. We must decentralize. People can't afford to live in cities anymore. They say, I could exist in a small town, but I can't exist here. NCAT is assembling technology so people can set up operations in small areas and in ghettos of cities. The question of urbanization is insufficiently treated. The point is the pattern of urbanization. We need the city, but we also need the countryside. We need flourishing cities, but not massive metropolises.

Q. Will the settlements that you advocate come about without political action, and are the dominate corporations interested in your ideas?

A. I notice an unease with managers of corporations because they don't know what to do. They see the environmental problem, the energy problem, the labor problem, the problem of poverty, and the hostility of the public toward them, and they are very uneasy. And there is so little active imagination in industry because market forces don't encourage imagination.

The brick industry is the most concentrated industry in England; however, there is no sense of the future in the industry. I told them that they should design minibrickworks all over England, and they were appalled. They said, Progress means to make things bigger. Then I pointed out that it is costing them as much to transport bricks as it takes to make them, and that market forces would suggest that mini-brickworks would be a good idea, but they did not agree with me. Market forces are negative unless foresight is part of the planning process.

The government is not needed in this movement except to give it a fair hearing, and show some encouragement. Groups are already working and I don't think it should be bureaucratized now. Channelling public funds in that direction would help.

Q. How do you see the educational system

supporting or impeding your ideas?

A. In the 60's, as we did away with country schools, we said: Let's build bigger schools. Since then our curriculum has gotten away from reality.

We need to develop personalities in schools, not just brains. We need to bring work back into schools, and teach children to use their hands. We are brain and hand. Let the children build some of the buildings, grow some of the food for the cafeteria. In return, they would develop a sense of self-reliance, a knowledge that they could do something to sustain themselves and their environment.

Q. What do you hope to accomplish with your meeting with President Carter? A. I haven't a clue. I go into such things

A. I haven't a clue. I go into such things without any expectations. My task is not to force myself or my ideas. I will probably relate some sense about my visit to this country. There is an amazing groundswell here, a readiness for voluntary effort. People want to serve.

The best thing you could do would be to use public funds to fund voluntary efforts, particularly on welfare time. Governments are good at collecting money. Voluntary groups are not good at collecting. Governments, however, are lousy at distributing money, and voluntary groups are pretty good at that.

Q. Do we abandon our cities?

A. No. But we must get jobs for people in cities. Take a look at the whole district; look at it as though it were an island. What do the people do there? If it is an island, they can't go to the next city and get a job. They have to find meaningful work there. We need local bakeries, local builders, local services. We need to rebuild using the materials that

are already there. We must regenerate, not abandon.

Q. What nations are the closest to practicing your ideas, besides China?

A. Japan, perhaps, and maybe Taiwan. The Swiss make most of the things they need, and are relatively self-sufficient. If a nation's business is on a human scale, the nation's business will be successful and efficient.

Red China is very impressive if you look at its history since 1911. For the first time, all of the people are clothed, housed and fed. The people are told not to buy anything that they can't make themselves. Then they figure, somebody has to be able to make this thing which I need but don't know how to make. I can probably make it myself. And so the individual is challenged and everybody is enlivened. Everybody is working; nobody has exaggerated expectations; nobody is rich; but everybody has enough.

Q. Should imported items, even bread that comes from miles away, cost more than locally made products? Should we erect tariff walls?

A. No. The baker left the small bakery because his technology was outdated. We need to put our brains to work updating the old and simple technologies that are efficient and inexpensive.

Q. Do you really believe that smaller units are more efficient than larger ones?

A. Definitely, because they are. Large, centralized units rely on cheap and plentiful fossil fuels, and this situation is not possible in our future. There are three bakeries in England, and only one now realizes that their transport is too expensive and that their whole way of doing things is outdated. They are decentralizing and forming smaller bakeries all over the country.

If the corporations decide to take the lead in this area and decentralize on their own, fine and good. If they don't, the consumers will have to pay, and I don't have to tell you that the consumer is getting mad. In many areas of this country, they are beginning to develop new technologies on their own.

Q. For a long time the industrial world has been making investments in the developing world. What have we been doing and what is the result? And what should be done in the future?

A. Well, my own experience can answer this question. The first time I encountered a small country was in 1955 in Burma. There was a food surplus then, and the population was growing, but was under control. The people also had good housing. Then they caught the development bug when somebody suggested that they needed more money and a higher standard of living. We began to transfer technology to the underdeveloped world, and a mess became inevitable.

It is the duty of the rich to help the poor, I believe, but I saw that the rich were ruining the poor. And that led me to the question of appropriate technology.

Technology transfer is to take something to a country that only the rich can receive, and so it is immediately discredited. Our foreign aid program has essentially been a strategy of collecting from the poor in rich countries and giving to the rich in poor countries. The peasant in India cannot receive the technology we send over there. Only the rich merchant in Bombay can receive it. Essentially, foreign aid should be about poverty, not about development.

If we refocus our sense of technology, then, and begin with new dimensions of scale, we have a chance to survive. If we don't, I am afraid we're going to be in trouble.

CIVIL ENERGY FROM LASER FU-SION: A GROWING REALITY

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. PURSELL. Mr. Speaker, today, I am inserting my fifth installment regarding laser fusion. The importance of maintaining an atmosphere of scientific freedom is critical to our Nation's future development. We must insure that all areas are explored in the development of our energy sources. Laser fusion is one of those energy sources which we must not allow to fall by the wayside. Following is excerpts from an article by Arthur Fisher from the December 1976, issue of Popular Science, which discusses the potentials of laser fusion as an energy source:

ENERGY FROM LASER FUSION (By Arthur Fisher)

Through a glass panel, I looked into the largest empty room I'd ever seen—a blank white cube more than 50 feet high. One wall was cut away; beyond it stretched an even larger room that vanished into the distance like a banquet hall for an army.

This unique structure, sitting on the grounds of the Lawrence Livermore Laboratory among sun-drenched vineyards about 50 miles from San Francisco, is the house of Shiva, a multi-armed monster that will be, when completed in 1977, the world's largest,

most powerful laser.

Not too long ago, people thought of a laser as a jumble of oddments sitting on someone's tabletop. The contrast is a powerful reminder of how far and fast we've come in the search for the holy grail of energy sources: controlled thermonuclear fusion. For \$25 million Shiva is the latest tool in an accelerating program to explore the feasibility of lasertriggered fusion to power us in the future.

INERTIAL CONFINEMENT

"Laser fusion," however, is the wrong title for this story. The kind of fusion I'm going to describe, the kind that is causing intense excitement among growing numbers of energy specialists, is properly called inertial confinement fusion. (The other and far older branch of fusion research is magnetic confinement fusion, of which more later.) Inertial confinement fusion includes not only fusion induced by lasers, but also by electron beams and ion beams. In each case, a small fuel pellet would be "ignited" to yield a thermonuclear microexplosion. It is a field as explosive as its goal, fast-growing, and peopied with scientists whose enthusiasm sometimes borders on the manic. It deals with ever-larger, more complex, more powerful machines, with names like Cyclops, Hydra, Python, Aurora, Shiva, Nova, Gamble . . . even, half-facetiously, Madness.

One index of the surging interest in the field is money; the amount our government is willing to commit to this research is rising steeply. From about 1970 through 1974, a total of approximately \$110 million was spent. But operating and construction budgets go from about \$62 million in 1975 to \$105 million in 1977.

To learn what was happening in this sometimes bizarre, often perplexing world of what I'll call laser fusion for short, I crisscrossed the country talking to scientists at a variety of institutions. To list the labs I visited is to hint at the scope of the research program.

First the laboratories operated for the U.S. Energy Research and Development Administration (ERDA), which directs the program: Lawrence Livermore Laboratory (LLL), Livermore, Calif.; Los Alamos Scientific Laboratory (LASL), Los Alamos, N.M.; and Sandia Laboratories (SLA), Albuquerque, N.M. The three ERDA labs together have about 1100 people working on laser fusion, and the bulk of ERDA's total program budget is spent there.

Then, the Naval Research Laboratory (NRL), Washington, D.C.; KMS Fusion, Inc. (KMS), Ann Arbor, Mich.; the Laboratory for Laser Energetics at the University of Rochester (LLE), N.Y.; and, of course, ERDA head-quarters itself in and near Washington, D.C.

The statement I heard most often at these labs, after I had been cautioned about the difficulties that lie ahead, was, "If we win, we win big." To understand why, it's necessary to trace the evolution of some fusion

concepts.

Thermonuclear fusion, the process that powers the sun and stars, consists of making big ones out of little ones: fusing together the nuclei of lighter elements into heavier ones. Along the way, some of the mass of the original nuclear particles "disappears"; it is transformed into energy. And because the energy released equals the mass lost times the square of the velocity of light (the famous equation of Albert Einstein, E=mc2), enormous energies result from tiny quantities of nuclear fuel-far more than from a chemical reaction. In the stars, many light elements may be fusing, but the basic reaction, the one that theorists believe started the vast thermonuclear furnace we call the sun, fuses nuclei of the lightest elementhydrogen.

It turns out that the best candidates for controlled fusion are heavy isotopes of hydrogen—deuterium (D) and tritium (T). Like the simple hydrogen atom, each has one proton and one orbiting electron, but deuterium's nucleus has one neutron bound to the proton; tritium's nucleus has two neu-

When a deuterium and a tritium ion fuse, the result is a helium nucleus containing two protons and two neutrons, and a free neutron. Both are spat out at enormous speeds, with the neutron bearing about 80 percent of the energy release, in the form of its motion; some X-rays are also emitted. The high-speed particles can be harnessed to generate power.

INCREDIBLE ABUNDANCE

The energy potential of this simple reaction is hard to believe: deuterium is abundant in the world's oceans, and the yield from the amount of deuterium in just a gallon of sea water—a minuscule 1/8 gram—is about equal to that from 300 gallons of gasoline. Indeed, the energy potential of fusion is about eight times greater than that for nuclear fission (the splitting of heavy elements such as uranium into lighter ments) for equal weights of fuel, because more mass is converted to energy in the fusion reaction. Moreover, there is far more deuterium in the world than uranium, about five billion billion kilograms, and it is inexpensive to extract from sea water. One calculation by LASL scientists sets the energy potential from the world's deuterium at about three million times that of uranium. As for tritium, it can be freely "bred" by interacting neutrons with lithium. (Eventually, fusion reactors could run on a deuteriumdeuterium fuel mixture. But a D-D reaction is harder to start and releases only a quarter as much energy.)

Thus the extraordinary lure of a controlled fusion reaction: a virtually unlimited source of energy, relatively free from pollution and undesirable environmental impacts. (Triti-

um is radioactive, but much less so and less dangerous than the products of fission plants, and has a short half-life—about 12 years). Also, a fusion reactor could not "run away" to produce a catastrophic accident of the kind some critics maintain is an inherent danger of the fission reactor.

Controlled hydrogen fusion, then, sounds like a near-perfect solution to mankind's worsening energy bind. The only problem is that no one has yet been able to achieve it. The hitch: To force the hydrogen fuel to fuse, scientists must create temperature and pressure conditions tantamount to hell on earth. The reason: the deuterium and tritium nuclei are ions, each with a positive charge, so they repel one another electrostatically.

To overcome this repulsion, a temperature of about 100 million degrees is needed—a temperature at which matter becomes a swirling cloud of charged particles called a plasma. Furthermore, this plasma must now be held together long enough, and at a high enough density, for a significant portion of the hydrogen nuclei to interact.

Such temperatures and pressures exist at the core of stars, and in the hydrogen bomb. For more than 25 years scientists have been trying to devise a way to recreate them on earth and somehow contain them so that a controlled fusion reaction could be harnessed usefully.

The first, and still viable, part of the effort was via the magnetic confinement route. By building a magnetic "bottle," physicists all over the world hoped, they could constrain a hot plasma with magnetic fields, so it would never touch the walls of a chamber. But the effort proved to be, in the words of some experimenters, "like trying to wrap Jello in rubber bands." (See "Fusion power," PS, August "74.) There have been important advances recently, and the magnetic people are still optimistic.

CONTROLLED FISSION

In the meantime, another idea began to perk in the scientific community, quietly at first, then with increasing insistence. This was to use inertia—the reluctance of matter to change its velocity with the application of a force—to confine the plasma. If you could zap hydorgen fuel hard and fast enough so that it didn't have time to get away from the reaction site before it started to fuse. The hydrogen bomb works in just this way, with the burst of energy needed to "ignite" the hydrogen fuel coming from a nuclear fission device—an atomic bomb. But how could the uncontrolled, lethal power of the H-bomb be scaled down and controlled in a usable way?

Sitting in a conference room at LLL, John Nuckolls, an expert in the theory of fusion told me a tale of true scientific serendipity:

"When I came to Livermore, people were talking about taking hydrogen bombs and putting them in holes in the ground and exploding them to make power-one of the early ideas of the Plowshare program, around After doing some calculations, looking at the size of the hole, and how hard it was to make the H bomb cheap enough, the idea entered my mind to go off in a different direction and try to scale down the size of the thermonuclear explosion. In '58 and '59 I worked on two questions: How small can you make a thermonuclear explosion? And what kind of source would you need to initiate it? I started running some computer calculations and by 1960 I was down to milligram size explosions, which is what people are talking about now for power plants. I also worked out the characteristics a power source had to have. Later that year, 1960, the laser was invented by Maiman. It didn't take long for people who knew what I had been doing to look at the laser and

then point out to me that this was just what I wanted for a power source. And when I put the properties of the laser in my fusion calculations, they fit."

The scientists involved with Nuckolls in

The scientists involved with Nuckolls in developing this idea included Stirling Colgate, Ray Kidder, and Edward Teller. They and their colleagues determined that if a laser of sufficient power were ever developed, it might ignite a deuterium fuel pellet. By the late 1960s', further calculations showed that lasers within the realm of possibility could ignite a deuterium-tritium mixture, provided that a fuel pellet could be crushed by the laser beam to 10,000 times normal liquid density.

A SMALL COMPANY MADE IT BIG

Finding a perfectly formed microballoon, spherical and with symmetrical, uniform walls, is a job that far surpasses looking for a needle in a haystack, as I found when I tried to pick one up with a camel's hair in the laser target fabrication lab at Los Alamos. Gene Farnum of LASL told me the spheres were so light—a gallon of them weighs only a pound—that if disturbed they may float suspended in the air for weeks. One of the chief maxims of the lab, he said, was "no hard breathing."

was "no hard breathing."

With such D-T filled microballoons, at least two labs, KMS and LLL, have reached an important milestone in the laser fusion program. After a laser shot, they have detected the kind of neutrons that are generated in a genuine fusion "burn" thermonuclear neutrons. Almost everyone now acknowledges that KMS got results first, an extraordinary accomplishment for a small company that had no backing from the government (it now has a contract with ERDA).

Pellet implosion and thermonuclear neutrons are the first two milestones in ERDA's well-planned route to laser fusion. Dr. C. Martin Stickley, Director of ERDA's Division of Laser Fusion, ticked off the rest of the schedule recently in Washington:

Significant fusion burn . . . 1977-1978. This means about one percent of the fuel in the target is undergoing a fusion reaction, enough to analyze with confidence. Shiva should produce significant burn.

Scientific breakeven . . . 1981–1982. The thermonuclear energy from the burn equals the energy delivered to the target (not to the laser). Says Dr. Stickley: "We will need hundreds of trillions of watts on target, attainable with the 100-kilojoule gas laser being built at Los Alamos, or perhaps, in 1983, with Nova, a proposed upgrade of Shiva that might double the number of arms and increase the power five- to ten-fold."

Net energy gain . . mid 1980's. "This is the all-important point: more total energy yield from the burn than is required to drive the laser system. It will require a few hundred more trillions of watts and a new laser—laser X—or fast energy source such as electron or ion beams."

Operating test system . . . late 1980's. "That assumes all our discoveries including Laser X can be engineered into a high-pulse-rate pellet burning system with all the control and conversion equipment . . ."

pellet burning system with all the control and conversion equipment . . ."

Demonstration power plant . . . late 1990's. I asked Dr. Stickley how confident he was about ever really reaching that last, tantalizing milestone. "People's general criticism of fusion," he answered, "is that it hasn't worked . . . we haven't done it. One of the reasons for my enthusiasm for the laserfusion program is that I believe we have the concepts in hand to show that it can work."

Nevertheless, the engineering problems in designing a workable inertial confinement fusion power plant are formidable, and formidable, and ERDA experts believe laser fusion will contribute nothing to the U.S. electricity supply before the end of this century.

Similar problems also attend electron beam and ion-beam fusion, the other inertial confinement schemes ERDA is investigating. (Some people are using the collective term "charged-particle fusion.")

THE PRACTICAL OUTLOOK

As exciting as these new concepts are for charged-particle fusion—e-beams, ion beams. and heavy ion beams-it would be unreasonable to anticipate a working power plant from any of these sources earlier than that pegged for a laser fusion plant-around the end of this century.

There are prospects, though, for getting some positive use out of the high-energy neutrons from laser fusion devices long before they reach the milestone of net energy gain. For example, KMS chairman Dr. Russell D. O'Neal told me: "We've been working under contract with the Texas Gas Transmis sion Corp. to produce hydrogen from water by using thermonuclear neutrons from laser fusion. Then we'd make methane-the main constituent of natural gas-from the hydrogen. We hope to be making a real contribution to the energy problem by the mid-1980's

And at the University of Rochester's Laboratory for Laser Energetics, Dr. Moshe Lubin has pulled together funds from ERDA, N.Y. State, G.E., Exxon, and utility companies to build a 24-beam glass laser called Omega X. As a "useful intermediary result," he told me, "we envision a laser fusion breeder . we should know if it works within the next five years." Spent nuclear fuel rods would simply be inserted in a laser fusion target chamber, and would capture the thermonuclear neutrons produced. Uranium-238 or thorium-232 could thus be bred into the fissionable materials plutonium-239 or uranium-233. The rods would be reusable many times

"You wouldn't need to worry about energy gain," says Lubin. "You could even consume energy. As long as the end product gives you a lot more energy when you put it a light-water reactor. We envision, no too long from now, a laser fusion breeder next to lightwater reactor complexes."

POSTAL SERVICE DELIVERY DAYS

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. MOAKLEY. Mr. Speaker, it has been brought to my attention that the Commission on Postal Service may submit a recommendation that postal delivery days be reduced from 6 to 5. I wish to register now my strong opposition to such a proposal.

I would reject such a reduction in the first place, because the American people deserve quality postal service. I remember that in hearings in my State, citizens were asking for increased postal services and deliveries rather than reductions. My constituents would be outraged by a cutback of the magnitude suggested by the Commission and personally, I would agree with them. We need 6-day delivery service

But I would oppose a reduction proposal for another, equally important reason-unemployment. A reduction in services by one-sixth would necessitate a massive reduction in the postal workforce. At this point in our economic history, the last thing we need to do is to put more people out of work. Ironically enough, Secretary of Labor Marshall suggested that the Postal Service would be a prime spot to place additional workers to provide improve services to the public. How can the Commission justify an opposite conclusion?

Gentlemen, we need 6-day postal delivery service not only for purposes of convenience and efficiency, but also for its employment capacity. I urge the Commission on Postal Service to consider carefully the multiple and crucial implications of a reduction in delivery days. I am sure such consideration would result in a reevaluation of the real worth

of this proposal.

IS GUN CONTROL REALLY RELEVANT?

HON. BOB TRAXLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. TRAXLER. Mr. Speaker, proponents of gun control have claimed that the mere presence of a handgun in an establishment is likely to cause injury or death. According to authoritative studies, this line of reasoning is faulty.

In an impressive analysis of various studies conducted on gun control, Don B. Kates, a professor at the Saint Louis University School of Law, states that:

Violence can be eliminated or reduced only by sweeping changes in the institutions and social and economic relationships, the ideologies and mores, which produce a violenceinclined people. Gun Control efforts are fundamentally obstructive because they divert attention from this arduous task by promising a simple, mechanical solution at the cost only of an easily villified group, gun owners.

I would like to share with my colleagues Professor Kates' excellent analysis which appeared in the March-April 1977 edition of Criminal Law Bulletin:

REFLECTIONS ON THE RELEVANCY OF GUN CONTROL

(By Don B. Kates, Jr.*)

To many, handgun prohibition prohibition provides a simple, and obvious, partial solu-tion to our society's remarkable capacity for producing violent people. Unfortunately, this cannot be validated by crime studies, either in Great Britain or in this country.

Seven American jurisidictions have, for over twenty-five years, required a permit to purchase or posses a handgun, or both.1 Five different criminological studies have compared the per capita homicide and violent crime rates of these jurisdictions to those for states that allow handguns. The conclusion of each study (based on FBI Uniform Crime Reports for the years 1959, 1966, 1968, 1970, and 1972-1974) is that, taken together, the handgun-prohibiting jurisdictions have consistently higher homicide and violence rates.2

Stated without further elaboration, these results might seem subject to the objection that the handgun-prohibiting jurisdictions may simply be much more crime-prone. But even accepting this hypothesis, the conclusion remains that the violence-reducing effect of handgun prohibition has not been significant enough to overcome these demo-graphic differences. In fact, however, these higher homicide and violence rates cannot be attributed to demographic differences. The handgun-prohibiting jurisdictions, taken together, are not markedly different in the demographic characteristics associated with high crime from the handgun-allowing states. Although four of the handgun-prohibiting jurisdictions are comparatively rural, unurbanized, and unindustrialized, in general, however, all of the handgun-prohibiting states exhibit substantially higher homicide and violence rates than their demographically similar neighbors or other demographically similar states.

The most massive, extensive, and sophisticated study ever done of the potential of gun control for reducing violence was carried out under federal funding at the University of Wisconsin in 1974-1975. This computerized analysis took into account every demographic variable that was found to have any statistically significant impact upon a comparison of states with differing gun laws. With demographic bias thus absolutely nullified, the Wisconsin report found: "|T|he conclusion is, inevitably, that gun control laws have no individual or collective effect in reducing the rates of violent crime." 3

In addition, this study went beyond previous ones to examine not only the effectiveness of extant handgun prohibitions, but their underlying theory, i.e., that the availability of handguns promotes homicide or violence. Comparing rates of handgun ownership to homicide and violence rates nationally, the Wisconsin study found no correlation. In other words, homicide and violence rates do not increase as rates of handgun ownership increase, nor do they decrease as rates of handgun ownership decrease.

The Wisconsin findings also refute the "adjacent state" explanation that has greeted previous studies showing handgun-prohibiting states with higher homicide rates. This explanation postulated that state handgun prohibitions were not reducing homicide because those desiring pistols could buy them in adjacent states. But if there is no correlation between rates of handgun ownership and rates of violence or homicide, then the number of people who have pistols or how they acquire them becomes irrelevant.

Moreover, the adjacent state argument has always been inconsistent with the stated purposes of handgun prohibition. Sophisticated proponents of prohibition have never argued that assassins, revolutionaries, terrorists, persons involved in organized crime, or even individual habitual criminals can be disarmed. Rather, they argue that greatly reducing the rate of handgun ownership in the general population will greatly reduce homicide, since most murders are committed by ordinarily law-abiding citizens in the heat of a sudden rage. But in the jurisdic-

Footnotes at end of article.

tions—particularly New York—that have handgun prohibitions, rates of ownership in the law-abiding populace have been radically reduced. Most law-abiding New Yorkers do not risk federal and state felony charges by buying across state lines or on the black market. If the drastic reduction of handgun ownership rates in New York for over sixty-five years has not been accompanied by a similar reduction in homicide—and no correlation is anywhere observed between high levels of handgun ownership and of homicide—then handgun prohibition would seem to be irrelevant, if not downright counterproductive.

Handguns predominate in American violence not because the handgun is necessarily the only or the most effective weapon, but because our culture perceives it as such. There is much criminological evidence that, in the absence of firearms, the enraged householder would prove just as deadly with any of the other lethal instruments our environment abounds in-although at least one study concludes that Americans are much deadlier with handguns than with knives.4 Americans may perform less well with knives because of purely cultural factors, particularly a hesitation to rely upon a weapon that our culture does not view as a preeminent weapon or one which adequately guarantees safety to the user. No such hesitation appears to afflict the violent in cultures where the knife in hand-to-hand combat is still regarded as the ultimate weapon. Mexican and Puerto Rican handgun prohibitions are very strict and are augmented by a level of poverty that makes handguns virtually unavailable to vast portions of the population. Nevertheless, Puerto Rico (the only American region that also prohibits rifles and shotguns) had a murder rate second only to Georgia in 1974. And the Mexican knife-homicide rate was more than three times the American rate for all homicides in the last year in which figures are available

More important, effective handgun prohibition probably would force those desiring weapons to turn not to knives, but to long guns-which are far more deadly than either knives or handguns. How much more is suggested by comparing the most common long gun to the most uncommonly powerful handgun: A 12-gauge shotgun fires a slug which is more than twice the diameter and three times the weight of that of a .357 magnum-or nine pellets each comparable to a .25 handgun bullet. The common 30-30 or 30-06 hunting rifles fire bullets weighing approximately the same as a .357, but at two to three times the velocity. At these velocities, a rifle bullet not only penetrates flesh and bone, but it also creates waves of hydrostatic shock which crush vital organs far removed from its path. Unless a rifle destroys the body by tumbling end-over-end, it is far more likely to travel through, endangering others at a substantial distance away. Eighty-five percent of those shot by San Francisco's Zebra killers, as well as public figures like Governor George Wallace, Senator John Stennis, and Premiers Tojo and Hendrik Verwoerd, recovered from multiple handgun wounds in the head or chest, wounds which, undoubtedly, would have been fatal if they had been inflicted with even a sawed-off long gun.5

The only disadvantage of the long gun to prospective criminals is its lesser concealability. This may be important to the armed robber and the assassin, but it is generally conceded that these types will be least affected by handgun prohibition. To the extent that they are affected, they will probably cut down long guns to conveniently concealable size. thereby increasing the danger to their victims.

As to homicide, concealability is largely irrelevant. Most homicides are committed in a momentary rage by law-abiding citizens who are normally not carrying a concealed weapon. For their purposes, the long gun in an adjacent bedroom or nearby automobile is fully as accessible as the similarly situated (but far more deadly) handgun. This goes a long way toward explaining why American handgun-prohibiting jurisdictions (which drive those desiring weapons to long guns) consistently have higher homicide rates. In Britain, where far more "crimes of passion" are committed with long guns than in this country, the recovery rate from shooting is much lower."

The only in-depth study of British gun control concludes, incidentally, that it has had no ascertainable effect upon violence. Done by a high-ranking British police officer for Cambridge University in 1970-1971, this study notes that Great Britain was very peaceful before prohibition was adopted in 1920, although until then it had literally no laws curtailing the ownership or carrying of firearms; that honest citizens have obeyed the prohibition only because England is so safe that firearms are not deemed necessary for self-defense; and that British criminals have retained, illegally at least, the same number of firearms they possessed in 1920.7 It appears that violent crime is comparatively rare because the highly civilized, homogenous, closely knit British society imposes cultural restraints against violence (upon even its criminals) better than we do. CONCLUSION

Gun control is irrelevant to the real determinant of violence, which is not the availability of firearms but the inclination toward use of weapons at all in interpersonal relations. Contrast the phenomenally high Mexican homicide rate with very unsophisticated weapons to the phenomenally low homicide rate in Switzerland where every man of military age owns a fully automatic rifle. (Such weapons, which are forbidden in this country, are widely available also in Denmark, Israel, and Finland, all countries with very low homicide rates.)

Violence can be eliminated or reduced only by sweeping changes in the institutions and social and economic relationships, the ideologies and mores, which produce a violence-inclined people. Gun control efforts are fundamentally obstructive because they divert attention from this arduous task by promising a simple, mechanical solution at the cost only of an easily villified group, gun owners. Americans must choose either to experiment with painful and difficult institutional change or to accept and live with the inevitability of continued violence.

TRIBUTE TO THE REVEREND MON-SIGNOR JOHN M. COSTELLO, J.C.D., A MAN OF GOD

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. BIAGGI. Mr. Speaker, as a man of faith, I believe that on March 11, 1977, a creation of God was with his Maker, a child of God was with his Father, a servant of the Lord was with his Master. For, Msgr. John M. Costello, a man of God, had gone home.

It was, I am sure, a joyous day for him. The Catholic liturgy teaches us that the passing on of God's faithful is cause for much celebration. Rejoice! A victory has been achieved. Man has overcome the temporal. His work is done and his final reward is at hand. It is in like manner to the resurrection of the Lord, Jesus Christ. And how very special it must be when one of God's ministry reaches his goal of everlasting life.

A native New Yorker, Monsignor Costello was born in the heart of New York City, the borough of Manhattan, in November of 1916. He received his primary education at Our Lady of Good Counsel School, and went on to Cathedral Prep, which is regarded in the Archdiocese of New York as a high school where young men are prepared for the very exacting and yet so special discipline and privilege of studying for the priesthood. Young John continued on his formal path to the calling of God's vocation at St. Joseph's Seminary at Dunwoodie, Yonkers, N.Y. The culmination of study and holy preparation was his ordination as an apostle of Christ and prince of the church on June 2, 1928. But his work was only to

Significantly, he was first to become a doctor of Canon Law after 2 years of study at Catholic University. It was then 1930, and he was assigned to the Church of the Annunciation in Manhattan. For, John Costello, a very learned man, was to serve as a model to the flock in the important work of the parish priest. In 1939, his talents on behalf of the Lord were to lead him to appointment as pro-synodal judge of the Archdiocesan Tribunal. His personal attributes and abilities supported him in elevation to the rank of Papal Chamberlain in 1950, and to the position of Domestic Prelate in 1952. Ultimately, in his work at the Tribunal, he reached a pinnacle of expertise in God's work as officialis.

Nineteen hundred and fifty-six witnessed his position as pastor of St. Augustine Church in Ossining, N.Y. It is truly a momentous occasion when a leader in God's service assumes the awesome responsibility of directing part of His province and providing the way to the salvation of souls, which was John Costello's sacred reason d'etre. Monsignor Costello reached still another designation as a church spokesman when assuming the duties in 1957 as synodal examiner. And very happily and meaningfully for all who knew and loved him there, Monsignor Costello was to become in 1963 the pastor of St. Brendan's Church, which is so near and dear to me. in the Bronx, N.Y. His leadership, his example, and his loving care will surely be missed within the church ranks and among all his friends and admirers in the community surrounding East 206th Street. To his brothers and sisters, the Reverend Monsignor Francis M. Costello, pastor of the Epiphany Church, Manhattan, N.Y., Thomas F. Costello, Mary E. and Julia M. Costello, we extend our warmest wishes that they, who were part of his life and shared his example, will be more bountifully blessed by their brother's intercession, and enjoy happiness, prosperity, and spiritual welfare as their brother would have

Despite the nature of one's religious beliefs and mode of expression, we recognize and respect the importance of our religious institutions as a spiritual framework, teaching the reason and showing a way of living, for so many of our people. Their leaders provide the counsel, the guidance, and example which is essential to many lives daily. We have the choice as a free people to take their lessons and make it part of our existence. We should have a faith in what we are and where we are going as people and a nation.

We are paying tribute today to a man who helped people be better people. We are saluting a leader who enabled people to live out days of their lives as best they could. In that form, they were true to themselves, a credit to their community, and an important contributing factor to the success of God's service and His work here on Earth.

At the funeral mass for Monsignor Costello in St. Brendan's Church on March 15, Msgr. George Kelly, director of the Institute for advanced Studies in Catholic Doctrine at St. John's University, delivered a very meaningful sermon. He deeply touched all who were in attendance that day with his realization

of what the loss of his dear friend, and brother servant of God, meant to him personally, to the church he also served, and to those left behind. We were privileged to hear of the work of the church and its talented leaders. We are given insight into how the concept of death affects men, and conversely, the tremendous power and meaning of prayer. We can observe Monsignor Costello as the very human, yet holy and learned man that he was, and witness his influence in the church and among men.

I would like to share that homily with you now. It is a fitting comment on the magnitude of the man we honor today and his work:

HOMILY GIVEN BY THE REVEREND MONSIGNOR GEORGE A. KELLY

"Feed the Flock of God which has been entrusted to you, watching over it, not grudgingly but with good will as God wishes—becoming the model for the flock. And when the chief Shepherd appears you will receive the crown of glory that never tarnishes." (1 Peter 5:2; 4)

The news that Monsignor John M. Costello was dying without warning, and then his sudden death, evoked a rash of sentiments in me and others which form a suitable subject of meditation here at his final resting place this side of the glory he hopefully now enjoys.

The first feeling was the sense of loss—the loss of a brother, the loss of a friend.

On second thought came the realization that the angel of death has already passed over the generation which once was our parents' and now has begun to spread his wings at least over the older of their children, sometimes even over the younger ones, a certain reminder that our bodies are becoming increasingly corruptible (1 Cor. 15-53), coming nearer and nearer to the certain day and hour which is predetermined for us, but unknown by us.

Then, I saw in my memory's eye Msgr. Costello as the priest he was, only as priest (nothing else was imaginable), what he meant to the church, what the church meant to him, what it meant to people that he was a priest, what it means for anyone to be a priest.

Losing a friend and a brother, with whom you are friendly, is an incalculable human Msgr. Costello's dying made me think of other priest friends he and I have lost. sometimes together, in the past quarter of a century. Morgan O'Brien, Conrad McCoy, Arthur Edward Murphy, John P. Monaghan John J. Moylan, Joseph P. A. O'Brien, Gerald Cahill—the list is limitless. I ask: Who thinks of them? Who prays for them? They had no wife to cry over them, to remember the anniversary masses, nor children to put flowers on their graves. But then I console myself. If I remember, others must too. Who are likely to remember priest friends? The people who will recount to their children's children the story of the priest who changed the course of their life. Msgr. Costello will be remembered many times over, just for that. As one lady on a long line at his bier the other night said: "It was a privilege to know The lives of his close friends have been emptied somewhat by his death but are still richer than life would have been had he not crossed their path. Memories lessons we learned from our friends. Especially if fond memories prompt us to pray regularly for departed friends. If we are reminded to pray for some priest we knew but may have few people left behind—a Hugh Gilmartin, a John Leo Dolan, a James L. Riordan, perhaps a Daniel Sullivan who died only last week with less than five minutes noticethen this mass of resurrection has benefits far beyond what we normally assign to it.

More than that is here a symbol of our own approaching death present in his dying now. Most of us belong to his generation. Though a torchbearer at Father Costello's first mass and separated in age by thirteen years, my hair is no less white than his. My time, our time is drawing near. The Second Vatican Council took note of the fact how man "rebels against death". Man dreads the breaking up of his body. He dreads the thought of forever ceasing to be. But by instinct he senses within himself the seed of his own eternity. It is not possible to have seen Msgr. Costello five minutes before his massive brain hemorrhage—the clear mind, the jaunty step. The agile tongue—and believe that his spirit died because the veins and arteries were no longer capable of containing that spirit. Indeed the more our bodies weaken each day, the more we long for life eternal. And our faith tells us that this is precisely what John Costello possesses now. Christ promised him and all his faithful sons just such a resurrection. Which is why believers are told: Cleave to God through union with his Son Jesus Christ. Indeed the Second Vatican Council has declared that the very dignity of man "rests above all on the fact that he is called to communion with God."

May the second lesson of this mass be a rekindling of our faith in that final resurrection which belongs to all of Christ's faithful servants.

But it is Msgr. Costello the priest that merits our preeminent attention. Here was a priest in the classic tradition. He held a place in the ranks of those priests who have made the church in America the envy of the Christian world. No less a person than Pope Pius XII in commenting of the flowering of the faith in the United States and looking for causes-on the 150th anniversary of the establishment of the American hierarchy—pointed his finger to the first cause, to American priests who "by their active collaboration in the sacred ministry sowed the precious seed which ripened to abundant harvest of virtues.' Michael Costello was at the heart of that tradition when it was in full bloom.

Thank God we have priests like him.
Thank God, too, that they have earned the affection of American Catholics.

Thank God it is still our instinct after ordination—an instinct, not a rule prescribed by authority, not a doctrine set out in a book—an instinct, mind you which blooms self-sown from the soil of Christian plety to crowd around the newly ordained, to kiss his hands while holy oil still glistens there, to seek his blessing before those hands are soiled by earthy use.

Every priest at his ordination lies down stretched out at full length, not unlike the extended body of your beloved pastor here. At that moment yields his body, mind, emotions and powers to Christ, to be Christ's instument, as if he had no life or will of his own. And when he does rise from the cold floor of the cathedral to face his bishop, he finds his hands tied together in the bishop's a token that henceforth he is captive of Jesus Christ, his faithful servant, his salt of the earth, his light of the world. John Costello was a priest long before the Second Vatican Council specified him as "a co-worker of the episcopal order." But from June 2, 1928 onward, a principle of that recent council was his very own, viz, "Faithfulness to Christ cannot be separated from faithfulness to his Church." Others may divide their loyalties in strange ways. But John Mitchael Costello-never.

Msgr. Costello's unique opportunities to serve well or to be an unfaithful priest were many. When he was sent to the Catholic University of America for advanced study he became a doctor of canon law. When he returned in 1930 and was told to be a

curate at Annunciation Parish in Manhattan, he was a good curate. When after Archbishop Spellman's arrival in New York he was made a judge and then chief judge of the matrimonial curia, he became what one man called "one of the finest legal minds in the American Catholic system of juris-prudence." A man with the unique knowledge and ability to know how and when the law of the church bound, and when that law loosed. Few men have had the opportunity to leave behind as pastor the memory of a renewed and refurbished St. Augustine's parish in Ossining and a veritable contemporary temple of worship here at St. Brendan's. Even during later years he continued the specialized interests of his younger days. He read the documents of Vatican II. He took seriously the admonition of the Sacred Synod which "Directs the attention of pastors of souls to their very grave obligation to do all in their power" to see that the faithful, especially the young, "who are the hope of the Church" received sound Catholic education. He was quite particular about the text and teachers of religious education.

He also was one of the few pastors who remembered that when Pope John XXIII announced on January 25, 1959 there would be a new ecumenical council, his first reason for the convocation was the hope that this would "lead happily to the desired and awaited bringing-up-to-date of the Code of Canon Law." One of the few pastors, too, who followed the legislation which ensued from each of the sixteen council documents, this explains why at the time of his death he was pursuing their application to certain aspects of parochial affairs in the United States.

Some of his other accomplishments—like his scholarly interest in English literature—will forever be hidden underneath the routine character of the many things he did often and well, deeds which because of their doing explains why the church is more universal than the local community here at St. Brandan's or at St. Augustine's. The parish priest is almost exclusively a living document. His history mostly dies with him. The only archive in which his full story is recorded is the infinite mind of God, who sees and remembers eternally, even when all others have forgotten. The real work of any good parish priest will be known only on the last day.

There is an effort which began outside the church and now unfortunately has taken root inside of the church to remove the priest from his pedestal. Not long ago a cultivated Irishman wrote that the church—

"Made of the newly ordained priest a veritable caricature of Jesus . . .

"The fresh faced, narrow-minded, fundamentally fearful, newly ordained priest was an object of wonder and near worship, clean with supernatural cleanliness, and a fleshly revelation of God for the faithful, while remaining for himself a mine of indescriminate desires and carefully covered-over ignorances."

This recent judgment comes with ill-grace from one who has already abandoned his priesthood with finality and does not describe John Michael Costello nor most of the priests who year after year said their first Masses in parishes like Our Lady of Good Counsel. These men were well aware that they were earthen vessels, weak and foolish instruments of a wise and confounding Lord. They know just the same that their priesthood, like Christ's was "Holy, innocent, undefiled, separated from sinners, higher than the Heavens (Hebrews 7:26)." To injure that priesthood was to injure Christ himself. Without that priesthood they understood Christ's work remained undone.

We have been brought together here as friends through the priesthood of John CXXIII—665-Part 9 Michael Costello. May he live in our memory and the associations continue. Let us leave him in the hands of God, praying only that the faults of his earthly life may speedily and mercifully be forgiven him; that we for whom the memories of our priesthood are intertwined with the recollection of his friendship and his kinship, may be true to the Catholic faith in which he died, to be worthy when our time comes of that vision in which he now lives.

The day after John Costello died Msgr. Francis Costello went to his brother's room in the rectory and found open on the pastor's desk a letterhead reading: Annunciation Rectory, Eighty-eight Convent Avenue, New York City. The notations, written in his hand said:

"Retreat note-1936" and read as follows:

"God is my Creator.
I am his creature.
I belong to him entirely.
He owns me.
I must do as he commands.
He has commanded me.

In common with all men I owe him certain duties.

As a priest, I freely undertook a more im-

portant office.
The salvation of souls.
I will do my best."

This truly was a priest of Jesus Christ.

HORSE CENSUS BILL

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. BRECKINRIDGE. Mr. Speaker, I am honored to present before the Congress of the United States a bill to authorize the Secretary of Agriculture to conduct an enumeration of horses starting in 1978 and in every fifth year beginning after 1978.

As a Representative of the Sixth District of Kentucky, I am proud of the contribution horses make to the Commonwealth of Kentucky. Our State is one of the 6 leading States in horse population, containing over 20,000 thoroughbreds on more than 400 thoroughbred farms valued at over half a billion dollars.

Accordingly, I wish to focus on the importance of conducting a national horse enumeration. Accurate data about horses are of national importance, because of the dimensions of the horse industry in the United States. Currently, the American Horse Council estimates that:

First, combined investment and annual expenditures of the horse industry amount to more than \$13 billion;

Second, horse owners spend nearly \$7 billion annually on feed, equipment, drugs, services, and related items;

Third, total Federal, State, and local revenues from racing and related industries approach \$1 billion annually;

Fourth, there are approximately 3.2 million horse owners in the United States; a majority represent middle- and low-income families who own horses for recreational purposes. There are over 200,000 breeders of registered horses; and

Fifth, more than 320,000 boys and girls are engaged in 4-H horse projects.

Mr. Speaker, an industry as large and important as the horse industry requires reliable basic and current raw data in order to function properly, the linchpin to which must be an accurate inventory of the horse population. Responsible financial planning in the industries that supply goods and services to horse owners is greatly complicated by the lack of information.

A dependable horse enumeration is, also, particularly important to the successful combating of disease. An epidemic like Venezuelan equine encephalomyelitis could reduce the horse population overnight. A more precise knowledge of the number and location of horses is essential to the conduct of adequate health research, vaccination, and control planning.

The present way of conducting a horse enumeration is cumbersome, incomplete and inaccurate. The Bureau of the Census will conduct an agricultural census in 1978 which will include a count of horses but only on farms. No inventory will be taken of the countless numbers of animals used as pleasure, racing, or other types of equine pursuits. In 1969, for example, the Bureau of the Census mailed out over 13 million forms to elicit information from 4.1 million persons. By the time the information was assembled it was obsolete and of little value. Moreover, such procedures unnecessarily antagonize farmers, who were required to answer up to 750 questions or face criminal penalties.

The Statistical Reporting Service in the U.S. Department of Agriculture, which now conducts crop and livestock surveys, excluding equines, has a superior capability for obtaining necessary agricultural information in a way that would yield more accurate results and cause less wear and tear on our farmers. The Reporting Service has well-trained personnel, accustomed to working cooperatively with the States, who would utilize sampling methods involving interviews with a relatively small number of farmers. In 1973, for example, the Statistical Reporting Service designed a pilot project to collect national statistics to provide estimates of equine population by breed and primary use. Unfortunately, no funds were made available for even this pilot project.

Despite the lack of adequate funding for a national equine enumeration, the State of Kentucky, in cooperation with the Kentucky Horse Council, the Kentucky Department of Agriculture and the Louisville Office of the U.S. Department of Agriculture's Statistical Reporting Service, appropriated money by the general assembly to conduct a survey of Kentucky equines. Heretofore, information on the Kentucky horse industry had been obtained utilizing either limited information or opinions of industry leaders.

The Kentucky project is designed to provide information on the total number of horses in the State, the number of horses by breed and use, the location of horses by region, the number of horse operations by type-farm, nonfarm, boarding stable, and so forth-the number of acres associated with the Kentucky horse industry and the number of horse owners. A questionnaire is currently being developed and will be mailed this summer. This is the type of information that is needed on a national level.

Mr. Speaker, I am proud that the State of Kentucky has taken the lead in cooperating with the USDA's Statistical Reporting Service to produce a Federal-State-local horse enumeration. We must now broaden this approach to a national level. The Kentucky Horse Council informs me that the Commonwealth's general assembly allocated over \$56,000 for the horse sampling. The USDA's Statistical Reporting Service, in designing their 1973 proposed "national equine statistical program." estimated that for the first 3 years of the sampling over \$1 million would be needed annually to produce an accurate horse enumeration.

Mr. Speaker, my legislation calls upon Secretary of Agriculture, Bob Bergland, to utilize the Statistical Reporting Service's fine offices to conduct a national equine enumeration in 1978 and every 5th year thereafter. The data collected in each enumeration should be published in the public domain and the Secretary. may, if he so desires, utilize the sampling method of statistical reporting.

The pilot project in the Commonwealth of Kentucky can serve as a useful guide on a successfully run project in this area. In addition, my bill would appropriate \$3 million for the fiscal year ending on September 30, 1978, and \$600,-000 for each fiscal year ending after such date in order to adequately accomplish the national goal of conducting a successful, informative national horse enu-

I urge the support of all interested citizens and Members in promoting the purposes and provisions incorporated in this piece of legislation.

H.R. 5935 follows:

H.R. 5935

A bill to direct the Secretary of Agriculture to take an enumeration of horses in 1978 and every five years thereafter

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of Agriculture, through the Statistical Reporting Service of the Department of Agriculture, shall, in 1978 and in every fifth year beginning after 1978, take an enumeration of horses in the United States

(b) The data collected in each enumera-tion taken under this Act shall relate to the year immediately preceding the year in which such enumeration is taken.

(c) The Secretary shall publish the data collected in each enumeration taken under this Act.

(d) The Secretary shall, if he or she considers it feasible, authorize the use of the statistical method known as "sampling"

taking an enumeration under this Act.

(e) As used in this Act, the term "United States" means the several States and the

District of Columbia.

SEC. 2. There are authorized to be appropriated to carry out the provisions of the first section of this Act \$3,000,000 for the fiscal year ending on September 30, 1978, and \$600,000 for each fiscal year ending after such date. Funds appropriated under this Act shall remain available until expended.

TRIBUTE TO J. EMMETT BALLARD

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. JONES of Tennessee. Mr. Speaker, would like to take this opportunity today to honor Mr. J. Emmett Ballard, a Jackson, Tenn., attorney, who has recently passed away.

For decades Emmett Ballard served his State and his community with dedication and determination. In 1951, he was named "Man of the Year" by a civic group for his efforts in bringing public housing to Jackson, and he was the first to receive the Lane College Black Heri-

Emmett Ballard was a man of understanding, patience, and gentle spirit, and he will be sorely missed by all who knew and respected him.

I would like to insert the following two articles that appeared in the Jackson Sun newspaper on March 24, 1977:

TRIBUTE TO J. EMMETT BALLARD

J. Emmett Ballard, longtime Jackson attorney, civic, industrial and community leader, died late Tuesday at Jackson Specialty Hospital after a long illness.

He had been practicing law here for about 42 years, and for most of that time he was

Jackson's only black lawyer.

66-year-old attorney, decades of community service, sought to cap his career by being elected city judge in November 1976—a race he lost to Jack Woodall. If he had won the campaign, he would have become the first black elected to city office.

A native of Madison County, Mr. Ballard was a graduate of Lane College and received his law degree from LaSalle University.

After word of his death spread through the community early today, several members of the Jackson Bar Association, of which Mr. Ballard was a member, commented on his life.

Former district attorney David P. Murray. who said he regarded Mr. Ballard most highly as a person and fellow attorney, called Mr. Ballard "a fine, Christian gentleman, outstanding member of the bar association and fine civic leader and church workeraround good citizen."

'He was fair and his word was his bond.' said City Judge Jack Woodall. "I never dealt with a more pleasant person. And as my opponent in the city judge's race, he was fair and honest in his campaign."

"We've lost a good member of the bar," said Atty. H. T. Etheridge. "He was a topnotch lawyer and well thought of by every-

Mr. Ballard served on boards and commissions under every governor from Frank Clement to Ray Blanton, and every Jackson mayor from A. B. Foust to Bob Conger. He was the first to call a meeting in Jackson in interest of public housing.

He was secretary to the Madison County Election Commission, a charter member and twice chairman of the Tennessee Human Development Commission. He served on the Tennessee Manpower Commission and the Manpower Control Commission.

Mr. Ballard was chairman of the Head Start Advisory Committee, chairman of the board for Opportunities Industrialization Center (OIC) and served on the Jackson Industrial Development Commission and the Health and Education Facilities Commission.

He was a delegate to the Democratic Na-

tional Convention in Chicago in 1968, and was an honorary colonel on the staff of the late Gov. Buford Ellington.

He was also a longtime member of Mother Liberty CME Church. He was a steward and member of the church's board of trustees.

In 1951, Mr. Ballard was named "Man of the Year" by a civic group for his efforts in bringing public housing to Jackson, and he was the first to receive the Lane College Black Heritage Award.

His survivors include his widow, the former Magnolia Pharr of Jackson; a daughter, Marion Hodge, a counselor in the city elementary schools; and a son, Franklin Ballard, a counselor at North Side Junior High and a member of the Madison County Court.

Funeral arrangements for Mr. Ballard are incomplete. Ford Funeral Home is in charge.

J. EMMETT BALLARD

After 66 years, J. Emmett Ballard-husband, father, church leader, lawyer, and civil rights leader--has departed his beloved city.

As a black lawyer, he could have moved to greater financial gain elsewhere. But he stayed because he saw his own special rewards here, because of his heartfelt dedication to Jackson's future.

He was a man who deeply felt the inequi-ties and wrongs about him. These he sought to end not by storm but by steady determination and gentle persuasion. If some men can be likened to mountains, J. Emmett Ballard was a quiet stream with a subtle but unrelenting force capable of great

For decades Jackson's single lawyer of his race, he recognized his special role in a community that had its share of walls erected by racial prejudice. While those in other cities sought to obliterate their own walls through explosive force, Ballard patiently scraped, tapped and chipped.

After 40-plus years the barriers were still there, but at least he could see over them and sought to test them during his last months of life. In his try for city judge last November, race distinctly was not an issue. If anything, age and frail health edged him out of his single but impressive bid for public office.

Yet he served his city well as organizer and leader of numerous community projects. That influence went beyond Jackson's borders, to the state level where he served on a variety of boards and commissions. His of accomplishments is long. Foremost of all his achievements were his understanding of others' attitudes and his patience, which were a model for all people.

Jackson has lost a valuable citizen. For-

tunately, his gentle spirit lingers.

A TRIBUTE TO GEORGE GORDON

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. MILLER of California. Speaker, on Thursday evening, April 14, the many friends of George R. Gordon will gather together to pay tribute to him as he retires from the Contra Costa County Community College Governing Board. The tribute, in which I join, is well deserved.

If any one person can be credited with brought quality community having based higher education to our area, it is George Gordon.

When George first took office in Jan-

uary 1949 as president of the original college board, our community college system consisted of a few surplus quonset huts in a field serving several hundred returning GI's. Twenty-eight years later, our Contra Costa colleges can boast of three magnificent campuses, a faculty comparable to that of any community college in California, and 34,000 full-time and part-time students.

The colleges send out several thousand well-prepared students to 4-year institutions each year. Thousands of Contra Costans have learned skilled trades and have entered technical professions through the community college system. Thousands of others are part-time students who have the opportunity to experience learning for the simple unmitigated joy of it. Our colleges are also a basic community resource, adding to the cultural life of our country.

All of this has been accomplished under the enlightened leadership and firm guidance of George Gordon. In his 28 years of uninterrupted service, seven times elected president of the board, George Gordon—unflappable, untiring, unequaled—has earned the everlasting respect and gratitude of his fellow Contra Costans.

INDIANA WINNER OF VFW VOICE OF DEMOCRACY SCHOLARSHIP PRO-GRAM

HON. DAVID L. CORNWELL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. CORNWELL. Mr. Speaker, on March 8, I had an opportunity to meet an exceptional young man from my district in Indiana. Monty Kris Woolsey was in Washington to be honored by the Veterans of Foreign Wars for winning the 1976-77 VFW Voice of America Scholarship Program in Indiana. Monty is a senior at the Jasper High School in Jasper, Ind., Dubois County. He plans to attend Wabash College, and thereafter study law. Besides being a member of the National Honor Society and Who's Who in American Music Students, Monty is an excellent debator having cocaptained his debate team and winning the Bicentennial Youths Debate. I am sure, Mr. Speaker, that you and my fellow colleagues will find Monty Kris Woolsey's winning address most stimulating and most rewarding in knowing that this is the way the younger citizens of my district regard their Government and their country. I have nothing but the greatest pride in this upstanding young gentleman.

The address follows:

ADDRESS BY MONTY KRIS WOOLSEY, INDIANA WINNER OF 1976-77 VFW VOICE OF DEMOC-RACY SCHOLARSHIP PROGRAM

I must have eaten too much pumpkin pie before retiring this past Thanksgiving night. Or, maybe it was the thoughts about that first Thanksgiving and what it has meant to us Americans that affected my sleep that night. For, as I slept, a nightmare overcame me. I was living in a country called Russia, then in Czechoslovakia, and Germany. I was living in Socialistic Countries where every major aspect of my life was controlled by the Government. Where I ate, where I slept, where I went, what I could say, what I could do, what I wrote, what job I had, who I met, who I could talk to, who I could marry ... Everything was decided for me. The right to exercise my free will was gone.

The feeling caused by this nightmare was horrifying. It tormented my mind and it gnawed at my insides. My head was spinning, I was tossing and turning trying to escape. Then suddenly I sprang up in bed. I was wide awake. My pillow was damp from perspiration, and—could it be? Yes, tears! I had actually wept.

I walked to the window and stared out into the sky. As I looked at the moon and the stars, the anguish caused by the nightmare began to fade and I began to smile. Although it was dark, I realized that I was in America, not Russia, or Czechoslovakia, or Germany. America, the land of the free and the home of the brave. The land ruled by democracy. And as I stared at the stars a while longer, I realized that in America we have opportunities. We have a chance to succeed. Our lives are not controlled by the Government. We have a will of our own. We have the right to do what we please. We have freedom of speech and the right to belong to the religion of our choice.

I understood what America must have meant to those Pilgrims who celebrated that first Thanksgiving. It meant for them much the same as it did later for Francis Scott Key who wrote our "Star Spangled Banner", as it did for Henry Carey who wrote, "America", as it did for Kathy Bates who wrote "America the Beautiful".

America is an abstract word that symbolizes a very unique environment. The environment of Democracy, freedom, love, free will, nationalism, the opportunity to do as we please, an environment of togetherness and pride. Pride because we want and we love the democratic society that our forefathers fought so strongly for. Pride because we know what joy and happiness living in a democratic society can bring us. We know

we know what joy and happiness living in a democratic society can bring us. We know that we can go to our friends' houses. We can go to the show. We can choose our vocation, set goals and try to accomplish them, then later achieve them. Our lives are not stinted by Socialism. No, we are enhanced with the ability to grow and to prosper.

Our thanks and our source for this immense opportunity is the word and the place called "America."

Being content with my new understanding of the word "America", I went back to my bed and I soon fell into a deep and peaceful sleep.

THE AMENDMENT TO THE SICK PAY EXCLUSION ACT OF 1976

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. DODD. Mr. Speaker, yesterday the House gave its approval to legislation which I believe is of vital importance to millions of retired and disabled persons throughout the country.

The bill, H.R. 1828 will eliminate a provision of the Tax Reform Act of 1976 which excludes most disability payments from the category of tax-free income for 1976. If not amended, this portion of the Tax Reform Act of 1976 would have re-

sulted in great hardship for those who can least afford to pay additional taxes: disabled retirees living on fixed incomes.

Prior to the passage of the Tax Reform Act of 1976, disabled retirees could exclude up to \$100 weekly in disability compensation when computing their Federal tax liability. The Tax Reform Act eliminated this exclusion clause retroactively to January 1, 1976, except for lower income disabled retirees who are under the age of 65 and permanently and totally disabled. If we had not voted in the House to amend this law, those people who receive disability payments and budgeted and planned during 1976 under the assumption that they would be able to deduct this income from their tax returns would have been faced with an unplanned-for expense on April 15. In many cases, increased fuel bills have already drained the savings accounts of many people on fixed incomes. It would have been unfair to saddle these people with an additional tax burden in times of economic uncertainty.

Under H.R. 1828, the provisions of the Tax Reform Act of 1976 will be delayed for 1 year and will go into effect for taxable years beginning after December 31, 1976. This legislation will provide taxpayers with the option of waiving the delay and filing this year using the new disability income exclusion or a new annuity income exclusion system.

As one gentleman from my home State

of Connecticut writes:

I was disabled as of August 5th, 1975 and not able to work. I am still disabled. I became sixty-five on July 14, 1976, and retired on a company pension on August 1 of last year. I will be hard-pressed to pay the federal tax on the \$100.00 per week that I received as disability leave pay from January 1 until August 1 of 1976.

The House has met its duty to enact legislation which answers to the needs of the people by passing H.R. 1828. I am sure that the passage of this bill by the House will come as most welcome news to many Americans.

AG-LAND FUND-1

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. AKAKA. Mr. Speaker, I would like to take this opportunity to note my approval of the decision of the Continental Illinois National Bank & Trust Co. of Chicago, and Merrill-Lynch, Inc., to withdraw their proposed Ag-Land Fund-1. I believe that the sponsors of this proposal accurately reacted to public opinion on this issue.

I voiced my disapproval of this plan during subcommittee hearings, for I believed that the fund did not deserve taxexempt status. Since it is an active, rather than a passive trust, it did not qualify for the special tax status.

The trust, furthermore, would have had a substantial advantage over other investors who have their land and income taxed. Land prices which already are high would have gone even higher. Young people who were interested in becoming farmers would not be able to afford the price of land itself. Moreover, they would not easily find land to rent since the corporation controlling the land would consider these young people as poor credit risks.

Trusts such as Ag-Land Fund-1 benefit those who run the trusts and not the American farmer. We should be alert to such proposals which diminish the im-

portance of the family farm.

MARGARET MEAD: AMERICAN FAM-ILIES IN THE FUTURE

HON. PAUL SIMON

OF HAINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. SIMON. Mr. Speaker, in mid-February over 70 of our colleagues were fortunate enough to hear Dr. Margaret Mead speak about the future of the family. Our dinner meeting was sponsored by the Congressional Clearinghouse on the Future as part of the ongoing series of "Dialogs on America's Future."

It is my pleasure, Mr. Speaker, to insert Dr. Mead's comments to us that night into the RECORD. Her presentation was stimulating and provocative, and I am pleased to share this transcript with my colleagues. The text of her comments

follows:

THE FUTURE OF THE FAMILY

Thank you for inviting me to be with you tonight. I have been asked to talk with you about the future of the family and I am happy to do so because I believe that no society can develop without the family. Therefore, if we use the family as a touchstone to look at what is happening in the society as a whole, we can get a pretty good idea about what is going on. Today some nine million households are fatherless; some one million girls are runaways; and three million teenagers have no one who will be responsible for them. We call this last group "door-step children."

America's families are in trouble. There can

be no mistake about it.

People are willing to spend thousands of dollars to imprison juvenile delinquents, but are not willing to spend that money for the children in families, through school cost, community center costs, etc. Why do we keep supporting institutions which turn juveniles into criminals?

It implies that there is a hatred of children in our society. We invented juvenile delinquent courts because the older court system looked so harsh to us. We invented juvenile delinquency detention homes because our prisons were such horrible institutions. We invented the junior high school because our high schools were too large and got to be violent and hostile places. And we invented suburbs for our children because we were afraid to keep them in our cities.

Today when a child is abused in a family,

we take the child away from the family instead of trying to help the family cope with their anxieties and frustrations. Children are a part of society, not separate from it. And we need to think about their future.

If our prisons are horrible, let's fix them. If the high schools are bad, let's make them smaller and more humane. If our cities are unlivable, let's make them habitable again. In short, let's look at the whole system.

Three years ago, Vice President, then Senator. Mondale held hearings on the family and children, and his consultants suggested that we have family impact statements attached to all legislation which might affect the family. Unfortunately, impact statements have been wrecked by the industrialization of research, and the agencies which should be writing the impact statements are not writing them. Instead, they are hiring consultants to write the statements for them.

But if you could write good impact statements about the family, it would be a good idea. When the Department of Housing and Urban Development decided to build housing for the elderly, they would have to ask the question, "Will it be possible for these people to be human again if we build these

buildings?

The Internal Revenue Service has provisions that make it undesirable for college age children to marry, and so many of our young people are living in what have come to be known as "arrangements". If they get married, they can't be counted as dependents anymore, and so their parents accept the "arrangement" idea.

One out of three marriages ends in divorce in America, one of the highest percentages in the entire world. And so we can see that families are in trouble, and we need to help them because there is no other way that we know where we can turn babies into human

beings except in the family.

QUESTIONS AND ANSWERS

Q. It seems to me that history rewards individualism. Isn't there a contradiction between this historical experience and your belief that the family is a touchstone?

A. No, because all individuals had families. People in the United States lived, not as individuals, but as pioneering couples. There were whole networks of families. The concept that we all came from a bunch of individualists is mythology. If you want exploration, you send out men alone because they will always come back. If you want colonization, you send out men and women

together. They will stay.

Q. What kind of questions would be asked in an impact statement on day care?

A. Will it permit women who need to work to work? Will it provide for the care of children? Will it provide for the residential care of all children? Will it provide local care in case of emergencies? What happens to children in day care facilities which have no continuity?

The only justification for day care is the fatherless household. Nine million households are fatherless in this country. That is over times the number of people who founded this country. And there is no way you are going to get those nine million men to go back to their families and start providing for them.

Q. In the developing world, the extended family still exists. Yet in our country welfare has taken over as a form of caring for family members. Why has this situation developed here? Why did the extended family

A. Because nobody liked it. For half a million years people lived with their relatives whether they liked each other or not. But as soon as they got the idea that they could leave, they left, from the villages to the cities. Of course, the extended family had advantages. But we need a new form. We need elected families where we can choose to live with the relatives and friends we like, and skip those we don't like. We need to build new towns where people can elect to live together because they want to be together.

Q. What is the family unit we are trying to preserve?

A. Men and women living together to bring up children. In the 50's we made people get of people married and we were suspicious who didn't get married or said they didn't want to get married. That is changed now. But the family is still needed to bring up children. Every human society has had families. There have been great varieties in the ways in which families have been organized within the community. We need to plan our housing so that people can live in communities so that we can care for each other.

Q. What impact will the ERA have on

families?

A. One of the difficulties about the ERA for me is that I wonder how many jobs men will take away from women when they pass the ERA. We have to pass it, of course, but I don't like to have to pass it. We have tried to legislate human rights and you can't do it. We have taken the civil rights positions and applied them to all groups old, the young, women. There is a difference between men and women that can't be legislated. For one thing, as far as we know, men cannot bear children. Some of them try to, but as far as we know, they can't.

Q. If tomorrow you were elected to Con-

gress, what would you do?

A. I would tell the people that Members of Congress are intelligent people, because the people of this country don't know that. They have no idea of what goes on in committees. They don't know that Members of Congress went to high school and college and law school and studied politics. They don't know how hard Members of Congress work. So I'd let them know that Congressmen and women are bright, educated people.

Then I would try to develop some cross

communication. Committees fragment life. I would try to work within the Congress to

change that fragmentation.

Q. How can we encourage caring in our society?

A. People become caring individuals when they have something to care for. If you want adults to be caring, see that they have children to care for and be responsible for, and set up communities where people can for each other, where single people will have a place to live that is related to children.

There can be no caring society without

children in it.

Q. Is there more caring in adversity than in prosperity?

A. We don't know how bad affluence is for people, but we suspect it's pretty bad. It's true that in hard times people tend to be more optimistic. But if people are too miserable, too poor, too hungry, their capacity to care goes down. And if they are too rich, their capacity to care goes down, too. For the last 15 years, Americans have been fending off food, and so it is hard for us to imagine people starving.

Q. How much time should be devoted to

children?

A. Between 18 and 20 years. And people shouldn't have children if they are not willing to spend that time raising them. We don't have to spend our whole lives parenting now, just a sector of our lives. Most men in our world spend their whole lives working to support a family, but today parenthood is part of an adult life, not all of it.

Q. Members of Congress have to do something about those in our society who are the "put-outs"—the elderly and the battered children, as two examples. What can

we do?

A. Deal with a large enough unit in planning, such as housing, that you can make some impact on the problem. We need small scale housing where young people live near older people. We need to redesign cities. suburbs, new towns so that they will be more humane. There is no solution except to redesign our communities. Desperation is produced by situations. Congress can change the situations.

Q. How can we combat juvenile delin-

A. Juvenile delinquency is not combatible. That is not the question we should be asking. We need to look at what kind of society

we need to build so that we won't have juvenile delinquency. What do we build to produce the kind of people we want to have in our society? If we just patch up the old sys-

tem, we won't solve the problems.

Q. Is there anything beyond housing?

A. Yes. Adequate pay. We can't reform society overnight. We need to reintroduce responsibilities for our children. We need to get them out of school if they don't want to be there and let them go back when they do. In the meantime, we need to give them reasonable jobs. Today, many of our schools are like prisons. And we need places for kids to run away to.

Q. What is the impact of television on the

family?

A. Well, television is bad for children because it doesn't require any participation. We are producing a group of passive children. But without television there would be no hope of reorganizing the world, because you can use television to look at interrelationships. We can look at television and see how others on the same planet live. Television will not go away and so we had better learn how to use it.

Q. It seems to me that new towns and communities would only confuse children more, rather than give them a sense of security. What do you think about that?

A. If children live in a large enough community (about 10,000) with enough family and friends around, they can cope with differences. We need to create communities that have sufficient stability so that children can be protected against the vicissitudes in particular families. Unless we set up frameworks for families to be protected, there is no use working on anything else.

Q. How can we maintain a high degree of

integration in large communities?

A. As we move from metropolis to megalopolis, let's not make the megalopolis look like the metropolis. We can make small communities within large ones and within that one build neighborhoods. We can divide cities up into manageable areas so that our families will be able to survive. And we must insure the survival of our troubled families if we are to survive as a country.

BICENTENNIAL IMPRESSIONS

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. GILMAN. Mr. Speaker, while our Bicentennial Year is now secure in the annals of our Nation's celebrated past, the spirit of America's 200th birthday continues to guide and encourage us as we face a full agenda of difficult issues to be dealt with during our Nation's third century.

I recently received a thoughtful essay written by Gerry Mirabile, a high school student in my district. Forwarded by his history teacher at the Spring Valley Senior High School, James Robbins, this succinct paper alerts us to the "natural and unspoiled wilderness lands" that have been painstakingly preserved even as the bounty of our technological and scientific knowledge has increased manyfold.

I would like to share with my colleagues, the following essay focusing on that part of our heritage which evokes from all Americans "a strong feeling of nationalism and pride in our good land":

My BICENTENNIAL IMPRESSIONS (By Gerry Mirabile)

On the surface of it, one would think that the Bicentennial year just ended, with its many special events and productions geared toward celebrating the two hundredth birthday of these United States, would be enough to instill some sort of nationalism

in nearly every American. Not so.

After a goodly number of years having been spent in the study of the history of these United States, and having had the historical impressions of numerous authors implanted in my head, I, not having any particular liking for history, was contented with my acquired knowledge up to this point, with no aspirations to expand on that knowledge. Yet, as the Bicentennial year dawned, I felt I should be ready to consider the impressions of others concerning this event, as well as develop my own impressions, and then to interpret what relevancy, if any, they had to my own life as an American citizen.

The most outstanding and, in my opinion, inequitable facet of the entire event was the lucrative end. An inexplicably massive number of people were grossly mislead into pur-chasing a number of nice but rather useless bicentennial "mementos", after having been laden with many erroneous ideas concerning the true meaning of the commemoration namely, pride in what this country has accomplished and stood for during its first two hundred years of freedom. Such was the case with a large percentage of the populous who fell easy prey to many unscrupulous people ready to exploit them at every turn. As it were, however, the monetary aspect proved the exception, not the rule, in a celebration which was characterized by a sense of unity previously surfacing in our nation only in times of turmoil.

One aspect of the total event, resultant of the large amount of technological and scientific knowledge acquired during the past two hundred years, was the large variety of special exhibits initiated to highlight many the recent advances made in various fields of research, many of which I myself had the opportunity to attend. It was this display of nationwide achievement, this show of diverse people meshing to become one cohesive unit, dedicated to the betterment of mankind, which afforded me some semblance of pride and nationalism. But still this did not merit my total allegiance to our nation during its two hundredth birthday. There had to be

The ever-present commercial segment of the celebration, more akin to the monetary than to the commemorative portion, nonetheless provided the people with a sense of jovial celebration. The mere cooperation needed to make all the planned dedications, ceremonies, and parades a reality was an awesome display of interest in the birthday of America. For my part, I noted this con-cern, and felt proud of the Americans who had put so much of themselves into the celebration. Yet I found it somewhat disheartening that so many had found their own superficial form of national pride from these events alone, when there was more.

During the July fourth weekend, I had the opportunity to tour Maine, Vermont, and New Hampshire, an unspoiled segment of our country which, although not totally representative of much of the country, is by no means peculiar in its natural beauty and unspoiled wilderness. It was upon observing this natural scene that I acquired a strong feeling of nationalism and pride in our good land. I called to mind the effort our people and legislators have made to preserve the same nature from which we all stem and on which we all must depend for our livelihood, and I, for my inspiration. I had at last found what relevancy the efforts of these people to endure all of two hundred

years, had in my life. For in the words of Ralph Waldo Emerson, "So much of nature as he is ignorant of, so much of his own mind does he not yet possess." This pres-ervation and endurance of natural beauty in these past two hundred years has helped me to find myself, and has given me some good reasons to be proud of our great nation.

THE CREATION OF AN OFFICE OF CONSUMER PROTECTION

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. LEVITAS. Mr. Speaker, I have today reintroduced legislation to establish an Office of Consumer Protection as an arm of the U.S. Congress. This bill would not create a new executive agency or another layer of bureaucracy. It would enhance the quality of protection which the American consumer would receive from the Federal vantage point.

In spite of the fact that efforts by the Federal Government to protect the interests of consumers date back at least as far as 1906 with the Pure Food and Drug Act, and in spite of the fact that the Congress has enacted numerous laws and established agencies, such as the FTC, the FDA, and the Consumer Product Safety Commission, designed to protect consumers, consumer protection in the Federal domain remains inadequate. Part of the problem is that these existing consumer agencies are falling down on the job they were created to do: Protect consumers. Far too often the regulatory bodies designed to protect the consumer have come to operate most effectively to protect business and industry instead.

Most people in this country believe that there is a need for better consumer representation in the Government, but average consumers, which most of us are, are usually not well organized and lack the money and expertise to have more than a marginal and intermittent effect on the decisionmaking done by the regulatory bodies and other Government agencies when it comes to consumer protection.

The current argument in Congress is not about the need for better consumer representation and protection, but the argument centers on the means which should be used to accomplish the goal; whether a new executive agency should be created or whether the numerous consumer protection agencies and laws which exist now should be strengthened and those laws vigorously enforced.

The existing regulatory agencies were created to provide consumer protection. If they are not doing their job, then the proper remedy is either to fire the laggards who are not doing the job or to provide more diligent, effective oversight by Congress to make them do that job. The solution is certainly not the creation of another executive agency.

It is duplicative and wasteful to create another new agency in the executive branch to advocate consumer protection to other agencies in that self-same exexecutive branch, agencies which are supposed to be watching out for consumer interests in the first place.

The primary responsibility of protecting the consumer lies within the authority of the existing executive and independent agencies. The FDA, FTC, Consumer Product Safety Commission, FPC, CAB, and many others, are all consumer protection agencies. But if they do not perform properly—and many do not—then it is a responsibility of the Congress to see that they do. This can be done and should be done as an ongoing part of our oversight jurisdiction.

Accordingly I think it is far wiser to create an Office of Consumer Protection which serves as an arm of the Congress, patterned after the General Accounting Office, which has maintained an excellent record for reliable, effective work. My proposal is for an office which would extend and regularize the traditional oversight we exercise in the Congress into the area of consumer protection in the same manner in which the GAO keeps watch on other Government activities.

Because the office I propose would be affiliated with the elected branch of the Federal Government, it would be inherently responsive to the public, unlike an agency which is part of the executive branch. Why should we think that another executive agency will do any better job than the other executive agencies already in existence? Why compound the problem instead of solve it?

There is very serious danger which exists in the creation of a new executive agency labeled "Consumer Protection." The obvious danger is that such a modestly funded agency would never be able to handle the hundreds of thousands of consumer grievances which would pour into it. The public is being sold a bill of goods when the claim is made that the proposed new executive Consumer Protection Agency will handle and solve their consumer complaints. It cannot. It will not. It is, therefore, a hoax on the American public and is being misrepresented in order to get public support for the creation of this new executive agency that has an entirely different purpose. When these unanswered consumer complaints pile up into a huge unresolved backlog, the American public will realize it has been had and deceived with false promises. The public's cynicism of a lying government will be rekindled.

In the end, the proposed new executive agency would itself be a "consumer fraud" perpetrated against a public who had been led to believe that a mechanism had been created to take care of their complaints, bringing a new, improved brand of consumer protection. In fact, the proposed executive agency is not designed to solve consumer complaints received from the public. It is not designed to add any new consumer protection at all. Let me repeat that: The proposed executive branch consumer agency is not intended or designed to create any new consumer protection at all. Indeed, the greatest consumer fraud which may be abroad in the land is the proposal to create a new consumer protection agency in the executive branch.

The Congressional Office of Consumer Protection would make congressional oversight of consumer protection responsibilities in the Federal Government an effective effort and prod the existing executive and independent consumer agencies to do their jobs. There would be no creation of an additional, cumbersome, ineffective agency just as-unresponsive as the so-called consumer protection agencies which now exist.

There is a very real need for consumer protection, and I have consistently voted for and supported consumer interests as vigorously as possible. The people in my district and across America want and need-and deserve-effective, meaningful consumer protection, but they are equally clear about not wanting another brand new executive agency. We need less Government-not more Government. At a time when we have a President who wants to make Government smaller and restrict the number of agencies, it is inconsistent to advocate the establishment of a brand new agency. At a time when we have a President who wants to eliminate the overlap and duplication of functions in various agencies, it seems bizarre to advocate a new, executive agency whose real function is not to provide one iota of new consumer protection but whose purpose is to get existing agencies to do what they are already supposed to do.

The legislation I propose would permit us to have effective consumer protection through effective oversight by the Congress, whose Members are elected by and responsible to the public. The Office of Consumer Protection will represent the rights of consumers and give them a long-needed advocate in the Federal establishment, an advocate who will have the authority to go to the agency involved, investigate the problem, and have it perform the task it was set up to do. What is needed is better consumer protection and not another new agency in the executive bureaucracy. My proposal for the Congressional Office of Consumer Protection consists of the following

(a) The establishment of the Office of Consumer Protection as an office of the Congress.

(b) The powers and duties of the Director, appointed by Congress.

(c) The functions of the Office in perform-

ing its responsibility of consumer protection.

(d) The procedure to be followed in han-

dling consumer complaints.

(e) How the consumer will be represented, authority for the Office to intervene as a party in a proceeding to represent consumer

interests.

(f) Authority for the Office to inform con-

sumers of its existence.

(g) Authority for the Office to encourage the development of testing procedures to be used in investigating products and services to consumers.

(h) The authority to investigate and gather information on consumer fraud.

My bill is comprehensive, thorough, and will fill the gaping hole in consumer protection. I earnestly seek your support for this much-needed measure.

ADDITIONAL FEDERAL JUDGESHIP

HON. STEPHEN L. NEAL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. NEAL. Mr. Speaker, on January 24, I introduced legislation to provide an additional Federal judgeship for the middle district of North Carolina. Certainly such action needs to be taken to provide relief for our overworked judges and court officers, but even more importantly, to provide the kind of justice our forefathers envisioned. I firmly believe that swift justice is not only basic to our system of jurisprudence, but is also a deterrent to crime.

At this time I would like to enter into the Record my statement for the Subcommittee on Monopolies and Commercial law, which in recent weeks has been considering the omnibus judgeships bill:

STATEMENT OF HON. STEPHEN L. NEAL

Mr. Chairman, I appreciate the opportunity to present briefly my views on the need for additional federal judgeships in the United States Courts.

I have no intimate knowledge of situations which exist in states other than North Carolina, but every iota of information I have been furnished by officers of the court, including the president of the North Carolina Bar Association, indicates that one additional judgeship is imperative in two of

North Carolina's three districts.

Mr. Chairman, I believe a part of the erosion of confidence in our system of justice over the past decade has resulted because our court dockets were so crowded. Litigants must wait interminably for their cases to be resolved. Witnesses, jurors, attorneys, defendants, plaintiffs are kept under obligation for unreasonable periods of time, often at considerable expense and trouble to themselves. Seemingly hurried trial procedures often leave litigants and the public with a feeling that due consideration has not been given, if due process not denied. In a great many instances, I am sure, legitimate complaints are not pursued because citizens feel

it simply is not worth the trouble.

I sympathize with overworked federal judges and other officers of the court, but I believe additional judges are needed not for the convenience of the courts, but for the public interest. After all, the courts control the calendar. The citizen before the bar, the witness, the juror, must patiently wait until the case is called.

Mr. Chairman, earlier in the 95th Congress I introduced a bill to provide for the appointment of one additional district judge for the Middle District of North Carolina. In preparing that bill, I studied the ten-year caseload in the U.S. District Court for the Middle District (Fiscal years 1968-1977). I found the following:

Total civil and criminal case filings increased from 502 in 1968 to 1030 in 1977.

Total criminal and civil cases pending rose from 206 in 1968 to 825 in 1977.

Weighted case filings per judgeship increased from 194 annually in 1968 to 567 annually in 1977. (U.S. average, all districts, was 265 in 1968 and 466 in 1977). All 1977 figures assume continued historical percentages of increase beyond December, 1976.

At the same time, the Clerk of Court of the Middle District provided a narrative summary of the need for an additional judgeship in the Middle District. That summary follows:

"U.S. DISTRICT COURT, MIDDLE DISTRICT OF NORTH CAROLINA

"Need for a third judgeship

"Increase in Case Filings: In the last half of the 1960's, the total case filings (other than bankruptcy) were about 500-600 per year. In the 1970's there has been a steady increase in filings (see attached chart) and an increase in the complexity and time-consuming nature of civil litigation, particularly in cases involving civil rights, the environment, consumer protection, class actions, review of administrative agency decisions, labor disputes, and stockholder suits. Prior to October, 1970, there were two active judges and one senior judge serving this district. Since then, two judges have carried a case load which has been doubled.

"Pending Case Load: As of December 1, 1976, there were 733 pending civil cases and 53 pending criminal cases for a total of 786. Fifty-one civil cases were ready for trial. Counsel estimates of trial time totaled over 163 days, That works out to approximately eight judge months on the basis of 20 trial days per month. A pending case load of 786 cases represents an intolerable delay in the

handling of civil litigation.

"Terminations: The two judges serving the Middle District have worked to the limits of their abilities, sacrificing vacations legitimately due them. The significant rise in the number of pending cases understandably parallels the increase in total filings; whereas, terminations are steady at maximum per judge production. Case terminations per judge prove their industry.

Cases terminated per judge

"Fiscal year 1974:	
MDNC	38
U.S. average	34
"Fiscal year 1975:	
MDNC	39
U.S. average	37
"Fiscal year 1976:	
MDNC	39
II S average	28

"Congressional Action: In the Speedy Trial Act of 1974, Congress has fixed strict time limitations within which criminal cases must be handled from indictments through trials. and thereby imposed added burdens upon all courts. When and if the new comprehensive criminal code becomes law, the judiciary will face an enormous burden in construing every provision of it, increasing the time and energy required to dispose of criminal cases. During the last several years, there has been a trend toward increasing courts' responsibilities by legislation increasing their jurisdiction; but Congress has not provided the judges necessary to keep up with the court's work in this district.

"In the final months of the last (94th) Congress, an amendment was added, in the Senate Judiciary Committee, to the Omnibus Judgeship bill (which had been pending since provide a roving judge for the Middle and Western Districts of North Carolina. A full judgeship had been included in the original bill for EDNC. The roving judge-ship idea was not supported by members of judiciary or Congressmen from Middle and Western Districts. Both Senators and interested Congressmen attempted unsuccessfully to get the bill amended to provide a full judgeship for the Middle District of North Carolina. The bill did not become law. The 1976 quadrennial survey of judicial needs clearly established the need for a third judgeship in the Middle District. A recommendation to that effect was approved by the Judicial Conference of the United States. The Judicial Conference recommendation for

the creation of 106 new judgeships, including a full judgeship for MDNC, is expected to go to the next Congress early in January 1977

"A roving judgeship to serve the Middle and Western Districts will not satisfy the needs in either district."

Mr. Chairman, this summary was transmitted to me from Roy G. Hall, Jr., of the law firm of Hall, Booker, Scales and Cleland in Winston-Salem, North Carolina. I believe certain portions of his letter are appropriate and I quote verbatim:

"One of the best arguments which come to mind to answer opponents (of an additional judgeship) is that in 1962, when Judge Preyer became the second full-time judge for this district, we then had two full-time judges and a very active retired judge (Johnson J. Hayes) who would come down out of Wilkes County to try jury cases at the drop of a hat. Now, 14 years later, with a case load which has more than doubled, we have only two judges.

"Furthermore, what I fear is that this situation effectively deters ordinary people from invoking federal jurisdiction and leaves our federal courts to the wealthy and in-

fluential litigants and law firms."

Mr. Chairman, I expect that such testimony could be gathered in most of the U.S. Court districts of the nation. Wherever and whenever such conditions exists, I believe they ought to be alleviated. For that reason, I support the addition of federal district court judgeship wherever such need is shown.

REVEREND LIGHTFOOT MARKS 25TH ANNIVERSARY AT SHILOH BAPTIST CHURCH

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. McCLORY. Mr. Speaker, an event of great interest in my 13th Congressional District in Illinois will occur Saturday, April 23, when my good friend, Rev. Jonathan N. Lightfoot, will be honored for his 25 years of service as pastor of the Shiloh Baptist Church in Waukegan.

Mr. Speaker, Rev. Jonathan Lightfoot has been far more than a spiritual leader in the Waukegan community. He has also been a constant supporter of worthy community, civic, and educational endeavors, Reverend Lightfoot's involvement in the spiritual and public affairs of the Waukegan area is recognized by all of us who know him.

The present Shiloh Baptist Church, built under Reverend Lightfoot's pastorate, is an architectual gem as a place of worship. It accommodates the large and growing congregation which he has

served for a quarter century.

Mr. Speaker, last year I had the opportunity to encourage Mrs. Betty Ford, our former First Lady, to visit Shiloh Baptist Church; to meet Reverend Lightfoot, his wife, Robbie, and members of the congregation; and to hear Shiloh's outstanding choir and several spirituals sung by Mary Lacey, an outstanding gospel singer from Waukegan.

Mrs. Ford was greatly impressed by the Shiloh service and by the church members. In my experience, it was the first time a First Lady had visited Waukegan under such circumstances. Photographs of her joy at being there and of the warmth with which she was received were carried by the media throughout the Nation.

Mr. Speaker, it is with great pride that I call to the attention of my colleagues this occasion marking the completion

of 25 years of devoted service.

Mr. Speaker, I shall be joining with many others on Saturday, April 23, at the Waukegan Sheraton Inn to pay tribute to one whose life exemplifies the word he preaches. At that time, I will present a copy of these remarks and extend to Jonathan and Robbie Lightfoot every good wish for continued good health, happiness, and many more fruitful years ahead.

THE ACTUARY'S ROLE IN PENSION AND HEALTH AND WELFARE PLANS

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. KOSTMAYER. Mr. Speaker, at the request of a fellow Pennsylvanian who works in the employee retirement field, I am today inserting an article by Nathan S. Kolbes concerning the role of the actuary in pension and health and welfare plans.

Mr. Kolbes is an expert in this field, and since actuaries have become quite important in the field of employee benefits, I commend this article to my colleagues:

THE ACTUARY'S ROLE IN PENSION AND HEALTH AND WELFARE PLANS

The Employee Retirement Income Security Act of 1974 (ERISA) significantly broadened the Actuary's position as advisor to the Board of Trustees of multiple employer jointly managed Pension Plans. ERISA imposes on the Actuary duties and responsibilities beyond the normal client-employee relationship with the Trustees who retain him.

The Actuary is now retained by the Trustees on behalf of the Plan participants. This relationship places the Actuary in a position of greater independence than just projecting actuarial assumptions. The Actuary. now with a legally certified right to act independently, has substantially increased responsibility for the propriety of his actions. The Actuary for a jointly managed Pension Plan can provide technical assistance during collective bargaining but should not be part of the collective bargaining process or he might allow management or legal Trustees to unduly influence him. The actuarial assumptions and methods should not be subject to negotiation.

Under ERISA, only "Enrolled Actuaries" can perform actuarial valuations and certify results. An "Enrolled Actuary" is an Actuary who has achieved actuarial competence qualified by experience, education, and examination and who was enrolled by the Federal Joint Board for the Enrollment of Actuaries established under ERISA. The Actuary is the Plan's architect. He provides both the actuarial and related consulting services to the Board of Trustees. The consulting Ac-

tuary will adopt procedures in establishing benefit levels and funding practices depending on whether the foundation (is a thriving industry or trade or one that is likely to decline). The Actuary must be aware of provisions in the collective bargaining agreement or in any other agreement (to make certain that all groups covered by the Plan will be treated consistently, i.e.—to insure that the different groups do not financially select against the Plan because of different conditions governing payment of employer contributions). Also, the Plan and Trust Agreement must reserve to the Trustees a right to require additional bargaining units to meet certain actuarial criteria before they enter the Plan so that accumulated Plan as sets will not be dilluted by the addition of groups with age, sex and service characteristics which generate high cost.

The Actuary's judgements and recommendations are based on periodic actuarial studies using the Administrator's records. His judgements and recommendations are only as good as the Administrator's records are adequate. If past service information is not available, actuarial liabilities will have to be approximated. Since the resulting financial errors can be substantial, the Actuary generally will make conservative estimates to

avoid underestimating liabilities.

The Actuary's judgement as to benefit levels, amortization periods, investment earnings assumptions, expense levels, etc. demand that he continually monitor the experience of the Plan. Where feasible, he should also monitor the experience for related or similar industries. On the basis of this monitoring, he should consistently update his actuarial assumptions. The concept of monitoring opens a subject which we believe is important in the maintenance of employee benefit plans. I will expand on this later.

When a Plan is initiated or revised, a team of professionals should be involved; e.g.-Attorneys, Accountants, Administrators, Actuaries and Consultants. The role of the Actuary is not exclusive. However, the Actuary is often deeply involved with virtually all aspects of the Plan design and is always exclusively involved with actuarial computations. It is important for the Actuary to carefully review with the Plan Administrator and other consultants the necessary employee data and records. The general concepts involved in Plan design are as follows:

1. Assisting Trustees in the establishment

of objectives.

2. Defining Plan Provisions:

Who is covered?

When can an employee retire? Normal? Early? or Deferred?

What pension credits will be allowed? What vesting provisions are desired?

Will there be a Disability pension? What amount? When payable?

Will death benefits be paid before retirement? After retirement? What amounts?

Will there be reciprocal agreements? 3. Choosing the actuarial method-Cost Method.

Once a Plan's goals and objectives have been specified and a mechanism for paying the pension obligations to the Plan participants established, it is incumbent upon the Plan sponsors to find out if the various alternatives are realistic. A strategy must be formulated that strikes a prudent balance between the risk and the rate of return on current assets in addition to anticipated contributions. The question then becomes, how does one know the best strategy?

Modeling, using computer simulation, represents the best school for examining alternative strategies. It is necessary to project assets, liabilities, benefits and contributions. A review of historic asset growth must be combined with projected worse cause asset

growth situations. Funding levels must be analyzed to determine the level of coverage of existing Plan members. Finally, the effect of varying interest rates, termination rates, salary levels, etc. should be decided. The result is the measuring of how well the actuarial assumptions are working. A planning model has the option of keeping all elements constant with no variation of actuarial assumptions, or a combination of real world statistics with varying or nonactuarial as-sumptions. What we have done is to create a Game Plan which must now be carried out via the establishment of an investment strategy that meets the Plan's objectives.

Once a Game Plan is instituted, it is paramount that the portfolios be audited and performance assessed on a regular basis. The Pension Benefit Guaranty Corporation's position is that "The importance of the performance of investment advisors or Trustees who manage assets mandates periodic review of investment performance.' In order to avoid liability, a Fiduciary must not only act prudently in selecting an investment advisor, but must act prudently and in the best interest of the Plan in maintaining a proper review of the investment performance. The same holds true for evaluating the performance of Trustees that manage retirement plan assets. Periodic evaluation can use varying standards for measuring performance. Plan performance must be measured by the results that were initially sought

in the Plan "objectives".

To properly audit a Plan's portfolio, asset data should be collected from the Plan's Trustees, custodian or portfolio managers and divided into six categories:

1. Common Stocks (List these).

2. Preferred Stocks.

3. Convertible Bonds. 4. Long-Term Bonds.

5. Short-Term Investments.

6. Other assets.

Information should be gathered quarterly so that the six categories above act as THE reconcilable components of a Fund's portfolio On start up, the components of the portfolio will have to be reconciled manually until a purified data base is created and a mechanism provided that will record every transaction including brokerage commissions and extra charges. Once this system is set up and functioning properly, the components can then be broken out as to their percentage contribution to overall performance. By structuring data captured in this fashion, implicit controls exist that will insure:

1. That purchases and sales are executed

accurately and promptly.

2. That securities are traded within the day's high/low range. 3. The correctness of commission cost.

stocks, transfer tax, accrued interest, etc. 4. That there is not excessive trading

(churning).

5. That proceeds from the sale of securities, dividends, interest, etc. are received when due and made immediately available for reinvestment.

Any descrepancies in these areas recognizable and therefore correctable. Unfortunately, there are discrepancies that are not as recognizable. If the investment function does not have a formal long range investment strategy, or guidelines are not adequately provided, the risk of deviating from the Plan's goals and objectives is very A careful monitoring of the distribution of assets within and throughout the portfolio requires constant review to keep investment strategy on track. The main tradeoff involved in an investment strategy is between long range expected return and short-term volatility. If equity investments do not grow at least as fast as the rate assumed by the Actuary, the Plan's sponsors may be called upon to make additional contributions.

The prudent investment manager must

arrive at what would be a suitable degree of risk for the particular Plan before a portfolio can be constructed to meet its needs. This is arrived at by intimate knowledge of such factors as a Plan's need for liquidity and its desired rate of return, because the character and objectives of each Plan determine the appropriate amount of risk. Volatility should be measured in the shortterm in the form of variation from the market, utilizing various market indicators such as Standard & Poors 500, and in the longterm employing the statistical technique of linear regression to depict the relationship between the equity portfolio of the Plan and the market.

The concept of simulation being employed in setting up a Plan's goals and objectives, creating a set of guidelines for meaningful reporting and analyzation and establishment global criteria for risk taking, suggest that investments be monitored or measured. The effectiveness of the Actuary to his client would be greatly enhanced if these concepts were introduced into the field of Employee Benefit Systems under the terms and con-

strictions of ERISA.

I hope that this brief over-view of the Actuary's role has been of some value to you. Perhaps, I can best end n saying, "Welcome to ERISA". I can best end my thoughts by

WGMS RADIO EDITORIAL COM-MENDS PRESIDENT CARTER'S STANCE ON HUMAN RIGHTS

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. ROUSSELOT. Mr. Speaker, Mr. Speaker, President Carter's widely publicized statements about human rights have received much criticism. Ironically, the strongest objections have been raised by Soviet party boss Leonid Brezhnev who has interpreted Mr. Carter's remarks as open support for Soviet dissidents. Under the U.S. policy of détente, it is only natural that Mr. Brezhney would assume that the people of America have begun to overlook the fact that the Soviet Government stifles political dissenters. It is about time that the shapers of America's foreign policy take a stance to express unwavering disapproval of the abusive, severe, and unjust treatment of those individuals who are not willing to conform to Communist totalitarianism. If President Carter means to take a tough stand for individual human rights, I hope he will receive the support and not the criticism of the free nations. One citizen who has spoken out in praise of President Carter's position is Jerry R. Lyman, senior vice president and general manager of WGMS Radio in Washington. WGMS is an RKO Radio station which has a policy to present editorials in the public interest. I believe that the opinions of Jerry Lyman deserve the attention of my colleagues in the House of Representatives and am, therefore, submitting the text of the broadcast which was heard by Washington, D.C., listeners on March 9:

HUMAN RIGHTS

(By Jerry R. Lyman)

President Carter's recent support of human rights in the Soviet Union has created quite a stir among politicians, world leaders, and the media. Although it's difficult to understand, the main thrust of much of this criticism is by those who fear the result of this human rights crusade by the President will be the destruction of detente, or a cooling of relations between the Soviets and the United States.

If this be the case, then let it happen. This country has been buffaloed too long by the one-sided benefits of detente. During this period, the Russian build-up of arms, their increased involvement in Africa, and their maintenance of totalitarian control over Eastern Europe has continued as we backed off to meet their demands.

If President Carter's support of human rights for those imprisoned in the Soviet Union has awakened this Nation once more to the world horror known as Soviet Communism, then we hope it continues. For the past two years, Alexander Solzhenitsyn has travelled this country trying to convince the American people of the realities of Soviet oppression—not just of the Jews, but of all the Soviet people. But only a few people took interest in what he had to say.

interest in what he had to say.

The recent deal by NBC with the Soviets for the 1980 Olympics was appalling—another play into the hands of the dollar-desperate Russians. The three networks should have told the Soviets to set up their own worldwide TV system, make them sweat for a few months, and then offered a take-it-or-leave it proposition.

The point is, this country continues to make agreements and economic deals that strengthen the Russians while doing little to solve so-called cold war problems. The Russians through their ever-present KGB agents continue to make inroads in all the unstable areas of the world, while certain elements in this country continue to criticize counteracting CIA activities and call for more defense cuts.

So, Mr. Carter, if your outspoken criticism of the Soviet treatment of dissidents is a preamble to a tougher stance toward Russian world communism, then keep it up. It's refreshing to see us on the attack for once.

INTRODUCTION OF THE WORLD FOOD RESERVE ACT OF 1977

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing today, the World Food Reserve Act of 1977, a bill designed to establish a reserve of balanced food supplements that will serve as a kind of "insurance policy" against the event of severe drought or other natural disaster that could threaten the food supply and the health of people in this country or abroad.

This bill would authorize the Secretary of Agriculture to enter into agreements with foreign countries that normally buy grain from us. These countries could assure themselves of a supply of food in case of natural disaster and at the same time, avoid disruption of normal trade in commodities.

This bill provides for the reserve to be immune from American embargoes on exports of grain. At the same time, the reserve will not be maintained at the expense of the American consumer. The

Secretary is empowered by this legislation to insure that grain prices will not be affected. The World Food Reserve deserves the consideration of this body.

CONGRESSMAN JENRETTE ADVO-CATES MAINTENANCE OF U.S. LEADERSHIP ON NUCLEAR WASTE MANAGEMENT TECHNOLOGY

HON. JOHN W. JENRETTE, JR.

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1977

Mr. JENRETTE. Mr. Speaker, we have been reading in the papers recently of President Carter's proposed address to the Nation on April 20 regarding a national energy policy. Included within the context of the new policy will be a closer look at nuclear energy, particularly as it relates to the Carter administration's concern for controlling nuclear proliferation.

Last Thursday, March 31, I sent a proposal to Mr. Carter advocating the maintenance of U.S. leadership in the technology needed for radioactive waste management. Part of my recommendation urges the President to undertake an evaluation of sites in the United States and selected foreign nations as international nuclear fuel cycle facilities. Since six bills are now pending in the House and the Senate to promote this concept, I felt it would be in the interest of the Members to read the full text of my letter to the President.

I urge my colleagues when reading this proposal to keep in mind the need for flexibility in exploring the nuclear option. Whichever direction we choose to take regarding our commitment to nuclear energy, it is imperative that American technology on safeguarding nuclear wastes be permitted to maintain high standards for waste management on a worldwide basis.

House of Representatives, Washington, D.C., March 31, 1977. Hon. Jimmy Carter.

The White House, Washington, D.C.

DEAR MR. PRESIDENT: Recent news reports have indicated that your energy policy will include an expanding role for nuclear power reactors in meeting near-term U.S. energy demands. With the heavy reliance that the State of South Carolina has on nuclear energy between now and the end of the century, I am happy to see this support for nuclear power as an integral part of our national energy policy.

I also understand that, as a deterrent to nuclear proliferation in the world, you are giving serious consideration to an indefinite delay in commercial nuclear fuel reprocessing. Certainly anything that you believe will further non-proliferation goals will have my full support. What I would like to recommend, however, is that the "delay" period be utilized to the maximum extent possible to maintain U.S. leadership in technology needed to manage radioactive wastes and safeguard plutonium.

wastes and safeguard plutonium.

The Savannah River laboratory in South Carolina has been a leader in the development of waste management and safeguards technology for over 20 years as a part of the U.S. weapons program. In addition, as you know, the Barnwell Nuclear Fuel Reprocessing Plant stands half completed adja-

cent to the Savannah River reservation. What I would like to propose is that the Executive Branch initiate an evaluation of how the Savannah River and Barnwell Facilities and the technology base now existing in South Carolina might be utilized on a research and evaluation basis during any delay period to maintain U.S. leadership in waste management and nuclear safeguards. As part of such a program, I would envision three basic aspects.

First, the Executive Branch could initiate an evaluation of sites in U.S. and selected foreign nations which might serve as international centers to enrich uranium, store spent reactor fuel and eventually reprocess. Congress has urged such an evaluation in six Senate and House bills, with a combined sponsorship of nine Senators and twenty House Members. I would also guess that allies such as Japan, France, West Germany and others would readily participate in such an evaluation.

Second, the Executive Branch would continue research and development programs on technology to solidify liquid radioactive wastes and convert liquid plutonium to solid form suitable for storage under maximum safeguard conditions for future uses. Even if the U.S. decides not to reprocess, the U.S. should have the above technologies developed for possible transfer to ensure that wastes and plutonium are handled safely on a worldwide basis.

Third, in the context of an international site evaluation, examine closely how U.S. facilities might be used to further international enrichment, waste management and safeguards programs. The International Atomic Energy Agency (IAEA) is in favor of evaluating the possible use of Barnwell in this regard. Just this month, David Fischer. External Affairs Director of the IAEA, stated at an international nuclear conference: "There is a lot to be said for the idea of multinational fuel cycle centers from the viewpoint of safety, economics, safeguards and physical security. However, no such cenwill be built unless a major industrial country participates—the investment is just too great." He further added: "If the U.S. is willing to approve the use of Allied-General Nuclear Services' Barnwell, South Carolina plant for international purposes, so much the better." Savannah River and the adjacent Barnwell site have the benefits of isolation from populated centers, the best cadre of technical talent in the nation, excellent highway, water and rail transportation access and managements very receptive to assisting you in every way possible achieve meaningful non-proliferation goals. The sites also should be given serious consideration as future large expansions are made in U.S. capabilities to store spent fuel and enrich uranium. These assets stand ready to serve as the cornerstone for a meaningful research and development effort.

I hope you will find these recommendations constructive as your non-proliferation and energy policies evolve. I would welcome the opportunity to discuss these ideas with you further.

With best wishes, I am Sincerely yours,

JOHN W. JENRETTE, Jr., Member of Congress.

JUDGE FRED LUCERO

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. EDWARDS of California. Mr. Speaker, on May 27, Judge Fred Lucero

will be honored by his many friends and admirers in Santa Clara County. This is a very special event because Fred Lucero is a new judge; he is a good judge; and he is the first judge of Mexican American descent to serve on a superior court bench in northern California.

It is incredible to remember that California, with its rich Spanish and Mexican heritage, did not have a single superior court judge of latino heritage until 1959 when then Gov. Pat Brown took the first step in a southern California court. We had to wait until the next Governor Brown, Jerry, to see the first superior court judge of Mexican American descent in northern California.

It is delightful to see that Fred Lucero is now Judge Fred Lucero. Because he is a fine and honorable person. Because he is eminently qualified for this position of public trust. Because his appointment shows us that things are finally changing in our country—sometimes not as quickly or as steadily as we would hope—but changing nevertheless.

PRICE-ANDERSON ACT RULED UNCONSTITUTIONAL

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. BINGHAM. Mr. Speaker, the temptation to rise and say "I told you so" is indeed, a difficult one to suppress: The first court challenge raised against the Price-Anderson Act has declared that its limitations on liability violates both the equal protection and the due process clauses of the fifth amendment. The conclusion of the district court for the western district of North Carolina is that the act's limitations on liability "are unconstitutional and unenforceable."

I am submitting excerpts from the North Carolina court's decision for the RECORD:

[In the District Court of the United States for the Western District of North Carolina, Charlotte Division C-C-73-139]

MEMORANDUM OF DECISION

(Before James B. McMillan, District Judge.)

Norman B. Smith, Smith, Patterson, Follin & Curtis, 816 Southeastern Building, Greensboro, North Carolina 27401; George S. Daly, Jr., Casey and Daley, 700 Law Building, Charlotte, North Carolina 28202; William B. Shultz and Alan B. Morrison, Suite 700, 2000 "P" Street, N.W., Washington, D.C.,

counsel for plaintiffs.

Douglas M. Martin, Assistant United States Attorney, Charlotte, North Carolina 28231; Joseph Di Stefano, Office of the General Counsel, Atomic Energy Commission, Washington, D.C. 20545; Peter L. Strauss, General Counsel, and Stephen F. Ellperin, Assistant General Counsel, United States Nuclear Regulatory Commission, Washington, D.C. 20555; Joseph B. Knotts, Jr. and J. Michael McGarry, III, Conner & Knotts, Suite 1050, 1747 Pennsylvania Avenue, N.W., Washington, D.C. 20006; Clarence W. Walker, Kennedy, Covington, Lobdell & Hickman, 330 NCNB Plaza, Charlotte, North Carolina 28280; and William L. Porter, Duke Power Company, Post Office Box 2178, Charlotte, North Carolina, counsel for defendants.

PRELIMINARY STATEMENT

Plaintiffs brought this action to obtain a declaration of the unconstitutionality of those portions of the Price-Anderson Act, 42 U.S.C. § 2210(c) and § 2210(e), which place a limitation of \$560,000,000 on the maximum amount of liability of a power company or a contractor for damages resulting from a nuclear accident involving an atomic power plant.

Damages and injunctive relief are not sought.

Defendants in their pleadings denied the merits of the claims of the plaintiffs and asserted that the plaintiffs lack standing and that the claims are not ripe for decision.
